The Queen's jubilee day in 1897 was observed with fervid loyalty throughout the island. In the capital an immense procession marched to the summit of Signal Hill, overlooking the harbor and commanding a view of the Atlantic in order to witness the laying of the foundation stone of a tower to be erected in memory of John Cabot, the discoverer of the island in 1499. This memorial tower will be used as a signal station and meteorological observatory. On the same day was laid, as a memorial of the Queen's jubilee, the foundation stone of a new wing to the Public Hospital, to be called the Victoria Wing, and to be set apart for the exclusive use of women and children. The funds were raised by public subscription.

NEW HAMPSHIRE, a New England State, one of the original thirteen, ratified the Constitution June 21, 1788; area, 9,305 square miles. The population, according to each decennial census, was 141,885 in 1790; 183,858 in 1800; 214,460 in 1810; 244,022 in 1820; 269,328 in 1830; 284,574 in 1840; 317,916 in 1850; 326,073 in 1860; 318,300 in 1870; 346,991 in 1880; and 375,530 in 1890. Capital, Concord.

Government.—The following were the State officers during the year: Governor, George A. Ramsdell; Secretary of State, Ezra S. Stearns; Treasurer, Samuel A. Carter; Attorney-General, Edwin J. Eastman; Adjutant General, Augustus D. Ayling; all Republicans; Insurance Commissioner, John C. Leonard; Bank Commissioners, John Hatten, Arthur W. Bacon, and Thomas J. Walker; Superintendent of Public Instruction, Frederic Gowings; Secretary of the Board of Agriculture, N. J. Bachelder; Labor Commissioner, Julian F. Trask; State Printer, Arthur E. Clarke; Chief Justice of the Supreme Court, August P. Carpenter, Republican; Associate Justices, William M. Chase, Democrat, Frank N. Parsons, Republican, Robert G. Pike, Republican, R. M. Wallace, Republican, Isaac N. Blodgett, Democrat, and Lewis W. Clark, Democrat; Clerk, A. J. Shaw, Republican.

Finances.—The State is remarkable this year for having a large surplus to apply upon its debt. The Treasurer's report for the year ending June 1

shows that the debt has been reduced about \$160,000. The net State debt is \$1,667,767.54, more than \$1,000,000 having been paid off since 1892 of the 6-per-cent. bonds authorized by the Legislature of 1871.

The State tax for the fiscal year ending June 1, 1898, is \$500,000. After that the reduction author-

GEORGE A. RAMSDOLL, GOVERNOR OF NEW HAMPSHIRE.

ized by the last Legislature goes into effect, and it will be \$425,000 a year. The valuations for taxation in 1897 were: Valuation by inventories, \$203,507,734; savings-bank deposits taxable, \$50,859,365; insurance capital, \$1,375,000; railroads, \$21,855,000; telegraphs, \$203,100; telephones, \$213,600.

Education.—The College of Agriculture and Mechanic Arts, at Durham, held its twenty-seventh commencement exercises June 9, and graduated a class of 17, the largest in its history. The summer school held a three weeks' session in August.

At Dartmouth commencement, June 30, degrees were conferred on 55 candidates for the degree of bachelor of arts, 15 for that of bachelor of letters, and 19 for that of bachelor of science. The college plant will be increased within the next four years by four new buildings, the James B. Richardson dormitory, the Charles T. Wilder physical laboratory, a chemical laboratory and heating plant in connection, and a new alumni memorial hall.

Industrial School.—The report of the State Industrial School, at Manchester, rendered in May, shows that the number in the school Sept. 30, 1896, was 135. The annual appropriation is \$6,000. The receipts for the year were \$23,605.04, and the payments \$21,725.18.

Banks.—The annual report of the Bank Commissioners is summarized as follows: Since the last report made by the commissioners two new savings banks have been organized and opened for business, one at Laconia and one at Keene. The number of savings banks has thus been increased to 77, of which 17 are in liquidation, under the management of their own officers, and 9 by assignees appointed by the court. There are 14 State banks and trust companies, 9 of which have savings departments; and 18 building and loan associations. One build-

ing and loan association, the Granite State Provident, is in the hands of an assignee.

Of the 14 trust companies, the New Hampshire Trust Company, of Manchester, and the Security Trust Company, of Nashua, are in the hands of assignees, and the Bank of New England is liquidating its saving department under the management of its own directors.

The condition of the savings banks June 30, 1897, is shown by the following statement of liabilities and premiums, the savings departments of the trust companies not being included:

ITEMS.	1896.	1897.
Amount due depositors.....	\$51,091,621 15	\$49,093,065 24
Guarantee fund.....	2,940,217 81	2,942,069 21
Interest.....	1,307,835 80	1,093,984 49
Miscellaneous indebtedness.....	51,061 46	89,139 76
Total.....	\$55,390,735 34	\$53,218,258 40
Premium.....	1,732,700 14	1,963,019 51
Total.....	\$56,092,436 48	\$55,181,278 91

The number of local building and loan associations has not been increased during the year. Their total assets June 30, 1897, were \$1,962,058.53, an increase since Oct. 31, 1896, of \$177,943.79.

The assignee of the Granite State Provident Association won a suit in April which was brought in Colorado, and by which it was sought to have the assets of the institution in that State retained for distribution among the shareholders there. The decision is that all the assets must be turned into the general fund to be divided among all the creditors. Similar suits have been brought in other States.

The suit of a shareholder in the wrecked Dover National Bank to compel the books to be opened for inspection of the attorneys of the shareholder was won in November.

Dr. J. C. Moore, whose numerous trials have been mentioned in former issues of the "Annual Cyclopaedia," was sentenced in April to four years in the State Prison, having been convicted of a fraudulent issue of 50 shares of stock of the Union Publishing Company, which was issued to himself and deposited in the Laconia National Bank.

Insurance.—The summary of the business of fire insurance companies for 1896 gives the following: Thirty-four New Hampshire companies—risks written, \$43,593,581.17; premiums received, \$571,235.44; losses incurred, \$269,381.94. Fifty-nine foreign fire and marine insurance companies—risks written, \$48,658,561.62; premiums received, \$669,116.04; losses incurred, \$318,104.65.

The commissioner gives a comparison of the ratio of losses paid to premiums in New Hampshire and the other New England and the Middle States. New Hampshire's ratio is the lowest, 43.9; Vermont's is the highest, 71.8; although New Hampshire is the only one having a valued policy law.

Railroads.—After an inspection of the railroads in September, the commissioners reported that the freshets wrought much more serious damage throughout New Hampshire than was generally understood to be the case. One hundred thousand dollars would hardly cover the losses.

A petition to the commissioners for leave to extend the Pemigewasset Valley Railroad from its present terminus at North Woodstock to a point near the Mount Liberty house was opposed by the Forestry Commission, on the ground that the proposed road would have to depend for its earning almost wholly upon the freight from lumber cut in the Pemigewasset valley; that the topography of that region and its relation to the watershed of the Merrimack river system rendered the removal of

the forest growth there a matter of vital importance to many interests far removed from the scene of the immediate cutting; and that therefore the proposed extension was not for the public good.

An important question was decided by the Supreme Court in March, by which the demurrer of the Manchester and Lawrence Railroad was overruled, so that the suit of the State against the road may be now tried upon its merits. The State seeks to recover \$750,000 from the Manchester and Lawrence Railroad, this being the sum which that road received from the Concord and Montreal under the award of the referees to whom the case in equity of the Manchester and Lawrence against the Concord Railroad had been referred.

Under the charter of the Manchester and Lawrence, and as provided by various enactments of the Legislature prior to 1844, and covering the period during which the major railroad systems of the State were constructed, railroad corporations are required to pay into the State treasury all sums received by them in excess of 10 per cent. per annum of net income; and as the Manchester and Lawrence had maintained a 10-per-cent. dividend up to the time it received its \$750,000 judgment from the Concord and Montreal, Gov. Busiel attempted to establish a lien in behalf of the State upon that sum of money.

Industries.—The report of the State Board of Agriculture for two years ending Nov. 1, 1896, shows that the agriculture of New Hampshire is represented by 29,151 farms, containing 1,727,387 improved acres, valued at \$66,162,160. The number of persons engaged in it is 42,670, and the total value of farm products about \$13,000,000 annually.

The Board of Cattle Commissioners reported that in the two years 517 herds of cattle were inspected and 562 animals were killed. The State pays owners half the health value.

The biennial report of the Bureau of Labor shows that there are 64 establishments engaged in the manufacture of shoes, paying for wages \$3,469,918 annually, giving employment to 8,069 people. The cost of material used is \$6,749,322; annual product, \$11,986,008, an increase during the decade of 7.81 per cent.; in number of establishments of employees, 45.94 per cent.; in amount in paid wages, 43.27 per cent.; in material used, 29.44 per cent.; and in value of product, 29.67 per cent.

An estimate of the stock of logs ready to be manufactured into lumber and pulp April 1 in Coos and Grafton Counties shows a total of 240,000,000 feet.

Legislative Session.—The one hundred and first session of the General Court began Jan. 6 and ended March 26, with 24 Senators and 357 Representatives. Chester B. Jordan was President of the Senate and James F. Briggs Speaker of the House.

George A. Ramsdell was inaugurated, Jan. 7, the fifty-fourth Governor of the State and the forty-fifth person to occupy the office. The following were declared to have been elected councilors: Joseph O. Hobbs, Allen S. Clapp, George W. Cummings, Walter S. Davis, Charles F. Piper.

A successor to United States Senator Jacob H. Gallinger was to be elected. Ex-Gov. Busiel was a candidate, but withdrew his name before the caucus met, and Senator Gallinger was unanimously chosen by the Republicans, and was elected to succeed himself.

The Republican candidates for State officers— Ezra S. Stearns for Secretary of State, Selah A. Carter for Treasurer, and Arthur E. Clarke for State Printer—were also elected.

In all, 509 measures were introduced, 142 bills and 45 joint resolutions were passed, and only 1 was vetoed.

Many bills were introduced having for their object the improvement of the highways.

An act to go into effect Sept. 1 provides for the appointment of three separate State boards of medical examiners, to be selected by the Governor and Council from lists furnished by the New Hampshire Medical Society, the New Hampshire Homoeopathic Medical Society, and the New Hampshire Eclectic Society. Candidates for license are to be examined by these boards. Among those to whom the law does not apply are physicians and surgeons in Government service, those called from other States for consultation or to attend regular patients, and clairvoyants and persons practicing hypnotism, magnetic healing, mind cure, massage, Christian Science, so called, or any other method of healing, if no drugs are employed or surgical operations are performed.

The statutes relating to the manner of conducting caucuses and elections were so amended as to throw greater safeguards around the exercise of the suffrage.

An act to provide for the education and maintenance of dependent children forbids the keeping of such children between three and fifteen years of age at county almshouses for more than sixty days, unless they are physically or mentally incapacitated for education, or are under sentence for crime; county commissioners are to find suitable homes for them or give them into the care of the State Board of Charities to be so provided for at the expense of the counties to which they are chargeable.

It is made the duty of the Board of Charities to inspect all State and county charitable or correctional institutions, except the State Prison and the asylum, for instance, at Concord, and report to the Governor and Council and Legislature biennially the result of their inspection.

The law in reference to the capital per mile of railroads organized under the general law was so amended that the capital stock of a corporation may not be less than \$5,000 for each mile if the gauge is to be three feet or less and \$10,000 when the gauge is to be more than three feet. It shall be divided into shares of \$100 each.

It is made the duty of boards of health to inspect the sources from which ice is taken for domestic use in cities and towns, and to forbid the sale of such as may be taken from unclean sources.

Days of grace were abolished, except where there is an express stipulation for them.

It was enacted that no policy of life or endowment insurance, issued upon the industrial plan, shall become forfeit or void for nonpayment of premium after premiums have been paid thereon for the term of two consecutive years. Every such policy shall have a surrender value after the payment of the premiums for two full years. On policies of prudential or industrial insurance on which the weekly premiums are not more than fifty cents each, the surrender value shall be payable in cash. When the weekly premium is more than fifty cents per week, a paid-up policy may be issued.

Itinerant vendors wishing to do business in the State are to deposit \$500 with the Secretary of State as a special deposit, and pay \$25 as a State license fee, besides a local license tax amounting to 2 per cent. of the value of the goods to be sold, which may not be advertised until after the licenses have been paid. The special deposit is to be returned after the expiration or surrender of the State license, except so much as may be required to satisfy just such claims against it.

Another act relating to hawkers requires them to take out licenses from the Secretary of State, \$1 for each city and town where the applicant desires to

sell, and also to pay in each city or town a tax proportioned to its size; but any soldier or sailor disabled in the war for the suppression of the rebellion, or by sickness or disability contracted therein, or since his discharge from the service, shall be exempt from paying license fees.

The issuing of railroad passes was made legal.

Bills to limit the use and prevent the sale of cigarettes were defeated; but the House voted to memorialize Congress to place them in the same category with spirituous liquors so far as interstate commerce is concerned.

The State tax was reduced from \$500,000 a year to \$425,000 for each of the ensuing two years.

The special appropriations amounted to \$74,000 less than usual. By a new rule adopted by the previous Legislature, a committee on appropriations received all bills reported from other committees which carried appropriations, so that this committee could keep track of all such and know what amount of expenditure was to be authorized. Among the special appropriations were \$5,000 to Dartmouth College for each of the ensuing two years, and \$2,500 each year to the College of Agriculture and the Mechanic Arts, besides \$3,105 for purchase of land; also \$20,000 to the State Soldiers' Home for the two years, \$2,500 for repairs at the Industrial School, and \$8,000 for improvements at the State camp ground.

Among other measures passed were:

Providing for the appointment of boards of health in the several towns.

Establishing the city of Berlin.

Regulating the use of bicycles.

Raising the age of consent from thirteen to sixteen years.

To promote the planting of nut, shade, and ornamental trees.

Protecting moose, caribou, and deer, and providing for the disposition of fish and game captured or taken from persons who have illegally taken them.

Repealing the law providing for a bounty on hawks.

For the better protection of trout.

Prohibiting the killing of beaver until Jan. 1, 1909.

Authorizing the Fish and Game Commissioners to close ponds and lakes against fishing through the ice.

All bills for important changes in the liquor laws were defeated, as were many applications for special charters for electric roads.

NEW JERSEY, a Middle Atlantic State, one of the original thirteen, ratified the Constitution Dec. 18, 1787. Area, 7,815 square miles. The population, according to each decennial census, was 184,139 in 1790; 211,149 in 1800; 245,562 in 1810; 277,426 in 1820; 320,823 in 1830; 373,306 in 1840; 489,555 in 1850; 672,035 in 1860; 906,096 in 1870; 1,131,116 in 1880; and 1,444,933 in 1890; by the State census of 1895, 1,672,942. Capital, Trenton.

Government.—The following were the State officers: Governor, John W. Griggs, Republican; Secretary of State, Henry C. Kelsey, Democrat, until March, then George Wurtz, Republican; Treasurer, George B. Swain, Republican; Comptroller, William S. Hancock, Republican; Attorney-General, John P. Stockton, Democrat, until March, then Samuel H. Grey, Republican; Adjutant General, William S. Stryker, Republican; Superintendent of Public Instruction, Charles J. Baxter, Republican. Chief Justice of the Supreme Court, Mercer Beasley, Democrat, until March, then William J. Magie, Republican. Associate Justices, William J. Magie, Republican, until March, then Gilbert Collins, Republican; David A. Depue, Republican; Jonathan

Dixon, Republican; Bennet Van Syckel, Democrat; Charles G. Garrison, Democrat; Job H. Lippincott, Democrat; William S. Gummere, Republican; George C. Ludlow, Democrat; Clerk, Benjamin F. Lee, Democrat, until March, then William Riker, Republican. Court of Errors and Appeals: Judges, J. W. Bogart, G. Krueger, William L. Dayton, John S. Barkalow, Charles E. Hendrickson, and James H. Nixon. Chancellor, Alexander T. McMill.

Finances.—The expenses of the State and its various boards, departments, and officers are paid out of the State fund. The receipts on account of this fund for the fiscal year ending in 1896 were \$2,138,532.88, among the items of receipt being the following: Tax on railroad corporations, \$1,059,687; tax on miscellaneous corporations, \$707,951; official fees, \$145,321; collateral inheritance tax, \$82,247; State prison receipts, \$45,016; judicial fees, \$31,008; sinking-fund account, \$20,000; dividends, \$18,870; Dairy Commissioner (fines), \$2,551. The total expenditures out of the said fund amounted to \$2,072,651.78, showing a balance of receipts over disbursements of \$65,881.10. There was a decrease in receipts from the preceding year of \$37,308.95. There was also a decrease in disbursements from the preceding year of \$196,388. The following disbursements are included in the amount of expenditures for the year: For State Prison Building Commission, \$100,000; State Reformatory, \$100,000; improvements at Morris Plains Hospital, \$49,544; Camden Armory, \$44,996; revision of statutes, \$18,000; Passaic Valley Sewerage Commission, \$10,000; Trenton battle monument, \$6,600; political and legislative history of New Jersey, \$4,500. The balance of the State fund in bank at the close of the year was \$959,628.98. The following sums were expended for charitable uses during the year: For State Hospital for the Insane, \$189,145.94; for maintenance of lunatics in county asylums, \$137,335.27; maintenance of blind and feeble-minded, \$94,587.02; the Reform School for Boys, \$60,793.21; Normal School, \$31,988.07; industrial education, \$31,864.75; the Reform School for Girls, \$21,458.88; the Home for Disabled Soldiers, \$15,166.66; for the deaf-mutes, \$38,076; total, \$620,415.80. The only direct tax levied upon the people of the State is the school tax, which for the year amounted to \$2,196,240, all of which was collected and paid out to the several school districts. The State paid out during the year to different counties having county asylums the sum of \$137,335.27.

Banks.—In November, 1897, the Comptroller of the Currency gave out the following abstract of the reports of the 102 national banks of the State: Resources: Loans and discounts, \$52,105,939.06; overdrafts, \$48,506.17; United States bonds, \$6,170,200; premiums on United States bonds, \$340,676.54; stocks, securities, etc., \$9,731,173.41; banking houses and fixtures, \$3,168,286.12; real estate and mortgages, \$643,639.27; due from national banks, \$2,350,292.51; due from State banks, \$511,789.51; due from reserve agents, \$11,570,153.89; checks and other cash items, \$853,089.78; exchanges for clearing houses, \$371,755; bills of other national banks, \$335,138; fractional currency, \$44,385.30; gold coin, \$1,777,883.38; gold Treasury certificates, \$255,470; silver dollars, \$11,211; silver Treasury certificates, \$1,014,026; silver fractional coin, \$213,223.63; total specie, \$3,371,814; legal-tender notes, \$2,096,436; total reserve, \$5,468,251; 5-per-cent. redemption, \$248,253.75; due from United States Treasurer, \$24,790.04; total resources, \$94,001,730.24. Liabilities: Capital stock paid in, \$14,445,000; surplus fund, \$8,235,500; undivided profits, \$4,257,843.15; national bank notes issued, \$5,103,675; less amount on hand, \$90,065.50; amount outstanding, \$5,013,609.50; State bank

notes outstanding, \$5,492. One to other national banks, \$3,620,773.62; due to State banks, \$660,339.39; individual deposits, \$57,172,940. United States deposits, \$225,531.92; deposits of United States disbursing officers, \$534,053. Notes and bills rediscounted, \$24,970. Cash payable, \$51,000. Liabilities other than State, \$4,000. Total liabilities, \$94,001,730.24. Average reserve, 29.69 per cent. For 1895-'96 the number of depositors in the savings banks was 154,334; amount of deposits, \$59,635,535; average due each depositor, \$386.82.

Insurance.—There were reported for 1896 117 companies in the State doing fire insurance exclusively, and 29 companies uniting fire with a marine business. Their total receipts were \$129,233,412, being an increase of \$84,203 over the receipts of 10 less companies in 1895. The net fire premiums received were smaller by \$501,081, the total being \$115,379,232. The net marine and inland premiums received amounted to \$4,827,358, an increase of \$590,605. The receipts from interest, dividends, and miscellaneous sources were \$9,026,728. The receipts for the year exceeded disbursements by \$15,044,079. The total expenditure was \$114,189,334; aggregate of fire losses paid, \$61,641,169; marine and inland losses, \$4,000,795; dividends to stockholders, \$5,226,423; commissions, salaries, taxes, and miscellaneous expenses, \$43,320,947. At the close of the year the risks outstanding aggregated \$17,691,630,337, which was an increase for the year of \$556,684,290. Risks amounting to \$13,775,413,631 were written during the year, for which \$146,951,446 in gross premiums was charged.

The life and miscellaneous insurance companies, other than fire and marine, numbered 131. The fixed premium life companies admitted assets of \$1,230,171,160. The assets of the New Jersey companies showed an increase for the year of \$6,348,084; companies of other States and countries, \$79,723,020. The aggregate of liabilities, excluding capital stock (\$9,675,250), was \$1,055,461,758; the policy reserve amounted to \$1,036,602,786, and was in excess of 98 per cent. of the total liabilities. Unsettled policy claims were reported at \$7,430,240; dividends due policy holders amounted to \$2,345,172, and all other liabilities to \$9,083,560. The aggregate surplus showed an increase for the year of \$14,987,540, the amount being \$174,709,402. The total income of these companies for the year was \$279,621,913; premiums received amounted to \$224,342,583; receipts from interest, dividends, rents, and miscellaneous profits were \$55,279,329. The total disbursements were \$200,729,838. The increase in payment to policy holders over the previous year was \$11,246,050.

The admitted assets of the 21 fidelity and casualty companies aggregated \$23,541,682. Excluding capital stock and surplus, the liabilities amounted to \$10,270,629. The total income for the year was \$16,457,979; total expenditure, \$15,653,253, of which \$6,203,298 was for losses and claims.

Internal Revenue and Distillation.—The National Bureau of Statistics reported that in the ten years ending with 1896 the State's internal-revenue collections grew from \$3,951,673.75 to \$4,111,712.89; that the increase in the production of distilled spirits in the same time was from 498,154 gallons to 614,518 gallons; and the increase in the production of fermented liquors was from 1,640,876 gallons to 2,023,926 gallons.

Manufactures.—Among the principal industries of the State the Bureau of Labor Statistics reported the following: Brick and terra cotta—capital invested, \$2,058,540; value of stock used, \$487,550; value of goods made, \$1,392,222; persons employed, average during year, 1,500; wages paid, \$588,397. Hats—capital invested, \$694,740; value of stock

used, \$802,751; value of goods made, \$1,698,524; persons employed, 1,320; wages paid, \$547,575. Shoes—capital invested, \$393,546; value of stock used, \$529,944; value of goods made, \$1,609,865; persons employed, 1,350; wages paid, \$585,889. Silk goods—capital invested, \$9,339,140; value of stock used, \$7,781,515; value of goods made, \$14,752,857; persons employed, 12,105; wages paid, \$4,672,355. Woolen and worsted goods—capital invested, \$4,246,373; value of stock used, \$3,988,486; value of goods made, \$6,166,845; persons employed, 4,461; wages paid, \$1,319,775.

Education.—The whole number of children of school age in the State in 1896 was reported at 428,969, against 424,959 in 1895, making a total gain of 4,010, against a loss of 14,289 in 1895, and an increase in the State appropriation for the succeeding school year (1897-'98) of \$70,050. The number of children attending private schools was 45,021; number attending no school, 89,201; number between ten and eighteen years of age who are unable to read (including immigrants, feeble-minded, etc.), 1,581; number employed in factories, mines, and stores, 5,650 (a large percentage attending evening schools). The total number of evening schools kept open was 1,520; pupils enrolled, 13,163; average attendance, 5,895; teachers employed, 294; total cost of evening schools, \$56,378. The number of colored children in the State was 12,689.

The following facts appear in a summary of statistics prepared by the Superintendent of Public Instruction: The total enrollment in the public schools was 280,330; in the primary grade, 186,785; in the grammar grade, 81,619; in the high-school grade, 11,926; average number on roll, 201,658; average daily attendance, 175,895; number of teachers, 5,620—males 779; females 4,841; average salary per month paid to male teachers, \$83.03; to females, \$48.13; amount expended for teachers' salaries, \$3,029,777. The principal items of receipts were: From income of State school fund, \$289,806; State school tax, \$2,196,240; district and city tax, \$2,599,268; appropriated by counties for salaries and expenses of county superintendents, \$28,082; interest of surplus revenue, \$31,392; raised in districts for manual training, \$24,364; received from sale of district lands, \$329,554; raised in districts for school libraries, \$4,530. Number of districts that raised tax to pay teachers' salaries, 224; districts that raised tax to build or repair schoolhouses, 230; districts that raised tax to pay debt and interest, 149; districts that raised tax for text-books and apparatus, 299; districts that raised no tax, 5. The number of school buildings was 1,763; number of unsectarian private schools, 175; sectarian private schools, 145. The total value of school property was \$11,924,227. The sum expended for manual training was \$49,800. There was expended for free text-books and apparatus \$280,918.

The State contributes \$35,000 a year for current expenses in normal training. The Normal School had in 1896 about 600 students and graduated 150. The Model Preparatory School enrolled during the year 594 students and the Farnum School 132.

The Oyster Industry.—There were 664 individuals and firms engaged in planting and marketing oysters, and 255 persons engaged in gathering seed oysters. These 664 planters employed 2,033 hands, to whom wages to the amount of \$94,280 were paid, and 1,559 hands were employed while marketing, their wages amounting to \$233,917. There were planted during the year 1,475,967 bushels of seed oysters; 995,643 bushels were purchased by planters and 477,824 bushels were gathered by them; of the total planted, 636,448 bushels were obtained from State waters. The number of bushels marketed was 1,668,972. The total sum realized by the

664 planters was \$1,384,516, or an average of 83 cents per bushel. The 255 engaged in gathering seed oysters collected 229,399 bushels, for which they received \$72,433. There were 96 of these persons engaged in Newark Bay, 72 in Raritan, 55 in Barnegat, and 32 in Delaware Bay.

The Insane.—During 1896 the sum of \$522,885 was spent in maintaining the State's two institutions for the insane. The expenses of the Morris Plains hospital aggregated \$281,507 and the receipts \$279,798. In the Trenton hospital the expenses were \$241,380, and the receipts \$233,734. During the year 251 patients were admitted to the Trenton hospital and 280 to the hospital at Morris Plains; at the end of the year the former institution contained 1,001 patients and the latter 1,116. There were 160 epileptics confined in the two hospitals. The report of the Board of Managers refers pointedly to the looseness of New Jersey laws regarding commitments to insane asylums.

Good Roads.—The Commissioner of Public Roads stated in his report for 1896 that the State-aid law had stimulated the property holders of many counties to spend large sums upon their roads, resulting in many improved highways. Under this law the State paid in 1892 \$20,661.85; in 1893, \$71,237.22; in 1894, \$74,696.83; in 1895, \$100,000; in 1896, \$100,000; and the appropriation for 1897 was \$100,000, making a total of \$466,595.10, which, added to the amount which counties and individuals were required to spend to obtain the State appropriation, aggregated in six years over \$1,400,000 for roads.

Decision.—In the Supreme Court Justice Van Syckel's opinion set aside the Mercer County conviction of the Philadelphia and Reading Railroad for maintaining a nuisance, which consisted of an unprotected and dangerous crossing, no gates or flagman being employed, and frequently neither bell nor whistle signal being given. The court held that a railroad company can only be required to give such signal of approaching trains as the Legislature has prescribed, unless the crossing has some peculiarly dangerous feature occasioned by the act of the company in constructing its road or buildings.

Constitutional Amendments.—At a State election held in September constitutional amendments against gambling and permitting *ad interim* appointments to State offices were adopted, and one giving school suffrage to women was defeated.

Legislative Session.—Among the acts passed by the Legislature were the following:

Authorizing the damming of Delaware river. (Authorizes the erection of dams above tide water for the purpose only of supplying power for manufacturing and electrical purposes.)

To prevent all fishing except by troll or hook and line in Hackensack river between June 10 and Feb. 25.

Authorizing the Governor to appoint one or more commissioners to revise and codify the General Statutes.

Empowering executors and trustees holding real estate in trust to improve it and erect buildings thereon.

Requiring all motor cars to have vestibule platforms.

An extraordinary session of the Legislature was called by the Governor to rectify a clerical mistake in the act providing for the special election on the proposed constitutional amendments. In the act providing for this election the amendment prohibiting lotteries read, in part: "Nor shall any gambling device, practice, or game of chance now prohibited by law be legalized." The word "prohibited" had been made to read "provided." The extra session lasted but one day, and transacted no other business.

NEW MEXICO, a Territory of the United States, organized Sept. 9, 1850; area, 122,580 square miles. The population, according to each decennial census, was 61,547 in 1850; 93,516 in 1860; 91,814 in 1870; 119,565 in 1880; and 153,593 in 1890. Capital, Santa Fe.

Government.—The following were the Territorial officers: Governor, Miguel Antonio Otero; Secretary, George H. Wallace; Treasurer, Samuel Eldred; Auditor, M. Garcia; Adjutant General, H.

MIGUEL A. OTERO, GOVERNOR OF NEW MEXICO.

B. Hersey; Solicitor-General, J. P. Victory; Superintendent of Public Instruction, Amado Chavez; Chief Justice of the Supreme Court, Thomas Smith; Associate Justices, N. C. Collier, N. B. Laughlin, G. D. Bantz, H. B. Hamilton.

Finances.—The report of the Treasurer to the biennial session of the Legislature dealt with Territorial finances from Dec. 3, 1894, to Nov. 28, 1896. The total revenues amounted to \$237,976.36 for 1895 and \$224,659.97 for 1896, the same having been derived from licenses, taxes, court fees, interest on deposits, etc. The expenditures for 1895 were \$330,528.32, and for 1896 were \$246,421.17, covering interest and part of the principal of the public debt, salaries and fees, expenses of Territorial institutions, normal schools, court expenses, cattle sanitary board, etc. The rate of taxation for Territorial purposes was 7.75 mills, and the assessed valuation of all the counties was \$41,140,802.67. At the close of 1896 there remained in Territorial banks \$32,301 in favor of the Territory. In his message to the Legislature Gov. Thornton said: "The great distress which has fallen upon our people during the last few years has unfortunately been such as to largely prevent the collection of taxes as closely as they should have been, and in every part of the Territory the delinquency has been so great that while the running expenses of the Territory for the same period have not been so large the taxes collected have not been sufficient to meet the demands of the Territory, and there is a deficiency in nearly every department."

In November, 1897, Gov. Otero and Auditor Garcia reported having checked up evidences of in-

debtedness paid by the Territory during the year as follows: Penitentiary, normal schools, \$80,169.91; salaries, \$34,716.66; increases, \$1,499.25; transportation of convicts, \$4,408.42; salaries, \$1,288.36; Territorial institutions, \$54,144.44; New Mexico Military Institute, \$5,399; agricultural experiment stations, \$25,189; Supreme Court, \$459.22; balance in deficit forty-fourth fiscal year, \$62,320; appropriation fund, \$1,283.87; miscellaneous fund, \$31,848.85; deficiency fund forty-sixth fiscal year, \$206.20; the indemnity, \$16,990.65; compensation of assessors, \$8,857.40; Silver City normal school, \$4,320.23; Las Vegas normal school, \$4,845.92; corporations, \$267.40; Territorial purposes forty-eighth fiscal year, \$4,214; legal expenses, \$1,272.25; interest on deposits, \$4,111.29; Capitol rebuilding, \$11,547.79; interest, \$55,800; note, First National Bank, Santa Fe, \$8,000; total, \$295,136.25.

Penitentiary.—During the two years covered by the report of the superintendent the expenditures were \$81,134.76. Of this amount \$23,000 was expended in erecting new buildings and in making repairs. The earnings of the convicts amounted to \$18,536. The superintendent complains that various counties that have sent prisoners have failed to pay expenses, the deficiency amounting to \$3,164. The number of prisoners in confinement was 377.

Public Lands.—During the year ending June 30, 1897, 14 contracts were awarded for the survey of public lands, private land claims or grants and small holdings; the number of miles of different lines established by the surveys made under these contracts is 2,335. Applications were made for the survey of 45 mining claims and the amended survey of 4 mining claims, and there was deposited on account of surveys of mining claims \$1,235. There were 126 mining districts in the Territory, only 23 of which were platted, owing to insufficient clerical help. The United States Court of Private Land Claims passed upon the validity of 44 private land claims, 15 of which were confirmed and 29 rejected, and there were still about 100 cases to be acted upon. There were 3,305 claims on file.

Railways.—About 1,200 miles of railway were reported in operation in the Territory in 1897—the Santa Fe road, affording outlets to Texas and Mexico on the south and to Colorado and Kansas and all the east; the Atlantic and Pacific, through central Arizona and California to the Pacific on the west; the Denver and Rio Grande to the north and northwest; the Denver and Gulf, cutting across the northeast corner to Denver, Col., and through Texas to the Gulf of Mexico; at Galveston; the Southern Pacific, across the southwest corner, from El Paso, Texas, through southern Arizona to San Francisco, with a branch from Deming to Silver City and the Grant County mining camps; and the Pecos Valley road, in the southeast.

Life Zones.—Among some statements given out by a bulletin of the Agricultural College, at Mesilla Park, are the following concerning the life zones of the Territory: "The first is the treeless region above timber line. The second is the one of black timber, which in this Territory extends from a level of 10,000 feet to timber line. This is the zone of heavy forest growth. The Pecos river rises within its limits, to which fact its continuous flow is in a measure attributed. The mid-alpine zone comes next. It lies at an elevation of 8,000 to 10,000 feet above the sea. In this area cereals can be cultivated, but not fruit trees, except some of the more hardy kinds. The next zone lies at an altitude of about 7,000 feet. It includes the lower San Juan. In it fruit trees do well. This is called the transition zone. Below it lies the upper Sonoran zone. This includes Albuquerque and the Mesilla Valley.

Sweet potatoes and Mission grapes do well there, and figs may be grown as curiosities. Some varieties of cotton also may be grown."

Indians.—The Mesquero Apache Indians, numbering about 500, in the southeastern part of the Territory, are under the agency of Lieut. V. E. Stottler, detached from the Tenth United States Infantry, who reported satisfactory progress in the management of this refractory tribe. All the Indian children are now attending school, the force of which comprises two teachers, a matron, laundress, cook and assistant, seamstress, industrial teacher, and carpenter. All vacations were abolished during 1895. The agent found that to allow the children to go home for two months during the summer meant a lapse into the old Indian mode of life. Each child has half a day in the classroom, and the other half at industrial work. The girls take turns at the kitchen, laundry, and sewing room, and the boys farm and chop wood. During 1896 there were raised on the farm 25,000 pounds of beets, 20,000 pounds of cabbage, 1,000 pounds of cauliflower, 3,500 pounds of turnips, 1,400 pounds of onions, 500 pounds of radishes, 1,400 pounds of celery, 2,000 pounds of pumpkins, 400 pounds of peas, 960 pounds of corn, 6,500 pounds of potatoes, besides cucumbers, asparagus, etc. The school has a pen of swine, flocks of chickens, and a herd of fine milch cows, and all the food for these animals is raised on the farm. In 1896, on recommendation of Lieut. Stottler, the Government issued 5,000 sheep for distribution among the tribe, and 500 for the school, the idea being to have the Indians raise their own mutton, and then to cut off the supply of beef, which cost the Government \$6,500 in 1896. On July 1, 1897, all rations except beef were cut off. The agent reports, in conclusion, that "every male on the reservation has cut his hair, put on civilized dress, and taken a piece of land, which he has fenced, and commenced to raise grain and vegetables. They all have cabins or frame houses, with cook stoves and utensils. There is no drunkenness. Every man has ten head of sheep, and a like number for each member of his family. Every child on the reservation is at school. Every man has a wagon, harness, and plow."

New Capitol.—The new Capitol, to take the place of the one destroyed by fire, was begun early in 1897. The main façade is approached by a broad terrace leading to a massive portico. The first story will be of cut stone, above which the building will be faced with buff brick, with a heavy cornice and frieze girdling the entire structure. Over the central part of the building will be a dome 36 feet in diameter, resting on a die intended for the reception of statuary. Surmounting the dome will be a group of columns forming the lantern and supporting the flagstaff, 125 feet above the ground. Each floor will be provided with ample fireproof vaults for the storage of records.

Legislative Session.—Among the acts passed by the Legislative Assembly were the following:

Providing for payment of an occupation tax by business men. It fixes the license to be paid by business men other than liquor dealers, and provides that the money received from such licenses shall be equally divided between the general school fund and the general current-expense fund in the counties where the licenses are issued. Licenses may be taken out quarterly, semiannually, or annually.

For the protection of game and fish.

To encourage the construction of new railroads.

For printing bills and resolutions in Spanish.

Providing for the payment of wages of working-men in mines in lawful money.

For the greater safety of travelers on railroads.

NEW YORK, a Middle State, one of the original thirteen, ratified the Constitution July 26, 1788; area, 49,170 square miles. The population, according to each decennial census, was 340,120 in 1790; 589,051 in 1800; 959,049 in 1810; 1,372,111 in 1820; 1,918,608 in 1830; 2,428,921 in 1840; 3,097,394 in 1850; 3,880,735 in 1860; 4,382,759 in 1870; 5,082,871 in 1880; and 5,997,853 in 1890. According to a State census taken in 1892, the population was 6,513,344. Capital, Albany.

Government.—The following were the State officers during the year: Governor, Frank S. Black, Republican; Lieutenant Governor, Timothy L. Woodruff; Secretary of State, John Palmer; Comptroller, James A. Roberts; Treasurer, Addison B. Colvin; Attorney-General, Theodore E. Hancock; State Engineer and Surveyor, Campbell W. Adams; Superintendent of Public Instruction, Charles R. Skinner; Superintendent of Insurance, James F. Pierce, who was succeeded on Feb. 11 by Louis F. Payn; Superintendent of Banking Department, Frederick D. Kilburn; Superintendent of

FRANK S. BLACK, GOVERNOR OF NEW YORK.

State Prisons, Austin Lathrop; Superintendent of Public Works, George W. Aldridge; Commissioner of Labor Statistics, John T. McDonough; Railroad Commissioners, Ashley W. Cole, Alfred C. Chapin, and Michael Rickard, who were succeeded on Feb. 3 by Ashley W. Cole, George W. Dunn, and Frank M. Baker; Chief Judge of the Court of Appeals, Charles Andrews; Associate Judges, Albert Haight, John C. Gray, Irving G. Vann, Edward T. Bartlett, Denis O'Brien, and Celora E. Martin.

Finances.—The balance in the treasury Oct. 1, 1897, was \$2,313,314, compared with \$4,930,046 on Sept. 30, 1896. The total receipts of the year were as follow: From general sources, including excise, \$21,894,120, compared with \$20,742,547 in 1896; canal tax, \$6,712,155, compared with \$3,896,283; school tax, \$4,071,837, compared with \$4,034,557. The total expenditures were \$21,067,101 from the general fund, against \$18,248,181 the preceding year; \$5,249,035 for canals, including extraordinary improvements, against \$1,896,283, and \$4,048,642 for schools, against \$4,970,134. The State tax

rate is 2.67 mills, compared with 2.69 mills in 1896. It is distributed as follows: For general purposes, 0.18; for canals, 0.175; for schools, 0.91; for canal maintenance, 0.21; for canal special, 0.005; for State care of insane, 1.10; total, 2.67. The tax will raise for general purposes, \$809,244.47; for free schools, \$4,091,180.36; for new work on canals, \$292,311.12; for payment of canal debt, \$584,454.34; canal tax for maintenance and ordinary repairs, \$944,118.54; canal tax for extraordinary expenses, \$427,104.24. State care of insane, \$4,945,382.85; total, \$12,003,792.92. The following are the estimated revenues from indirect taxation: Estimated surplus, Sept. 30, 1897, \$1,474,613.00; tax on corporations and organization tax, \$2,300,000; inheritance tax, \$2,000,000; license fees for sale of liquors, \$3,250,000; arrears and interest of nonresident taxes, \$150; fees of public officers, \$35,000; sale of lands, \$40,000; banks, for expenses of Bank Department, \$30,000; insurance companies, for expenses of Insurance Department, \$185,000; railroad companies, for salaries and expenses of Railroad Commissioners, \$65,000; gas-light companies, for salaries of inspectors of gas meters, \$9,500; special tax for judges of Supreme Court, stenographers, and attendants, \$131,595; fees of notaries, \$35,000; pool tax, \$30,000; Niagara State reservation, \$8,000; Electrical Subway Commission, \$60,000; Soldiers' and Sailors' Home, \$115,000; State prisons, \$25,000; salt duties, \$30,000; miscellaneous, \$75,000; total, \$10,048,708.60.

Wealth of the State.—The State assessors during the year were Martin Heermance, Rollin L. Jenkins, and Edward L. Adams. The amount of property in the State in 1897, as returned by the local assessors, was \$4,506,985,649, the tables for which show an increase in the value of real estate of \$138,272,791, and of \$2,690,435 in the value of real estate over that of 1896. The increase of real property subject to assessment for New York, Kings, Queens, and Richmond Counties is \$1,342,149, and of personal property \$15,135,315. New York County's total valuation of real property is \$1,787,186,791, and of personal property \$1,731,509,143. This is an increase over last year of \$55,077,638 in real estate, and an increase of \$6,514,303 in personal property. This large increase in New York County is met, however, by a decrease in the assessed value of real estate in Kings County, where the total valuation is but \$510,107,742, a decrease of \$45,203,255, while the value of personal estate is increased \$6,152,085 to \$33,688,721. Queens County shows a falling off of \$15,657,940 in the value of its real estate, as compared with last year, while Richmond shows a gain of \$3,831,398. In personal estate Richmond has a gain of \$1,513,284 over last year, and Queens shows a gain of \$955,443. Oneida and Onondaga Counties show gains of more than \$10,000,000 each in personal estate, and Herkimer a gain of \$1,000,000 in real estate. Suffolk County shows a gain of \$26,000,000 in real estate over 1896.

Legislative Session.—The regular session of the Legislature began on Jan. 6, 1897, and continued until April 24. As elected, the Senate consisted of 36 Republicans and 14 Democrats, and the Assembly of 114 Republicans, 35 Democrats, and 1 Independent Republican. Timothy E. Ellsworth was continued as President *pro tem.* of the Senate, and James M. E. O'Grady Speaker of the Assembly. The Legislature passed 1,159 bills, of which 797 were approved by the Governor.

By far the most important act of this year's Legislature was that creating the Greater New York. It passed the Assembly on March 23 by a vote of 118 against 28, and was then sent to Mayor Strong for his acceptance; but this official returned it with a message of disapproval, and again, on

April 12, it passed the Assembly by a vote of 106 against 32. On May 5 the bill received the signature of Gov. Black. It went into effect on Jan. 1, 1898. The amendments to the original "Races law" were signed by the Governor and went into immediate operation. Among the other measures adopted are the following:

Concerning New York city:

Allowing the expenditure of \$250,000 for the improvement of Bryant Park and the building of a free library, to be occupied by the New York Public Library on the Astor, Lenox, and Tilden foundations.

Regulating the height of fireproof dwelling houses, and providing that they shall not exceed 150 feet on streets and avenues exceeding 79 feet in width and 100 feet when the street is less than 79 feet.

Authorizing the city to contract with the Grant Monument Association for the preservation of the tomb of Gen. Grant.

For the extension of the Metropolitan Museum of Art building.

To allow cars of elevated or surface railroads to run over the Brooklyn Bridge, and making one fare good for a trip from New York or Brooklyn, without extra cost for crossing the bridge.

A new East-River bridge bill, permitting a change in the plan of the Brooklyn approach.

Amending the act relative to the boundaries of the proposed public park for the Twenty-third Ward, by providing that the westerly boundary shall be the easterly bulkhead line of Harlem river.

Authorizing the city to issue bonds to provide for the payment for land required for the erection of a courthouse for the appellate division of the Supreme Court.

Other measures enacted were:

Amending the code of civil procedure to provide that a decree of probate of a will shall not be conclusive as to personality in an action brought under section 2653a to determine the validity or invalidity of such will.

Providing that the maximum punishment for arson shall be twenty-five years instead of fifteen years, for a second-degree offense; fifteen years instead of seven for a third degree.

Providing that a person who willfully, by loosening, removing, or displacing a rail, or by any other interference, wrecks, destroys, or so injures any car, tender, locomotive, or railway train, or part thereof, while it is moving on any railway in this State, whether operated by steam, electricity, or other motive power, and thereby causes the death of a human being, is guilty of murder in the first degree.

Providing that, if a woman die, leaving illegitimate children, and no lawful issue, such children shall inherit her personal property as if legitimate.

Providing that a married woman may confess judgment if the debt was contracted for the benefit of her separate estate or in the course of business carried on for her separate account.

Protecting sales of real estate of infants by special guardian prior to Jan. 1, 1872.

Amending the code of civil procedure relative to possession of real property in reference to the foreclosure of mortgages.

Authorizing the Governor to appoint a commission of three to examine the efficiency of voting machines which are offered for use.

Providing for the completion of the State Capitol building by contract under the supervision of State Superintendent of Public Works George W. Aldridge.

To authorize the records of the New York State Weather Bureau to be received and read in evidence in any court of the State.

Appropriating \$25,000 for the college of agriculture at Cornell University, to be expended in giving instruction throughout the State and in carrying on experiments.

Appropriating \$22,000 to erect an equestrian statue to Major-Gen. Henry W. Slocum, on the Gettysburg battlefield.

Appropriating \$25,000 to pay a bounty of one cent a pound on beet sugar raised in the State.

Abolishing the business of ticket scalping.

Authorizing the expenditure of \$5,000 a year for five years, under the direction of the Long Island Historical Society, in translating and preserving the old Dutch records and historical documents of Kings County, Brooklyn, New Utrecht, and Gravesend.

To establish a botanic garden in Prospect Park, Brooklyn.

Providing that any one who is found in possession of an anæsthetic (knock-out drops), unless upon a physician's prescription, shall be guilty of a felony.

Appropriating \$11,000 for the erection of a new building at the New York agricultural experiment station in Geneva.

Appropriating \$25,000 to purchase the site of the battle of Stony Point, Rockland County.

Prohibiting the hounding of deer for ten years in the towns of Dresden and Putnam, Washington County.

Amending the fish and game laws by providing that floating devices, boats propelled by hand and sailboats, may be used from which to shoot web-footed wild fowl in Long Island Sound, Great South Bay, Gardiner, Shinnecock, and Peconic Bays.

Providing that railroad companies shall not mortgage their property without the consent of stockholders owning two thirds of the stock.

Amending the election law by including primary elections under that section which makes it a misdemeanor to practice fraud or bribery.

Authorizing the sale of the Onondaga Salt Springs reservation.

Making money due to truckmen or cartmen preferred claims on the estates of debtors.

For the office of United States Senator, to succeed David B. Hill, Democrat, the nominees were Thomas C. Platt by the Republicans and David B. Hill by the Democrats. A joint session of the Assembly was held on Jan. 20, when the vote was as follows: Platt, 147; Hill, 42; Henry George, 4. On the same day Chester S. Lord was elected a Regent of the University of New York, over Henry P. O'Neil, the nominee of the Democratic caucus.

Banks.—These are under the supervision of a State superintendent, who is appointed for three years. The present incumbent is Frederick D. Kilburn, who was appointed Jan. 24, 1896. His report for the fiscal year ending Sept. 30, 1897, shows that the number of active State banks of deposit and discount in New York was 212, a net decrease of one since the last report. The total resources of all the moneyed institutions under the supervision of the department are as follow: Banks of deposit and discount, Sept. 15, 1897, \$329,272,539; savings banks, July 1, 1897, \$89,671,900; trust companies, July 1, 1897, \$44,465,629; safe-deposit companies, July 1, 1897, \$4,225,124; foreign mortgage companies, Jan. 1, 1897, \$23,427,559; building and loan associations, Jan. 1, 1897, \$5,439,218; total, \$1,695,254,960. The increase, compared with the resources of the same institutions in 1896, is \$137,291,278. The amount of capital employed by the State banks of deposit and discount and by individual bankers on Sept. 30, 1897, was \$30,570,700, a decrease of \$650,000. The resources of all the State banks of deposit and discount in New York on Sept. 15,

1897, were \$329,272,539, compared with \$273,795,005 in 1896. The securities and cash deposited with the Superintendent of Banks in trust by the several banks, individual bankers, and trust companies, and held by him, was \$4,044,378.98. The report shows that there are still outstanding \$77,979 of the circulating notes of banks incorporated under the laws of this State which have not been advertised for redemption, and which are not secured.

Insurance.—This department is under the care of a superintendent who is appointed for three years. The incumbent was James F. Pierce, whose term of office expired on Feb. 11, when he was succeeded by Louis F. Payn. The annual report for 1896, issued in May, shows that the business done by all the life companies during the year exclusive of "industrial" was: Policies in force, 269,025, insuring \$759,870,302; issued during 1896, 51,638 policies, insuring \$127,292,490; premiums received, \$26,758,946.95; claims incurred, \$12,640,235.97; claims paid, \$12,365,947.69. Twenty-five casualty and fidelity companies reported: Assets, \$28,563,940.85; liabilities, except capital, \$12,749,600.71; capital, \$10,179,600; net surplus, \$5,673,346.87; receipts, \$17,451,219.24; disbursements, \$16,274,638.04; risks in force, \$2,800,871,565.

The summary of the department's two joint reports on all kinds of companies shows: Fire—companies, 153; assets, \$261,602,530; liabilities, except capital, \$124,333,031; surplus, \$80,438,624; risks in force, \$18,236,140,779. Marine—companies, 14; assets, \$20,525,021; liabilities, except capital, \$5,113,584; surplus, \$14,411,437; risks in force, \$230,675,840. Life—companies, 36; assets, \$1,228,324,342; liabilities, except capital, \$1,053,608,138; surplus, \$164,905,704; risks in force, \$5,820,660,739. Casualty—companies, 25; assets, \$28,563,940; liabilities, except capital, \$12,749,600; surplus, \$5,634,740; risks in force, \$2,800,871,565.

Excise.—In accordance with the so-called "Rainey bill," enacted in 1896, the collection of the excise dues was intrusted to a commissioner, and the incumbent during 1897 was Henry H. Lyman. The amount received in 1897 was \$12,275,247.60. One third of this amount (\$4,091,749.20) was paid to the State, and the other two thirds (\$8,183,498.40) divided among different localities. On Oct. 1, there were 28,054 licenses outstanding. The number in force before the present law went into effect was 33,437, and the amount of money received therefrom was \$3,172,376.58, hardly more than one quarter of the present income from the same source. The receipts have nearly quadrupled, and the number of licenses has decreased almost one sixth. The records of the police courts in 41 cities and 430 incorporated villages show that, notwithstanding an increase in population, the cases of drunkenness have fallen off to a marked degree. The uniform law and rate of taxation throughout the State have done much to equalize the privileges of this traffic and to remove many of its objectionable features. A census of the number of saloons in cities showed that the number of saloons to each 1,000 inhabitants ranged from a minimum of 2.6 in Jamestown to a maximum of 8.1 in Long Island City.

Civil Service.—The civil-service commissioners are Willard A. Cobb, George P. Lord, and Silas W. Burt. According to their annual report, the number of persons examined in 1896 was 3,829, against 1,460 in 1895. The number for 1896 is more than the total for the first ten years of the history of the commission. Of those examined, 1,835 were successful. The number of appointments after examination during the same period was 631, or in the ratio of about one appointment to three successful candidates. The largest number of appointments

after competitive examination in any preceding year was that for 1895, when the number was 300; 134 competitive examinations were held, on seventy-one days, in 1896, against 51 examinations in 1895. The number of eligible lists prepared during the year 1896 was 129.

Education.—This department is under the supervision of a superintendent, whose term of office is three years. The present incumbent is Charles R. Skinner. There are 11,738 school districts, compared with 11,800 in 1896. There is a decrease of 83 in the number of districts in the country, but an increase of 20 in the cities. The total valuation of schoolhouses and sites is \$66,077,000, the city schools being valued at \$49,784,983. The increase in the valuation is \$5,774,474. The number of teachers employed is 34,367, of whom 5,461 are men and 28,902 women, a net increase of 565. In cities 15,283 teachers are employed, and in the country 19,102, being an increase in the cities of 1,794 and a decrease in the country of 1,229. The average annual salary paid to teachers is \$495.43, an increase of \$8.06. In cities the average is \$720.09, a decrease of \$5.10, and in the country it is \$312.12, an increase of \$5.94. The teachers report 1,203,199 children in attendance at school between the ages of five and eighteen, of whom 685,803 live in the cities and 517,396 in the country. The increase is 17,091. The total expenditure for school purposes was \$26,689,856, as compared with \$23,173,830 in 1896. Of the expenditures, \$7,537,212 was devoted to rural districts and \$19,152,644 to cities, which shows an increase of \$3,610,573 in city districts and a decrease of \$94,547 in rural districts. The amount of salaries paid to teachers in cities was \$9,158,205, and in rural districts \$5,001,854. School buildings erected, repaired, and equipped during the year involved an expenditure of \$8,398,676, of which \$1,171,976 was spent in the country districts.

Health.—This charge is under the supervision of a board consisting of Case Jones, president; Baxter T. Smelzer, Daniel Lewis, Owen Cassidy, Frederick W. Smith, George B. Fowler, Frank E. Shaw, and Attorney-General Theodore E. Hancock. State-Engineer Campbell W. Adams, and Health-Officer Alvah H. Doty, *ex officio*. These gentlemen serve without compensation. In 1897, 124,600 deaths were reported to the State Board of Health, making a death rate for the State of 18.50 per 1,000 of population, against 18.60 in 1895. There were 19,510 deaths from infectious diseases. There were only 3 deaths from smallpox, all occurring in or near the metropolis. Grip recurred in milder form, causing fewer than 3,000 deaths, most of them in March. Typhoid fever caused 1,600 deaths. Diphtheria caused fewer deaths than during the past ten years—4,600. Scarlet fever caused 771 deaths. In contrast with typhoid fever, it is a disease of cities, there having occurred from it in the four large cities, New York, Brooklyn, Buffalo, and Rochester, 3,477 deaths, against 577 from typhoid fever, while in rural towns, with an aggregate population of 1,500,000, there were 307 deaths from it, against 366 from typhoid fever. The most noteworthy feature of the sanitary condition of the State is the steady diminution in the number of deaths from consumption in New York and Brooklyn. In the congested portions of these municipalities are found the largest percentages of deaths from nearly all infectious diseases, and slight variation from previous years, but in tuberculosis the decrease has been steady for five years. The explanation of this gratifying exhibit is the fact that the local boards of health in these cities have recognized that the disease is due to infection, and precautions have been taken to prevent its spread by a more rigid scrutiny of the food supply, espe-

cially in the quality of milk and the examination of the cows.

The fertilizer and animal-manure manufactories on Newtown creek are still being investigated by order of the Governor.

Charities.—There are more than 1,000 charitable institutions and private charitable organizations in the State. The State Board of Charities, in its report to the Legislature, shows that the number of beneficiaries in the various institutions subject to the supervision of the board are 60,848, who are cared for at an expense of more than \$20,000,000. There are 22 institutions wholly or partly maintained at the public expense. The report says: "While the State Board of Charities is empowered by law to approve or disapprove of the organization and incorporation of charitable institutions, societies, and associations, and to license institutions for the feeble-minded, it has no direct authority to dissolve such corporations or to revoke licenses. The board believes that the best interests of the State require that such powers should be conferred upon it, thereby providing a speedy way of closing unworthy and undesirable institutions, of which there are not a few."

Canals.—The care of these water ways is in charge of the Superintendent of Public Works. The incumbent during the year was George W. Aldridge. The canals were opened May 5, and closed for the season Dec. 1, 1897. The wheat shipments of the season reached 25,964,172 bushels. This is a decrease of 11,000,000 bushels compared with 1896, but an increase of 5,000,000 bushels over 1895. The average rate of freight on wheat was 2.8 per cent., compared with 3.7 per cent. in 1896 and 2.2 per cent. in 1895. The rate on grain this year is the lowest, with one exception, on record. Toward the close of the year it was shown by Campbell W. Adams, State Engineer and Surveyor, that the amount of \$9,000,000 appropriated for the improvement of the canals was insufficient, and that at least \$7,000,000 additional will be required. According to Gov. Black, the cost of building all the canals, of maintaining them since the completion of the Erie Canal in 1825, and enlarging them now, has been more than \$97,628,867.45, and yet the commerce passing over them paid that enormous amount in tolls in less than sixty years.

Prisons.—These are under the care of a superintendent. The present incumbent is Austin Lathrop. According to his report submitted to the Legislature, the prison population on Oct. 1, 1896, was: Auburn, 1,089; Clinton, 886; Sing Sing, 1,220; total, 3,195. The population of the State prisons is the smallest for many years. The actual decline in the year in inmates is 388; the decline since Sept. 30, 1891, is 494. The expenditures for care and maintenance were: Sing Sing, \$168,153.67; Auburn, \$154,763.06; Clinton, \$151,968.79. Deficiency in the three prisons, \$353,303.12. The expenditures for care and maintenance have risen \$7,705.89 in the three prisons. In Sing Sing the increase is \$20,293.73, in Auburn the decrease is \$7,728.73, in Clinton the decrease is \$4,859.13.

The present system of convict labor was adopted in accordance with the provisions of an act of the Legislature of 1896, which followed out the mandate of the new Constitution, prohibiting the sale of prison-made goods in this State in the open market. When the prison authorities were making preparations to carry out the law they were skeptical as to whether there would be a sufficient demand for goods to keep the convicts employed. These fears have been dissipated by the workings of the law during its first eleven months of operation. During that time requisitions have been received for more than \$750,000 worth of goods,

which guarantees the continuous employment of convicts. As it costs but about \$500,000 annually to maintain the prisons, they are made self-supporting under the new system. Superintendent Lathrop has asked the Legislature for an appropriation with which to build a prison in the central part of the State at which all executions shall take place. He says: "The reformatory prisons do not seem to be the proper place for executions. It has been found that each approaching event of this kind is the cause of perturbation and depression among the prison population; it is sometimes antagonistic to the disciplinary methods of these institutions, and is so obnoxious that the officers do not hesitate to condemn the practice of having such executions in the prison."

Labor Statistics.—This department is in charge of a commissioner. The present incumbent is John T. McDonough. In 1895 reports were received from 427 trade unions, giving their membership as 180,231, including men and women; in 1896, 962 unions sent in reports, but the total membership only reached 170,296, a falling off of about 10,000. In the clothing trade there are 20,000 fewer members this year. Returns from 1,721 establishments, in the 65 general industries covered by the report, show that, in 1891, 200,333 persons employed by these concerns were paid \$93,257,541.09, an average of \$465.51 to each employee. In 1895, according to the figures presented by 2,290 establishments, 253,139 persons engaged therein obtained in wages \$110,427,158.81, an average for the year of \$436.23. A good deal of attention was given in the report to statistics relating to wages paid by gas and electric-light companies, the costs of production, and the market values of heating and lighting products. Eight electric-light plants submitted figures showing that the employers received 42.08 per cent. of the cost of the products, and that the percentage of the companies' earnings was 84.24. The figures for 21 gas companies were 26.24 and 108.59, and the figures for 6 companies, conducting both gas and electric business, were 34.71 and 182.83. There were 40 per cent. less strikes and lockouts in 1896 than in 1895.

National Guard.—The supervision of the militia is under the charge of the Adjutant General on the Governor's staff. All the organizations of the Guard are now fully equipped for active service, and no delay would be incurred in mobilizing upon short notice. The organizations of the naval militia were found to be in excellent condition. The medical departments of the Guard and naval militia are well supplied with all necessary appliances, and the hospital corps of nearly every organization are most efficient.

Railroads.—This department is cared for by three commissioners, each of whom serves for five years. The incumbents at the beginning of the year were Ashley W. Cole, Alfred C. Chapin, and Michael Rickard, who were succeeded on Feb. 3 by Ashley W. Cole, George W. Dunn, and Frank M. Baker. According to their report, the gross earnings for the year ending June 30, 1897, show a decrease, compared with 1896, of \$5,901,397.82, and a decrease in operating expenses of \$6,977,196.29. The capital stock was increased \$3,238,855 during 1897, and the funded debt \$28,698,185.40. Other liabilities were diminished \$1,388,874.28, and the cost of road and equipment was increased \$19,647,095.84. The aggregate of bonds and stock at their par value is greater than the aggregate cost of road and equipment by \$1,953,300.51. The percentage of dividends on capital stock was 2.45, against 2.49 in 1896. The actual increase in steam-railroad mileage in this State during the year was 57.56 miles, to which the New York and Pennsylvania

railroads contributed 27.10 miles, the Depew and Tonawanda Railroad 10.56 miles, South Vandalia and State Line Railroad 4 miles, and small extensions of prior existing roads the remainder. The aggregate railroad mileage for the State is as follows: Surface, steam, 8,113.52; surface, street, 1,178.79; elevated, 65.71; total, 9,358.02.

Forest Preservation.—During 1897 the Forest Preserve Board purchased more than 250,000 acres, and the total sum expended was \$940,000. The sum included an item of less than \$15,000, covering the total expenses incident to the acquisition of this property, together with services in searching titles and inspection and determination of the value of the property. About \$12,000 was expended for the acquisition of timber rights and the payment of back taxes on lands acquired, so that only \$913,000 was expended in the purchase of 250,000 acres. This makes the average price about \$3.50 an acre. The lands acquired include many of the choicest tracts in the north woods. The sum of \$60,000 remains unexpended, and this amount the board has reserved because, for an expenditure of \$940,000, a larger acreage has been acquired than was expected from the expenditure of the entire appropriation of \$1,000,000. There are altogether about 3,000,000 acres of forest lands in the Adirondacks. Previous to the appropriation of \$1,000,000 for the acquiring of forest lands, the State owned about 800,000 acres of the total 3,000,000. When the Forest Preserve Board has spent the entire \$1,000,000, 250,000 acres will have been acquired, bringing the State's ownings up to 1,050,000 acres.

Fisheries.—The commissioners in charge of this department are Barnet H. Davis, Edward Thompson, William R. Weed, H. S. Holden, and Charles S. Babcock. Their report for the year ending Sept. 30 gives the following items: During 1897 there were hatched and planted in public waters in the State 191,726,678 fish of various kinds, all the eggs having been taken from stock fish at the hatching-station ponds or secured from wild waters in the State. The fish were hatched and distributed at a total cost of 19.6 cents a thousand. The commission reared and planted 130,400 trout eight and ten months of age and 14,858 trout from twelve to eighteen months of age, or a total of 144,855 above the age of what are commonly called "fingerlings." In addition to the fish hatched and distributed from the State hatcheries, the United States Fish Commission contributed to the State 27,417,533 fish and eggs, the eggs being hatched at the State hatcheries, making a grand total of 219,144,211 fish of all kinds planted in State waters. The increase in the output of commercial fishes from the State hatcheries for 1896 was more than 34,000,000 over that of 1895. A systematic attempt was made to cultivate the Labrador whitefish, one of the most delicious of the whitefishes, and 250,000 eggs were taken at a temporary station at Canandaigua lake and hatched at Caledonia. Since the close of the year further operations have been conducted at Canandaigua lake on a greater scale, and 13,160,000 whitefish were hatched at Caledonia from eggs taken in this lake, showing the possibilities of this branch of fish culture, should a perfectly appointed hatching station be erected.

State Capitol.—The Capital Commission in existence at the beginning of the year was abolished by the Legislature at the instigation of the Governor, and the completion of the work was given to the Superintendent of Public Works. On May 29 the contract for completing the Capitol was awarded to the Hallowell, Me., Granite Works. The bid of this company was \$259,000, and the award was approved by Gov. Black. During the year there was contract work under way aggregating \$80,000,

which will be finished by Feb. 1, 1898. There was about \$100,000 left of last winter's appropriation, which was used upon the building and grounds.

Centennial of the Capital.—A commission, authorized by the Legislature, consisting of John B. Thacher, Myer Nussbaum, William B. Van Rensselaer, William Jay, and James M. E. O'Grady, was named by Gov. Morton to conduct the celebration in Albany, Jan. 6, 1897, of the one hundredth anniversary of the selection of that city as the State capital. The Legislature appropriated \$2,500 and authorized the city of Albany to expend \$5,000 for the celebration. The exercises began with a parade of military and civic organizations under the marshaling of Oscar Smith, and was followed by literary exercises in Harmanus Bleecker Hall. These began with an address by ex-Gov. Morton, and included an historical address by Chauncey M. Depew, an address by Thomas G. Alvord, and a poem by William H. McElroy, with music at intervals. In the evening a brilliant display of fireworks was made in Washington Park. A ball, the most brilliant ever seen in Albany, was given in the evening.

Battle Monument.—On May 30 the battle monument erected in memory of the officers and enlisted men who fell in battle during the civil war by their surviving comrades was dedicated at West Point. The monument consists of a monolithic shaft of polished pink Milford granite, 46 feet high, standing on a cylindrical pedestal, and bearing on a square abacus a granite sphere, upon which is poised a winged figure of Fame, with trumpet and wreath. The whole stands upon a circular stylobate and stereobate of granite steps divided at regular radial intervals by eight square plinths, bearing granite spheres belted with bronze, upon which are inscribed the names of 2,042 enlisted men. The names of 788 officers are applied in bronze letters on the face of the circular pedestal. The cost of the monument was about \$75,000. The architects were McKim, Mead and White, and the sculptor, Frederick Macmonnies. The ceremonies included the presentation of the monument to the United States army by Gen. John M. Wilson, its acceptance by Gen. John M. Schofield, and presentation to the General Government, and its acceptance by the Secretary of War.

Political.—The election held on Nov. 2 was for a single State officer, namely, Chief Justice of the Court of Appeals, to succeed Charles Andrews, whose term expired on Dec. 31.

The Prohibition State Convention was held in Syracuse Sept. 8, and adopted a platform calling for abolition of the liquor traffic and denouncing the Raines law. Francis E. Baldwin, of Elmira, was unanimously chosen as candidate for the chief-justiceship.

The Democratic State Committee met Sept. 15, and issued an address in which no reference was made to the Chicago platform. This committee named Alton B. Parker, of Kingston, as their candidate for the chief-justiceship.

The Republican State Committee met in New York city Sept. 18. It issued an address advocating in strong terms the gold standard and denouncing agitation for "reputation and a dishonest dollar." The convention unanimously named William J. Wallace, of Albany, as the candidate.

Theodore F. Cuno was the nominee of the Socialist-Labor party. The vote was as follows: Total number of votes cast, 1,159,158; Parker, Democrat, received 554,680; Wallace, Republican, 493,791; Cuno, Socialist, 20,854; and Baldwin, Prohibitionist, 19,653. Parker's plurality over Wallace, 60,889. The defective, blank, and scattering votes numbered 70,180, of which 56,259 were cast in New York, 9 in Kings, and 3,851 in Queens.

NEW YORK CITY. Government.—The city officials who held office during the year were: Mayor, William L. Strong; President of the Board of Aldermen, John Jerejian; Register, William Schmer; and Sheriff, Edward J. H. Tamm, all of whom were elected on the anti Tammany ticket and took office Jan. 1, 1895, except the Register, who is a Tammany Democrat, and took office Jan. 1, 1896.

Finances.—The condition of the debts of the boroughs of Manhattan and the Bronx is shown in the accompanying table:

FUNDED DEBT.	Outstanding Dec. 31, 1894.	Outstanding Dec. 31, 1895.
1 Payable from the sinking fund, under provisions of the Consolidation Act of 1895.	\$2,500,000 00	\$2,500,000 00
2 Payable from the sinking fund, under provisions of chapter 380, section 6, Laws of 1878, and section 176, New York City Consolidation act of 1895.	9,700,000 00	9,700,000 00
3 Payable from the sinking fund, under provisions of chapter 380, section 8, Laws of 1878, and section 192, New York City Consolidation act of 1895, as amended by chapter 178, Laws of 1896.	69,544,904 44	112,262,464 70
4 Payable from the sinking fund, under provisions of chapter 79, Laws of 1890.	9,922,100 00	9,922,100 00
5 Payable from the sinking fund, under provisions of the constitutional amendment adopted Nov. 4, 1894.	38,770,000 00	41,977,000 00
6 Payable from taxation.	445,100 00	445,000 00
7 Payable from taxation, under the several statutes authorizing their issue.	25,273,002 80	34,531,002 80
8 Bonds issued for local improvements after June 9, 1880.	9,718,428 61	10,000,526 21
9 Debt of the annexed territory of Westchester County.	477,000 00	463,000 00
10 Debt of the annexed territory (chapter 504, Laws of 1865).	616,134 27	713,300 00
11 Special revenue bonds.		1,461,645 01
Total funded debt.	\$105,907,600 19	\$224,679,679 79
Deduct sinking fund investments for redemption of debt.	77,630,491 63	
Not including \$315,863.58 cash on deposit in 1897.		85,654,317 22
Net funded debt.	\$118,277,108 56	\$139,025,361 57

The foregoing table shows that during the year beginning with Dec. 31, 1896, the net bonded debt increased \$20,548,162.71. For the three years since Dec. 31, 1894, the total increase has been \$34,746,540.46. In the year the cost of permanent improvements amounted to \$28,939,915.49, and bonds were issued to cover that amount as follow: For public buildings, \$2,874,196.65; for schools and education, \$6,598,262.83; for docks and improvements of parks and highways, \$1,428,097.42; for bridges, \$1,749,846.17; for paving and repaving, \$2,464,425; extension and improvement of water supply, \$3,757,000; assessment bonds, \$982,087.60; and miscellaneous, \$4,085,099.82. The amount of the issue of

* While the bonds have always been classified as temporary debt, it has been claimed lately in the rapid transit litigation, and probably correctly, that as they are redeemed out of the tax levy of the year succeeding the year of their issue, they do not fall within the exception in section 10 of Article VIII of the Constitution, and that they should be included with the funded debt for the purpose of ascertaining what is the city's margin of indebtedness.

bonds during 1897 is the greatest in the history of New York city. In addition to the foregoing, bonds to the amount of \$114,000 issued by the territory of Westchester County, annexed in 1895, were assumed by the city in 1897. The returns, as given below, resulted, in August, in the announcement of a tax rate of \$2.10 for each \$100 of assessment, compared with \$2.14 for 1896.

Board of Estimate and Apportionment.—This body—consisting of the Mayor, the President of the Board of Aldermen, the Comptroller (Ashbel P. Fitch), the President of the Department of Taxes and Assessments (Edward P. Barker), and the Corporation Counsel (Francis M. Scott)—allowed the following amounts for 1898: State taxes and common schools for State, \$5,704,871.81; interest on the city debt, \$6,126,801.14; redemption of city debt, \$3,352,139.85; the Mayoralty, \$42,155; the Common Council, \$90,000; Finance Department, \$360,988.21; Law Department, \$212,550; Bureau of Public Administrator, \$17,390; Department of Public Works, \$3,745,700.16; Department of Public Parks, \$1,440,025; Department of Street Improvements, Twenty-third and Twenty-fourth Wards, \$1,010,275; Department of Public Charities, \$1,364,608; Department of Correction, \$488,100; Health Department, \$653,770; Police Department, \$7,051,630.12; Department of Street Cleaning, \$2,999,002.40; Fire Department, \$2,608,753; Department of Buildings, \$340,785; Board of Education, \$6,962,145.92; College of the City of New York, \$175,000; the Normal College, \$150,000; Department of Taxes and Assessments, \$170,720; the Judiciary, \$1,958,110; printing, stationery, and blank books, \$220,000; asylums, reformatories, and charitable institutions, \$1,578,517.06; municipal service examining boards, \$30,000; Bureau of Elections, \$312,000; commissioners of accounts, \$60,000; judgments, \$250,000; fund for street and park openings, \$734,568.86; coroners' salaries and expenses, \$57,700; the sheriff, \$130,982; Register's Office, salaries and expenses, \$129,250; miscellaneous, \$915,105.11; total, \$51,443,643.64; deduct general fund, \$5,040,900.48; grand total, \$46,402,743.16.

This statement shows that the amount allowed for 1898 is \$51,443,643.64, which is reduced by deducting from the general fund made up by receipts from various sources during the year, the unexpended balance of previous years amounting to \$5,040,900.48. The total amount to be raised by taxation is \$46,402,743.16, which represents an increase of \$1,973,187.97 over that of 1897, and of \$8,825,783.12 over that of 1894. The increase is due chiefly to the greater amounts required for the administration of the larger territory, and notable among the increased amounts is that of \$1,030,906 for education, \$202,518 for public works, \$172,824 for the Fire Department, and \$69,691 for police.

Wealth of the City.—This department is a county charge, and is cared for by a board of three tax commissioners, as follows: Edward P. Barker, president, Theodore Sutor, and James L. Wells. The office is at 280 Broadway. They report the total valuations of real and personal property as assessed for taxation in 1897, at \$2,168,635,856, against \$2,106,184,905 for 1896, showing a net increase of \$62,450,951, which is distributed as follows: Increase in real estate, \$55,677,648; personal, \$6,473,303; total, \$62,150,951. The total taxation on personal estates was distributed as follows: Insurance companies, \$3,201,461; trust companies, \$5,341,508; railroad companies, \$28,426,511; miscellaneous, resident corporations, \$47,438,915; miscellaneous, nonresident corporations, \$19,934,462; resident, personal, \$7,693,110; nonresident, personal, \$27,880,833; estates, \$9,886,270; banks, \$81,936,386 total, \$381,449,065. The real-estate taxa-

tion was distributed as follows: Net result of real-estate valuations for 1896, as shown by the books sent to Receiver of Taxes, \$731,509,143; gross increase of real-estate valuations over 1896, as shown by the books when opened for revision in January, 1897, \$64,129,648 (of this amount, \$35,000,000 was for improvements on real estate); increased real-estate valuations made by consent and notice, \$17,355; total, \$1,795,656,146; total personal and real estate, \$2,168,635,856. The Aquarium, formerly Castle Garden, is rated at \$1,000,000, including the Battery wall and engine house. A valuation of \$4,200,000 is given to the land occupied by the New York end of the Brooklyn Bridge. This property includes lots on Park Row, and North William, Rose, Vandewater, Cliff, Pearl, Cherry, Water, and Front Streets. Washington Market is valued at \$600,000, and Fulton Market at \$400,000. Washington Bridge is valued at \$1,000,000, and Spuyten Duyvil Bridge, which crosses Spuyten Duyvil creek, is entered at a valuation of \$500. High Bridge is valued at \$400,000. Bellevue Hospital and grounds have an official valuation of \$1,500,000. The sections of ground on which the Washington equestrian statue and the Lincoln statue stand (at Union Square) are each valued at \$1,000. The regimental armories appear on the records at conservative valuations, that of the Seventh Regiment being \$700,000; the Eighth Regiment and Troop A, at \$650,000; the Seventy-first Regiment, \$900,000; the Ninth Regiment, \$450,000; the Twelfth Regiment, \$300,000; and the Twenty-second Regiment, \$350,000. The old distributing reservoir in Fifth Avenue, between 40th and 42d Streets, is valued at \$2,250,000, the Jerome Park Reservoir at \$1,050,000, and the reservoir on Gun Hill Road at \$400,000.

Public Works.—This department is under the charge of a commissioner appointed by the Mayor. He holds office for four years. The incumbent during the year was Charles H. T. Collis. Active work on the widening of Elm Street was carried on. The commissioners (Joel B. Erhardt, Charles H. Truax, succeeded by William G. Davies and William G. Choate) appointed in 1895 to assess the value of property condemned reported in April that 150 parcels of property were affected by the improvement. They reported \$5,108,847 as the value of the property condemned and \$291,565 as the value of benefits that will accrue to property formerly in block centers, but which is now changed to corner lots. The site selected for the new building for the Hall of Records is the eastern part of the block bounded by Chambers Street on the south, Broadway on the west, Center Street on the east, and Reade Street on the north. The block so bounded will be cut in two by the extension of Elm Street from Reade Street to Chambers Street. The area of the property to be taken for the new building is 31,000 square feet. The appropriation of \$500,000 for the new wing of the American Museum of Natural History became available in May, and work on the building was begun. The improvement will make this museum the largest structure of its kind in the world. More than \$500,000 was expended in asphaltting streets. Of great importance was the completion of the repairing of Fifth Avenue, from Washington Arch to the end of the street, together with the laying of 48-inch water mains and new sewers in that thoroughfare. This work was begun Sept. 3, 1896, and completed Dec. 31, 1897, having cost \$800,000. During Commissioner Collis's administration 60 miles of block pavements were covered with asphalt, and about 42 per cent. of the new pavement was laid in the tenement-house district. The city has now 128.87 miles of asphalt pavement, against 62.34 miles in 1895. There are

three continuous routes of asphalt pavement from the Battery to Harlem river, so that every hospital has an ambulance route over smooth pavements to all parts of the city, and a bicyclist may ride from one end of the island to the other without traversing a block pavement.

Parks.—This department is under the direction of a board of four commissioners. During the year the board was composed of Stephen A. H. Tanager, president, Samuel McMillan, William A. Styles (who died Oct. 7), and Smith Ely. The secretary of the board is William Leary, and the office is in the Arsenal Building, Central Park. The Mulberry Bend Park was formally opened June 15. This was one of the first of the parks to be obtained in consequence of the passage of the small-parks act in 1887. The city paid \$1,500,000 for the land, and reclaimed for healthful purposes one of the worst and most populous tenement districts in the city. A small park at 76th Street and East river was decided on by the board at its meeting, June 18, when sites for three other parks were suggested.

Zoological Park.—The development of this park is under the care of the New York Zoological Society, of which body Levi P. Morton is president. The bill establishing the park provided that when the society raised \$100,000 the city should expend \$125,000 on improvements in preparation of the grounds for the buildings and collections. The Board of Park Commissioners in March approved the site chosen in Bronx Park by the society, which is described in the "Annual Cyclopaedia" for 1896, page 531, and active measures were taken by the society to secure the necessary funds. In the report of the society for 1897 it is shown that \$66,000 has been subscribed. Meanwhile, plans for the work, including those for ten of the most important buildings, were submitted to the Park Commissioners and received their approval on Nov. 22. The Board of Managers have christened all the hills, lakes, and distinctive portions of the park. The largest lake is named Agassiz, and another is called Cope, after the American zoologist who has linked his name with the study of the great mammals that once roamed over this country. There is an Audubon Hill, a Baird Court, and a Wilson Hill. All the quarters for the future zoological population of the park have been selected. The society has a membership of 551, compared with 118 in 1896.

Botanical Garden.—The plans for buildings prepared for the managers of the New York Botanical Garden were submitted to the Park Commissioners, and that body appointed a commission consisting of Charles S. Sargent, Thomas Hastings, John C. Olmsted, and Samuel Parsons, Jr., to report on them. A plan changing the site of the conservatory and removing the director's residence from the park, but retaining the original site of the museum, was finally agreed upon by the Park Board. The Board of Estimate and Apportionment granted an appropriation of \$500,000 for the building of the museum.

The Aquarium is under the general direction of the Park Department, and occupies the old site of Castle Garden on Battery Park. The superintendent is Tarleton H. Bean, and the building is open free to the public daily except on Mondays and Tuesdays, when it is open only between the hours of 12 m. and 1 p. m. It was first open Dec. 10, 1896, and in the year ending with Dec. 9, 1897, there were 1,635,252 visitors, being an average of 6,289 persons daily.

Vital Statistics.—The Board of Health consists of the president of the Board of Police, the health officer of the port, and two commissioners, one of whom must have been for five years a practicing physician. The commissioner who is not a physi-

cian is president of the board. The officials during 1897 were as follow: President, Charles G. Wilson; Dr. George B. Fowler, Health Officer; Dr. Alvah H. Doty, and President of the Board of Police, Theodore Roosevelt, who was nominated by Frank Moss. The secretary of the board is J. J. Jones Clark, and the headquarters are in the Criminal Court Building. The vital statistics were as follow:

ITEMS.	1896.	1897.
Deaths under one year	1,470	1,471
Deaths under five years	16,967	17,364
Total deaths	41,602	39,600
Total reported births	56,620	54,899
Total reported marriages	20,508	20,705
Total reported stillbirths	2,542	2,574
Death rate per 1,000 living	21.50	19.54

The principal causes of death were the following: Pneumonia, 4,624; phthisis, 4,847; diarrheal diseases, 2,575—under five years, 2,295; Bright's disease and nephritis, 2,499; heart disease, 2,347; diphtheria, 1,377; bronchitis, 1,089; measles, 891; whooping cough, 308; scarlet fever, 500; typhoid fever, 259; croup, 214; cerebro-spinal meningitis, 232; influenza, 196; malarial fever, 118; and small-pox, 24. Among the deaths by violence were the following: Accident, 1,784; sunstroke, 39; suicide, 436; and homicide, 63.

The use of anti-toxic serum in the treatment of diphtheria, the careful inspection and the permit system for regulating the sale of milk, the treatment of consumption as an infectious disease, the medical supervision of schools, the inspection of tenement houses and the destruction of the worst of the rear tenements, the cleanliness of the streets, and the general improvement in the sanitary administration account in a large part for the great decrease in the number of deaths.

On July 1, 1897, the estimated population of New York city was 1,950,562.

Street Cleaning.—This department is managed by a single commissioner. The incumbent during 1897 was George E. Waring, Jr. His report, which dealt largely with the separation, collection, and disposition of garbage, shows that the following cart loads of garbage were collected: By the department, 164,422; by private persons, 19,383; total, 183,805. About 800,000 cart loads of domestic ashes were collected this year, at a cost of 80 cents a load, making the total cost of collecting and delivery at the dumps \$640,000. A thorough investigation was made, looking to the possibility of developing a money value from the coal ashes of domestic fires. Repeated experimental analyses of these ashes indicated that they will yield on the average: Coal (recoverable), 20 per cent.; clinker, 15 per cent.; fine ash, 50 per cent.; coarse ash and stone, 15 per cent. These percentages give on the amount collected this year: Coal, 144,000 net tons; clinker, 180,000 cubic yards; fine ash, 600,000 cubic yards; coarse ash and stone, 180,000 cubic yards. A fair estimate of value of these materials is: Coal, 144,000 net tons, at \$2.50, \$360,000; clinker, 180,000 cubic yards, at 75 cents, \$135,000; fine ash, 600,000 cubic yards, at 28 cents, \$168,000; total, \$663,000. The new method of getting rid of worthless matter by burning has proved much more satisfactory than the old plan of dumping at sea. On this subject Col. Waring says: "To further extend this general method of disposal of refuse by burning it, plans have been prepared for a much larger plant, to be located in East 48th Street. These plans provide for a plant covering an area 85 feet by 100 feet, and having a brick furnace building 55 feet by 25. It will be ready for use early in 1898." Other plants are in course of construction at 110th Street, and at 30th Street, on the North river. Paper,

which under the old system was lost to the city, now is an important item on the credit side of the ledger. An estimate, based on twenty-one weeks of actual operation at the 18th-Street yard, gives the sales of paper for the year as 2,937,300 pounds, and the income \$6,815. The length of streets cleaned was 546 miles.

Police.—This department is managed by a board of four commissioners, appointed by the Mayor for a term of six years. The board during the year consisted of Theodore Roosevelt, president, succeeded by Frank Moss on April 21, and made president on May 5; Avery D. Andrews, Frederick D. Grant, succeeded by George M. Smith on July 31, and Andrew D. Parker. The Superintendent of Police was Peter Conlin, who resigned, and was succeeded by John McCullagh. The headquarters are at 300 Mulberry Street. March 17, Mayor Strong removed Commissioner Andrew D. Parker from office, on the ground of neglect of duty. The charges were sent to Gov. Black, who, on hearing the testimony, decided against the removal. The force, Dec. 31, 1897, consisted of a superintendent, a chief inspector, 6 inspectors, 16 surgeons, 40 captains, 173 sergeants, 50 detective sergeants, 202 roundsmen, 4,454 patrolmen, and 84 doormen, a total of 5,652, an increase of 1,206 over 1896. In the year 33 members of the force died, 42 were retired, 89 were dismissed, and 28 resigned. There were 108,033 arrests, against 112,997 in 1896. Of this number 91,234 were males and 16,799 were females. The principal crimes and misdemeanors for which the arrests were made are as follow: Intoxication, 19,783; disorderly conduct, 22,663; violation of corporation ordinances, 12,999; felonious assault, 1,071; suspicious persons, 6,479; violation of excise law, 2,889; petit larceny, 3,938; vagrancy, 6,737; and grand larceny, 1,989. The property clerk received 3,059 lots of stolen or unclaimed property, and delivered 1,131 lots, aggregating in value \$17,048.88. There was delivered from precincts property valued at \$842,034.26.

Fire.—This department is under the control of a board of three commissioners, appointed by the Mayor for a term of six years. The board during 1897 consisted of James R. Sheffield, president, Oscar H. Lagrange, and Thomas Sturgis. The chief of the department is Hugh Bonner, and the headquarters are at 157 East 67th Street. The force, Jan. 1, 1898, included 1,137 officers and men, 64 engine companies (including 3 fire boats), 22 hook-and-ladder companies, 66 steam fire engines in service, 3 water towers in service, 29 hook-and-ladder trucks in service, and 450 horses. In the year there were 4,046 fires, of which 3,912 were confined to the building and 41 extended to other buildings. Of the total number, 93 were not in buildings. The estimated loss by these fires was \$2,305,678. The average loss was \$812.08. There were 11 buildings destroyed by fire, and 1,691 fires resulted in nominal damage.

A strenuous effort was made to have the present high rate of insurance reduced, and a report was made on that subject. The average loss per fire was reduced from \$1,300 in 1874 to \$742.72 in 1892. The total loss for the first six months of the three years ending in 1894 was \$7,843,777, compared with a total of \$4,503,116 for the first six months of the last three years.

Docks.—This department is under the control of three commissioners. The commissioners during 1897 were: Edward C. O'Brien, president, Edwin Einstein, and John Monks. Office, pier A, North river. The improvements during the year included work on the construction of five new piers, from 700 to 750 feet long, with slips 250 feet wide, beginning at or near the foot of Charles Street and

extending to Gansevoort Street, making a total of 8,963 feet, or 1-7 mile, of wharfage room. Plans were adopted for the construction of seven large piers, each 800 feet long, between Bloomfield Street and West 23d Street; for two other piers, each 800 feet long, flanking the ferry slips opposite West 13th Street, and one pier, also 800 feet long and 50 feet wide, on the northerly side of Bloomfield Street, as well as a short pier and 403 feet of available bulkhead line at West 22d Street, furnishing 16,496 linear feet, or 3-12 miles, of wharfage room, exclusive of 1,960 feet used for ferries. The aggregate wharfage room covered by these improvements is 25,459 feet, or 4-82 miles, to which is to be added the room occupied by the ferry slips. The recreation pier, at the foot of East 24th Street, was formally presented to the city Sept 25. This pier is the second of its kind to be opened to the public, and contracts for three more are to be let. The 3d Street pier was opened June 26, and its success surpassed even the hopes of the Dock Commissioners. The 24th Street pier is 720 feet long, and it is estimated that it will accommodate 14,000 persons. Its cost when completed was more than \$100,000. It is the intention of the Dock Commissioners to inclose the pier in glass and have it properly heated, so that it can be used all the year round.

Education.—The board having control of this subject consists of 21 commissioners, who are appointed by the Mayor and receive no salary. The president of the board is Charles B. Hubbell. The city superintendent is John Jasper, and the headquarters are at 146 Grand Street. The lack of adequate accommodations for pupils led to energetic efforts on the part of the Board of Education to secure new sites and buildings for schools. On May 12 the Committee on Sites recommended the purchase of twelve sites, having a total valuation of \$942,000, also of 19 additional pieces of property adjacent to school buildings and considered necessary to improve the condition of these schools, having a valuation of \$567,275. This report was accepted, and maps and plans for condemnation were ordered filed in the Register's office. At this meeting John T. Buchanan, of Kansas City, Mo., and John J. Wright, of Philadelphia, Pa., were chosen principals for the new high schools. A report was received at the meeting held Oct. 20, recommending the naming of the boys' high school Clinton High School, the girls' high school Irving School, the mixed school Morris High School, and the manual training high school Stuyvesant High School. The contract for the Board of Education Hall, to be erected at the corner of Park Avenue and 59th Street, was awarded to Thomas Cochran & Sons, and bonds to the amount of \$244,900 were ordered to be issued. The school census required by the State superintendent was completed toward the close of the year, and showed that there were 391,482 children of school age, between four and eighteen years. The cost of this census was nearly \$27,000. The report of the Board of Estimate and Apportionment allowed an increase of \$1,030,905.03 over the budget for 1896, most of which was required for the salaries of teachers in the new schools. The sum of \$10,000 was allowed for the vacation schools to be established during the coming summer.

The Board of Estimate and Apportionment authorized, on Aug. 17, the trustees of the College of the City of New York to purchase land on West 138th and 140th Streets, overlooking the Hudson and Harlem rivers, as a site for the college, at \$350,000. Subsequently the land was purchased and plans for the new buildings were accepted by the college trustees. The present site of the college, 23d Street and Lexington Avenue, has been

selected for a new armory for the Sixty-ninth Regiment of the National Guard.

New York Public Library.—A bill for the erection of a library building on the site of the reservoir on Fifth Avenue between 40th and 42d Streets was passed early in the year by the Legislature, and on April 13 was approved by Mayor Strong. It provides that the directors or trustees representing the Astor, Lenox, and Tilden Libraries, which are to be merged in the Great New York Public Library, shall have the preparation of the plans for the structure, but all forms of contract for the work are to be submitted to the Park Board. It was stipulated that such material from the old reservoir as is available may be used. The work of demolishing the reservoir was begun when the 48-inch water mains were laid in Fifth Avenue below 38th Street. The bill authorizes the Comptroller to issue bonds to the amount of \$2,500,000. Eighty-six separate sets of plans were submitted in competition for the building, and from three competitors a decision was made in favor of the one submitted by Carrère & Hastings.

Rapid-Transit Railroad Commission.—This body consists of Alexander E. Orr, president, John Claflin, John H. Starin, George L. Rives, Woodbury Langdon, and Charles S. Smith, together with the Mayor and the Comptroller, *ex officio*. The office is at 256 Broadway. Delays, owing to the necessity of appealing to the courts in order to sustain the action of the commissioners, have occupied most of the year. The plans describing the proposed routes mentioned in the "Annual Cyclopaedia" for 1893, page 551, encountered legal opposition, and a decision of the Appellate Court was secured, certifying to the validity of the commission. Another difficulty was met with in a failure to secure the consent of a majority of the property owners along the proposed route, and the commissioners applied to the Appellate Division for a commission. The commission examined the plans of the Rapid-Transit Commissioners, and in November reported favorably to the court. In their report they said: "We do not doubt that the road will carry as many as 300,000 passengers a day. Based upon this estimate, the gross earnings should be \$5,575,000 annually, and the net earnings \$2,290,000. Deducting interest at 3½ per cent. on the investment of \$35,000,000, and on the estimated cost of equipment, \$7,845,000, and allowing 10 per cent. for interest and depreciation, making a total of \$1,922,000, would leave a balance of \$368,000 a year. This balance is more than sufficient to meet the sinking-fund provisions of the statute." Counsel presented arguments for and against the adoption of the report, and on Dec. 17 the decision of the court was announced, confirming the report of the commissioners. On Dec. 31 the announcement was made that the Metropolitan Street Railway Company had decided to make a bid for the franchise of the proposed road, and for that purpose had instructed their engineers to prepare plans for an underground road. By obtaining control of rapid transit the directors of the Metropolitan Street Railway Company believe that they could establish a valuable auxiliary to the present surface lines, and that by the free use of transfers they could control not only the short-distance travel but also the long-distance passengers who now largely use the Manhattan Elevated Railway.

Monuments.—In 1897 several beautiful works of art were added to the monuments that grace the public thoroughfares.

On May 29 a statue in bronze of Peter Cooper, representing the philanthropist seated in an armchair, with a huge cane in his left hand, was presented to the city. The pedestal and background

are of granite, about 14 feet high. In the granite beginning at a point about midway from the base to the top, an alcove is cut, and in this alcove is the bronze figure. Below is the inscription: "Erected by the citizens of New York in grateful remembrance of Peter Cooper, founder of the Cooper Union for the Advancement of Science and Art, Anno Domini MDCCLXVII." The sculptor was Augustus St. Gaudens, and the monument was erected under the direction of Stanford White, architect. The exercises included music by the Choral Union, the unveiling of the statue by the granddaughter and great-granddaughter of Mr. Cooper, presentation of the statue to Mayor Strong by Franklin Edison, chairman of the Statue Committee, its acceptance by Mayor Strong, who turned it over to Commissioner Stiles of the Department of Public Parks, and its acceptance by Mr. Stiles. The statue stands in Cooper Park, south of Cooper Union.

On May 7 a *Ginkgo biloba* tree was planted near the grave of Gen. Grant by Yang-Yu, representing Li-Hung-Chang. Representatives of the family of Gen. Grant and of the Department of Public Parks were present. On Dec. 30 a tablet was placed near it to commemorate the planting of the tree by order of the Department of Public Works. It bears a long Chinese inscription on the left half, while on the right is the following inscription in English: "This tree is planted at the side of the tomb of Gen. U. S. Grant, ex-President of the United States of America, for the purpose of commemorating his greatness, by Li-Hung-Chang, Guardian of the Prince, Grand Secretary of State, Earl of the First Order, Yang-Yu, Envoy Extraordinary, Minister Plenipotentiary of China, Vice-President of the Board of Censors, Kwang Hsu, 23d Year, 4th Moon, May, 1897."

On Oct. 7 a bronze tablet with the inscription, "This tablet is placed here in loving memory of the first Dutch settlers, by the Holland Dames of the New Netherlands and the Knights of the Legion of the Crown, Lavina, Königin," was placed on the wall of the building at the southeast corner of Pearl and State Streets, which is the site of the *Stadhuis*, or City Hall of New Amsterdam that was built in 1636.

On Oct. 16 the Society of the Sons of the Revolution presented the city with a tablet commemorative of the battle of Harlem Heights. The memorial, six feet square, was placed on the Engineering Building of Columbia University, facing the Boulevard on the line of 117th Street, which is said to be the site of the historic field. It represents the death of Major Andrew Leitch and the advance of the American soldiers led by Col. Thomas Knowlton. The faces of the principal figures were made from portraits and represent leaders in the battle. James Edward Kelly is the sculptor. The exercises included prayer by Rev. Brockholst Morgan, chaplain of the society; presentation of the tablet to the society by Prof. Henry P. Johnston, of the Celebration Committee; unveiling by Frank Bailey, a great-grandson of Col. Knowlton; presentation of the tablet by Frederick S. Tallmadge, President of the Sons of the Revolution, to Columbia University; its acceptance by President Low; and addresses by Charlton T. Lewis and William M. Sloane.

An iron gate in memory of Herbert Majes, a member of the class of 1800 of Columbia University, who was drowned in saving the life of a young woman at Fire Island, has been erected at the entrance of the university grounds at 119th Street and the Boulevard. The gateway consists of an entrance for carriages in the center through double gates and two single gates for pedestrians. The total width

is 40 feet and the height in the middle is about 24 feet. The iron cornice, continuing across the entire width, supports ornamental pediments. The seals of the province and of the city of New York are incorporated in the design above the side entrances, and in the central portion is the seal of the State of New York, supported by eagles and the date of the erection of the memorial, the whole being surmounted by a free adaptation of the university seal. On one of the granite posts separating the carriage entrance from the side gates is carved: "In Memoriam, Herbert Mapes, '90 Arts, '92 Mines, Obiit, 1891." On the other is a wreath of laurel and a palm.

The design for a soldiers' and sailors' monument was selected by the Board of Commissioners appointed for that purpose. This design, which was sculptured by Frederick Macmonnies, calls for a terraced pedestal, inclosed by a railing, entrance to which is by steps. The pedestal is surmounted by a circular column about 125 feet high, the cap of which is a heroic statue of Peace. Upon three sides of the base of the column are statues, two sides having a mounted soldier and the third side a group of sailors. No site for the monument has been chosen, although it is expected that it will be erected somewhere on Riverside Drive.

The Lorelei fountain, commemorating the genius of Heinrich Heine, arrived in New York Dec. 26. The site of its probable erection was described in the "Annual Cyclopaedia" for 1896.

Dedication of Grant's Tomb.—This event took place on April 27, the seventy-fifth anniversary of the birth of Gen. Grant, which date was by act of the Legislature made a public holiday. The arrangement for the ceremony began with the appointment of a committee of 200 citizens by Mayor Strong on Feb. 11. The Mayor was chosen chairman of the committee, and the Board of Estimate appropriated \$50,000 for the expenses of the celebration. Later, numerous subcommittees were appointed, and of the Committee of Military Affairs Gen. Grenville M. Dodge was named as chairman, becoming also grand marshal of the parade. The land parade was organized into three grand divisions, as follows: First, the military, under Gen. Wesley Merritt, including the West Point Cadets, United States troops numbering nearly 5,000 (forming the largest mobilization of the regular army in New York city since the civil war), and the National Guard of New York and other States. Second, the Veterans, under Gen. Oliver O. Howard, including the Grand Army of the Republic, Sons of Veterans, and similar organizations from various States. Third, civic organizations, under Charles F. Homer, including letter carriers, fire associations, public-school students, and other societies, and uniformed foreign bodies. The naval parade, under the command of Admiral Francis M. Bunce, included vessels from the North Atlantic fleet, revenue marine, light-house tenders, and foreign men-of-war. The line of march of the land parade was from 23d Street up Madison Avenue to 55th Street, thence west to Fifth Avenue, to 59th Street, to the Boulevard, along the east roadway to 72d Street; thence west on 72d Street to Riverside Drive, and up the Drive and around the Claremont and back to 119th Street, thence by the Boulevard to a point beyond the reviewing stand. On April 18 the body of Gen. Grant had been removed from the temporary tomb and placed in the great sarcophagus. The route of the processions was lined with stands, many of which had been elaborately decorated with bunting, the brilliant colors of which were spoiled by a severe rain on the night of the 26th. The only decoration on the tomb was double victory palms bound with purple silk on each of the columns.

On the morning of the parade the weather was clear but cold, with a piercing north wind that made it bleak, and as the day advanced the sky was overcast. The exercises at the tomb began with the arrival of President McKinley. On the grand stand was every surviving member of the Grant family, ex-President Cleveland, members of the Cabinet, the diplomatic corps, and many invited guests of national reputation. When President McKinley arrived a chorus under the direction of Frank Damrosch sang "America," in which the thousands present joined. Then followed a prayer by Bishop John P. Newman. After a hymn of thanks, Mayor Strong introduced President McKinley, who spoke briefly, beginning with the words: "A great life, dedicated to the welfare of the nation, here finds its earthly coronation." Singing of "The Star-Spangled Banner" followed, after which Gen. Horace Porter, President of the Monument Association, delivered the oration of the day, and transmitted the tomb to the custody of the city. Mayor Strong, in behalf of the municipality, accepted the trust, and the exercises closed with the "Hallelujah Chorus" from Handel's "Messiah" and the Doxology rendered by trained voices under the direction of Frank Damrosch. The land parade had set out on its march and reached the west side of the Claremont at one o'clock. The marine parade arrived simultaneously, and at the hour just named the signal from the Claremont conveyed the message, "The President is here." A salute of 21 guns acknowledged the fact, and President McKinley passed to the reviewing stand again, and the parade of nearly 60,000 persons passed before him. Late in the afternoon the presidential party withdrew, and, taking the "Dolphin" at the foot of 133d Street, the President reviewed the fleet of vessels by passing down the line to 52d Street, where he debarked and returned to the Windsor Hotel. In the evening a brilliant reception was held at the Union League Club, for which more than 1,000 invitations were issued, and at which Chauncey M. Depew presented the members and guests to President McKinley. The final event was a ball and reception given by the city of New York on the evening of April 28 at the Waldorf.

The New York and Brooklyn Bridge.—The charge of this bridge since its completion has been under the care of a board of seven trustees, whose legal existence closed with the end of the year. Their final report shows that in 1897 the receipts from tolls were \$1,240,861.24, divided as follows: Carriage ways, \$90,797.16; railroad, \$1,150,064.08. In the year 45,542,627 passengers were carried upon the railroad. The receipts from all sources, including rents, interest, etc., amounted to \$1,363,731.03. The expenditures amounted to \$1,228,143.24, leaving a balance of \$207,158.24. During the period of the bridge railway's existence 480,692,936 passengers have been carried. At the close of the year, after payment of all debts, there was a surplus sufficient to pay to New York \$43,000 and to Brooklyn \$86,000, this being in the proportion of their ownership.

On Dec. 31, at 11.30 p. m., the first trolley car crossed the bridge. As it was necessary, on account of an injunction, that the track should be completed before midnight, work had been continued all the evening.

Exchanges.—During 1897, at the Stock Exchange, there were bought and sold stocks, 77,407,447 shares; State and railroad bonds (par value), \$534,379,500; Government bonds (par value), \$10,234,030. At the Consolidated Stock and Petroleum Exchange the transactions were: Railroad stocks, 66,462,560 shares; mining stocks, 997,080 shares;

bonds (par value), \$12,165,000; wheat, 1,348,742,000 bushels.

The transactions of the Produce Exchange were: Wheat flour, 4,340,000 barrels; rye flour, 124,500 barrels; wheat, 1,286,290,000 bushels; corn, 197,385,000 bushels; oats, 59,578,000 bushels; rye, 3,028,000 bushels; barley, 6,358,000 bushels; pork, 65,250 barrels; lard, 68,008 tierces; tallow, 19,028,250 pounds.

On the Cotton Exchange the transactions by bales were: Futures, 29,489,300; spots, 445,608.

The receipts at the Sub-Treasury were \$1,103,119,065.82, against \$1,374,985,433.27 in 1896. Payments were \$1,096,006,010.75, against \$1,393,464,032.45 in 1896. Receipts for customs were \$122,896,324.50, against \$99,407,892.56 in 1896. Gold withdrawals were \$41,892,441, against \$114,383,468 in 1896.

The operations of the Clearing House for the year were: Exchanges, \$31,427,927,471.39; balances, \$2,014,366,319.42.

Post Office.—The postmaster is Cornelius Van Cott. The post-office building is at the junction of Broadway and Park Row. Besides the general post office there are 28 branch offices, of which the one known as Branch I, at the corner of Columbus Avenue and 105th Street, was opened Feb. 1. There are also 91 substations, of which several were opened in 1897. In the year the total number of letters, postal cards, and packages handled was 498,461,905. More than 275,000,000 postage stamps, 42,000,000 envelopes, and 70,000,000 postal cards were sold. The records of the registry department show a total of articles handled of about 1,200,000. The money-order transactions, compared with 1896, show an increase of \$79,508.58 in the outgoing foreign advices, and a decrease of \$2,048.30 in the incoming foreign orders. More than \$19,000,000 in gold passed through the registry department of the post office in the year, principally consigned to bankers in the United States. The receipts from all sources were \$8,146,278.67, an increase in 44 per cent. over 1896. The increase in net revenue during the year was \$281,804.70, or 6 per cent. The first public test of the pneumatic mail service of the Tubular Dispatch Company was made on Oct. 7, when the branch line from the General Post Office to Station P, in the Produce Exchange, was opened.

Immigration.—The reception of immigrants in New York is under national supervision. Ellis island has been set apart for this purpose, and is under the direction of Commissioner Thomas Fitchie. The records for the fiscal year ending June 30 show that the number of immigrants was 180,556, of whom 106,040 were males. Those under fifteen years of age numbered 29,976, and there were 129,672 between the ages of fifteen and forty. Of the entire number, 70,679 came to join members of their immediate families. The illiterate immigrants numbered 37,662. The hospital furnished relief to 1,223 patients. Of those excluded, 1,082 were paupers, 323 contract laborers, 5 lunatics, and 1 idiot. The authorities sent back 194 immigrants who had become public charges within one year after landing. The amount of money brought into the country by the arrivals was \$671,262, not including that brought in between June 1 and June 15, the records of which were destroyed.

Greater New York.—The birth of Greater New York was celebrated by a procession and a display of fireworks. A procession of floats sent by business houses, theaters, and societies, escorted by independent military orders, civic associations, bicyclists, and individual maskers, together with a delegation from Chicago, started from Union Square at 10.15 p. m., under the marshalship of Col. George M. Smith, and marched down Broadway to City

Hall Plaza. Meanwhile there were gathered in the plaza the united singing societies of the two cities, numbering more than 2,000 voices, together with the famous bands of the Twenty-second and Seventy-first Regiments of the National Guard. The City Hall itself was elaborately decorated with the American colors, and electric lights of red, white, and blue were hung in the park. Simultaneous with the starting of the procession a singing contest was begun, which was continued until the arrival of the carnival procession. Then masses of fireworks were set off, and the long white shafts of many flash lights added brilliancy to the scene. As midnight approached, patriotic music was sung by the societies, under the direction of the bands, and the chimes of Trinity Church were rung. At the moment of the birth of the New Year the municipal flag of the new metropolis was run up the flagstaff by an automatic arrangement that was put into action by the pressing of an electric button in San Francisco by Mayor Phelan of that municipality. A salute of 100 guns from the Second Battery, stationed in Mail Street on Government ground, was fired, and as the sound of the first gun died away echoing sounds came from a battery in Brooklyn. In Brooklyn the City Hall was illuminated, and in the Mayor's office Mayor Wurster and his living predecessors (with two exceptions) received the public until 9.25 p. m., when the final exercises were held in the Council Chamber. These included an address from St. Clair McKelway, an historical address by the Rev. James M. Farrar, a poem on "The Passing of Brooklyn" by Will Carleton, and a short address by Seth Low. At twelve o'clock the City Hall bell tolled, and the city of Brooklyn became a borough.

Political.—The election of 1897 was held Nov. 2, when the following candidates were voted for: Democratic (Tammany)—City ticket: Mayor, Robert A. Van Wyck; Comptroller, Bird S. Coler; President of the Council, Randolph Guggenheimer, also 15 members of the Council, being 3 from each of the 5 districts. County ticket: District Attorney, Asa Bird Gardiner; Register, Isaac Fromme; County Clerk, William Sohmer; Sheriff, Thomas J. Dunn; Justices of the Supreme Court, Charles H. Van Brunt and Francis M. Scott; Judges of the City Court, John Henry McCarthy and Edward F. O'Dwyer; Coroners, Borough of Manhattan, Antonio Zucca, Edward T. Fitzpatrick, Jacob E. Rausch, and Edward H. Hart; Coroners, Borough of the Bronx, Anthony McOwen and James P. Daly; Justice of Municipal Court, Eleventh District, Borough of Manhattan, William E. Stillings; Justice of Municipal Court, First District, Bronx, William W. Penfield; Justice of Municipal Court, Second District, Bronx, John M. Tierney; President, Borough of Manhattan, Augustus W. Peters; President, Borough of Bronx, Louis F. Haffen; also for 36 aldermen and 37 members of the Assembly.

Republican—City ticket: Mayor, Benjamin F. Tracey; Comptroller, Ashtel P. Fitch; President of the Council, R. Ross Appleton; also 15 members of the Council, being 3 from each of the 5 districts. County ticket: District Attorney, William M. K. Oleott; Register, George H. Von Schack; County Clerk, James R. O'Beirne; Sheriff, Thomas L. Hamilton; Justices of the Supreme Court, Charles H. Van Brunt and Thomas Allison; Judges of the City Court, Elisha K. Camp and Henry C. Botty; Coroners, Borough of Manhattan, Theodore K. Tutbill, Gustav Scholer, George W. Kram, and Moses J. Jackson; Coroners, Borough of the Bronx, John H. Gustavson and Rufus R. Randall; Justice of Municipal Court, Eleventh District, Borough of Manhattan, Francis J. Worcester; Justice of Municipal Court, First District, Bronx, Richard N. Arnow; Justice of Municipal Court, Second District, Bronx,

Douglas Mathewson; President, Borough of Manhattan, Louis Stern; President, Borough of the Bronx, Alonzo Bell; also for 36 aldermen and 37 members of the Assembly.

Citizens' Union.—City ticket: Mayor, Seth Low; Comptroller, Charles S. Fairchild; President of Council, John H. Schumann; also 15 members of the Council, being 3 from each of the 5 districts. County ticket: District Attorney, Austen G. Fox; Register, Edward F. McSweeney; County Clerk, Benjamin E. Hall; Sheriff, Edward F. McSweeney; Justices of the Supreme Court, Charles H. Van Brunt and George P. Andrews; Judges of the City Court, Joseph Pettritch and S. Stanwood Menken; Coroners, Borough of Manhattan, Alfred E. Thayer, Cyrus John Strong, William Henry Terry, and Levi F. Warner; Coroners, Borough of the Bronx, Emery L. Ernhooop and Patrick J. Byrne; Justice of Municipal Court, Eleventh District, Borough of Manhattan, Francis J. Worcester; Justice of Municipal Court, First District, Bronx, William W. Penfield; Justice of Municipal Court, Second District, Bronx, John J. Brady; President, Borough of Manhattan, Robert J. Hoguet; President, Borough of the Bronx, Samuel McMillan; also for 36 aldermen and 37 members of the Assembly.

Jeffersonian Democrat.—Those Democrats who were unwilling to accept the nominees of Tammany Hall and equally unwilling to accept the conditions of the Citizens' Union placed in nomination the following city ticket: Mayor, Henry George; Comptroller, Charles W. Dayton; President of the Council, Jerome O'Neill.

The sudden death of Henry George, Oct. 29, led to the substitution of his son, Henry George, Jr., for the first place on the ticket. For the most part the nominees of the Citizens' Union for the county ticket were supported by this party. The Prohibitionists, the People's party, the Socialist-Labor party, the National Democrats, and the United Democracy had each a complete or partial ticket in the field. The canvass was lively. The result was a victory for the candidates of Tammany Hall, as shown by the following vote for Mayor: Boroughs of Manhattan and Bronx—Van Wyck, 146,666; Tracy, 55,834; Low, 77,210; George, 13,076; Van Wyck's plurality, 66,456. Borough of Brooklyn—Van Wyck, 76,185; Tracy, 37,611; Low, 65,656; George, 6,938—Van Wyck's plurality, 10,529. Borough of Queens—Van Wyck, 9,275; Tracy, 5,639; Low, 5,876; George, 1,096. Borough of Richmond—Van Wyck, 4,871; Tracy, 2,779; Low, 2,798; George, 583. The total vote was 526,566, of which Van Wyck received 233,997; Tracy, 101,863; Low, 151,540; George, 21,693. Van Wyck received 82,457 votes more than Low. The votes on the remaining candidates on the city and county tickets were similar. The elections for members of the Municipal Assembly resulted as follows: Council—Democrats, 23; Republicans, 3. Board of Aldermen—Democrats, 47; Republicans, 10; Citizens' Union, 3. In New York County there were returned to the Assembly 30 Democrats, 2 Republicans, and 1 each Independent Republican and National Democrat, against 23 Democrats and 12 Republicans in 1896.

Events.—On May 6 the bicentennial jubilee of Trinity Church was celebrated with elaborate services. On May 16 the new service of the Pennsylvania Railroad, landing its passengers at West 23d Street, went into effect. On June 15 the immigrant buildings on Ellis island were destroyed by fire. On Oct. 18 the new station of the New York Central and Hudson River Railroad, at 125th Street, was opened. On Oct. 31 the Astoria, the largest hotel in the city, was opened with a series of charitable entertainments. On Nov. 1 Mills Hotel No. 1, a model building for poor men, was opened. On

Nov. 4 the electric cars began their regular trips on the Fourth Avenue street-car line. On Nov. 14 the corner stone of the new building of Bellevue Hospital Medical College was laid. On Dec. 31 the resolution of the Board of Aldermen turning over the Hall of Records to the National Historical Society for a museum was signed by the Mayor.

NICARAGUA, a republic in Central America. The Congress is a single Chamber composed of 48 members elected for four years by the 12 provinces, 2 representatives by the people of each province, and 2 members by the provincial Legislature. The President is elected for four years by direct popular suffrage. The President for the term ending Jan. 31, 1898, was Gen. José Santos Zelaya. His Cabinet in the beginning of 1897 was composed as follows: Minister of the Interior, Justice, Police Fomento, and Ecclesiastical Affairs, Gen. Erazmo Calderon; Minister of Foreign Affairs, Dr. Manuel C. Matus; Minister of War and Marine, Gen. Domingo Silva; Minister of Finance and Commerce, Dr. Luciano Gomez; Minister of Communications and Public Works, Dr. Leopold Ramirez.

Area and Population.—The area of Nicaragua is 49,200 square miles. The civil population is about 380,000, and the number of uncivilized Indians 40,000.

Armed Forces.—The military forces consist of the active army, the reserve, in which all able-bodied citizens are counted from the age of eighteen up to that of forty-five years, and the National Guard, which embraces those above thirty-five and under forty-five years of age. The number of active troops is variable, but does not exceed 3,500 men except in times of war. There is no naval force except some armed steamers on the Lake of Managua.

Finances.—No reports of revenue and expenditure have been published since 1892, when the receipts were \$1,764,000 and expenditures \$2,984,000. There is a foreign debt of £285,000 sterling and an internal debt which amounted in 1894 to \$7,000,000.

Commerce.—The values of the imports from and exports to the different countries in 1896 are given in the following table:

COUNTRIES.	Imports.	Exports.
Germany.....	\$930,000	\$2,286,000
Great Britain.....	1,427,000	730,000
United States.....	676,000	1,009,000
France.....	478,000	387,000
Other countries.....	219,000	1,235,000
Total.....	\$3,730,000	\$5,647,000

Communications.—The railroads have a length of 96 miles, and the projected lines, if built, will add 525 miles. The length of telegraph lines is 1,255 miles.

Political Affairs.—On Feb. 1, 1897, President Zelaya issued a decree of amnesty to the revolutionists who took part in the insurrection of 1896. On Sep. 17 another revolt was started by the enemies of Zelaya simultaneously in the city of Granada and in the town of Jinotepé, among the mountains of Granada province. The Conservatives of Carazo also arose in arms against the Government. Outside of these Conservative strongholds the people of the country came to the support of the Government, which threw a strong military force into the disturbed district, where the authority of the Government was restored in a few days and the rebels took to flight, pursued by the troops. After this rising was quelled the country was still kept in a state of siege, for the causes of dissatisfaction remained and malcontents were numerous. Before the end of September the Cabinet was re-

constituted as follows: Minister of War and Marine, Gen. Erasmo Calderon; Minister of the Interior, Manuel C. Matus; Minister of Public Works, Jose C. Romero; Minister of Finance, Enrique C. Lopez. The President's proposal to sell the national railroad and steamboats roused strong opposition.

The Costa Rican consul, Eduardo Boudier, was arrested on a charge of complicity in the rebellion. Considerable ill feeling existed between Costa Rica and Nicaragua on account of the boundary dispute, which had been referred to the arbitration of the United States Government. President Cleveland appointed E. P. Alexander, of South Carolina, to act with a Nicaraguan and a Costa Rican engineer on a boundary commission. In the spring both governments strengthened their military forces on the frontier. Their relations became more strained later, in consequence of a decree of the President of Costa Rica admitting imports free of duty by way of the San Juan river, which forms the boundary between the republics and the common harbor of Greytown. Colombia revived a claim to the Mosquito coast, but this the Nicaraguan Government refused to discuss. The American commissioner decided the boundary dispute with Costa Rica in favor of Nicaragua by tracing the boundary from the harbor head of Greytown. The line according to the treaty of April 15, 1858, is the channel of the Rio San Juan del Norte at its exit into the ocean. This channel has shifted several leagues to the south since the treaty was made, and if Costa Rica's claim to the old exit was sound the whole harbor of Greytown and the entrance to the Nicaraguan Canal would be in Costa Rican territory. The minister of the Greater Republic of Central America early in the administration of President McKinley made overtures looking to the consummation of a treaty for the construction of the Nicaragua Canal. He had already made similar proposals during the presidency of Mr. Cleveland, but received no answer from the Government, which had declined to recognize him as the representative of the Greater Republic, but only as the representative of the individual republics of Central America leagued together in the Greater Republic. His communication to Secretary Olney assumed that the Nicaragua Canal Company was unable to raise the money to fulfill its contract unless the United States Government should come to its aid. He proposed that the governments of the United States and of the Greater Republic of Central America should come to a direct understanding on the basis of the Zavala-Frelinghuysen treaty, with such modifications as might be agreed upon, and that a just arrangement should be made with the Maritime Canal Company of Nicaragua so that it might renounce a concession whose conditions it was unable to fulfill. By the treaty negotiated at Washington during the administration of President Arthur by Dr. Joachim Zavala, the special commissioner of Nicaragua, and Secretary Frelinghuysen the United States Government was to have the exclusive right of way across Nicaragua on a strip 2½ miles broad, and in return was to give to the Government of Nicaragua a specified share of any net canal earnings and a guarantee to protect its territory from any external aggression, besides lending it \$4,000,000 to be expended upon public improvements. This treaty, when submitted to the United States Senate in December, 1884, failed to receive a two-third majority. When Mr. Cleveland became President a few weeks later he withdrew the treaty for re-examination and never sent it back in any form. Instead of doing so, he said in his annual message that he disapproved of securing for the Government paramount privileges of ownership or right outside of its own territory coupled with ab-

solute and unlimited engagements to defend the territorial integrity of states whose interests lie. One objection to the Zavala treaty which had been promptly ratified by the Nicaraguan Government, was that it might cause the United States with England, since it practically set aside the Clayton-Bulwer treaty providing for the joint protection by the United States and Great Britain of any waterway that may be constructed across the isthmus. In April, 1897, on information given by the President of the Maritime Canal Company that the Government of Nicaragua contemplated the revocation of the concession, the State Department at Washington instructed the diplomatic representative at Managua to make whatever representations were necessary to prevent such forfeiture. On authority given by Congress a commission was appointed to make a new survey of the Nicaragua Canal route and report to the United States Government. The bill provided that the commission should consist of not more than five nor fewer than three persons, and that at least one engineer should be selected from the army and one from the navy. The previous commission estimated the cost of a canal 30 feet deep and 100 feet wide at bottom, 169 miles from ocean to ocean, including the part running through Lake Nicaragua, permitting transit of vessels in twenty-eight hours, to be \$133,473,000.

NORTH CAROLINA, a Southern State, one of the original thirteen, ratified the Constitution Nov. 21, 1789; area, 52,250 square miles. The population, according to each decennial census, was 350,751 in 1790; 478,103 in 1800; 555,900 in 1810; 628,829 in 1820; 737,087 in 1830; 753,419 in 1840; 809,039 in 1850; 922,022 in 1860; 1,071,361 in 1870; 1,399,750 in 1880; and 1,617,947 in 1890. Capital, Raleigh.

DANIEL L. RUSSELL, GOVERNOR OF NORTH CAROLINA.

Government.—The following were the State officers during the year: Governor, Daniel L. Russell, Republican; Lieutenant Governor, C. A. Royster, Republican; Secretary of State, Cyrus Thompson, Populist; Treasurer, W. H. Worth, Populist; Auditor, H. W. Ayer, Populist; Attorney General, Z. V. Walser, Republican; Adjutant General, A. D. Cowles, Republican; Superintendent of Instruction,

C. H. Mebane; Commissioner of Agriculture, S. L. Patterson, succeeded in April by J. M. Mewborne; Labor Commissioner, J. Y. Hamrick; Railroad Commissioners, J. W. Wilson and S. O. Wilson, succeeded by L. C. Caldwell, J. H. Pearson, and D. H. Abbott; Chief Justice of the Supreme Court, W. T. Faircloth, Republican; Associate Justices, Robert M. Douglas and D. M. Furches, Republican, Walter Clark, Democrat, and W. A. Montgomery, Populist; Clerk, T. S. Kenan, Democrat.

Finances.—The receipts for 1895-96 were \$1,620,285.59; the expenditures, \$1,885,698.52.

The interest-bearing bonded debt of the State stands as follows: 4-per-cent, consolidated bonds, \$3,800,250; 6-per-cent, North Carolina Railroad construction bonds, \$2,720,000; total, \$6,080,250.

The annual income to the State from its stock in the North Carolina Railroad Company has been, under the old lease, \$180,012; is to be for six years, under new lease, \$195,013; is to be for ninety-four years, under new lease, \$210,014.

Under the act to "compromise, commute, and settle the State debt," \$3,366,250 new 4-per-cent, bonds have been issued in exchange for the old valid debt. To complete the work begun in this line will require \$249,520 more to carry the new debt to its utmost possible limit, \$3,615,770. The time in which this may be done expires Jan. 1, 1899.

The State holds, as an investment, 30,002 shares of stock in the North Carolina Railroad Company, 12,666 in the Atlantic and North Carolina Railroad Company, and \$136,750 in the new 4-per-cent, consolidated bonds.

The State Board of Education holds, as an investment, \$143,250 of the 4-per-cent, and \$2,000 of the 6-per-cent, bonds.

In January the United States Supreme Court affirmed the opinion of the Supreme Court of North Carolina in the cases of *Baltzer vs. the State* and *Baltzer and Tanks vs. the State*. The first involved the validity of the constitutional amendment of 1880, which prohibited the General Assembly from paying or assuming any of the State bonds commonly known as special-tax bonds, of which there are about \$12,000,000 outstanding. The other case involved a claim of \$297,000 against the State growing out of the dealing between the State and the Chatham Railroad Company, when the State issued \$2,000,000 of its bonds in exchange for mortgage bonds of the railroad. The decision of the United States Supreme Court was in favor of the State in both cases.

There were this year on the pension list 5,273 names and \$102,000 in the fund.

The appropriations for 1897 and 1898 for State institutions were: Institution for the Deaf, Dumb, and Blind, \$137,500; School for the Deaf and Dumb, at Morganton, \$90,000; Normal and Industrial School, \$50,000; university, \$50,000; Agricultural College, \$25,000; Western Hospital, \$180,000; Central Hospital, \$110,000; Hospital for Colored, \$80,000; Agricultural College for Colored, \$25,000; normal and training schools for colored, \$36,000; Department for Criminal Insane, \$6,000; orphan asylum for white, \$20,000; for colored, \$6,000; total, \$186,400.

Education.—The school population is 634,185. An apportionment of 9 cents *per capita* was made in September from the school fund. The average attendance in 1896 was 204,293. In August the townships not already levying a special tax for schools voted on the question of taxing themselves \$500 for the purpose, and nearly all voted against the tax. By an act of the Legislature the State board is to pay \$500 more to every township raising the \$500 by tax. A paper read at the University Summer School made the following comparison of

educational statistics of North Carolina and of other States: More than a third of our people over ten years of age can not read. Of the white people, 1 in 4 is illiterate. Of 49 States and Territories, North Carolina has the shortest school term, pays teachers least, expends for each child at school less than all but one (South Carolina), has the lightest school tax of all but six, the most illiterate population of all but six, the most illiterate white people of all except the Territory of New Mexico.

The Normal College graduated 23 young ladies in May. The school has more than 400 students.

The one hundred and second commencement exercises of the university, at Chapel Hill, were held June 2, and 42 were graduated. On the opening day in September 405 were registered. The post-graduate courses were opened this year to women. An alumni hall is to be built at a cost of \$25,000.

The enrollment at the Agricultural College for the year ending in June was 247, of whom 21 were in the graduating class.

Wake Forest College had a registration, Sept. 15, of 207.

The Penitentiary.—There are more than 1,200 convicts, most of whom are kept at work on the farms and railroads. In October there were but 66 in the prison, exclusive of the criminal insane. In consequence of bad business management, slack discipline, and a scandal in the department for the criminal insane, the directors in October took the control from the superintendent and gave it to an executive committee of three.

Banks.—According to a statement by the Treasury Department in October, there are 94 banks in the State with total resources amounting to \$19,621,582.45. There are 27 national banks in the State with resources amounting to \$10,486,739.65; 45 State banks with \$6,477,051.45; 16 private banks with \$1,284,299.76; 6 saving banks with \$1,373,491.59.

The amount of loans and discounts in the 94 banks July 23, 1897, was \$12,912,465.34; overdrafts, \$181,535.47; United States bonds, \$758,500; State bonds, \$281,942.50; premium on bonds, \$63,398.044; stocks, securities, etc., \$480,588.43; banking house, furniture, etc., \$587,122.66; other real estate and mortgages owned, \$269,016.20; gold coin and certificates, \$541,882.97; silver coin and certificates, \$306,788.70; all other currency, \$576,153.74; checks and other cash items, \$177,753.84; due from banks and bankers, \$2,410,216.45; due from the United States Treasury, \$35,581.21; current expenses, \$38,636.90.

The First National Bank of Asheville failed July 31. In October the president, the cashier, and one of the directors were arrested, charged with embezzlement and conspiracy. The Western Carolina Bank, of Asheville, failed Oct. 12, and the National Bank, of the same place, Oct. 22.

The Bank of Louisburgh and the Bank of Nashville, private banks under the same management, closed Oct. 19. The president was arrested in November, charged with rendering a false statement of the condition of the banks, and also obtaining deposits by falsely representing his banks to be solvent.

The Railroad Commissioners.—By a law of 1891 it is made the duty of the Governor to suspend from office any Railroad Commissioner who shall be the holder of "any stock or bond of any railroad company, or be the agent or employee of any such company, or have any interest in any way in such company, or in case any one of them shall be disqualified to act." In August the Governor summoned two of the commissioners—J. W. Wilson and S. Otho Wilson—to appear before him on or before Sept. 1, and show cause why they should not be sus-

pended from office, both being charged with interest in a certain piece of hotel property, known as Round Knob, on the line of the Southern Railroad, which is worth little or nothing except as a hotel, and is worthless for this purpose except when designated by the Southern Railroad as an eating house for their passenger trains. The commissioners appeared with their counsel, declared that the act under which the Governor was proceeding was unconstitutional, and also denied the truth of the charges. The Governor appointed L. C. Caldwell and John H. Pearson to succeed the two commissioners, who refused to surrender the offices. Suit was brought, and decisions were rendered against them in the Superior and the State Supreme Court. From the latter decision, given in December, they have appealed to the United States Court.

Railroads.—The State is credited with 32 miles of new track in 1897. The mileage was given in July as 3,654. The valuation of the roads for taxation was raised from about \$26,000,000 to \$29,000,000.

There was a movement to secure from the Railroad Commissioners a reduction in both passenger and freight rates; but they decided to make no reduction, as it appeared that there had been a gradual reduction. The average passenger rate for 1891, the year of the establishment of the commission, was 2.88 cents, the average freight rate per ton per mile 1.66 cent. In 1896 the average passenger rate per passenger per mile was 2.21 cents, and the average freight rate per ton per mile 1.39 cent. In September the rates for hauling raw cotton were reduced by the commission, and the roads protested.

The Atlantic and North Carolina Railroad, also owned in part by the State, resisted amendments to its charter made by the Legislature, and an injunction was granted to the private stockholders to restrain the Governor from appointing a State's proxy and prevent the accomplishment of the plans with regard to it, until the validity of the acts could be tested in the courts.

Telegraphs.—The assessment of telegraph property for taxation was raised this year. The principal increase was on the Western Union, which was fixed at about \$380,000.

In July the Railroad Commission issued an order cutting down the toll on telegrams of 10 words over the Western Union line from 25 cents to 15 cents, when sent from one point in the State to another. The toll on other lines was made 20 cents. From this order the Western Union Company appealed to the Federal courts, and later the Postal joined in the appeal. This case was in the courts at the close of the year.

State Monuments.—Two statues were unveiled, July 4. One was the bronze statue to William Hooper, a signer of the Declaration of Independence, unveiled on Guilford battle ground; the other was the statue to the men who were massacred following Gen. Rutherford, unveiled at Newton.

Industries.—There are about 200 factories in the State, including hosiery and knitting and woolen mills; but they are mostly small; two thirds of them have fewer than 10,000 spindles, fewer than half a dozen operate more than 25,000, and the largest has fewer than 40,000. When the last census of mill operatives was taken there were employed in all the textile mills of the State 23,437 men, women, and children. Of these there were 10,567 women who are over eighteen years of age. The highest rate of wages paid to skilled men is \$2 a day. The average for the State at large is: Skilled men, \$1 a day; unskilled men, 67 cents; skilled women, 66 cents a day; unskilled women, 47½ cents. The average of wages for children is 31 cents.

During the year ending Nov. 30 North Carolina

tobacco manufacturers made 26,929,242 pounds of plug and 6,300 of snuff, 4,029,320 cigars, and 30,061,300 packages of cigarettes.

The value of the gold product was reported at \$44,300.

The cotton crop, as reported in April, was 424,090 commercial bales.

An exposition car has been fitted out to show the resources of the State; it will be taken through the Southern States in winter, and through the Northern States in summer. The car, the "City of Charlotte," is built of North Carolina woods, and is divided into an exhibition room and a living room. It contains specimens of marbles, gems, gold, silver, and copper ores, and other mineral products, natural-history specimens, fruits, vegetables, and grains, 102 specimens of timber, and other exhibits showing the products of the State. The outer and inner walls of the car are decorated with maps and paintings of North Carolina scenery.

Mob Violence.—There was but one lynching in the State this year. On Thanksgiving day, a negro, Nathan Willis, was arrested on the charge of murdering a young white man in Brunswick County. A mob was raised by the farmers in the country near the Waccamaw river. Willis was taken from the sheriff, carried into the woods, and chained between two pine trees. Lightwood was then piled around him, and he was burned to death.

Legislative Session.—The General Assembly met Jan. 6, and adjourned March 9. The Senate was presided over by Lieut.-Gov. Reynolds, and A. F. Hileman was Speaker of the House. There was a question as to the time when the new State officers should come in, the Constitution being contradictory on this point, in one place making their term begin Jan. 1, in another directing that the inauguration take place after the election returns shall have been counted by the Legislature. The contradiction arose from the change of time for the meeting of the Legislature from November to January. The new officers were installed Jan. 12.

In politics the Legislature stood: Republicans, 66; Populists, 58; Democrats, 45.

The term of United States Senator Jeter C. Pritchard was about to expire, and there was an excited contest over the choice of his successor. He was elected in 1895 as a free-silver man; but is said to have changed his views somewhat during the presidential canvass, and to have advocated international bimetallicism and not the free coinage of silver by this country alone. On this account or some other, he was not acceptable to the majority of the Populists; but after his nomination by the Republicans 19 Populists who were in his favor bolted the caucus of their party, whose nominee was Cyrus Thompson. The choice of the Democrats was Rufus A. Doughton. At the election, Jan. 20, Pritchard was chosen, receiving 88 votes to 43 for Thompson, and 33 for Doughton.

A committee of the Senate was appointed to investigate charges of extravagance in the office of A. L. Swinson, enrolling clerk of the House. The House had passed a resolution to dismiss him on this charge. His version of the affair was that he refused to put on the list two negro clerks at \$5 each a day, at the request of some of the members, because there was nothing for them to do. He said it had already (in February) cost \$1,500 to do \$6 worth of copying, estimated at the usual charge per sheet.

Later, in March, the Lieutenant Governor and the Speaker were arrested on a warrant sworn out by Swinson, setting forth that they broke into the enrolling clerk's office, and also "broke open the private drawer of Swinson, all of which breaking and entries were against the will of Swinson, who was

present and forbidding, and against the statute and dignity of the State." They were acquitted.

A new revenue law was passed. Among other provisions, it makes a failure to pay poll, property, license, or privilege taxes a misdemeanor, punishable by a fine of not more than \$500 or imprisonment for not more than six months. By an error, the law placed the State tax at 46 cents and the poll tax at \$1.29. This conflicts with the Constitution, which provides that the poll tax shall be three times the property tax on the \$100. It was decided in court that the poll tax must be increased to \$1.38. On appeal to the Supreme Court the law was declared void, and the levy of 1895, which was 43 cents, was reinstated.

Of the 3 cents thus taken from the property tax, 1 cent was for general State purposes and 2 for schools, leaving for the general fund 2½ cents; for the schools 18 cents, and for pensions 3½ cents, which was not changed from the law of 1895.

The appropriations aggregated \$1,023,890.86. The estimated revenue was \$801,359.25. The Treasurer notified the heads of the various institutions that he would not pay special appropriations until he should find that he had a surplus after paying the running expenses of the government and the interest on the bonds.

A law was made for regulating the appointment of minority county commissioners, providing that, on the affidavit of 12 of any county, half of whom shall be freeholders, that the elected board of commissioners have mismanaged the affairs of the county, the judge of the district shall examine, and if he find the charges true, it shall be his duty to appoint two honest and discreet electors and citizens of said county, who shall be of a political party different from that of a majority of the said board of commissioners, to be members of the board until the election of their successors.

Some changes were made in the election law. A thorough revision of the school laws provides for State examinations of teachers, and by uniting weak districts is intended to make possible a four-months' term all over the State.

Among the acts affecting railroads were: To allow express matter to be carried on Sunday trains; repealing the fellow-servant act, making railroad companies liable for employees' injuries; requiring companies to redeem unused mileage tickets; amending the charter of the North Carolina and Atlantic Railroad, and subjecting it to State control; increasing the power of the Railway Commission.

The fishery laws were so amended as to make the license fee \$2,500 for foreigners who use seines in the sounds. The use of certain kinds of nets was prohibited in Albemarle Sound and its tributaries, and the use of Dutch or pond nets in Neuse river.

Acts affecting convicts prohibit the working of women on public roads or in chain gangs, allow tramps to be sent to the roads, provide for furnishing 250 convicts to the Winston-Salem Railroad, and allow convicts to be worked on public roads between July 15 and March 1.

Dispensaries for liquors, after the South Carolina plan, were provided for in five localities.

An act was passed to fix fire insurance rates on farm risks not to exceed those in Virginia.

Among other general laws were:

To locate the line between Tennessee and North Carolina, appropriating \$300.

To exempt all fraternal benevolent associations from taxation.

To buy a portrait of Zebulon B. Vance, appropriating \$500.

To prohibit adulteration of turpentine with kerosene.

Prohibiting liquor selling near churches.

To make land grants valid even when not registered by created counties.

To prevent minors from entering bar and billiard rooms and bowling alleys.

To protect coal miners and provide for inspection of coal mines.

To prohibit the use of fillers in commercial fertilizers.

To purchase Morris creek battle ground for \$200.

To prevent "overhead" fire insurance.

To regulate the procuring of bodies for dissection.

To repeal the assignment act of 1895.

To promote the oyster industry.

Political.—The State committee of the People's party issued an address in August, from which are taken the following extracts:

"We have secured to the citizen the right to cast one vote at all public elections, and to have that vote counted as cast. We have taken the public schools out of the hands of partisan politicians and restored them to the people. We have given the right of local self-government to each county in the State. We have removed the judiciary of the State to a safe distance from the arena of partisan politics. For a more effective and equitable control and reduction of the encroachments of railroad corporations we suggest that the Railroad Commissioners should be elected by a direct vote of the people."

A mass convention of negroes was held at Raleigh, Nov. 4, and the "Lincoln Republican League" was formed. The convention was called in protest against the giving of all offices, save 10, to the 30,000 white Republicans, and it is said this insulted the 120,000 negro voters. Resolutions were adopted calling on all negro Republicans hereafter to vote for no man opposed to giving the negro full recognition; that in future before any man is nominated negroes should exact a written pledge that he will give half of his clerical force to the colored Republicans; that all nominees shall give a pledge in favor of negro education, and that colored men who are willing to trade their race off for office shall not be nominated.

NORTH DAKOTA, a Northwestern State, admitted to the Union Nov. 3, 1889; area, 70,795 square miles. The population in 1890 was 182,719. Capital, Bismarck.

Government.—The following were the State officers during the year: Governor, Frank A. Briggs; Lieutenant Governor, J. M. Devine; Secretary of State, Fred Falley; Treasurer, George E. Nichols; Auditor, N. B. Hannum; Attorney-General, J. F. Cowan; Superintendent of Education, J. G. Halland; Adjutant General, Elliott S. Miller—all Republicans. Commissioner of Agriculture and Labor, H. U. Thomas; Land Commissioner, G. H. Winters, succeeded by H. J. Watt in August; State Examiner, H. A. Langlie; Oil Inspector, William Badger; Railroad Commissioners, George H. Keyes, L. L. Walton, and John R. Gibson; Superintendent of Irrigation and Forestry, W. W. Barrett; Insurance Commissioner, F. B. Fancher; Game Warden, G. E. Bowers; Chief Justice of the Supreme Court, Guy C. H. Corliss; Associate Justices, Alfred Wallin and J. M. Bartholomew; Clerk, R. D. Hoskins—all Republicans.

Finances.—The Treasurer's statement for the six months ending June 30 shows that the balance at the beginning of the year was \$182,797.17; the receipts brought the total to \$993,579.66; the disbursements were \$623,763.90; leaving a balance of \$369,815.76, of which \$213,181.23 was in the permanent school fund.

The total real-property valuation, as equalized by

the board in August, was \$64,024,911, a reduction of \$948,843 from the returns of the counties.

The valuation of railroad property was increased by the addition of \$250 to the valuation of every mile of road in the State for franchise. Heretofore the franchises of the roads have not been taxed. The total mileage of railroad in the State is 2,507. The total valuation of railroad property is about \$8,500,000.

The total value of the personal property in the State, as returned by the county boards of equalization, is \$20,187,448.

Education.—The school population is 72,132. The November apportionment was \$98,959.92, giving \$1.36 for each child.

A charter has been granted for the incorporation of the Northwestern College of Osteopathy at Fargo.

State Institutions.—The committee of the Legislature to visit the State institutions reported that they found them in good condition and managed economically. The amount of appropriations asked was \$573,213; but in view of the financial condition of the State the committee recommended that in all \$300,000 be appropriated. The only new building regarded as absolutely necessary was a hospital for the Penitentiary; but the Legislature provided for a warden's residence.

The Legislature decided to bond the lands given for the Reform School, at Mandan, for \$20,000, and use the money for buildings. Heretofore the State has sent refractory boys to the South Dakota Reform School, paying more than \$300 a year for each.

The biennial report of the Soldiers' Home, at Lisbon, showed that the whole number cared for was 52, and the average number present was 20.

New buildings were provided for at the Hospital for the Insane and at the School for the Deaf.

Banks.—Report was made to the Comptroller of the condition of the 26 national banks in the State, July 23. Comparison with the condition of the 29 in existence in July, 1896, and the 27 in May this year, showed that there was proportionally a material increase in the individual deposits and loans and discounts, but a reduction of 16.29 per cent. in the average reserves held by the banks since May. The individual deposits in July last year were \$4,549,228, which declined to \$3,692,829 in May, and have increased to \$4,003,118. The loans and discounts are \$4,447,334, and while this is slightly below the figures of last year, it is largely in excess of those reported in May, which were \$2,919,716.

The report of the State banks showed a marked improvement between July 29 and Oct. 5, this year. According to the examiner's statement, the resources at the former date were \$4,499,626.49; on Oct. 5 they were \$5,779,941.73. The individual deposits subject to check increased from \$1,495,956.45 to \$2,639,050.91, or over 76 per cent., the total increase being \$1,143,094.46. The reserve on July 23 was \$905,817.82; on Oct. 5 it was \$2,068,778.84, being over 31 per cent. on July 23, and over 50 per cent. on Oct. 5.

The Merchants' National Bank, at Devil's Lake, closed Jan. 4. In March the Federal grand jury, in session at Bismarck, investigated the methods of the suspended banks and found indictment against L. F. Booker, ex-State Treasurer and President of the Grand Forks National Bank, and H. F. Salvards, president of the First National Bank, of Minot. When Booker's case was called in November he failed to respond, and his bonds were forfeited.

Products.—Following is a statement issued by the Commissioner of Agriculture in September: "From statistics gathered from official sources and estimates carefully and conservatively made, the resources of North Dakota for 1897 are found to be as follow: 40,000,000 bushels of wheat, \$35,000,000;

4,500,000 bushels of flax, \$4,500,000; 9,000,000 bushels of barley, \$3,000,000; 28,000,000 bushels of oats, \$7,500,000; 3,000,000 bushels of potatoes, \$1,500,000; 2,000,000 pounds of wool, \$240,000; poultry and eggs, \$1,200,000; milk and milk products, \$2,500,000; live stock sold and meat products, \$10,000,000; total, \$66,040,000. This gives us about \$200 per capita for every man, woman, and child in North Dakota, or about \$1,500 for the head of each family in the State. This does not take into consideration the finished products of manufactures, or the revenues from the extensive coal mining in the western part of the State."

Immigration.—From the reports of county auditors the Commissioner of Agriculture made a compilation showing the increase of the population of the State through immigration in 1895 and 1896. The total increase is given at 16,793, of which 11,774 were added in 1896. In the spring several colonies of Dunkards from various sections in the East came into the State. Other colonies of the same sect had previously immigrated to the State; those in Canada, Towner County, and adjacent territory, numbered about 3,500. The immigrants of this year settled principally in Towner, Ramsey, Benton, Pierce, and Bottineau Counties. The railroads are contributing largely to the settlement of the vacant lands.

Lands and Timber.—The report of the General Land Office for the year ending June 30 shows that 10,659 acres in the State were patented to the Northern Pacific. There are 11,000,433 acres of unoccupied surveyed land and 9,424,860 unsurveyed.

The Commissioner of Forestry reported to the Legislature that the Indians were cutting trees in large quantities, many of which are young, sound, and growing. The trees are being sold for firewood. For years it has been asserted by citizens of the Turtle mountain region that the Indians living there, many of whom are aliens, set fires to the timber for the purpose of killing the trees, in order that they may cut them as dead timber. Besides burning and destroying this wood material, so much needed by the residents of the State for domestic purposes, the fires destroyed all young trees and seeds, and much of the soil of the mountains.

The Superintendent of Forestry sent to the children in the spring 1,500,000 seeds of box elder and white ash, to be planted on or about Arbor Day, and 500,000 seeds to be used in starting the Sylvaton Home, School, and Church Nurseries.

The report of the Game Warden says that he issued licenses to 3,502 residents of the State and 60 licenses to nonresidents to hunt. The total amount of fees received was \$2,155.27 to the 33 deputy game wardens and \$1,075.13 to the State Game Warden. Although the game laws of the State are very defective, the game birds and animals were better protected last year than in any previous season.

Lawlessness.—In February the family of Thomas Speer, a Methodist circuit rider, consisting of six members, was found murdered with circumstances of atrocity. Officers arrested an Indian half-breed named Alexander Coudot and a negro half-breed named Black Hawk on suspicion. Rings and jewelry that had disappeared from the Speer house were found in the possession of a young full-blooded Indian, Paul Holy Track, and he, with a companion, Philip Ireland, was arrested. The two boys made a confession, implicating Black Hawk, Coudot, and an Indian named George DeGuerre. Coudot was tried, found guilty of murder, and sentenced to be hanged; but the Supreme Court granted him a new trial. Under the law no conviction for murder could be had on uncorroborated

testimony of accomplices. The State maintained it had presented enough corroborating testimony to warrant a conviction, but in the opinion of the Supreme Court not a single feature of the corroborating testimony comes within the requirement of the statute. The new trial was granted Nov. 8. On Nov. 14 Holy Track, Ireland, and Coudot were taken from the county jail at Williamsport and hanged by a mob of 25 or 30 men. The other accused men were in jail in Burleigh County. The death of Holy Track and Ireland left the State without evidence against them, and they were discharged and taken to the reservation under a guard of Indians.

Legislative Session.—The fifth legislative session began Jan. 5 and ended March 6. E. A. Williams was Speaker of the House and C. B. Little president *pro tem.* of the Senate.

Senator Hansbrough's term in the United States Senate expired, and he was nominated for re-election by the Republican caucus by a vote of 49 against 15 for O. W. Francis, and was elected by a vote of 24 in the Senate and 43 in the House. William A. Bentley, the candidate of the Democrats and Populists, received 7 votes in the Senate and 17 in the House.

The total number of bills passed was 161, of which 152 became laws. The Governor vetoed 19, and 10 of these were passed over the veto, being appropriation bills that were passed on the last day of the session, as follow: Agricultural college, \$22,000; agricultural college, \$10,000; normal school, Valley City, \$20,455; normal school, Mayville, \$20,900; deaf school, \$19,250; insane hospital, \$109,750; university deficit, \$8,500; university, \$50,720; Penitentiary, \$48,350; Soldiers' Home, \$12,200. The reasons given for the veto were the lack of time to consider the amounts and the fact that the aggregate was largely in excess of the probable revenue that would be applicable to the purpose. As the caucus conference committee was unable to agree on a plan to reduce the appropriation and the Governor would not withdraw the vetoes, the bills were again passed.

A bounty on the destruction of wolves was provided for; a levy of one tenth of a mill is to be made for the purpose.

A new revenue law was enacted making many changes in the manner of levying and collecting taxes and correcting the conflicting and ambiguous provisions of the former law. A retroactive tax law provides for taxation of all property on lands not owned by the owners of the buildings which has escaped taxation since 1889. This is designed to tax property located on the railroad right of way.

An act to facilitate the collection of delinquent taxes for 1895 and preceding years is estimated to involve about \$670,270 in the counties and \$350,000 to \$500,000 from railroad companies.

It was provided that grain commission men or dealers must file a bond in the sum of \$10,000 with the Secretary of State to guarantee their payment of sums due to farmers who ship grain.

A law was made to compel insurance companies to pay taxes of 5 per cent. on gross premiums for 1897 and 2½ per cent. after that year. The law taxing insurance was omitted from the revised codes of 1895, and this bill provides for the 1896 tax now unpaid.

The law limiting loans by State banks to three times the amount of capital was repealed.

The election laws were so amended that hereafter a candidate's name can not go on the official ballot more than once. If nominated by more than one party, he must choose the one on whose ticket he wishes to appear. The new law also provides for a

separate ballot for all constitutional amendments, which must appear in full on the ballot, and for any other question other than the selection of public officers.

The Edwards precinct law was repealed. A new bill provides for a residence of ninety days in a precinct as a qualification.

It was provided that any district veterinarian may inspect any cattle, horses, or sheep that may be brought into his district from another State and unloaded to graze and run at large, and charge a fee of 5 cents for each sheep, 15 cents for each head of cattle, and \$1 for each head of horses.

A new railroad law was enacted under which the Commissioners of Railroads are required, within sixty days of the time the law takes effect, to fix maximum rates for the common carriers of the State. The law also makes provisions for various other matters in the regulations of common carriers.

A tax commission was appointed to adjust the delinquent taxes of the Northern Pacific. The following concurrent resolution passed both houses: "It being evident that railroad property within the State is returning good revenue on capitalization, ranging from \$24,000 to \$60,000 per mile, while paying taxes on mere nominal valuation, and the necessity for revenue for State institutions being apparent, the State Board of Equalization is hereby directed to assess all railroad property at a just and fair valuation, which in no case in future shall be less than \$5,000 per mile."

A bill to forbid the use of convict labor for manufacturing or other purposes was amended so as to permit the sale of convict farm products and brick, and was passed in that form. One proposing to employ convicts in mining coal for State institutions was defeated. The educators of the State in conference prepared a bill, which was passed, making changes in the school laws, which are not radical, but tend to simplify the work of the State Department of Instruction.

The laws in regard to the appointment of Penitentiary and reform school boards were amended.

A memorial to Congress was adopted, asking the reduction of the price of school lands to \$5 an acre.

Concurrent resolutions were carried expressing sympathy with the Cubans, and requesting the Superintendent of Instruction to take measures to secure appropriate celebration of Lincoln's Birthday in the schools.

The constitutional amendment proposed by the session of 1895, giving the Legislature power to impose penalties for failure to vote at general elections, was also passed at this session and now goes to the people.

The salaries of the Railroad Commissioners were reduced to \$1,200, and it was provided that they should have \$200 a year for expenses.

A committee that was appointed to examine the workings of the prohibitory law submitted the testimony taken, reporting that the law was fairly well enforced in several localities where public sentiment was in favor of doing away with the liquor traffic; but that in other places there were open violations of the law; that officers were elected with the understanding that they would not enforce it; that licenses were issued under city ordinances to sell "soft drinks" or run "shooting galleries," which were in effect licenses to sell intoxicating liquors.

A bill returned without approval was one changing the penalty clause in the prohibitory law so as to make it read "fine or imprisonment" instead of "fine and imprisonment." This bill caused much excitement through the State, and it was alleged that \$20,000 had been spent by the liquor interest to carry it through. It was defeated the day before

the final adjournment, but was brought up again the last day and "railroaded" through both houses under suspension of the rules. It was voted.

A bill to resubmit the prohibition clause of the Constitution to popular vote was defeated.

Among other enactments were:

Refunding the bonded indebtedness of the State, and funding other indebtedness.

Requiring meetings of stockholders of domestic corporations to be held within the State.

Providing for forfeiture of corporate franchises on failure to comply with the laws as to meetings and employment of agents.

Providing for a Trans-Mississippi Fair Commission.

For making estates pay the cost of keeping patients in the insane asylum.

Repealing the Russian-thistle law, and refunding to counties unexpected moneys collected under it.

Allowing discretion as to the foreclosure of contracts for the sale of school lands so as to give relief to purchasers who have been unable to keep up their payments.

Offering bounties for the arrest and conviction of stock thieves.

Providing for a school of forestry at Bettineau.

For the organization of children's home societies.

To prevent the adulteration of candy.

Permitting bicycles to be taken as baggage.

Regulating the practice of osteopathy.

Providing for an issue of bonds to raise funds for building for the Industrial School, at Ellendale, and the Reform School, at Mandan.

Making Lincoln's Birthday a legal holiday.

Providing for the appropriation by counties of a sum for the purchase of game birds to stock the woods and fields of the State.

NORTHWEST TERRITORIES OF CANADA. Constitutional Changes.—The year 1897 was all important for these vast geographical portions of the Dominion. They were given the self-governing status of a province, and they shared generally in the results of the gold discoveries in the Klondike—a region forming part of their extreme north-western borderland.

The step by which effect has been given to an act passed by the Dominion Parliament in June for the better government of the Northwest Territories is an interesting illustration of the growth of constitutional powers under the liberal institutions of the British Empire. The Territories do not as yet pay their own expenses, and therefore do not enter into the full dignity of rights equal to those of the other provinces of the Dominion; but they will for the future enjoy the privileges of responsible self-government, subject to certain limitations, and take something like provincial rank. The effect of the act, as defined by the Minister of the Interior, is to "give to the people of the Territories a government which shall not have the full powers of a provincial government, but in so far as they have power to deal with subjects they shall do so in the same way as the other provinces. They will have ministers who are responsible to the Legislature, and the rules and precedents that apply to the provincial governments will apply to the Government of the Territories."

Government.—The Government sworn in at Regina during the summer was practically the same as the old Executive Council. Mr. Mackintosh remained Lieutenant Governor, and Hon. F. W. G. Haultain became Premier and Attorney-General, Hon. J. H. Ross Provincial Secretary and Commissioner of Public Works. Hon. H. Mitchell, Hon. C. A. Magrath, and Hon. H. G. V. Bulvey were the other ministers, without portfolio. The

third session of the third Legislature was opened Oct. 28.

Gov. Mackintosh, in his speech from the throne, congratulated them upon the "marked evidence of prosperity to be seen all over the Territory as a result of a beautiful harvest and the sound condition and good prospects of all the important industries. The wonderful discoveries of mineral wealth in hitherto unexplored parts of the Territory, and the almost absolute certainty of establishing ready means of access to the new gold fields from the settled portions of the country, present, he thought, most beneficial results in the way of opening up new markets for staple products, while the building of the Crow's Nest Railway would enable stock raisers and agriculturists to reach themselves of the constant and increasing demand for food supplies of all kinds from the rich mining regions of the neighboring province of British Columbia. Continuing, he said:

"Since the last meeting of the Legislature important changes in the Constitution of the Territories have been made by the act passed at the last session of the Federal Parliament. In accordance with the provisions of that act I have chosen an Executive Council, and can now congratulate the Territories upon having obtained a completely responsible system of government. In consequence of this change, a reorganization of the offices of the Government and the creation of public departments for the carrying on of the public service will be found necessary, and measures having these ends in view will be submitted for your consideration."

A deputation composed of the Premier went to Ottawa later to ask for a larger subsidy, and to urge that the rich Yukon districts be left under Territorial control and not transferred to Manitoba, as had been suggested.

NOVA SCOTIA, PROVINCE OF. The Legislature convened on Jan. 21, 1897. Lieut.-Gov. M. B. Daly, in his speech from the throne, said:

"An abundant harvest has rewarded the labor of the farmers in all departments, though in horticulture the prices, owing to the large production throughout the world, have been low. The fisheries likewise have been generally successful, and the catch has been large, though in this important industry prices have not been so remunerative as could have been desired.

"The mining industry gives tokens of continued improvement. I have much pleasure in announcing to you that the output of coal for 1896 was the largest in the history of the province, and the increase has been confined very largely to the coal mines of Cape Breton. The prospects for the present year are also most encouraging. The gold-mining operations for the year show an increase over the preceding year, and the industry generally seems to give promise of more permanent progress by reason of the introduction of scientific methods and the systematic working of low-grade ores.

"During the recess the Judicial Committee of the Privy Council, the highest court of appeal in the empire, has given judgment in a case involving the rights and privileges of the Legislature of this province, and incidentally involving the rights and privileges of all provincial legislatures throughout the Dominion, and the judgment sustains in the fullest degree the rights and powers of provincial legislatures to maintain order and uphold their dignity.

"My Government, very soon after the last meeting of the Legislature, appointed a commission to make a thorough investigation into the workings of the Victoria General Hospital, which commission devoted considerable time and attention to making exhaustive inquiries into all branches of the

administration of that important institution. Their report will be laid before you.

"The Coast Railway Company, with whom a contract had been made for a narrow-gauge railway, have applied during the year for an alteration in the terms of the contract whereby they could construct a standard-gauge railway and obtain the usual subvention of \$3,200 per mile. A new contract has accordingly been entered into on that basis, which will be submitted to you. Considerable progress has been made in the construction of this road during the past year. The other railway companies which were either under contract or proposing to construct lines of railway in different parts of the province have made no substantial progress in the work of construction.

"The difficulty in disposing of the excessive fruit crop during the past season has called special attention to the question of cold storage, which is becoming an important element in the agricultural and fishing industries of the country, is being largely adopted in other countries, and is receiving encouragement from the Federal Government. I invite your attention to the subject, with a view of securing to this province the advantages of a system so vitally important to its various industries.

"The subject of land titles has been engaging the attention of the governments of various countries for some years past. The desirability of having land held by the most certain tenure and upon easy terms of transfer has been recognized as a matter of the greatest importance. A measure has been prepared looking to the introduction of the system of the registration of land titles.

"The subject of the probate court, which engaged your attention at the last session of the Legislature, will be again submitted to you in the form of a measure looking to changes and reforms in the administration of estates.

"Among other measures to be submitted will be amendments in relation to the mining laws; a change in the act relating to succession duties, whereby reciprocity is to be obtained with the Imperial Government in respect to property of Nova Scotians situate in Great Britain, and of property of the inhabitants of the United Kingdom situate in Nova Scotia; and a measure touching the road and bridge service."

During the session, on March 1, a joint address of the Legislative Council and House of Assembly of Nova Scotia to the Queen was passed amid much enthusiasm.

The Legislature adjourned on March 1 after passing many measures, of which the following were the most important:

To amend the judicature act.

To incorporate the Dominion Eastern Railway Company, limited.

Respecting the magistracy.

To incorporate the Cape Breton Iron Company, limited.

To incorporate the Equitable Savings' Loan and Building Association.

To amend the law respecting mines and minerals.

To amend chap. viii of the acts of 1896 entitled "An Act to prevent the spread of diseases affecting fruit trees."

To incorporate the Touquoy Gold Mining Company, limited.

To incorporate the Maritime Young Men's Christian Association.

To amend the game act of 1896.

To incorporate the Oriental Gold Mining and Development Company, limited.

To revive and amend chap. cxlii of the acts of 1889 entitled "An Act to incorporate the Nova Scotia Mining and Prospecting Company, limited."

To amend the town's incorporation act, 1895.

To authorize the granting of aid toward providing cold storage for agricultural and other products.

To amend the liquor-license act of 1895.

To incorporate the Cape Breton Oil Company, limited.

To incorporate the Dominion Granite Company, limited.

Respecting the Golden Group Mining Company, limited.

To provide for licensing boarding houses for infants under twelve years of age.

To amend an act to incorporate the North Sydney Mining and Transportation Company, limited.

To incorporate the Cow Bay Gold Mining Company, limited.

The elections were held on April 20, and the government of Hon. G. H. Murray was sustained by an immense majority. The Conservatives, under J. F. Stairs, were almost annihilated politically—only four being returned to the provincial Legislature. The main issue presented by the Opposition was the charge of extravagance, piling up of debt, and annual deficits. This was largely denied, and was certainly not accepted by the electorate.

Finances.—The assets of the province as announced on Sept. 30, 1896, were as follow: Counties road service, \$101,329.81; county of Halifax, education, \$13,127.73; Dominion of Canada provincial debt account, \$1,056,179.21; education, county loan, \$18,777; Hospital for Insane—due by municipalities, \$18,721.37; due by private patients, \$6,385.73; due counties, old accounts, \$32,622.06; department of mines, royalty, etc., \$86,827.39; balance of sinking fund in National Provincial Bank of England, \$85.70; total, \$1,334,056.

The liabilities were as follow:

Provincial debentures payable in Halifax.....	\$2,043,500 00	
Provincial debentures payable in London.....	\$200,000	
Less canceled by sinking fund.....	4,000	
	<u>£196,000</u>	953,866 66
Special loans:		
In England..... (£40,000)	\$194,666 66	
In Halifax.....	120,000 00	
	<u>314,666 66</u>	
Banks in Halifax.....		118,879 39
Total.....		<u>\$3,430,912 71</u>

The province is also liable on a guarantee of interest on £50,000 sterling debentures of the Windsor and Annapolis Railway.

The provincial treasurer's statement of the expenditure of the province chargeable to revenue for the year ending Sept. 30, 1896, was as follows: Windsor and Annapolis Railway, \$14,641.25; commutation road tax, Guysboro, \$250; Miner's Relief Society, \$2,896.19; salaries, \$22,152.91; electoral lists, \$102.05; estreats, \$275; private bills, \$150; game licenses, \$880. Works departments, \$17,011.48; Crown lands, \$1,816.46; public charities, \$128,721.79; legislative library, \$1,965.70; miscellaneous, \$22,401.08; legislative expenses, \$46,466.88; importation of horses, \$5,159.72; sinking fund, \$4,866.66; agriculture, \$20,911.07; school of agriculture, \$987.15; succession duties, \$30; interest, \$15,687.76; packets and ferries, \$35,851.30; debenture interest, \$124,434.24; criminal prosecutions, \$6,548.08; Crown lands, \$7,520.34; medical college, \$800; public printing, \$8,777.67; mines, \$16,813.85; provincial engineer's office, \$11,234.40; education, \$243,308.64; road grant, \$91,232.16; total, \$853,893.83.

The following was the revenue for the same period: Fees, mines, \$426; mines, \$276,602.90; Windsor and Annapolis Railway, \$12,401.09; commutation

road tax, Guysboro, \$250; subsidy, \$452,810.08; fees, \$881.19; gazette office, \$1,898.45; extracts, \$2,606.00; private bills, \$1,210; marriage licenses, \$5,387.04; game licenses, \$700.68; miscellaneous, \$18,488.23; importation of horses, \$3,393.36; succession duties, \$18,253.04; agriculture, \$653.41; Victoria General Hospital, \$5,685.36; interest, \$353.35; Crown lands, \$16,032.79; provincial engineer's office, \$23.02; education, \$963.72; Hospital for Insane, \$44,398.55; sinking fund, \$30.60; balance, \$12,734.04; total, \$853,893.83.

Education.—The number of schools increased from 2,305 to 2,312; the pupils enrolled from 100,555 to 101,032; the number of trained teachers from 616 to 690; and the total day's attendance made by pupils from 10,773,255 to 11,061,572.

The amount of money raised by sectional assessment was less than that of the previous year by a comparatively small amount, a little more than \$2,000; but the total provincial grants were greater by more than \$3,500, making the total expenditure for public education about \$1,500 greater than in 1895. On account of the increased attendance at school, however, the cost of education per pupil was reduced about 3 cents. The total cost this year, including all assessments on the school sections, the county assessment, and all payments from the provincial treasury to teachers and for the general administration was for each pupil enrolled \$8.95, or for each pupil "daily present on an average" \$15.06.

The high-school work as tested by the provincial examination has rapidly accommodated itself to the new standard. Nothing will show this more clearly than the series of results of the examinations from the last year of the teachers' examination. The popularity of the present system is indicated by the rapidly growing number of candidates presenting themselves from year to year.

According to the annual report of the chief superintendent the Normal School, with its additional

facilities, re-enforced by the neighbouring School of Agriculture, "is giving a better training to the teachers graduating. Attendance for the minimum time prescribed is not sufficient to win a diploma from the institution."

The Coal Trade.—The coal trade returns for the twelve months ended Sept. 30, 1896, were as follows: Sold in Nova Scotia, 696,403 tons; New Brunswick, 252,293 tons; Prince Edward's Island, 94,236 tons; Newfoundland, 63,000 tons; Quebec, 735,600 tons; West Indies, 1,222 tons; United States, 174,919 tons. The total production was 2,335,472 tons, compared with 2,089,245 tons in 1895.

Gold.—For the year ending Sept. 30, 1896, the production was, in ounces, as follows: Wine Harbour, 501; Gold river, 432; Fifteen-Mile Stream, 3,151; Kenfred, 389; Stormont, 5,076; Brookfield, 4,083; Carleton and Moose river, 2,864; Umanak, 3,732; Sherbrooke, etc., 2,796; Waverley, 534; Central Rawdon, 531; Cow Bay, 249; Tangier, 85; localities unproclaimed and other districts, 577; total, 25,596.

Railroads.—The aggregate traffic for the twelve months ending Sept. 30, 1896, was as follows: Dominion Atlantic Company, 269,659 19 passengers, 219,112.03 tons of freight; Cumberland Coal and Railway Company, 8,447.29 passengers, 63,201.72 tons of freight; Sydney and Louisburg Railway, 20,882.33 passengers, 217,169.50 tons of freight; Nova Scotia Central Railway, 24,120.29 passengers, 22,063.04 tons of freight; Canada Coals and Railway Company, 2,964.40 passengers, 21,463.92 tons of freight; total, 326,067.32 passengers and 542,941.21 tons of freight.

Agriculture.—The number of agricultural societies in the province that have qualified for participation in the Government grant for 1896 and are now in active operation is 85. The number of members is 4,888. The subscription paid by members amount to \$5,675.30. The Government grant is \$8,000.

O

OBITUARIES, AMERICAN. Adams, Wil-

Ham Taylor (known as OLIVER OPTIC), author, born in Medway, Mass., July 30, 1822; died in Boston, Mass., March 27, 1897. In youth he worked on a farm in summer and attended school in winter, and when eighteen years old he began teaching, subsequently becoming principal of the present Harris Grammar School, in Dorchester. After engaging in the hotel business with his father for a few years, he resumed teaching, and was so employed till 1865, when, at the request of Messrs. Lee & Shepard, the publishers, he resigned to apply himself wholly to story writing. In this he was eminently successful. He visited Europe a dozen times and traveled through nearly every country there, making his last trip in 1896, when he went round the world, stopping in China, Japan, and other Eastern countries. For his domestic stories he traveled through each of the United States and each of the British North American provinces and acquired a noteworthy familiarity with American history. He published his first book, "Hatchie, the Guardian Slave," in 1853, and on his seventy-fourth birthday, in 1896, he had written 100 books, besides several hundred stories in periodicals. In the course of his long career he was also editor of "Oliver Optic's Magazine," "The Student and Schoolmate," and "Our Little Ones," and from 1893 he was an editor of "The Whole Family." Many of his works were issued in series, and among these

were "The Boat-Club Series" (6 vols.); "The Riverside Stories" (12 vols.); "The Woodville Stories" (6 vols.); "Young America Abroad" (2 series of 6 vols. each); "The Starry Flag Series" (6 vols.); "The Lake-Shore Series" (6 vols.); "The Onward and Upward Series" (6 vols.); "The Yacht-Club Series" (6 vols.); "The Great Western Series" (6 vols.); "The Boat-Builer Series" (6 vols.); and "The All-over-the-World Series" (8 vols.).

Allen, Frederick De Forest, philologist, born in Oberlin, Ohio, in 1844; died in Cambridge, Mass., Aug. 4, 1897. He was educated at Oberlin College and the University of Leipzig; was a professor in the University of Tennessee in 1866-'68 and 1870-'73; became a tutor at Harvard in 1873; held a chair in the University of Cincinnati in 1874-'79; and then spent a year as professor at Yale. In 1880 he accepted the chair of Classical Philology at Harvard, which he held till his death. His publications include an edition of the "Medea" of Euripides (1876); "Remnants of Early Latin" (1880); a revision of "Hadley's Greek Grammar" (1884); "Greek Versification in Inscriptions" (1888); and a large number of volumes of the ancient classics which he edited.

Allen, Harrison, anatomist, born in Philadelphia, Pa., April 17, 1841; died there, Nov. 14, 1897. He was graduated in medicine at the University of Pennsylvania in 1861, became an assistant surgeon

in the regular army in 1862, and resigned with the brevet rank of major in 1865. He was called to the chair of Comparative Anatomy and Medical Zoölogy at the medical school of the University of Pennsylvania, which he held till 1878, when he was transferred to the chair of Physiology. He remained in the last chair till May, 1895, and was then retired as professor emeritus. In 1878 he also became Professor of Anatomy and Surgery at the Philadelphia Dental College, and for several years after 1870 he was surgeon to the Philadelphia Hospital. He was President of the American Laryngological Association in 1886, and President of the American Anatomical Society in 1891-'93. He was the author of numerous monographs and books, including "Outlines of Comparative Anatomy and Medical Zoölogy" (1867); "Studies in the Facial Region" (1874); "An Analysis of the Life Form in Art" (1875); and "System of Human Anatomy" (1880).

Alvord, Thomas Gold, lawyer, born in Onondaga, Onondaga County, N. Y., Dec. 20, 1810; died in Syracuse, N. Y., Oct. 26, 1897. He was graduated at Yale in 1829, admitted to the bar in 1832, and practiced till 1846. In 1844 he entered active political life as a Democrat and was elected to the State Assembly, where he served through fourteen terms, the last one being that of 1882. In 1861 he became a Republican; in 1858, 1864, and 1879 he was Speaker of the House; in 1864 he was elected Lieutenant Governor of the State; in 1867-'68 he was a member of the Constitutional Convention; in 1878 he was chairman of the Apportionment Committee of the House; and in 1894 he was vice-president of the Constitutional Convention. For many years he was engaged in the manufacture of salt. He was considered a high authority on parliamentary law.

Atkinson, John, clergyman, born in Deerfield, Salem County, N. J., Sept. 6, 1835; died in Haverstraw, N. Y., Dec. 8, 1897. He entered the old New Jersey Conference of the Methodist Episcopal Church in 1853, and in 1858 was assigned to the newly created Newark Conference. Subsequently he was attached to the Rock Island Conference of Illinois, the Detroit Conference of Michigan, and again to the Newark Conference of New Jersey. He held pastorates in Newark, Jersey City, Chicago, Bay City, Adrian, and lastly in Haverstraw. He was a frequent contributor to the denominational press; was the author of the hymn "Shall we meet beyond the River"; and among other works had published "The Living Way" (1856); "Memorials of Methodism in New Jersey" (1860); "The Garden of Sorrows" (1868); "The Class Leader" (1874); "Centennial History of American Methodism" (1884); and shortly before his death a work on the "Wesleyan Movement in America."

Babcock, James Francis, chemist, born in Boston, Mass., Feb. 23, 1844; died in Dorchester, Mass., July 20, 1897. He was graduated at the Lawrence Scientific School, where he applied himself wholly to chemistry, in 1862, and established himself in Boston as an analytical chemist and chemical expert. In 1869 he was elected Professor of Chemistry in the Massachusetts College of Pharmacy, where he remained till 1874, when he was called to the similar chair in the Boston University. In the following year he was appointed State assayer and inspector of liquors. He held this office till 1885, when he became city inspector of milk in Boston, serving as such till 1889. While State assayer he secured the insertion in the liquor statutes of the definition of the term "intoxicating liquor" known as the 3-per-cent. limit, and while inspector of milk he secured the suppression of the use of coloring matter in milk and largely increased the efficiency of the office. He invented

the fire extinguisher bearing his name, was widely known as a lecturer on scientific subjects, published numerous reports on sanitation and the chemistry of food, and was an expert chemical witness in important trials.

Bacon, John Edmund, jurist, born in Edgefield, S. C., March 3, 1832; died in Columbia, S. C., Feb. 19, 1897. He was graduated at South Carolina College in 1851, studied law at the Litchfield (Conn.) Law School, and was admitted to the bar in 1854. He also became an accomplished linguist early in life. In 1858 he was appointed secretary of the United States legation at St. Petersburg, and for a time was acting as *chargé d'affaires*. While at this post he married the daughter of ex-Gov. Pickens, then United States minister to Russia. On the election of Abraham Lincoln to the presidency he resigned his office, returned to South Carolina, and entered the Confederate army, serving till the close of the war and rising from the ranks to the grade of major. In 1866 he was selected to accompany Gov. James L. Orr to Washington to negotiate for the restoration of South Carolina to the Union; was elected district judge of Edgefield in 1867, and officiated till removed by the Federal military commander; and in 1872 removed to Columbia and was the unsuccessful Democratic candidate for Congress. The reopening of South Carolina College by act of the Legislature in 1873 was due in the largest measure to his efforts. In 1884 he was a Democratic presidential elector, and in 1886 was appointed United States *chargé d'affaires* in Uruguay and Paraguay.

Baker, William Spohn, author, born in Philadelphia, Pa., April 17, 1824; died there, Sept. 8, 1897. He acquired a private-school education and studied conveyancing, which he practiced till 1880, afterward applying himself wholly to special historical research and writing. He was one of the most enthusiastic and thorough students of Washingtoniana, and made the largest and finest collection of biographies, sketches, portraits, medals, and private papers of Washington in existence. Among his special publications are "Engraved Portraits of Washington," "Medallic Portraits of Washington," "Character Portraits of Washington," "Washington's Itinerary," and "Washington after the Revolution." At the time of his death he had in press "Washington in Philadelphia." His other publications included "American Engravers and their Works," "William Sharp, Engraver, and his Works," and "The Antiquity of Engraving and the Utility and Pleasures of Prints."

Bateman, Newton, educator, born in Fairfield, N. J., July 27, 1822; died in Galesburg, Ill., Oct. 21, 1897. He accompanied his father's family to Illinois in 1833; spent his early youth at hard manual labor; worked his way through Illinois College, being graduated in 1843; studied for the ministry at Lane Theological Seminary; and became a traveling agent for an historical chart. After nearly two years spent in traveling in the United States he began his noteworthy career as an educator as principal of a private school in St. Louis. From 1847 till 1851 he was Professor of Mathematics in St. Charles College, and in the last year was placed in charge of the public free school in Jacksonville, having also to discharge the duties of principal of the high school, superintendent of the city schools, and school commissioner of the county. In 1858 he was elected State Superintendent of Public Instruction. During 1863-'64 the State was in Democratic hands, and then failing of re-election he was employed in the office of the provost marshal general of Illinois. His tenure of the office of superintendent was marked by a series of official reports of high value, in which the various phases of public

education were ably discussed, and much of the excellence of the present school laws of Illinois is due to his sagacity. He was President of Knox College, Galesburg, Ill., from 1875 till 1892, when impaired health caused him to resign. Dr. Batesman was also a member of the Illinois State Board of Health from 1877 till his death.

Bates, Newton Lemuel, physician, born in Parma, Monroe County, N. Y., Nov. 16, 1807; died in Washington, D. C., Oct. 18, 1897. He received his medical degree from the Buffalo University in February, 1861, and in June entered the navy with the rank of assistant surgeon. He was promoted passed assistant surgeon, June 22, 1864; surgeon, Sept. 16, 1865; medical inspector, Jan. 15, 1881; and medical director, Sept. 1, 1888; was placed in charge of the Naval Museum of Hygiene, May 28, 1895; and was appointed surgeon-general of the navy about two weeks before his death. Dr. Bates had served on sea duty more than ten years, and on shore or other duty nineteen years. He was at the New York Naval Laboratory in 1864-67, was fleet surgeon of the South Atlantic station in 1873-'76, and subsequently of the European station.

Beasley, Mercer, jurist, born in Philadelphia, Pa., in 1815; died in Trenton, N. J., Feb. 19, 1897. He was a son of the Rev. Frederick Beasley, provost of the University of Pennsylvania in 1813-'28, took a partial course in Princeton College, and studied law in Trenton and Elizabeth. He was admitted to the bar in 1833, settled in Trenton, and soon became distinguished for the extreme care with which he prepared his pleadings. In 1864 he was appointed Chief Justice of the Supreme Court of New Jersey, and he was reappointed in 1871, 1878, 1885, and 1892. As a practitioner he was foremost in the examination of cases usually submitted to the appellate court, and when he became Chief Justice he brought to that office great experience in these cases. He had a remarkable memory and a quick, analytical mind; was mild and helpful in disposition; and was strongly averse to technicalities. During his official career he swore nine governors into office.

Beecher, Eunice White, widow of Henry Ward Beecher, born in West Sutton, Mass., Aug. 26, 1812; died in Stamford, Conn., March 8, 1897. Her father was Artemas Bullard, a physician of English descent, who, besides attending to an extensive practice, owned one of the largest farms in New England. Eunice was educated in her native town and at Hadley, Mass., and while she was studying in the last town a brother became a classmate of Henry Ward Beecher at Amherst College. During a vacation young Beecher accompanied the brother to the farm, and there met Eunice. An engagement of marriage resulted, which was not fulfilled till after Mr. Beecher was installed as pastor of a church in Lawrenceburg, Ind., more than seven years afterward. The wedding took place at the home of the bride's parents, and immediately afterward the couple went to their new Western home. After two years' service at Lawrenceburg, Mr. Beecher resigned his charge, and went to Indianapolis, whence in 1847 he removed to Brooklyn, N. Y., there spending the remainder of his life. Ten children were born of this union, of whom four survive the mother. From the time of their settling in Brooklyn till Mr. Beecher's death, in 1887, the life of Mrs. Beecher was closely interwoven in that of her distinguished husband, and yet it had a strong individuality, which developed a great personal influence for good. After her husband's death she lived quietly in Brooklyn. In 1891 she made a trip to the Pacific coast to visit her youngest son; in 1895 she went alone to Port Townsend, Wash., to celebrate her eighty-third birthday with a son's

family; and shortly before her death she went to Stamford, Conn., to visit her daughter, and there met with an accident which proved so severe for her remarkable vitality. Her last appearance in public was at the unveiling of the statue of her husband in Brooklyn, in 1891. Mrs. Beecher was for many years a regular contributor to periodicals, principally on domestic topics, and had published "From Dawn to Daylight: A Simple Story of a Western Home" (1859); "Mother's Page: with Young Housekeepers" (1875); "Letters from Florida" (1878); "All around the House: or How to make Homes Happy" (1878); and "Home" (1883).

Bell, Isaac, benefactor, born in New York city, Aug. 4, 1814; died there, Sept. 30, 1897. He began his business career when fourteen years old in a banking house, and in 1836 was sent South to look after important cotton interests, first in Charleston, S. C., and afterward in Mobile, Ala., where he established himself in business, and remained till 1856. While in Mobile he became active in politics, and held several offices, and was also vice-president and chairman of the Southern Bank of Alabama. On his return to New York in 1856 he interested himself in large financial and other concerns, with many of which he was connected until his death. He also entered on a career of public beneficence. His business operations yielded him a large fortune, of which he gave liberally to charitable and philanthropic enterprises. Soon after his return he was appointed one of the ten governors of the almshouse, and when that institution was merged into the Department of Charities and Correction he was appointed one of the commissioners, and acted as president from 1857 till 1873. Chiefly through his exertions Bellevue Hospital was established, as well as the Bellevue Hospital Medical College, of whose trustees he was president for many years. In connection with the work of the hospital he established the system of ambulance service. He also was largely instrumental in establishing the Normal College, and became responsible for the school ship "Mercury," under control of the Department of Charities and Correction, and of the "St. Mary," loaned to the Department of Education. During a large part of this period Mr. Bell was a member of the Department of Education. Throughout the civil war he was conspicuous among the business men of New York who composed the Union Defense Committee, by whom steamers were chartered for Government use, regiments were raised for the National army, and several million dollars collected and disbursed for the benefit of New York volunteers and the relief of soldiers' wives, widows, and orphans. After the draft riots of 1863 he, with Paul Forbes and Leonard Jerome, organized the Police Riot Relief fund, and he was custodian of the fund till within a few years. Mr. Bell was also a Commissioner of Immigration for several years.

Biddle, Arthur, lawyer, born in Philadelphia, Pa., Sept. 23, 1852; died in Atlantic City, N. J., March 8, 1897. He was graduated at Yale in 1873, studied law, and was admitted to the bar in 1878. Subsequently he became a member of his father's firm, and applied much of his time to research in certain branches, the results of which appeared in his publications: "Treatise on the Law of Stock Brokers" (1881); "Treatise on the Law of Warranties in the Sale of Chattels" (1884); and "The Law of Insurance" (2 vols., 1893).

Birch, William, minstrel, born in Utica, N. Y., Feb. 26, 1831; died in New York city, April 29, 1897. He began his career as a negro minstrel when thirteen years old as "end man" of a company playing in New Hartford, and after following the road for six years joined the Fellows combination in New York, where he and George Christy

alternated as end men in two minstrel halls night after night. His first marked success was made in California, whither he went to dig for gold, and where, with Wambold, Bernard, and Backus, he organized the long-famous San Francisco Minstrels. This combination was exceptionally fortunate, and remained on the Pacific coast for six years. In 1857 the troupe established themselves in the hall on Broadway, opposite Niblo's Garden, in New York, where they had another long period of success. From this hall the troupe moved uptown to a house built for them, but the change was unfortunate. Soon Bernard and Wambold retired, then Backus died, and Barch was left to hold the house alone. Speculation in stocks wrought his financial ruin.

Bliss, George, lawyer, born in Springfield, Mass., May 3, 1830; died on Shadow Farm, near Wakefield, R. I., Sept. 2, 1897. His grandfather and father were well-known lawyers, and the latter was also president of several railroad corporations. The son was graduated at Harvard in 1851, continued his studies for two years in Berlin and Paris, and on his return studied law in Springfield and New York and at the Harvard Law School. After his admission to the bar he established himself in practice in New York. In 1859-'60 he was private secretary to Gov. Edwin D. Morgan, in 1861 was appointed to his staff, and in 1862 was appointed paymaster general of New York, with the rank of colonel, and also a captain in the 4th New York Heavy Artillery, and was detailed to the military staff of Gov. Morgan, who had been commissioned a major general of volunteers. In 1862-'63 Col. Bliss, under instructions from the Secretary of War, organized the 20th, 26th, and 31st Regiments of United States colored troops. After the war he resumed his law practice. In 1866 he was appointed attorney for the Metropolitan Board of Excise and the Metropolitan Board of Health, in 1872 President Grant appointed him United States attorney for the Southern District of New York, and in 1881-'83 he assisted the United States Attorney-General in the prosecution of the Star Route postal cases. For more than twenty years prior to 1893 he was active in Republican political affairs. He drew up the New York charter of 1873 and several important amendments afterward made to it, was one of the three commissioners appointed to compile the special and local acts relating to the city of New York in 1879-'80, and subsequently drew up the "New York city consolidation act." He also drew up and procured the passage of the first tenement-house act for the city. While an undergraduate he was associated with David A. Wells in the compilation of the "Annual of Science Discovery" and "Things not generally known," and later in life he published three editions of the "Law of Life Insurance" and four editions of the "Annotated Code of Civil Procedure."

Bluejacket, Charles, Shawnee Indian chief, born in Michigan in 1816; died in Bluejacket, Cherokee Nation, Indian Territory, Oct. 30, 1897. He was the last of a long line of Shawnee chiefs, and hereafter the remnant of that tribe will be ruled by an executive council. Shortly before his death he accepted an invitation of the Wyandotte County (Kansas) Historical Society to revisit the Shawnee township and locate the grave of Ellskwatava, the "Prophet," that it might be marked with a monument. The fatigue of the journey and the excitement caused by the enthusiastic greetings he received while passing through Kansas City proved too severe for the old man and occasioned his death.

Brittan, Harriet G., missionary, born in England about 1823; died in San Francisco, Cal., April 30, 1897. She was the daughter of a clergyman, who removed his family to Brooklyn, N. Y., during

Harriet's childhood. After acquiring a general education she went to the African missionary field under the auspices of the Domestic and Foreign Missionary Society of the Protestant Episcopal Church, and spent two years teaching in Liberia. While there she wrote a book on "Scenes of Everyday Life in Africa." A severe prostration with African fever caused her to return to her home. In 1862 she became connected with the Woman's Union Missionary Society of America for Heathen Lands, and by it was sent to India, then having but few American missionaries. She reached Calcutta in 1863 with several missionaries who were to work under her directions, and, as superintendent of the Zenana Mission, remained in that field more than fifteen years. Miss Brittan is said to have been the first American admitted to the private apartments of high-caste Indian women, and her sympathy for the women of India generally prompted her to write the books "Kardoo, the Hindoo Girl," and "Shushone, the Hindoo." The proceeds of the sale of her books were applied to missionary work. In 1880 Miss Brittan went to Yokohama, Japan, where she was superintendent of the large mission established for the benefit of Eurasian children till 1893, and was then placed in charge of the Home for Missionaries. At the time of her death she had reached San Francisco on her way to New York.

Brush, Charles Benjamin, civil engineer, born in New York city, Feb. 15, 1848; died there, June 3, 1897. He was graduated as a civil engineer at the University of the City of New York, and his first professional service was with the engineer corps of the Croton Aqueduct Department in 1867-'69. In the last year he established himself in independent practice. He was appointed Adjunct Professor of Civil Engineering in the University of the City of New York in 1874; became full professor and dean of the school of engineering there in 1888; was elected an associate of the American Society of Civil Engineers in 1871, a member in 1877, a director in 1888, and vice-president in 1892; and was for many years a member of the Charity Organization Society. Professionally he was widely known for his work in designing and constructing waterworks throughout the United States and for his connection as engineer with the Washington Bridge over Harlem river in New York, the Hudson River Tunnel, the projected bridge over the Hudson at New York, and the Hoboken Land and Improvement Company. His last important work was as chief engineer of the Hackensack Water Company of New Jersey.

Butler, Charles, philanthropist, born in Kinderhook Landing, Columbia County, N. Y., Feb. 15, 1802; died in New York city, Dec. 13, 1897. He was a son of Medad Butler, the first judge of Columbia County, and a brother of Benjamin Franklin Butler, Attorney-General of the United States in President Jackson's Cabinet. Charles was graduated at Greenville (N. Y.) Academy; studied law with his brother and Martin Van Buren, who had become law partners; was admitted to the bar in 1824, and established himself for practice in Lyons, N. Y. Soon afterward he removed to Geneva, N. Y., and became assistant district attorney of Genesee County and attorney for a New York life insurance company. While acting in the last capacity he was influential with John Jacob Astor, Isaac Bronson, and others, in building up that portion of the State. In 1833 he went to Chicago, then known as Fort Dearborn, and as a town was being laid out there he made large investments in land that was afterward comprised within the limits of the city. He placed his brother-in-law, William B. Ogden, in charge of this property, and the latter became the first mayor of Chicago after its incorporation as a city, in 1837. Subsequently he bought much land

in what is now the city of Toledo, Ohio, and gave the ground on which stand an industrial school and two churches. In 1845 he removed to New York, where among his first successes was the adjustment of the debts of the States of Michigan, Indiana, and Illinois to the satisfaction of the creditors. He was afterward interested in large railroad enterprises in the West. His various operations yielded him wealth and enabled him to accomplish works of beneficence for which he will long be remembered. He was one of the founders of Union Theological Seminary in New York, to which he gave \$100,000, and with which he held official relations till his death. In 1836 he was elected a member of the council of the University of the City of New York, which he served officially till his death, and to which he gave \$100,000. He was also a founder and officer of the Protestant Half-Orphan Asylum of New York, and of the Westchester Temporary Home for Friendless Children. He received the degree of LL. D. from Wabash University and the University of the City of New York.

Butler, Thaddeus J., clergyman, born in Limerick, Ireland, in 1831; died in Rome, Italy, July 16, 1897. He studied in Rome, where he joined the papal choir and became a favorite of Pope Pius IX. After graduation he remained in Rome till he and his three brothers were ordained to the priesthood, and then the brothers came to the United States as missionaries. They settled in Chicago and remained near each other till the outbreak of the civil war. Father Thaddeus became Professor of Theology in the seminary of St. Mary of the Lake, and, on the succession of Bishop Duggan to the episcopal see, secretary to the bishop and chancellor of the diocese. At the beginning of the civil war he went to the field as chaplain of Col. James A. Mulligan's regiment. While he was at Lexington, Mo., a Confederate field hospital was fired on by mistake, and two wounded men were killed. Soon afterward Chaplain Butler and Surgeon William H. Winer, of the same regiment, were captured, tried by drumhead court-martial, and sentenced to be shot, in retaliation for the firing on the hospital. As they were about to be led out for execution an officer on Gen. Price's staff recognized Dr. Winer as an old schoolmate, and, pleading with the Confederate commander, secured a respite, and then a discharge on parole for both captives. Dr. Butler then returned to Chicago, resumed his priestly functions, and built up a prosperous parish in the north side. After serving for some time in Rockford, Ill., he was transferred to Chicago, and placed in charge of St. John's Church, of which he remained pastor till his death. Early in 1897 he was appointed Bishop of Concordia, Kan., and was to have been consecrated on the day following that of his death. He was widely known for his oratorical and vocal accomplishments.

Cameron, Angus, lawyer, born in Caledonia, N. Y., July 4, 1826; died in Milwaukee, Wis., March 30, 1897. He was educated at the Genesee Wesleyan Seminary, Lima, N. Y.; studied law in Buffalo, and was graduated at the National Law School, Ballston Spa, N. Y.; and removed to La Crosse, Wis., to practice in 1857. In 1863, 1864, 1871, and 1872 he was a member of the State Senate; in 1866 and 1867 was a member of the Assembly, and he was Speaker of the House in the last year. In 1864 was a delegate to the National Republican Convention at Baltimore, and in 1866-'75 was a regent of the University of Wisconsin. He was elected United States Senator in 1875, and again in 1881 for the term ending March 3, 1885. In the Senate he served as chairman of the Committee on Claims and as a member of the Committees on Indian Affairs, Privileges and Elections, and Public Buildings.

Carleton, Charles Arms, soldier, born in Brooklyn, N. Y., May 27, 1845; died in New York city, April 1, 1897. He was a brother of George W. Carleton, the New York publisher, and was associated with him in business at the beginning of the civil war. On April 21, 1861, he enlisted as a private in the 12th New York State Engineer Corps, and he spent the three months term at Washington and Arlington Heights and in the Virginia and Maryland fields. On the expiration of his term he reenlisted, became a 2d lieutenant in the 4th New Hampshire Volunteers, and in April, 1862, was appointed acting adjutant of the battalion sent to garrison Fort Clinch, at Fernandina, Fla. He accompanied the battalion to James Island, S. C., and took part in the preliminary skirmishes and the assault there, June 16. In April, 1864, he was appointed acting assistant adjutant general on the staff of Gen. Adelbert Ames, with whom he served to the close of the war. He was engaged in the operations at Bermuda Hundred, Va.; was in the battles of Swift Creek, Weir Bottom Church, Falling Creek, Drury's Bluff, Walthall Junction, Cold Harbor, and Chapin's Farm. At Fort Fisher he distinguished himself in the first and final attacks, and was slightly wounded. Honorable mention in official reports was followed by the bestowal on him by President Lincoln of the brevets of lieutenant colonel "for distinguished conduct at the storming of Fort Fisher," and colonel and brigadier general "for gallant and meritorious services during the war." He participated in 21 engagements and sieges. He was mustered out Dec. 19, 1865, and was afterward engaged in business in New York.

Cheever, Henry Theodore, clergyman, born in Hallowell, Me., April 17, 1807; died in Worcester, Mass., Feb. 13, 1897. He was a brother of the Rev. George Barrell Cheever, and was graduated at Bowdoin College in 1834, and, after visiting Europe, at the Bangor (Me.) Theological Seminary in 1840. For several years he was associate editor of the New York "Evangelist," and in the interest of that periodical he visited the South Sea Islands. He held several pastorates, and from 1859 till 1864 was secretary and agent of the Church Antislavery Society, but he was best known for his numerous publications. He edited "Memoirs of Nathaniel Cheever, M. D." his father (1833); "Autobiography and Memorials of Capt. Obadiah Gungah" (1855); "Life and Writings of the Rev. Walter Colton, U. S. N." (1856); "Autobiography and Memorials of Ichabod Washburn" (1878); and "Correspondencies of Faith and Views of Madame Guyon" (1886); and wrote "The Whale and his Captors" (1849); "A Reel in a Bottle for Jack in the Dol-drams" (1851); "The Island World of the Pacific" (1852); "Life and Religion in the Sandwich Islands" (1854); "Short Yarns for Long Voyages" (1855); and "Waymarks in the Moral War with Slavery between the Opening of 1859 and the Closing of 1861" (1862).

Christy, Charles, minstrel, born in New York city in 1829; died in Kansas City, Mo., Feb. 13, 1897. He came of a family of actors, and was one of the original Christy Minstrels, founded by his uncle, Edwin P. Christy, joining the *troupe* as a balladist in 1845. He was also an actor in the drama, and had played in support of Edwin Forrest and William Macready. When the palmy days of the Christy Minstrels were over Charles managed similar combinations in various parts of the country, and was the chief attraction in the one organized by "Coal-Oil Johnny" Steele, soon after the discovery of petroleum in Pennsylvania. For about twenty years he had lived in Texas, managing *sawdust* shows. In 1892 he went to Kansas City, Mo., with Pain's Novelty Company.

Clark, Alvan Graham, astronomer, born in Fall River, Mass., July 10, 1832; died in Cambridge, Mass., June 9, 1897. He was a son of Alvan Clark, the famous optician and manufacturer of telescopes, and after acquiring a grammar-school education became associated with his father under the firm name of Alvan Clark & Sons. The superiority of the lenses made by the firm was first brought to the attention of astronomers by the Rev. W. R. Dawes, who introduced several of the instruments abroad. Forty years ago the largest telescope that had been made was a 15-inch achromatic instrument made in Europe, and the United States had produced nothing to compare with it. In 1859 the Clarks began work on an object glass with an aperture of 18½ inches, for the University of Mississippi, but the civil war prevented its sale to that institution, and it became the property of the Astronomical Society of Chicago. With this instrument Alvan Graham Clark discovered the companion of Sirius, for which the French Academy awarded him a medal. The next largest instrument was the one made for Princeton College Observatory. In 1870 the firm contracted with the United States Government for a telescope for the Naval Observatory, to be the largest in existence. The original contract called for an instrument with a 24-inch aperture, but as an English instrument of 25 inches had just been completed the contract was changed to 26 inches. On the completion of this telescope, with which Prof. Asaph Hall discovered that Mars had two satellites, the firm made another of the same size for the University of Virginia, known as the McCormick telescope. Then came the great 30-inch instrument for the imperial observatory at St. Petersburg, for which the Emperor presented Mr. Clark with a gold medal weighing half a pound. In 1886 an order for the most powerful telescope in the world was completed for the Lick Observatory, at Mount Hamilton, Cal., with the great aperture of 36 inches. With this instrument the fifth satellite of Jupiter was discovered. Afterward Mr. Clark had made a 20-inch lens for Denver University, one of 24 inches for Percival Lowell, one of similar size for the Harvard Observatory station at Arequipa, Peru, and, the greatest of all ever completed, the wonderful Yerkes lens of 40 inches, a gift of Charles T. Yerkes to the Chicago University, formally installed in the observatory at Lake Geneva, Wis., in 1897. Mr. Clark was a member of the expedition to observe the eclipse of the sun at Shelbyville, Ky., in 1869, and of the eclipse expeditions to Jerez, Spain, in 1870, and to Wyoming in 1878, and had made many discoveries of double stars.

Clark, James Gowdy, balladist, born in Constantia, N. Y., June 28, 1830; died in Pasadena, Cal., in September, 1897. He became favorably known as a concert singer, song writer, and poet early in life, and in his career was closely associated with Ossian E. Dodge, George P. Morris, Nathaniel P. Willis, and other poets of the day. He had a charming voice and sang his own compositions with great effectiveness. Among his most popular songs were: "The Old Mountain Tree," "The Evergreen Mountains of Life," "Freedom's Battle Hymn," "The Children of the Battlefield," "The Beautiful Hills," "The Awakening," and "Star of my Soul," which was sung at his funeral. Mr. Clark served through the civil war in a New York regiment.

Clark, Lewis George, ex-slave, born in Kentucky, about 1811; died in Lexington, Ky., Dec. 16, 1897. He was a son of Daniel Clark by a mulatto woman; was brought up in slavery; escaped to Oberlin, Ohio, in 1841; and spent many years in lecturing through the North against slavery. About four years ago he returned to Lexington, and for some time he was supported by charity. Clark had claimed for many years that he was the origi-

nal of the character of George Harris, in "Uncle Tom's Cabin." His claim, in brief, was set forth as follows: "I came to Maine, where I stayed nearly two years lecturing against slavery. In 1844 I was sent for to come to Cambridgeport. My home was at Mr. A. H. Safford's. During her vacation Mrs. Stowe and her father, who was President of Lane Seminary, at Walnut Hill, Cincinnati, came East and made the Safford house their stopping place. Mrs. Safford was a radical abolitionist. Mrs. Stowe would sit in the parlor and ask me questions. When she got through she would go off to her room and note down what I had said, and then she would come again. She told me afterward that her reason for so doing was that it was generally very hard to get anything from a slave, but that I was inclined to talk, and she was glad to learn many things that I could tell her. She further said that she collected the facts, thinking that they might become useful at some time." After many denials of this claim, Mrs. Stowe, in 1895, said respecting it: "I wish to say that George Harris has no living prototype. I created him." Clark, however, persisted in his claim, and impressed so many with its truthfulness that after his death his body lay in state in the Auditorium in Lexington, the first time that a negro had been so honored in Kentucky.

Clingman, Thomas Lanier, lawyer, born in Huntsville, N. C., July 27, 1812; died in Morgantown, N. C., Nov. 3, 1897. He was graduated as first-honor man at the University of North Carolina in 1832, studied law, and entered political life as a Whig member of the Legislature when twenty-three years old. In 1836 he removed to Asheville, N. C., where he was elected to the State Senate four years afterward. At this period he was known as a brilliant speaker and a remarkably able debater. In consequence of a memorable debate with Charles G. Memminger, of South Carolina, afterward Secretary of the Confederate Treasury, he became one of the foremost of Southern Whigs. In 1843 he was elected to Congress, and, with the exception of one term, he served continuously till 1858. During this service he was one of the most active and constant members of the House. He took part in the discussion of all important measures, frequently provoking personal encounters by his caustic language, and was particularly outspoken against the Bulwer-Clayton treaty. His appointment to the chairmanship of the Committee on Foreign Affairs gave him a powerful influence, and brought him to his feet whenever an international question was under discussion. He was an intense admirer and supporter of Henry Clay, and his comments on his friend's defeat led to a harmless duel between himself and William L. Yancey, of Alabama. In 1858 he was appointed United States Senator to fill the vacancy caused by the appointment of Senator Asa Biggs as United States judge for the district of North Carolina, and afterward he was elected for the term beginning March 4, 1861; but in January of the last year he withdrew from the Senate, and in July was expelled therefrom with other Southern members who had withdrawn without sending in resignations. Soon after withdrawing from the Senate he entered the Confederate army as a colonel; in 1862 was commissioned brigadier general and given command of four regiments of North Carolina infantry; and in April, 1865, he surrendered with Gen. Joseph E. Johnston. His last participation in national politics was as a delegate to the National Democratic Convention of 1868. In his last years adversity overtook him. Gen. Clingman gave much attention to scientific and literary pursuits. He measured the highest point of the Black mountain, since known as Cling-

man's peak, in 1855; determined the highest point of the Smoky mountain, now designated as Clingman's Dome, in 1858; and discovered a variety of rare minerals and opened several important mines of mica in his native State. His principal publications were a volume of his speeches (1878), "Follies of the Positive Philosophers" (1878), and many pamphlets that were intended to prove the efficacy of preparations of tobacco in the treatment of diseases and injuries.

Clitz, John Mellen Brady, naval officer, born in Sackett's Harbor, N. Y., Dec. 1, 1821; died in Washington, D. C., Oct. 10, 1897. He was a son of Capt. John Clitz, of Fort Erie fame; was appointed a midshipman in the navy, April 12, 1837; was promoted passed midshipman, June 29, 1843; master, Aug. 16, 1850; lieutenant, April 6, 1851; commander, July 16, 1862; captain, July 25, 1869; commodore, Dec. 28, 1872; and rear admiral, March 13, 1880; and was retired Oct. 16, 1883. He was on sea service twenty-five years and nine months, and on shore or other duty thirteen years and one month. He served on the "St. Mary's" in the Mediterranean squadron in 1844-'45, and on the bomb-brig "Hecla," of the home squadron, at the capitulation of the castle of San Juan d'Ulloa and the capture of Tuspan in the Mexican war. In 1863 he commanded the "Penobscot," of the North Atlantic blockading squadron, and the "Junata," of the East Gulf squadron, and in 1864-'65 commanded the steamer "Osceola," of the North Atlantic squadron, took part in both attacks on Fort Fisher, and was commended by Admiral Porter. After the war his principal services were in the ordnance department of the Brooklyn Navy Yard, 1870; as commander of the naval station at Port Royal, S. C., 1876-'77; and as commander of the Asiatic station, 1881-'83.

Coke, Richard, jurist, born in Williamsburg, Va., March 13, 1829; died in Waco, Texas, May 14, 1897. He was a son of Richard Coke, a Representative in Congress in 1829-'33; was graduated at William and Mary College in 1848, and immediately after his admission to the bar removed to Waco, Texas, where he was engaged in practice, when not in public service, till his death. On the outbreak of the civil war he entered the Confederate army as a private, and, after distinguishing himself on several occasions, was mustered out at the close of the war with the rank of captain. In 1865 he was appointed a district judge, and in 1866 was elected a judge of the Supreme Court of the State, where he served one year and was then removed by Gen. Sheridan on the ground of being an impediment to reconstruction. He was elected Governor of Texas in 1873 and 1876. In April, 1877, he was elected United States Senator to succeed Morgan C. Hamilton, Republican, and in 1883 and 1889 was re-elected, serving till 1895, and declining a renomination. In his last term he was chairman of the Committee on Fisheries, and a member of the Committees on Commerce, the Judiciary, Revolutionary Claims, and the Transportation and Sale of Meat Products.

Colby, Charles Edwards, chemist, born in Lawrence, Mass., Oct. 18, 1855; died in New York city, Oct. 15, 1897. He removed to New York with his parents in 1868, was graduated at Grammar School No. 35 in 1872, studied a year in Germany, and was graduated in engineering at Columbia College in 1877. Immediately afterward he became assistant to Dr. Charles F. Chandler, Professor of Analytical Chemistry at Columbia, and was associated with him till 1889, when the chair of Organic Chemistry was created for him. He was a careful, thorough investigator, and was author of numerous contributions to technical periodicals and cyclopædias.

Colgate, Samuel, manufacturer, born in New York city, March 22, 1822; died in Orange, N. J., April 23, 1897. He was a son of William Colgate, who established the soap and perfumery house of Colgate & Co., in New York, in 1806, and after completing his education Samuel joined the firm, and subsequently succeeded his father as its head. Another son of William, James Boorman Colgate, became a banker and head of the firm of J. B. Colgate & Co. The father was one of the organizers of the American Bible Union, and he and both sons became deeply interested in the Baptist Church. Much of the large wealth of the Colgate families was applied to religious, educational, and charitable enterprises. The brothers erected the Colgate Academy building, at Hamilton, N. Y., at a cost of \$60,000, and in recognition of their munificent gifts to Madison University, at that place, the name of the institution was changed to Colgate University in 1889. Samuel was a contributor to every charity in Orange, N. J.; was one of the founders and main supporters of the North Orange Baptist Church; and was for many years an officer of the Baptist Missionary Union, the American Tract Society, the Baptist Home Mission Society, the New York Baptist Educational Society, and the New York Society for the Suppression of Vice. (See GIFTS AND BEQUESTS.)

Colhoun, Edmund R., naval officer, born in Chambersburg, Pa., May 6, 1821; died in Washington, D. C., Feb. 17, 1897. He was appointed a midshipman in the United States navy, April 1, 1839; was promoted passed midshipman, July 2, 1845; master, Jan. 6, 1853; lieutenant, June 27 following; commander, Nov. 17, 1862; captain, March 2, 1869; commodore, April 26, 1876; and rear admiral, Dec. 3, 1882; and was retired, May 6, 1883. He was on sea service for sixteen years and seven months, and on shore or other duty for twelve years and seven months. While serving on the frigate "Cumberland," of the home squadron, in 1846-'47, he was present at the first attack on Alvarado, Mexico, and at the capture of Tabasco. From 1853 to 1861 he was out of the service. He commanded the steamers "Shawshoon" and "Hunchback," of the North Atlantic blockading squadron, in 1861-'62, and was in the engagements at Roanoke island and Newbern, and on the Blackwater river below Franklin, Va.; commanded the steamer "Ladona" and the monitor "Weehawken" in 1863, and took part in the actions between July 10 and Sept. 15, including those of Forts Sumter, Wagner, and Beauregard; and as commander of the monitor "Saugus," in 1864-'65, he engaged Howlett's battery on James river and participated in the two attacks on Fort Fisher. In 1866-'67 he was fleet captain of the South Pacific squadron; in 1873-'74 commanded the "Harford" on the Asiatic station, and also for part of the time the station; in 1877-'81 was commandant of the Mare Island Navy Yard, San Francisco, Cal.; and in 1881-'82 was inspector of vessels in California.

Cope, Edward Drinker, naturalist, born in Philadelphia, Pa., July 28, 1840; died there, April 12, 1897. He was a great-grandson of Caleb Cope, a Quaker of Lancaster, Pa., and a grandson of Thomas Pym Cope, whose line of ships made regular trips across the Atlantic, and who founded a great linen house in Philadelphia, which on his death passed into the hands of his sons Henry and Alfred. Alfred, the younger of the brothers, was the father of Edward Drinker, and although a member of the firm was not actively engaged in the business. His leisure and literary tastes had much to do with the mental development of the son. At the age of seven Edward made drawings of jellyfish, grampuses, and other natural objects

seen during a sea voyage to Boston, and a year later his journal makes record of a visit to the Museum of Natural Sciences in Philadelphia. As a boy he showed an "incessant activity in mind and body, reaching in every direction for knowledge, and of great independence in character and action." His school education was obtained in the Friends' Select School in Philadelphia and in the Westtown Academy, after which, in 1858-59, he studied anatomy in the University of Pennsylvania, and then joined the group of young naturalists who were associated in the Smithsonian Institution under Spencer F. Baird. During 1863-64 he was in Europe, and devoted much attention to the great museums; in 1864 he accepted the chair of Natural Sciences in Haverford College, which he held for three years; in 1868 he was employed by the Geological Survey of Ohio to determine the characters of the air-breathing vertebrates in the coal deposits; in 1871 he conducted an expedition to Kansas, where he investigated the Cretaceous beds and collected their fossils; a year later he joined the geological survey of the Territories under Ferdinand V. Hayden, as palaeontologist, and he served in the field in Wyoming in 1872 and in Colorado in 1873; he then entered the geographical survey of the Territories of the United States west of the one hundredth meridian, under Lieut. George M. Wheeler, and continued with that service until its consolidation with the United States Geological Survey in 1879. During these years he explored the United States from the Missouri river to the Pacific Ocean, and from the Gulf of Mexico to the British line, discovering nearly a thousand new species of extinct, and as many recent vertebrata. His investigations relate chiefly to herpetology, ichthyology, mammalogy, and palaeontology. "He found herpetology an art, he left it a science; he found it a device mainly for the naming of species, he left it the expression of the co-ordination of all structural features. The reformations he effected in the classification of the anurous amphibians and the saurian reptiles were especially notable." Of his researches in ichthyology Prof. Gill says: "His work on the extinct fishes was incomparably better than any that has been done before in the United States. He far surpassed all his predecessors, not only by his knowledge of morphological details manifest in the extinct as well as in living forms, but by his keen philosophical instinct and taxonomic tact." His work in mammalogy was most potent. During his connection with the Government surveys he discovered, classified, and described many new forms. The discovery of the *puerco* was his greatest geological achievement, and practically the whole fauna of the Wasatch was discovered and described by him. The titles of his many papers, about 400 in number, form a systematic record of the development of palaeontology in the United States. Among his larger works in this branch of science, most of which are contained in Government reports, are the following: "Systematic Arrangement of the Lacertilia and Ophidia" (1864); "Primary Groups of the Batrachia Anura" (1865); "History of the Cetacea of the Eastern North American Coast" (1866); "Synopsis of the Extinct Cetacea of the United States" (1867-68); "Systematic Arrangement of the Extinct Batrachia, Reptilia, and Aves of North America" (1869-70); "Systematic Relations of the Fishes" (1871); "Systematic Relations of the Tailed Batrachia" (1872); "Extinct Vertebrata of the Eocene Formations of Wyoming" (1873); "Cretaceous Vertebrata of the West" (1875); "Tertiary Vertebrata" (1885); "Catalogue of the Batrachians and Reptiles of Central America and Mexico" (1887); "The Batrachia of North America" (1889); and "The Snakes and Lizards of

North America" (1896). On the death of Leidy, in 1891, Prof. Cope was called to the chair of Geology and Palaeontology in the University of Pennsylvania, which place he held until his death. In other ways he was active in his native city, and he was for many years secretary and curator of the Academy of Natural Sciences; also he was chief of the department of organic material of the permanent exhibition in Philadelphia. In 1878 he purchased the "American Naturalist," which he removed to Philadelphia, and he devoted most of his time to its publication, continuing as its senior editor until his death. The Bigsby gold medal of the Geological Society of London was conferred on him in 1879, and in 1872 he was elected to the National Academy of Sciences. He joined the American Association for the Advancement of Science in 1868, presided over the section in biology in 1884, and was elected its president in 1896. The doctrine of evolution received earnest and careful study from him, and he was recognized as the leader of the Neo-Lamarckian school in the United States. His works on this subject include: "The Origin of Genera" (1868); "Hypothesis of Evolution, Physical and Metaphysical" (1870); "Methods of Creation of Organic Types" (1871); "Evolution and its Consequences" (1872); "Consciousness in Evolution" (1875); "On the Theory of Evolution" (1876); "The Origin of Will" (1877); "The Relation of Animal Motion to Animal Evolution" (1878); "A Review of the Modern Doctrine of Evolution" (1879); "Origin of Man and Other Vertebrates" (1885); "The Energy of Life Evolution and how it has acted" (1885); "The Origin of the Fittest" (1886); and "The Primary Factors of Organic Evolution" (1896). His home in Pine Street was stored from cellar to garret with his collections. His own room was piled waist high with pamphlets, fossils, and alcoholic specimens. Occasionally an aged tortoise would wander out from beneath a saurian, and one of his latest pets was a Gila monster, which, contrary to the popular belief, was perfectly harmless and loved to be handled by its owner. Even after death his love for science manifested itself by his curious will. He directed that his body be cremated, but his brain and skeleton were bequeathed to the Wistar Museum of the University of Pennsylvania. The School of Biology received his library and osteological collections, while his palaeontological collections were ordered to be sold and the proceeds devoted to the endowment of a professorship of vertebrate palaeontology in the Academy of Natural Sciences, "on condition that the professor shall be an original investigator of merit, who shall be elected by the council of the academy, and shall have the approval of the National Academy of Sciences." Osborn speaks of him as "a great naturalist, certainly the greatest America has produced." Gill compares him to Cuvier, Owen, and Huxley, and says: "Cope covered a field as extensive as any of the three. His knowledge of structural details of all the classes of vertebrates was probably more symmetrical than that of any of those with whom he is compared; his command of material was greater than that of any of the others; his industry was equal to Owen's; in the clearness of his conceptions he was equaled by Huxley alone; in the skill with which he weighed discovered facts, in the aptness of his presentation of those facts, and in the lucid methods by which the labor of the student was saved, and in the conception of the numerous propositions facilitated, he was unequalled." (See GIFTS AND BEQUESTS; and see his portrait in the "Annual Cyclopaedia" for 1896, page 31.)

Corson, Juliet, domestic-science writer, born in Roxbury, Mass., Feb. 14, 1842; died in New York

city, June 18, 1897. In 1876 she established the New York School of Cookery, and until 1883 she superintended its management. Her writings on dietetics have been widely popular and of great benefit to her generation. Her book "Fifteen-Cent Dinners" was prepared for the use of the poor, and at the time of the railroad strike in 1877 she gave away an edition of 50,000 copies. Her other works are: "Cooking Manual of Practical Directions for Economical Every-Day Cookery" (New York, 1877); "Cooking School Textbook and House-keeper's Guide" (New York, 1878); "Twenty-fives-Cent Dinners for Families of Six" (New York, 1878); "Meals for the Million: The People's Cook Book" (Boston, 1882); "Miss Corson's Practical American Cookery and Household Management" (New York, 1886); "Family Living on Five Hundred a Year" (New York, 1887); and "Sanitary Living."

Couch, Darius Nash, soldier, born in South-east, Putnam County, N. Y., July 23, 1822; died in Norwalk, Conn., Feb. 12, 1897. He was graduated at the United States Military Academy in 1846, and entered the army as a second lieutenant in the 4th Artillery. His first service was in the Mexican War, where he gained the brevet of first lieutenant for gallantry at Buena Vista, and promotion to full rank in 1847. He was on duty in Mexico in 1848; in Florida during the Seminole War in 1849-50; on the Mississippi, in New York harbor, in North Carolina, and at Fort Mifflin in 1851-54; and resigned from the army to engage in manufacturing in 1855. In 1853 he obtained a leave of absence and made an exploring expedition into Mexico at his own expense, in the course of which he found valuable acclimates and gathered a large number of important zoölogical specimens, which he presented to the Smithsonian Institution. In June, 1861, he re-entered the military service as colonel of the 7th Massachusetts Volunteers, and in August was commissioned a brigadier general. He served in the defense of Washington till the reorganization of the Army of the Potomac, when he was given command of a division with which he distinguished himself in the battles of Williamsburg, Fair Oaks, Oak Grove, and particularly at Malvern Hill. In July, 1862, he was promoted to major general of volunteers, and participated in Gen. Pope's retreat and in the battle of Antietam. Soon afterward he was placed in command of the 2d Army Corps, with which he took part in the operations at Fredericksburg and Chancellorsville. In 1863-'64 he commanded the Department of the Susquehanna, and in July, 1863, organized the Pennsylvania militia to resist the Confederate invasion under Gen. Lee. From December, 1864, till May, 1865, he commanded the 2d division of the 23d Army Corps, and took part in the battle of Nashville and in the operations in North Carolina. Horses were shot under him at Malvern Hill, Chancellorsville, and Nashville, and he was wounded several times. He resigned from the army May 26, 1865; was the unsuccessful Democratic candidate for Governor of Massachusetts in the same year; was collector of the port of Boston in 1866-'67; subsequently removed to Norwalk, Conn., and was quartermaster general on the staff of Gov. Hubbard in 1876-'78. He was adjutant general of the State in 1883-'84.

Crooks, George Richard, educator, born in Philadelphia, Pa., Feb. 3, 1822; died in Madison, N. J., Feb. 20, 1897. He was graduated at Dickinson College in 1840, and entered the ministry of the Methodist Episcopal Church and engaged in missionary work in Illinois. In 1842 he was appointed classical and mathematical tutor in Dickinson College; in 1843 principal of the Collegiate Grammar School; and in 1846 adjunct Professor of Ancient

Languages. During 1848-'60 he was engaged in the ministry in Philadelphia, Washington, New York, and Brooklyn, and in 1860-'75 was pastor of the "Methodist." In 1880 he became Professor of Historical Theology in Drew Theological Seminary, where he remained until his death. He was the founder of Children's Day in the Methodist Episcopal Church, and of the children's fund for the encouragement of education among Methodist youth. In collaboration with Prof. McClinton he prepared "The First Book in Latin" and "The First Book in Greek" (1846 *et seq.*); with Prof. Schenck, a "Latin-English School Lexicon" (1856); and with Dr. Hurst, an adaptation of Hagenbach's "Theological Encyclopedia and Methodology" (1864; new edition, 1903); and published independently an edition of Butler's "Analogy," with life, analysis, and notes (1852); "Life of Rev. Dr. John McClinton" (1876); and "Life of Bishop Matthew Simpson" (1890); and edited "Sermons of Bishop Simpson" (1895).

Crowninshield, Caspar, soldier, born in Boston, Mass., in 1837; died there, Jan. 10, 1897. He was graduated at Harvard College in 1860, and entered the National army as a captain in the 29th Massachusetts Infantry, July 10, 1861, transferring to the 1st Massachusetts Cavalry in November. His service with the cavalry in Virginia and South Carolina was so efficient that on the organization of the 2d Massachusetts Cavalry in 1863 he was made senior major, and within a short time he succeeded to the command of the regiment. He was promoted lieutenant colonel, March, 1, 1864, and colonel on the death of Col. Charles R. Lowell at Cedar Creek, Oct. 21. He succeeded Col. Lowell as commander of the Reserve Brigade in the first cavalry division of Gen. Sheridan's command; served with Sheridan through the campaigns in the Shenandoah valley and in that of Appomattox, and was present at the surrender of Gen. Lee. For meritorious services through the war he was brevetted brigadier general, May 20, 1865. A month afterward he retired to private life.

Dahl, Olaus, educator, born in Nannestad, Norway, Sept. 15, 1850; died in Chicago, Ill., March 10, 1897. He came to the United States in childhood, was graduated at Luther College, Decorah, Iowa, in 1885, and at Yale divinity school in 1891, was tutor in the Danish and Swedish languages in the academical department of Yale in 1890-'94, and from 1894 till his death was lecturer on Scandinavian literature in the University of Chicago.

Dallas, Mary Kyle, author, born in Philadelphia, Pa., about 1840; died in New York city, Aug. 25, 1897. She began writing at an early age. At twenty she married Jacob A. Dallas, an artist well known in his day in New York and Philadelphia art circles, who survived less than two years. Mrs. Dallas was a regular contributor of poems, short stories, and sketches to the "New York Ledger" for more than fifteen years, and to "Lippincott's Magazine" for ten years, and also contributed largely to other periodicals.

Dana, Malcolm McGregor, clergyman, born in Brooklyn, N. Y., in 1838; died there, July 26, 1897. He was graduated at Amherst College in 1859, and at Union Theological Seminary in 1863, and began his career as a clergyman at Winsted, Conn. In 1864-'74 he was pastor of the Second Congregational Church in Norwich, Conn.; in 1874 he founded the Park Congregational Church in the same city, with which he remained till 1878; in 1878-'88 he was pastor of Plymouth Church, St. Paul, Minn., and in 1888-'94, of the Kirk Street Church, Lowell, Mass. While at St. Paul he was sent to Europe by the State Board of Corrections and Charities to inspect prison systems, especially

the British; was a vice-president of this board, and several times chaplain of the lower house of the Legislature, and was chairman of the Congregational Missionary Board of Minnesota and a founder and president of the State Congregational Club. In late years he was active in temperance and sociological reforms, and at the time of his death he was the first vice-president of the International Board of Corrections and Charities. Dr. Dana was for some time one of the editors of "The Advance." He wrote a history of Carleton College, Northfield, Minn., of which he was a trustee, and "The Norwich Memorial," a history of Norwich, Conn., during the civil war.

Daniels, Charles, jurist, born probably in New York city about 1826; died in Buffalo, N. Y., Dec. 29, 1897. He was born of Welsh parents, but he never knew definitely in what part of the world he was born nor when, nor how many brothers and sisters he had. His earliest recollections were of a home in New York city and of a little shop in which his father made shoes. When ten years old he accompanied his parents to Toledo, Ohio, and was at once put to work at his father's trade. His early education was very limited. He was left an orphan when sixteen years old, and, after wandering through several cities and towns in western New York, he settled in Buffalo. Living in a room over the shop, spending all the money he could spare from food for books, reciting to a sympathetic lady at night what he read during the day, and obtaining one winter's schooling at the Batavia Academy, he educated himself while working at his trade. He was admitted to the bar in 1848; practiced in partnership with Eli Cook till 1850, and alone till 1863; was elected a justice of the Supreme Court of New York in 1863, 1869, and 1877, the last term being for fourteen years, and with the exception of five years he was also an associate justice of the General Term of the Supreme Court of the New York district from 1873 till his retirement from the bench in 1891. In 1886 he was the unsuccessful Republican candidate for judge of the New York Court of Appeals, and in 1892 and 1894 he was elected to Congress. His decisions were rarely overruled, his opinions would fill more than 100 printed volumes, and during his long term on the bench he was honored by governors of each of the great political parties. His most effective service as a jurist in behalf of the State and city was rendered in the causes growing out of the Tweed and Erie Canal frauds. He tried Henry W. Genet, one of the leaders of the "ring," who was convicted but escaped. Judge Daniels sent the sheriff and his deputy to jail for thirty days for official carelessness, and on Genet's return from Europe, ten years afterward, sentenced him to pay a fine of \$10,000 and to be imprisoned for four months. During Gen. Tilden's war on the Erie "Canal ring" he had Judge Daniels transferred to Albany to preside at the trial of George D. Lord, a contractor, who was convicted of fraud.

Davis, Daniel Franklin, lawyer, born in Freedom, Waldo County, Me., in 1843; died in Bangor, Me., Jan. 9, 1897. He was brought up on a farm and in a sawmill, and under most unfavorable circumstances became self-educated. During the two last years of the civil war he served as a private in the 1st Maine Cavalry. After the war he studied law, and was admitted to the bar in 1869. In 1874 he was elected to the lower house of the Legislature; in 1876 and 1878 to the State Senate; and in 1879 was chosen Governor of the State as a Republican. At the close of his term he was appointed collector of the port of Bangor.

Day, David A., missionary, born in Pennsylvania, about 1847; died at sea, Dec. 17, 1897. He was

educated at the Susquehanna Lutheran University, Selinsgrove, Pa.; took a full course in medicine; and with his bride went to the Muhlenberg Mission, 30 miles from Monrovia, Liberia, Africa, where he labored incessantly for twenty-three years. He combined the evangelical, educational, and industrial elements; acquired and brought to a high state of cultivation a tract of 10,000 acres, which he divided into small farms and allotted to the people of the mission; and made the mission one of the most successful on that continent. He was known for hundreds of miles along the west coast, and frequently acted as arbitrator between warring tribes. He was on his way to the United States to recuperate his health at the time of his death.

Dayton, William Lewis, jurist, born in Trenton, N. J., April 13, 1839; died there, July 28, 1897. He was a son of William Lewis Dayton, the Republican candidate for Vice-President of the United States on the ticket with John C. Frémont in 1856, and United States minister to France in 1861-64. He was graduated at Princeton in 1858; was assistant secretary of legation at Paris in 1861-65; was admitted to the bar in 1866; and was private secretary of Gov. Marcus L. Ward in 1866-69. In 1879, 1888, and 1889 he was city solicitor of Trenton; in 1882-85 was United States minister to the Netherlands; and from 1896 till his death he was a judge of the New Jersey Court of Errors and Appeals.

Dean, George Washington, astronomer, born in Freetown, Mass., Nov. 4, 1825; died in Fall River, Mass., Jan. 23, 1897. In 1847 he was appointed to the engineering and astronomical department of the United States Coast Survey, and he remained in that service till 1885. He conducted determinations of meridians of longitude between the United States and Europe by astronomical and telegraphic observations, and invented many instruments and methods by which his department of the service was greatly improved. He represented the Coast Survey at the landing of the Atlantic cable at Heart's Content, Newfoundland, in 1869; had charge of the Government observation of the eclipse of the sun at Shelbyville, Ky., in 1869, and of the total-eclipse expedition to Jerez, Spain, in 1870; and at the time of his retirement was determining an arc across the continent to connect the surveys of the Atlantic and Pacific coasts.

Derby, Perley, genealogist, born in Murfreesboro, Tenn., in 1823; died in Salem, Mass., March 28, 1897. He removed to Salem about 1837; learned the jeweler's trade, and worked at it for several years in Pawtucket, R. I.; and, returning to Salem, became an accomplished portrait painter. During the past thirty years he applied himself almost wholly to genealogical research, and had been employed in nearly every State in the Union in compiling family records.

De Trobriand, Philippe Regis, soldier, born near Tours, France, June 4, 1816; died in Bayport, Long Island, N. Y., July 15, 1897. He was a son of Gen. Joseph de Trobriand, commander of the military district of Tours, and in his youth was one of the pages of Charles X, King of France. His father wished him to acquire a military education, and he undertook preparation for St.-Cyr; but after the revolution of 1830 his father, then commander at Rouen, resigned from the army, and the son's education was completed at Orleans and Poitiers, where he was graduated in 1834 and 1838. In 1841, on the death of his father and his succession to the family estates and the title of Baron de Trobriand, he came to the United States for a period of travel. Here he became acquainted with Mary Mason Jones, daughter of the President of the Chemical Bank, and in 1843 they were married. For several years they lived in Italy, attached to the court of the

Comte de Chambord, the Bourbon heir to the throne of France. In 1848 they returned to New York, where Philippe began the publication of the "*Revue du Nouveau Monde*," which he discontinued in 1851, when he returned to France. In 1854 he again made his home in New York, and was one of the editors of the "*Courier des États-Unis*" till August, 1861, when he entered the National army as colonel of the 55th New York Volunteers. He was engaged in the operations of the Army of the Potomac to the close of the battles at Gettysburg, and was promoted brigadier general of volunteers in January, 1864. In the second day's struggle at Gettysburg he commanded the brigade that held the peach orchard till it was no longer tenable, then held the north bank of Plum creek till dislodged by the Confederate charge, and ultimately formed a part of Gen. Birney's new line, which drove the enemy through the wheat field to the stone fence. During a part of 1864 he commanded the defenses of the city of New York, and afterward commanded a brigade in the 2d Army Corps, which he led at Deep Bottom, Petersburg, Hatcher's Run, and Five Forks. In the operations leading to the surrender of Gen. Lee he commanded the 3d division of the corps, and on the day of the surrender, April 9, 1865, he was brevetted major general of volunteers. On the reorganization of the regular army in 1866 he was commissioned colonel of the 31st Infantry, and in March, 1867, he was brevetted brigadier general, United States army. Subsequently he commanded the districts of Dakota, Montana, and Green River; was transferred to the 13th Infantry; was in command at Salt Lake City in 1870-'75, and at New Orleans in 1875-'79; and was retired at his own request, March 20, 1879. His course at New Orleans won him the respect of all parties, and he maintained a residence there till within a few months of his death. While a student at Poitiers he published a novel, "*Les gentilshommes de l'ouest*," and in 1867 his reminiscences of the civil war, under the title "*Quatre ans de Campagnes à l'armée du Potomac*," of which an English translation was published in Boston.

Deutsch, Solomon, philologist, born in Gleiwitz, Prussia, in 1816; died in New York city, Jan. 27, 1897. He came of a noted family of philologists; was a cousin of Emanuel Oscar Menahem Deutsch, the distinguished Talmudic scholar; and was educated at the Universities of Breslau and Göttingen. In 1857 he accepted a call to a synagogue in Philadelphia, and subsequently held the office of rabbi in Syracuse, Baltimore, and Hartford. About 1885 he retired from religious labor and applied himself to literary and philological work. His publications include "*Letters for Self-Instruction in German*," "*Medical German*," "*Hebrew Grammar*," "*Drill Master in German*," "*Key to the Pentateuch*," and "*Biblical History in Biblical Language*." He left unfinished the manuscript of two works on the study of languages.

Dixon, Maria E., painter, born in Sag Harbor, Long Island, N. Y., in 1849; died in Brooklyn, N. Y., Jan. 7, 1897. She was a member of the Brooklyn Art Association and of several women's clubs, and had achieved a high reputation by her painting. For many years her daughter had acted as her model, and the last picture that Mrs. Dixon painted was "*Youth and Old Age*," for which the daughter posed for the principal figure.

Dixon, Nathan Fellows, lawyer, born in West-terly, R. I., Aug. 28, 1847; died there, Nov. 8, 1897. He was graduated at Brown University in 1869, studied law, and in 1871 was admitted to practice in the courts of New York, Connecticut, and Rhode Island. In 1877 he was appointed United States attorney for the district of Rhode Island, and he

was reappointed in 1881. He was elected to the State Senate in 1885, and annually thereafter till and including 1889, when he was elected to Congress, and shortly afterward to the United States Senate. He was counsel for several corporations and president of a manufacturing concern and a bank.

Doane, Thomas, civil engineer, born in Orleans, Mass., Sept. 20, 1821; died in West Townsend, Vt., Oct. 22, 1897. He studied civil engineering with Samuel M. Felton in Charlestown, Mass., and was first employed as chief engineer of a division of the Vermont Central Railroad. In 1849 he established an office in Charlestown, which he retained till his death. At one time or another he had been connected with all the railroads running out of Boston, and he was particularly identified with the Boston and Maine road. Probably his most important work was that in connection with the construction of the Hoosac Tunnel. He was appointed chief engineer of the work in 1863; built the dam in Deerfield river to furnish water power; introduced nitroglycerin and electric blasting for the first time in the United States; also introduced compressed air and invented the machinery for it; and had a share in inventing the pneumatic drills. In 1869 he went to Nebraska, where he built 240 miles of railroad for the Chicago, Burlington and Quincy Company, and in 1873 returned to the Hoosac Tunnel as consulting engineer, and also had charge of the reconstruction of the whole of the Troy and Greenfield Railroad. On the opening of the tunnel, Feb. 9, 1875, he ran the first locomotive through it. While in Nebraska he promoted the agitation for the establishment of a college, and secured for its site a square mile of ground at Crete, 20 miles east of Lincoln. For his services the institution was named Doane College. Mr. Doane was president of the Boston Society of Civil Engineers. (SEE GIFTS AND BEQUESTS.)

Dolph, Joseph Norton, lawyer, born in Dolphsburgh, N. Y., Oct. 19, 1835; died in Portland, Ore., March 10, 1897. He took a partial course at Genesee Wesleyan Seminary, taught a school while studying law, and was admitted to the bar at Binghamton, N. Y., in 1861. In 1862 he enlisted in Captain Crawford's "*Oregon Escort*," a company raised for the protection of immigrants to the Pacific coast against hostile Indians, and the same year he settled in Portland, Ore. He was elected city attorney and appointed United States attorney for the district of Oregon in 1864; elected to the State Senate in 1866, 1868, 1872, and 1874; and elected United States Senator as a Republican in 1883 and 1889. In his last term he was a member of the committees on Coast Defense, Commerce, Foreign Relations, Public Lands, Relations with Canada, and University of the United States (select), and was active among the opponents of the free coinage of silver.

Doolittle, James Reed, jurist, born in Hampton, N. Y., Jan. 3, 1815; died in Edgewood, R. I., July 27, 1897. He was graduated at Geneva (now Hobart) College in 1834, was admitted to the bar in 1837, and after practicing in Rochester and Warsaw, N. Y., and serving as district attorney of Wyoming County, N. Y., removed to Racine, Wis., in 1851. In 1853-'56 he was judge of the first judicial circuit of Wisconsin, and in 1857 and 1863 was elected a United States Senator as a Democrat-Republican. While in the Senate he was an energetic supporter of the policies of Presidents Lincoln and Johnson. He served on the Committees on Indian Affairs, Foreign Relations, Commerce, Military Affairs, and the one appointed to investigate John Brown's raid. In the last committee he united with Senator Collamer, of Vermont, in presenting a minority report to the effect that the raid

was not an act of rebellion, but merely an incident of proslavery lawlessness in Kansas. Judge Doobittle was a delegate to the Peace Convention of 1861; was one of the nineteen Senators who voted "No" at the impeachment trial of President Johnson; and presided over the National Union Convention in Philadelphia in 1866 and the National Democratic Convention in Baltimore in 1872.

Douglas, Robert, arboriculturist, born in Gateshead, England, in 1813; died in Waukegan, Ill., June 1, 1897. He removed to Canada in 1836, and to Whitingham, Vt., in 1839; drove across the country and settled on Lake Michigan, 30 miles beyond what is now Chicago, a few years afterward; and there worked at the tailor's trade and in the nursery business till the gold excitement of 1849 took him to California. He was unsuccessful as a miner and returned to the States, and thereafter applied himself solely to the propagation of plants. He is said to have been the first man to raise forest-tree seedlings by the million. He planted large forests near Furlington, Kan., and elsewhere; had charge of the selection and planting of trees on the grounds of Leland Stanford University in California and of George W. Vanderbilt's estate at Biltmore, N. C.; assisted Prof. Sargent in preparing his forestry report for the tenth census; and selected many of the most valuable specimens in the collection of woods presented by Morris K. Jesup to the American Museum of Natural History in New York.

Dow, Neal, reformer, born in Portland, Me., March 20, 1804; died there, Oct. 2, 1897. He was educated at public and private institutions, including Portland Academy and the Friends' Academy at New Bedford, Mass.; entered his father's tannery when fifteen years

old, and on attaining his majority became a partner in the business under the firm name of Josiah Dow & Son. He remained a member of this firm for fifty-one years, and at times was connected with other business concerns. In 1839 he was appointed chief engineer of the Portland Fire Department. In this office he displayed notable courage and tact. His experiences as a fireman

led him to undertake the temperance reform, which subsequently made his name familiar throughout the world. A steady private advocacy of prohibition was followed by the inauguration of a public agitation, which was greatly promoted by his popularity and earnestness. In 1839 he induced the board of aldermen of Portland to submit the question of license or no license to popular vote, and the result showed a majority of 35 votes for license. Four years afterward the question was again submitted to the people, when the no-license party won by a majority of 400. During this interval he was greatly stimulated in his efforts by his attempts to reclaim a high public official who had become a confirmed dipsomaniac and was threatened with open exposure. In 1841 he retired from active participation in business and began traveling through the State—in his sleigh in winter, in his carriage in summer—holding public meetings, speaking indoors and out, wherever he found auditors, and distributing an immense amount of original temperance literature. This missionary work for absolute prohibition was carried on at his own expense for ten years, and,

after his election to the mayoralty of Portland, in 1851, he immediately drafted "a bill for the suppression of drinking houses and tipping shops," containing most radical and repressive provisions. This measure was deemed too extreme by his friends; but he took it to the Legislature, discussed its provisions at a public hearing, secured its acceptance by the committee, and on the following day saw it adopted and approved by the Governor. The law was repealed in 1856; was re-enacted through his efforts in 1858; was made the subject of a constitutional amendment in 1884; and was further strengthened in 1891. Mr. Dow was re-elected mayor in 1854; was a member of the Legislature in 1858-'59; went to England on the invitation of the United Temperance Societies of Great Britain, and delivered many public addresses in 1857, 1866, and 1874; and was the Prohibition candidate for President of the United States in 1880. His ninetieth birthday, March 20, 1894, was fittingly observed by temperance organizations throughout Christendom. Early in 1861 he offered his services to Gov. Washburn, and after raising nearly two full regiments he was commissioned colonel of the 13th Maine Volunteers, Dec. 31, and joined Gen. Butler's expedition to New Orleans in the following February. In April, 1862, he was commissioned a brigadier general of volunteers, and commanded at Fort St. Philip, at Pensacola, Fla., and at the defenses of New Orleans, north of the city. He took part in the attack on Port Hudson, May 27, 1863, where his conduct elicited the commendation of his division commander, and where he received two wounds. While convalescing within the Federal line he was captured by a party of Confederate cavalry, and was held a prisoner at Mobile and in Libby prison till the following March, when he was exchanged. Because of his kindness to Confederate prisoners while at New Orleans his own restraint was made as comfortable as possible. Impaired health caused him to resign his commission, Nov. 30, 1864. As a military officer he was one of the first to recognize the propriety of employing colored soldiers, and he refused to return any escaping slave to bondage.

Drake, Jonathan, abolitionist, born in Hampton, N. H., June 22, 1804; died in Leominster, Mass., Jan. 17, 1897. He settled in Leominster in 1839, and when the antislavery movement was at its height he conducted public meetings and turned his home into an "underground-railway" station. In 1851 he received into his home the fugitive slave Shadrach after his escape from the Boston courthouse, dressed him in woman's clothes, and assisted him in his flight to Canada. He also befriended James Jackson, one of Jefferson Davis's slaves, in a similar manner. Mr. Drake was widely known as a strong no-license and antitobacco advocate.

Drew, Louisa Lane, actress, born in London, England, Jan. 10, 1820; died in Larchmont, N. Y., Aug. 31, 1897. She was the daughter of an actor named Lane and his wife (subsequently Mrs. Kinloch, a popular actress), and, accompanying her mother to Philadelphia in 1827, made her first appearance on the stage at the Walnut Street Theater, Sept. 26, in the character of the little Duke of York, with Junius Brutus Booth as Gloster. In the following year she appeared at the Park Theater, New York, in "Little Pickle," and then for five years played in the large cities as an "infant phenomenon," her repertory including "Twelve Precisely," "The Heir at Law," "The Road to Ruin," "The Four Mowbrays," and "The Actress of All Work." In 1833 she joined a stock company at the Bowery Theater, New York, and in it played with all the great stars of the day. When fourteen years old

she appeared in the character of Julia in "The Hunchback," at the Boston Theater, and when fifteen in that of Lady Teazle in "The School for Scandal," at New Orleans. In 1838 she became leading lady at the Walnut Street Theater, Philadelphia, where, on Sept. 24, 1839, she appeared as Julie de Mortimer, the part of Richelieu being taken by Edwin Forrest. After two seasons at this house she starred in other cities, played a brief engagement at the Chestnut Street Theater, Philadelphia, made another tour of the large cities, and in 1852 joined the stock company of the Chestnut Street house. In 1853 she went to the Arch Street Theater, Philadelphia, where among other parts she played as Constance in "The Love Chase," Jane Shore, Beatrice in "Much Ado about Nothing," Mrs. Oakley in "The Jealous Wife," Young Norval, Widow Cheseley, and other widely divergent parts. During the season of 1857-'58 she played with the Walnut Street company, and at the close of the season in 1861 assumed the management of the Arch Street house, which she retained for more than thirty years. In 1892 she played a short engagement in New York; in 1893 made a starring tour of the large cities; in 1895 played Mrs. Malaprop at the Coudock benefit in New York; and in 1896-'97 played the title part in "The Sporting Duchess" with a traveling company. She married Henry Hunt in 1836, George Mossop in 1848, and John Drew in 1850. Her children by her last husband are John Drew, Sidney Drew, and Ethel Barrymore, all known on the stage.

Drisler, Henry, educator, born on Staten Island, N. Y., Dec. 27, 1818; died in New York city, Nov. 30, 1897. He was graduated at Columbia College in 1839, and then became classical instructor in the grammar school of the college, under Dr. Charles Anthon. In 1843 he was appointed tutor of Latin and Greek in Columbia, and in 1845 adjunct professor of those languages. On the separation of the departments of Latin and Greek and the provision of an additional chair in 1857, he was made professor of Latin, and on the death of Dr. Anthon, in 1867, Prof. Drisler was appointed Professor of Greek. In 1889 he was made dean of the faculty of arts, and he retained this office and the title of Jay Professor of Greek till July 1, 1894, when he resigned, and was made professor emeritus. During his long connection with the college he was twice its acting president—in 1867, when President Barnard was absent as a commissioner to the Paris Exposition, and in 1888, on the resignation of the president. On his own retirement Prof. Drisler was given a reception by the Alumni Association of Columbia College, and presented with a commemorative gold medal. The trustees of the college established the Henry Drisler fellowship in classical philology, and President Low created the Henry Drisler Classical fund of \$10,000, for the purchase of equipment for the departments of Latin and Greek. Prof. Drisler's literary work was more important than voluminous. He was associated with Dr. Anthon for many years in the preparation of a series of classical text-books; personally re-edited and enlarged Liddell and Scott's edition of Passow's "Greek Lexicon"; revised and enlarged Yonge's "English-Greek Lexicon" (1870); was associate editor of the seventh revised Oxford edition of Liddell and Scott (1883); was general editor of the new classical series published by Harper & Bros.; and was a contributor to "Johnson's Universal Cyclopaedia" and to "Smith's Classical Dictionary."

Duane, James Chatham, engineer, born in Schenectady, N. Y., June 30, 1824; died in New York city, Nov. 8, 1897. He was graduated at Union College in 1844, and at the United States

Military Academy in 1848; entered the army as brevet 2d lieutenant of engineers, was promoted 2d lieutenant, March 16, 1851; 1st lieutenant, July 1, 1855; captain, Aug. 6, 1861; major, March 2, 1863; lieutenant colonel, March 2, 1867; colonel, Jan. 10, 1883; and brigadier general and chief of engineers, Oct. 11, 1889; and was retired, June 20, 1888. For services in the field in the Rappahannock campaign, and particularly for engineering services in the operations before Petersburg, he was brevetted lieutenant colonel and colonel, July 6, 1864, and, for services during the siege of Petersburg and the final campaign of the war, brigadier general, March 13, 1865. Prior to the civil war he served with the engineer corps, was an assistant instructor at the Military Academy, was employed in fortification construction, commanded the engineers in the expedition to Utah, and was instructor in engineering at the Military Academy. His first service in the civil war was at Fort Pickens, Fla. In the winter of 1861-'62 he organized the engineer corps of the Army of the Potomac, and in the last year he directed the work of bridging the Potomac at Harper's Ferry; had charge of the engineering operations in the siege of Yorktown; took part in the battle of Gaines's Mill; constructed several notable bridges besides roads and field works; was chief engineer of the Army of the Potomac in the Maryland campaign; and was appointed chief engineer of the Department of the South in November. Under the last assignment he took part in the attack on Fort McAllister, Ga., and in the operations at Charleston. From July, 1863, till June, 1865, he was again chief engineer of the Army of the Potomac. After the war he was appointed commandant at Wadsworth Point, N. Y., and superintending engineer of the defenses at the eastern entrance to New York harbor; superintendent of fortifications on the coast of Maine and New Hampshire; and he was chief engineer of the army in 1886-'88. On his retirement he was appointed a member of the New York Aqueduct Commission, of which he almost immediately became president, and retained the office till his death. He published a "Manual for Engineer Troops" (New York, 1862).

Duryee, George, soldier, born in Great Neck, Long Island, N. Y., June 30, 1812; died in New York city, April 1, 1897. In 1861 he was commissioned a 1st lieutenant in the 5th New York Volunteer Infantry, better known as Duryee's Zouaves, commanded by his brother, Abram. The regiment was actively engaged from the moment it reached the front, and at the battle of Gaines's Mill, when attached to Sykes's division of the 5th Army Corps, it bore the brunt of the Confederate assault. George Duryee was promoted captain soon after reaching the field; major, Dec. 4, 1862; and lieutenant colonel, Dec. 31. He was present at Big Bethel, the siege of Yorktown, Gaines's Mill, Antietam, Fredericksburg, and Chancellorsville, and for distinguished gallantry in the last action, where he was severely wounded, he was brevetted colonel. After an apparent recovery he rejoined his regiment, but soon afterward, while in front of his men, he fell from his horse, hopelessly paralyzed.

Duryee, William Rankin, educator, born in Newark, N. J., April 10, 1838; died in New Brunswick, N. J., Jan. 20, 1897. He was graduated at Rutgers College in 1860, and at the New Brunswick Theological Seminary in 1861; was ordained in the ministry of the Reformed Church in 1862; and was chaplain of the 1st Kentucky Cavalry and acting assistant surgeon through the Tennessee campaign and till after the battle of Shiloh, when a fever nearly caused his death. He organized the Reformed Church at Lafayette, a suburb of Jersey City, N. J., in 1864, and remained its pastor till

1891, when he became Professor of Ethics and chaplain at Rutgers College. Dr. Duryce was an authority on the history of the early Dutch and Huguenot settlements in America, a contributor to periodicals, and an accomplished speaker. His publications include "Sentinels for the Soul," a tract for soldiers (New York, 1862); "Our Mission Work Abroad"; "Centennial Discourses of the Reformed Church" (1876); a notable monograph on the English Bible; and a volume of poems, containing his prize song "The Kingdom of Home."

Earle, Joseph H., jurist, born in Greenville, S. C., April 30, 1847; died there, May 20, 1897. He attended school at Sumter, S. C., till the beginning of the civil war; served through the war in the artillery; was graduated at Furman University, at Greenville, in 1868; taught a school while studying law; and was admitted to the bar in 1870, beginning practice at Sumter. In 1876 he became active in political life, and took part in the uprising led by Gen. Wade Hampton. Two years afterward he was elected to the lower house of the Legislature, and in 1882 was elected to the State Senate. He was a delegate to the Democratic National Conventions of 1880 and 1884. In 1886 and 1888 he was elected Attorney-General of South Carolina. When the rupture in the Democratic party in his State occurred he united with the State officials and anti-Tillman wing. In 1890, when Benjamin R. Tillman was nominated for Governor, Mr. Earle was his opponent and was defeated. In 1891 he removed to Greenville, and in 1894 was elected judge of the 8th Circuit Court of South Carolina. Gov. Tillman supported him in this election, but he soon gave offense to the Tillman wing by declining to interpret the laws as desired. The campaign for United States Senator in 1896 was bitter, and attracted much attention outside the State. Gov. John G. Evans was the Tillman candidate for the seat, and his election was considered certain. In South Carolina the nomination is made by a majority vote of the people at a general primary. Just before the campaign for the nomination opened there was published what purported to be an exposure of the circumstances of the refunding of the State debt, which involved both Judge Evans and Senator Tillman. The publication created intense excitement, and led the Conservative Democrats to nominate Judge Earle. On Jan. 27, 1897, he was elected, having all the votes of the joint assembly excepting one.

Edgerton, Alfred P., politician, born in Plattsburg, N. Y., Jan. 13, 1813; died in Fort Wayne, Ind., May 14, 1897. He was for a short time editor of a newspaper in his native place; in 1833 removed to New York and engaged in commercial business; and in 1837 went to Defiance County, Ohio, to take the management of a land company. In 1845 he was elected to the State Senate of Ohio; in 1848 was a delegate to the Baltimore Convention; and in 1850 and 1852 was elected to Congress from the Toledo district. He was the financial agent of Ohio in New York city in 1853-56; was chairman of the National Democratic Convention at Cincinnati in 1856. In that year also, in association with Pliny Houghland and Hugh McCulloch, he became a lessee of the Indiana canals, and subsequently general manager. In 1864 he was a delegate to the National Democratic Convention, and in 1868 was an unsuccessful candidate for the office of Lieutenant Governor of Indiana. He declined the nomination of the O'Connor Democrats for Governor in 1872. He was appointed a United States civil service commissioner in 1885, succeeded Dorman B. Eaton as president of the commission, and held the office till Feb. 9, 1889, when President Cleveland removed him.

Embry, James Crawford, clergyman, born in Knox County, Ind., Nov. 2, 1834; died in Philadelphia, Pa., Aug. 11, 1897. He served from 1862 till after the fall of Vicksburg on a supply boat carrying provisions for the army under Gen. Grant, and entered the ministry of the African Methodist Episcopal Church in August, 1863. In 1876 he was elected secretary of education by the General Conference; in 1878 was appointed secretary of finance and treasurer of the Church fund; and in 1884 was located in Philadelphia. He was elected a bishop of the Church, and assigned to the South Carolina district in May, 1897.

Evans, John, philanthropist, born in Waynesville, Ohio, March 9, 1814; died in Denver, Col., July 3, 1897. He was graduated at the medical department of Cincinnati College in 1838; began practicing at Ottawa, Ill.; and soon afterward removed to Attica, Ind., where he secured the erection of the first insane asylum in Indiana. He was superintendent of this institution till 1848, when he was elected to the faculty of the Rush Medical College, at Chicago. By investments in real estate in the young city he acquired large wealth, much of which he applied to philanthropic purposes. He founded the town of Evanston and the Northwestern University in that city; endowed two chairs with \$50,000 each; and was president of the board of trustees of the university for more than a third of a century. He was also one of the founders and builders of the Fort Wayne and Chicago Railroad, and was its managing director till after his removal to Colorado. Dr. Evans was a delegate to the convention that first nominated Mr. Lincoln for the presidency. In 1862 he became Governor of Colorado Territory. His first act was the organization of an effective military force, which particularly distinguished itself by repelling an invasion by 3,500 Texan rangers under Gen. Sibley. Before the expiration of his term Gov. Evans was removed by President Johnson. In 1865 the first State organization of Colorado was effected, and in anticipation of an early admission into the Union Gov. Evans and Jerome B. Chaffee were elected United States Senators. The act for admission was passed by both houses of Congress, but President Johnson vetoed it. Gov. Evans founded the University of Denver, giving \$200,000 for its construction and a subsequent large endowment, erected Evans chapel, was the principal contributor to the erection of Grace Methodist Episcopal church, and aided nearly every Methodist congregation and educational institution in the State.

Evans, Thomas Williams, dentist, born in Philadelphia, Pa., Dec. 23, 1823; died in Paris, France, Nov. 14, 1897. When fourteen years old he went to work with a goldsmith and dental plate maker. His skill in making plates led him to undertake the study of dentistry, and when eighteen years old he received a special medal for original work. He practiced dentistry in Maryland and in Lancaster, Pa., acquired a large technical knowledge of metals, and made a specialty of saving teeth by filling. He would often fill several teeth for the privilege of extracting the worst one, after filling, for a specimen of his work, and by this method he acquired a curious collection, which, with specimens of his plate work, he placed on exhibition at the Franklin Institute in Philadelphia. About this time he sought a substitute for gold foil for filling teeth, and made experiments with a view to hardening India rubber. He mixed the rubber with sulphur, baked the mass, and instead of getting the white substance he desired, obtained a black one. He laid aside his specimen, labeled "Tried to make ivory, but made ebony," and gave it no further serious thought till some time after his settlement in Paris,

when a process for making gutta-percha by his experimental plan was patented in the United States. Ever afterward he declared himself the original discoverer of gutta-percha. In 1848 he was sent for as the most skillful American dental surgeon to go to Paris to look after the teeth of President Louis Napoleon, and he made his home in that city till his death, though never abandoning his American citizenship. When in Paris he was in daily attendance on the Emperor and the Empress, and his professional services were in demand at every court in Europe. He was loaded with gifts and decorations, and by the judicious investment of the large sums received for his professional services he acquired a fortune of millions of dollars. Dr. Evans also gained an international reputation as an expert in military sanitation. He made a study of the condition of the European camps and hospitals in the Crimean War; was an organizer and an influential promoter of the United States Sanitary Commission in the civil war; and was the founder of the Red Cross Society and personal director of its ambulance corps in the Franco-Prussian War. On the night of Sept. 4, 1870, when the Empress was deserted by all the great members of the household and the high court functionaries, Dr. Evans's home became her refuge in her flight from the mob. She was driven there directly from the Tuileries. Dr. Evans had her attired in his wife's clothes, and drove her in his carriage to the Normandy coast, where he secured passage to England for her on the pleasure yacht of a friend. Dr. Evans made a brief visit to New York and Philadelphia a few weeks before his death, and authorized the announcement that he intended bequeathing the bulk of his property for educational purposes. (See GIFTS AND BEQUESTS.)

Farnsworth, John Franklin, lawyer, born in Eaton, Quebec, Canada, March 27, 1820; died in Washington, D. C., July 14, 1897. In early life he removed to Michigan, where he was admitted to the bar, subsequently settling in Chicago, Ill. From 1857 till 1861 he was a Republican Representative in Congress and a member of the Committee on Military Affairs. In 1861 he was commissioned colonel of the 8th Illinois Cavalry, afterward raised the 17th Illinois Volunteers, and on Nov. 29, 1862, was commissioned a brigadier general of volunteers. Owing to injuries received in the field, he resigned in March, 1863; removed to St. Charles, Ill.; and again served in Congress from that year till 1873, in his last term being chairman of the Committee on Post Offices and a member of the Joint Select Committee on the Insurrectionary States. Since the expiration of his term he had practiced his profession at Washington, D. C.

Fay, Joseph Story, philanthropist, born in Cambridgeport, Mass., Dec. 8, 1812; died in Boston, Mass., June 14, 1897. In early and middle life he was engaged in mercantile business, principally in Savannah, Ga., but in later years he applied himself largely to practical horticulture and forestry. He had a large estate at Wood's Holl, where he planted 100 acres with pine seed and produced a valuable forest, and cultivated rare exotics and strawberries. He was a member of the American Forestry Congress and the Massachusetts Horticultural Society. He responded liberally to appeals for the poor and needy at home and abroad, and was a notable benefactor of the Home for Little Wanderers, St. Luke's Home for Convalescents, and the Episcopal Church Home, all in Boston.

Fenn, Augustus Hall, jurist, born in Plymouth, Conn., Jan. 18, 1844; died in West Winsted, Conn., Sept. 12, 1897. He entered the 19th Connecticut Infantry as a first lieutenant, and after serving for two years, attaining the rank of brevet colonel for gallantry, and losing his right arm at Cedar Creek,

he resigned his commission and studied law. In 1867 he was admitted to the bar, then attended the Harvard Law School, and in 1867 was appointed a judge of the Superior Court of Connecticut. After six years' service on this bench, he was appointed a judge of the Supreme Court of Farners, and he held the office at his death. Judge Fenn was for many years a lecturer at the Yale Law School, and was a member of the commission that revised the penal laws of Connecticut in 1885 and the general statutes in 1886. As a public speaker he was known beyond his State. Among his lectures were "Will Sheridan in the Shenandoah," "Mastodon Identity," and "Points of Law we ought to know."

Fink, Albert, civil engineer, born in Lauterbach, Germany, Oct. 27, 1827; died near Sing Sing, N. Y., April 3, 1897. He was graduated at the Polytechnic Institute of Darmstadt in 1848; came to the United States in the following year, and entered the service of the Baltimore and Ohio Railroad Company as draughtsman. From this post he was promoted to that of chief office assistant of Benjamin H. Latrobe, then chief engineer of the company. He remained with this company till 1857, and during the greater part of his service was in charge of the design and construction of bridges and buildings, including the first important iron bridges in the country—those over the Monongahela river and Troy run—and the tunnels on the Grafton and Parkersburg section of the road. He was also for a time consulting engineer of the Norfolk and Petersburg Railroad, and designed the bridge at Norfolk. From the Baltimore and Ohio Company he went to the Louisville and Nashville as assistant engineer, and for it built the bridges over Green river, over the Cumberland at Nashville, and over the Ohio at Louisville. This road suffered severely during the civil war, and through this period he was chief engineer and superintendent of the road and machinery department. In 1865 he was made general manager, and in July, 1870, was elected vice-president. Soon after his election he began a minute investigation into the cost of railroad transportation, and suggested that rival corporations should unite their interests under a plan by which the traffic should be amicably divided. Under this plan the Southern Railway and Steamship Association was formed in 1875, and Mr. Fink assumed its management. Within two years the advantages of the pooling system became so marked that Messrs. Vanderbilt, Jewett, Garrett, and Scott, representing respectively the New York Central, the Erie, the Baltimore and Ohio, and the Pennsylvania Railroads, induced Mr. Fink to attempt the organization of a trunk-line pool of the west-bound traffic. In June, 1877, he effected an organization which within six years represented 40 of the largest railroad corporations in the country. He held the office of Commissioner of the Trunk-Line Association till June, 1889, and during this period the pool was kept intact. After his resignation, due to impaired health, he resided chiefly in Louisville. Mr. Fink invented the bridge truss bearing his name.

Flagg, George Whiting, painter, born in New Haven, Conn., June 26, 1816; died on Nantucket island, Mass., Jan. 3, 1897. He was a son of Henry C. Flagg, a lawyer of Charleston, S. C., and a nephew of Washington Allston. He studied painting with his uncle, and portraiture with Bowdoin in Charleston; and when sixteen years old received as much

as \$300 apiece for portraits. In 1835 he went to Europe for further study, and, after spending three years in the galleries, lived for six years in London. On his return he opened a studio—first in New Haven, and then in New York city. He was elected a member of the National Academy of Design in 1843 and an academician in 1851. Among his earliest paintings are a portrait of Bishop England, "A Boy listening to a Ghost Story," "A Young Greek," "Jacob and Rachel at the Well," and "Murder of the Princes." Those best known include "Landing of the Pilgrims," "Landing of the Atlantic Cable," "Washington receiving his Mother's Blessing," "The Good Samaritan," "Columbus and the Egg," "The Match Girl," "Haidée," "The Scarlet Letter," and "The Execution of Lady Jane Grey."

Francis, John Morgan, journalist, born in Prattsburg, Steuben County, N. Y., March 6, 1823; died in Troy, N. Y., June 18, 1897. He was apprenticed to the printer's trade, and when twenty years old became editor of the "Wayne Sentinel," at Palmyra, N. Y. In 1845 he joined the editorial staff of the "Rochester Advertiser," and in the following year that of the "Troy Budget," of which he became editor and part owner. He established the "Troy Times" in 1851, and for many years was its senior proprietor and editor in chief. In the early part of his journalistic career Mr. Francis was a Freesoiler, and from the organization of the Republican party he was a member of it. He was a member of the State constitutional conventions of 1867-'68 and 1894, and in the last-named body served on the Committees on Preamble and Bill of Rights, on Cities, and on Civil Service. In 1871 he was appointed United States minister to Greece, where he served for three years; in 1882-'84 he was minister to Portugal; and in 1884-'85 to Austria-Hungary. Under an act of the New York Legislature of 1895 he was appointed a member and elected vice-president of the incorporation of Trustees of Scenic and Historic Places and Objects.

French, George Franklin, physician, born in Dover, N. H., Oct. 30, 1837; died in Minneapolis, Minn., July 13, 1897. He was graduated at Harvard College in 1859, and at its medical school in 1862; entered the National army as an assistant surgeon, Aug. 13, 1862; was appointed a surgeon on the staff of Gen. Grant in the following year; and afterward was placed in charge of the organization of field hospitals under Gen. Sherman. When the latter was about setting out on his march to the sea Dr. French was appointed surgeon in chief of the 1st division, 15th Army Corps, and he held the post throughout the march, resigning his commission in June, 1865, and receiving the brevet of lieutenant colonel a month later. Dr. French settled in Portland, Me., to practice, became a member of the original staff of the Marine General Hospital, and in 1875 was appointed instructor in physiology and lecturer on dermatology in Portland Medical School. In 1879 he removed to Minneapolis; in 1881 was appointed lecturer on obstetrics in the St. Paul Medical College; in 1882-'85 held the same chair in the Minneapolis Hospital College; and in 1883 became Professor of Gynecology in the same institution. He was appointed President of the State Examination Board in 1887, and in 1890 was President of the Minnesota Academy of Medicine.

French, John Raymond, educator, born in Pulaski, Oswego County, N. Y., April 21, 1825; died in Syracuse, N. Y., April 26, 1897. He was brought up on a farm, and was graduated at Union College in 1849. Soon after graduation he became Professor of Mathematics in Valley Seminary, Fulton, N. Y., of which he was subsequently principal.

He resigned in 1854, and in 1855-'59 was principal of Mexico Academy. During the last period he also studied law, and on leaving the academy he was admitted to the bar, and for five years he practiced. In 1864 he was elected Professor of Mathematics at Genesee College. When that institution was removed to Syracuse, in 1871, he became dean of the College of Liberal Arts, retaining also the chair of Mathematics till within a short time of his death. For nearly three years he had been vice-chancellor of the university. He received the degree of LL. D. from Allegheny College in 1870.

Fullerton, Joseph Scott, soldier, born in Chillicothe, Ohio, in December, 1835; died in a railroad accident near Oakland, Md., March 20, 1897. He was graduated at Oxford, Ohio, Law School, and practiced till the outbreak of the civil war. He entered the National army as captain on the staff of Gen. Gordon Granger, served through the war, and at its close was a brevet brigadier general on the staff of Gen. O. O. Howard. After the war he resumed law practice in St. Louis, and during President Johnson's administration was postmaster there. At Chickamauga he rode at Granger's side when that general made a dash into the gap at the horseshoe ridge with Steedman's two brigades, reached the position on Wood's right, prevented Hindman's Confederate division from getting into Gen. Thomas's rear, and in a furious encounter of twenty minutes drove Hindman back utterly crushed. Nearly half of the men who rushed with Granger and Fullerton up the ridge were killed or wounded. Both generals escaped unhurt, though their clothing was riddled with bullets.

George, Henry, political economist, born in Philadelphia, Pa., Sept. 2, 1839; died in New York city, Oct. 29, 1897. He was the son of a publisher of Protestant Episcopal Church books, and was educated in the public

schools of his native city. After working in a crockery store a year, he went to sea as a cabin boy when fourteen years old, and made the round trip from New York to London, Melbourne, Calcutta, and back again to New York, in about fourteen months. He then, at his father's desire, began to learn the printer's trade, but soon became discontented by confinement, and shipped as an ordinary seaman on a coasting vessel bound from Philadelphia to Boston. In 1858 he became interested in the gold discoveries along Frazer river in British Columbia, and shipped before the mast on a vessel bound for the Pacific coast. He worked his way to the gold region, was disappointed in all his calculations, and worked in Victoria till he earned enough money to pay for a steerage passage to San Francisco. He reached that city in 1859, penniless, did odd jobs, and, after a few months of extreme poverty, made his way to Sacramento, where he found employment in a printing office. This proved so precarious that he was glad to get a place as weigher in a rice mill, and while there he was again tempted by stories of great wealth in gold mining, and made a fruitless journey to the interior of the State. After this he went to San Francisco, and worked for some time as a compositor in a newspaper office. In 1860 he joined two other printers, and, with a few hundred dollars they had saved between them, established a paper called the "Journal." His inability to obtain news

from the Eastern States because he was not a member of a press association soon led to the suppression of the paper, and he resumed typesetting, ultimately becoming a partner in a job-printing office in Sacramento. This venture also proved unprofitable, and he again sought a newspaper composing room for a livelihood. When the attempt was made to establish an empire in Mexico under Maximilian Mr. George joined an expedition intended to aid the Mexicans, but a United States revenue cutter prevented the sailing of the force. He now began writing anonymously for the newspapers. Soon his identity was discovered by the editor of the San Francisco "Times," and he was offered an editorial place on that paper, of which he subsequently became managing editor. Afterward he was connected with the San Francisco "Chronicle," the San Francisco "Herald," and the Oakland "Recorder." While he was on the last paper his opposition to corporations and monopolies led the Central Pacific Railroad Company to buy a controlling interest in the paper and make a change in the editorship. In 1871 he published a pamphlet under the title of "Our Land and Land Policy, National and State," of which a limited number of copies were sold in California only. The following year he was a delegate to the convention that nominated Horace Greeley for the presidency, and he also established the San Francisco "Evening Post," the first one-cent paper on the Pacific coast. Various complications ultimately cost him all that he had invested in the concern. An appointment as inspector of gas meters in San Francisco yielded him a living salary, with sufficient leisure for his literary work. In 1879 he completed his book "Progress and Poverty," of which a few copies were printed privately in San Francisco, and in 1880 he removed to New York, and after much trouble secured the publication of the book in that city and in London. He went to Ireland in 1881 to write up the land question for several American newspapers. In 1883 he accepted an invitation of the Land Reform Union to deliver a series of lectures in England, and in 1884 lectured in Scotland on the invitation of the Scottish Land Restoration League. As a result of his observations, he published "The Irish Land Question" (1881); "Social Problems" (1883); and "Protection or Free Trade" (written in 1884, lost, rewritten, and published in 1896). In 1886 he was the candidate of the United Labor party for the office of Mayor of New York. His canvass was memorable because of the active participation in it of the Rev. Edward McGlynn, D. D., an eloquent Roman Catholic priest. Mr. George polled, according to the returns, 68,110 votes, but always maintained that he was really elected. In 1887 he established "The Standard," and with Dr. McGlynn organized the Anti-Poverty Society, in whose interest they both lectured extensively. He was an unsuccessful candidate for Secretary of State in 1887, revisited England in 1889, and made a lecturing tour of Australia in 1890. Meanwhile his "Progress and Poverty" had been published in the French, German, Spanish, Italian, Dutch, Swedish, Russian, Japanese, and Chinese languages, and he had published pamphlets on "The Condition of Labor," "An Open Letter to Pope Leo XIII," and "A Perplexed Philosopher." In the early autumn of 1897 Mr. George was nominated by several organizations for Mayor of the Greater New York. Subsequently these bodies, in a great mass meeting, united under the party name of the "Democracy of Thomas Jefferson," and Mr. George accepted the nomination. He entered the campaign with great earnestness, and was several times cautioned against overexertion. On the night before his death he addressed four large meetings. He retired about

midnight, was suddenly seized with apoplexy, and died before daylight. The party that had nominated him substituted his son, Henry George, Jr., at the head of the ticket, and continued the canvass. It was estimated that more than 30,000 persons viewed the remains of Mr. George in the Grand Central Palace, and the public funeral was one of the most impressive ever seen in New York. At the time of his nomination he was engaged in the preparation of a work which he intended to be his masterpiece. It was nearly finished, and it was published in 1899. It is entitled "The Science of Political Economy."

George, James Zachariah, jurist, born in Monroe County, Ga., Oct. 20, 1826; died in Mississippi City, Miss., Aug. 14, 1897. When ten years old he accompanied his widowed mother to Carrollton, Miss., where he acquired a common-school education and maintained his legal residence till his death. At the beginning of the Mexican War he volunteered as a private in the 1st Mississippi Regiment, and took part in the battle of Monterey. On his return from Mexico he studied law, was admitted to the bar, elected reporter of the High Court of Errors and Appeals in 1854 and 1860, and prepared ten volumes of the "Reports." In 1861 he was a member of the State convention that passed the ordinance of secession, and in the civil war he became a brigadier general in the Confederate army, and twice was made a prisoner. Returning home, he resumed law practice, and completed a digest of all the decisions of the Supreme Court and the High Court of Errors and Appeals from the admission of the State into the Union till the end of 1870. In 1875-'76 he was chairman of the Democratic State Executive Committee; in 1879 was appointed a judge of the State Supreme Court and elected its chief justice; and in 1881, 1886, and 1892 was elected United States Senator. Recently he had given the most of his attention to the work of the Judiciary Committee and to the legislation on bankruptcy.

Gersoni, Henry, philologist, born in Wilna, Russia, in 1843; died in New York city, June 29, 1897. He was educated at the Universities of St. Petersburg and Berlin, and for several years was a member of the Students' Society, which was eventually suppressed. In 1866 he came to the United States and preached in the Temple Emanuel, New York city. He was also a contributor to "The Jewish Times" and other periodicals till 1874, when he was chosen rabbi of a synagogue in Atlanta, Ga. Thence he went to the Temple B'nai Sholem, in Chicago, where he established and published for two years "The Jewish Advance." Since 1883 he had resided in New York city. He was an accomplished linguist, and had written many articles on the history of the Jews in Russia.

Ginter, Lewis, manufacturer, born in New York city, April 24, 1824; died in Westbrook, Va., Oct. 2, 1897. When seventeen years old he went to Richmond, Va., where he became a successful merchant. During the civil war he served in the quartermaster's department of the Confederate army, attaining the rank of major. After the war he was a broker in New York city till ruined by the "Black Friday" panic in 1869. He then returned to Richmond, began manufacturing cigars in a small way, was one of the first cigarette manufacturers in the country, and became one of the strongest members of the American Tobacco Company, the cigarette trust. He acquired large wealth, and did much to beautify and improve Richmond.

Grace, Agnes (known in religion as SISTER GONZAGA), benefactor, born near Emmetsburg, Md., in 1812; died in Philadelphia, Pa., Oct. 8, 1897. She acquired a common-school education, became a Sister of Charity when fifteen years old, and had been

connected with St. Joseph's Orphan Asylum in Philadelphia since 1830, and its superiress for fifty years. During the greater part of the civil war she was an army nurse, and ministered to hundreds of soldiers on both sides. At the time of her death she was believed to be the oldest Sister of Charity in the United States.

Grace, Thomas L., clergyman, born in Charleston, S. C., Nov. 16, 1814; died in St. Paul, Minn., Feb., 22, 1897. He was educated at the Roman Catholic seminary in Charleston, the convent of St. Rose in Kentucky, and the Minerva College in Rome; entered the order of St. Dominic when sixteen years old; and was ordained in Rome, Dec. 21, 1839. He returned to the United States in 1844, and for several years was engaged in missionary labor in Kentucky and Tennessee, particularly in Memphis, where he erected the Church of SS. Peter and Paul, the convent of St. Agnes, and an orphan asylum. After holding the pastorate of the Memphis church for thirteen years, he was appointed bishop of the see of St. Paul, Minn., in 1859. In 1875 the great labor imposed on him by the vastness of his diocese was relieved by the setting off of northern Minnesota as a vicariate and the appointment of the Rev. John Ireland as coadjutor, and further relief was given in 1879, when Dakota was placed under the care of a vicar apostolic. Bishop Grace celebrated the silver jubilee of his episcopate in July, 1884, and the same year resigned his see.

Greatorox, Eliza, painter, born in Manor Hamilton, Ireland, Dec. 25, 1819; died in Paris, France, Feb. 9, 1897. She was a daughter of the Rev. James Calcott Pratt; came to New York in 1840, and married Henry W. Greatorox, an English musician, in 1849. After her marriage she studied painting and took a course in etching. She visited England in 1857, spent 1861-'62 in Paris, and visited Germany and Italy in 1870-'73. At first she applied herself to landscape painting, but in late years she gave her entire attention to pen-and-ink work and etching. Many of her pen-and-ink sketches appeared in book form with text by her sister, Mrs. Matilda P. Despard, of which the best known are "The Homes of Ober-Ammergau" (Munich, 1872); "Summer Etchings in Colorado" (New York, 1873); "Etchings in Nuremberg" (1875); and "Old New York, from the Battery to Bloomingdale" (1876). She also made a large pen drawing of "Dürer's House in Nuremberg," which is in the Vatican. A series of eighteen of her sketches illustrative of New York was exhibited among the art collections at the Centennial Exhibition at Philadelphia in 1876. Among her best-known paintings are "Bloomingdale" (1868); "Chateau of Madame Oliffe" (1869); "Normandy" (1882); "The House of Louis Philippe in Bloomingdale" (1884); and "Bloomingdale Church," "St. Paul's Church," and "The North Dutch Church," each painted on a panel taken from St. Paul's and the North Dutch Churches (1876). Mrs. Greatorox was the first woman that was elected an associate of the National Academy of Design (1868), and the only woman that ever was admitted to the Artist's Fund Society of New York.

Green, Joseph F., naval officer, born in Maine, Nov. 24, 1811; died in Brookline, Mass., Dec. 9, 1897. He was appointed a midshipman in the United States navy Nov. 1, 1827; was promoted passed midshipman June 10, 1833; lieutenant, Feb. 28, 1838; commander, Sept. 14, 1855; captain, July 16, 1862; commodore, Dec. 2, 1867; and rear-admiral, July 13, 1870; and was retired Nov. 25, 1872. During his active career he was on sea service for twenty years and five months and on shore or other duty for seventeen years and three months. He was attached to the ship-of-the-line "Ohio," of the

Pacific squadron, at the time of the Mexican War. In 1851-'52 he was on duty at the Boston Navy Yard; in 1853-'54 on ordnance service; and in 1855-'58 at the Naval Academy. He was again assigned to ordnance duty in 1861, commanded the steam sloop "Canandaigua" of the South Atlantic blockading squadron in 1862-'64, took part in the bombardment of Fort Wagner, was on ordnance duty at the Boston Navy Yard in 1866-'68, and commanded the Southern squadron of the Atlantic fleet in 1870-'71.

Green, Traill, chemist, born in Easton, Pa., May 25, 1813; died there, April 29, 1897. He was graduated in medicine at the University of Pennsylvania in 1835, and returned to Easton and engaged in practice. He was elected Professor of General and Applied Chemistry at Lafayette College in 1837, and of Natural Sciences at Marshall College, Mercersburg, in 1841, holding the last chair till 1847, when he returned to Lafayette College. The Pardee Scientific Department, at Lafayette, was organized by him, and he was its dean till within a few years of his death. Prof. Green built the astronomical observatory of Lafayette, and presented it to the college. He was the first President of the American Academy of Medicine, and President of the Pennsylvania Medical Society in 1868. He rendered important service under various State appointments. He received the degree of LL. D. from Washington and Jefferson College in 1866.

Groesbeck, William Slocomb, lawyer, born in New York city, July 24, 1815; died in Cincinnati, Ohio, July 7, 1897. He was graduated at Miami University, Oxford, Ohio, in 1835; studied law and settled in Cincinnati to practice. In 1851 he was a member of the State Constitutional Convention; in 1852 was appointed to the commission to codify the laws of the State; and in 1857-'59 was a Republican Representative in Congress and a member of the Committee on Foreign Affairs. He was a member of the Peace Congress in 1861, a State Senator in 1862, and a delegate to the National Union Convention in Philadelphia in 1866. His most notable public service was counsel for President Johnson in the impeachment trial in 1868. He had little sympathy for the President or his policy, but consented to be his counsel. In 1872 a convention of Liberal Republicans, dissatisfied with the nomination of Horace Greeley, put Mr. Groesbeck in nomination for the presidency, but the act was almost entirely overlooked in the excitement of the campaign, and when the electoral college met he received one vote for the vice-presidency, for which his name had not been mentioned. He was appointed a delegate to the International Monetary Congress in Paris in 1878. For many years the citizens of Cincinnati have enjoyed free park concerts as a result of his gift of \$50,000 for the purpose.

Hale, George Silsbee, lawyer, born in Keene, N. H., Sept. 24, 1825; died in Schooner Head, Me., July 28, 1897. He was a son of Salmon Hale, the historian; was graduated at Harvard in 1844; taught for some time in Richmond, Va.; and was admitted to the bar in Boston in 1850. He edited the sixteenth, seventeenth, and eighteenth volumes of the "United States Digest," and with H. Farnham Smith the nineteenth, and was associated with George P. Sanger and John Codman in editing the sixteenth, seventeenth, and eighteenth volumes of the "Boston Law Reporter." His other literary work included "Memoirs of Joseph Parker," a chief justice of New Hampshire (1876); "Memoirs of Heron Metcalf," of the Massachusetts Supreme Court (1876); and the historical sketch of the charitable institutions of the city in the "Memorial History of Boston." He took an active interest in the charitable and public institutions of the city,

and had been President of the Common Council and a member of the State Legislature.

Halliday, Samuel Bryane, clergyman, born in Morristown, N. J., June 5, 1812; died in Orange, N. J., July 9, 1897. He removed with his father's family to New York, where he worked as a clerk and undertook to prepare for the ministry, but soon had to give up study on account of his eyes. He engaged in volunteer missionary work, established in the Spring Street Presbyterian Church the second Sunday-school infant class in the United States, and was appointed General Secretary of the New York City Tract Society. When compelled by failing health to retire from this work, he went to Providence, R. I., where he was employed in mercantile business and was instrumental in establishing three Congregational churches near the city. Subsequently he resumed his studies for the ministry; was ordained and installed pastor of the Congregational church at Lodi, N. J., in 1863; became superintendent of the Five Points House of Industry in New York in 1865; and removed to Brooklyn and united with Plymouth Church in 1866. A strong friendship soon sprang up between Henry Ward Beecher and Mr. Halliday, and when the trustees decided to provide an assistant for Mr. Beecher the latter selected Mr. Halliday. The office of pastoral helper was created, and in 1869 Mr. Halliday withdrew from the Five Points Mission and began his work with Plymouth Church. This relation was continued till Mr. Beecher's death, in 1887. When Dr. Lyman Abbott was chosen Mr. Beecher's successor, Mr. Halliday resigned his office, and was presented by the church with a handsome annuity. Finding a promising field in the Ocean Hill region of the city, where there was a small, struggling Congregational church, he assumed its pastorate without salary, and within three years erected a tasteful church edifice at a cost of \$26,000, and had the name changed from the Tabernacle to the Beecher Memorial Church. He held the pastorate as long as advancing years would permit.

Hardy, George E., educator, born in New York city in 1839; died in Roselle, N. J., April 15, 1897. He was graduated at the College of the City of New York in 1878; began teaching in the public schools; was appointed principal of Grammar School No. 82 and elected President of the State Teachers' Association in 1886; and was Professor of the English Language and Literature in the College of the City of New York from 1894 till his death. Prof. Hardy had become favorably known as a writer and lecturer on educational topics, and was one of the founders of the Catholic Summer School of America. Of his publications, "Five Hundred Books for the Young" is the most important. He left unfinished a "History of England" and a "History of English Literature," for schools.

Harrington, George W., soldier, born in Waterloo, N. Y., in 1837; died in Kalamazoo, Mich., June 24, 1897. He entered the United States Military Academy, but in 1853, before he had completed the course, he volunteered for service in the Indian war. He crossed the plains with Gens. Albert Sidney Johnston and Philip St. George Cooke, and acquitted himself with much credit. In the early part of the civil war he organized the 10th New York Cavalry. He was captured and was confined in Libby Prison, from which with others he escaped. In the Gettysburg campaign he distinguished himself by his bravery till seriously wounded. He was brevetted a brigadier general for this service, and soon afterward was compelled by his wounds to retire from the army. After the war he was engaged in the undertaking business in Rochester, N. Y., and in Kalamazoo. Gen. Harrington was president of the Michigan Undertakers' Association.

Harris, Henry Herbert, educator, born in Louisa County, Va., Dec. 11, 1807; died in Lynchburg, Va., Feb. 4, 1897. He was graduated at the University of Virginia in 1828, became an instructor in Albemarle Female Institute, and served in the Confederate army through the civil war. Largely through his influence Richmond College was opened soon after the war, and from 1866 to 1869 he was Professor of Greek there, and for four years chairman of its faculty. In 1866 he joined the faculty of the Southern Baptist Theological Seminary, in Louisville, Ky., with which he was connected till his death. Dr. Harris began his ministry in 1839 by preaching to a congregation of colored people. In 1849 he gathered a small congregation and Sunday school in the suburbs of Richmond, and when, in the following year, a church was organized there, he was ordained and became its pastor. In 1873-'76 he was editor of the "Educational Journal" of Virginia, and in 1877 of the "Foreign Mission Journal," the organ of the boards of the Southern Baptist Convention. On the organization of the Virginia Baptist Historical Society, in 1876, he was elected its secretary and treasurer. He was also for many years one of the editors of the "Religious Herald" of Richmond.

Harris, Isham Green, lawyer, born near Tullahoma, Tenn., Feb. 10, 1818; died in Washington, D. C., July 8, 1897. When fourteen years old he became a shopboy in Paris, Tenn.; before he was nineteen he went to Tippah County, Miss., where he became a successful merchant, a law student, and, by the failure of a bank, penniless, and returning to Paris he was again successful in business, continued his law studies, and was admitted to the bar in 1841. In 1847 he was a successful candidate for the lower house of the Legislature as a Democrat, against two unpopular Democrats and a Whig candidate. From that time till his death, with three brief exceptions, he was continually in public life. In 1849 and 1851 he was elected to Congress, in 1853 was re-nominated, but declined, and in 1856 he made a successful canvass of his State for presidential elector at large. At the close of his second term in Congress he removed to Memphis and resumed law practice. He was elected Governor of Tennessee in 1857, 1859, and 1861. At the beginning of the civil war he instituted vigorous measures to put the State in an attitude of defense against what he characterized as an invasion by the National troops, but the successes of the Union armies soon drove the Government from the capital, and in the last three years of the war he was a volunteer aid on the staff of the commanding general of the Confederate Army of the Tennessee. At the battle of Shiloh, when Gen. Albert Sidney Johnston received his death wound he fell into the arms of Gov. Harris. After the war, though Gov. Brownlow had offered a large reward for his capture, Gov. Harris escaped into Mexico, going thence to England, and returning to Memphis in 1867. In 1876 he made a personal canvass of the State as a self-announced candidate for the United States Senate, and in the election he defeated Judge L. L. Hawkins, the Republican candidate. He was re-elected in 1883, 1889, and 1895. Senator Harris was a tireless worker, and very punctilious in observing the rules and courtesies

sies of the Senate. He was popular among his fellow-members, who by a large majority elected him president *pro tem* of the Senate in 1893.

Haskell, James Richards, inventor, born in Geneva, N. Y., Sept. 17, 1825; died in Passaic, N. J., Aug. 15, 1897. He removed to Ohio with his parents in 1833, was educated at Western Reserve College, and engaged in manufacturing in New York city in 1853. In 1856 his attention was directed to the accelerating principle of heavy ordnance, originated by A. S. Lyman, of New York, and he became interested in the development of it. After a series of experiments he constructed a gun with powder pockets along its bore. A small charge of powder was placed behind the shot at the breech to start it, and as the shot passed each powder pocket the gas of combustion ignited and exploded the charge, and each one added to the velocity of the shot. The initial, or breech charge, was slow-burning powder, the pocket powder was quick burning. Mr. Haskell built several of his multicharge guns, and they showed remarkable results in velocity and penetration. The Government paid him \$100,000 for his invention, but subsequent developments in the science of gunmaking prevented its practical application, and he spent the remainder of his life in endeavoring to adapt the principle of the multicharge gun to the new conditions.

Headley, Joel Tyler, author, born in Walton, Delaware County, N. Y., Dec. 30, 1813; died in Newburg, N. Y., Jan. 16, 1897. He was graduated at Union College in 1839, and subsequently at Auburn Theological Seminary, and for a time was pastor of the Presbyterian Church at Stockbridge, Mass. In 1842 he was compelled by failing health to withdraw from the ministry. He spent a year in foreign travel, and on his return engaged in literary work. In 1846 he became associate editor of the New York "Tribune," succeeding Henry J. Raymond, but poor health soon made it necessary for him to resign the post. He lived in the Adirondacks for the greater part of several years, visited the region regularly for nearly thirty years, and published a book on the locality by which it is believed attention was first attracted to the Adirondacks as an important health resort. In 1854 he was elected to the New York Assembly, and in 1855 was the successful Know-nothing candidate for Secretary of State of New York. His publications include "Napoleon and his Marshals" (2 vols., New York, 1846); "Washington and his Generals" (1847); "Life of Cromwell" (1848); "The Adirondacks; or Life in the Woods," a collection of newspaper letters (New York, 1849); "Sacred Scenes and Characters" (1849); "Life of Washington" (1857); "Life of Havelock" (1859); "Chaplains of the Revolution" (1861); "The Great Rebellion" (2 vols., 1864); "Grant and Sherman: Their Campaigns and Generals" (1865); "Farragut and our Naval Commanders" (1867); "Sacred Heroes and Martyrs" (1865); "The Achievements of Stanley and other African Explorers" (1877); "History of the War of 1812"; "Lives of Scott and Jackson"; "Sacred Mountains"; and "History of the Riots of 1863."

Hesing, Washington, journalist, born in Cincinnati, Ohio, May 14, 1849; died in Chicago, Ill., Dec. 18, 1897. He accompanied his parents to Chicago in childhood and was educated there till 1861, when he went to Germany to study. He was graduated at Yale in 1870, and immediately afterward took a course in political economy and German literature at the University of Berlin. In November, 1871, he became connected with the "Illinois Staats Zeitung," of which his father was proprietor, and in 1880 was made managing editor. In 1872 he became a member of the city Board of Education, and took an active part in the presidential campaign,

making an effective series of speeches in English and German for the Republican party. In 1880 he was elected to the county Board of Education, and in 1882 was chosen its president. Subsequently he became a Democrat, and for several years retired from active politics. In 1890, during the controversy on the school question, he gave his influence to the liberal side. He was a member of the commission appointed to devise ways and means for improving the condition of Chicago during the World's Columbian Exposition, and also of the Intramural Commission, was appointed postmaster of Chicago in 1894, and was the unsuccessful independent candidate for mayor in the spring of 1897.

Hewit, Nathaniel Augustus (better known by the adopted Christian names of AUGUSTINE FRANCIS), clergyman, born in Fairfield, Conn., Nov. 27, 1820; died in New York city, July 3, 1897. He was a son of the Rev. Nathaniel Hewit, a founder of Hartford Theological Seminary, and was graduated at Amherst in 1839. In 1840 he entered the Theological Institute of Connecticut at East Windsor, in 1842 was licensed to preach in the Congregational Church, in 1843 was ordained a deacon in the Protestant Episcopal Church, and in 1847 was ordained a priest in the Roman Catholic Church after two years of study in Charleston, S. C. He became vice-principal of Charleston Collegiate Institute, where he remained three years. Then deciding to join a religious community, he became an associate of the New York Redemptorists, and was attached to the Church of the Holy Redeemer. In 1858 Fathers Hewit, Hecker, Walworth, Baker, and Deshon, all Redemptorists, recognizing that that order was unsuited to conditions existing in the United States, secured from Pope Pius IX a decree creating the "Institute of Missionary Priests of St. Paul the Apostle." The work of the Paulist Fathers, as these priests were called, met with immediate and large success. Father Hecker was superior of the order from its institution till his death, in 1888, when Father Hewit succeeded him. In 1865 Father Hewit gave up active missionary work and applied himself to theological and literary work, becoming Professor of Philosophy, Theology, and the Holy Scriptures in the Paulist Seminary in New York city. He was also editor of the "Catholic World" in 1869-'74. From its inception till within a year of his death Father Hewit was intimately connected with the Catholic University of America, in Washington, D. C. He was one of its lecturers, and secured the establishment by the Paulist Fathers of the College of St. Thomas Aquinas at the university. The degree of D. D. was conferred upon him by Amherst College and the Pope. He was a regular contributor to the "American Catholic Quarterly Review"; edited the "Complete Works of Bishop England" (Baltimore, 1850); and published "Reasons for submitting to the Catholic Church" (Charleston, 1846); "Life of Princess Borghese" (New York, 1856); "Life of Dumoulin-Borie" (1857); "The Little Angel of the Copts"; "Life of Rev. Francis A. Baker" (1865); "Problems of the Age, with Studies in St. Augustine on Kindred Subjects" (1868); "Light in Darkness: A Treatise on the Obscure Night of the Soul" (1870); and "The King's Highway; or, The Catholic Church the Way of Salvation, as revealed in Holy Scripture" (1874).

Hoffman, Charles Frederick, clergyman, born in New York city in 1834; died on Jekyll island, near Brunswick, Ga., March 4, 1897. He was a son of Samuel Verplanck Hoffman, a wealthy merchant, and a brother of the Rev. Eugene Augustus Hoffman, dean of the General Theological Seminary, in New York city. The brothers acquired very large wealth from the estate of their father.

Charles Frederick was graduated at Trinity College, Hartford, in 1851, took a three years' course at the General Theological Seminary, and after ordination engaged in mission work at Boston, N. J., for three years, and then held charges at Burlington, N. J., and Garrison, N. Y. In 1874 he was called to the Church of All Angels, New York city, and he remained its rector till his death. At his own expense he erected a handsome building 100 feet square at a cost of \$150,000, and presented it and the ground on which it stands to his congregation. The new church was dedicated in 1890, and was enlarged by him at a cost of \$200,000 to about double its former capacity in 1896-97. In 1894 Dr. Hoffman erected a large parish house for the church and provided for both mental and manual training. He gave to St. Stephen's College at Annandale, N. Y., in money and buildings about \$200,000; presented Hobart College, at Geneva, N. Y., with a handsome endowment; erected a library building for the A. T. Porter Institute at Charleston, S. C.; and in 1896 sent a check for \$40,000 to the University of the South, at Sewanee, Tenn. Dr. Hoffman was president of the Association for furthering the interests of Church Schools, Colleges, and Seminaries, and besides the benefactions mentioned gave most liberally to such institutions. He had received the degrees of D. D., LL. D., and D. C. L. (See GIFTS AND BEQUESTS).

Holley, George Washington, author, born in Salisbury, Conn., Feb. 17, 1810; died in Ithaca, N. Y., June 12, 1897. He was a brother of Alexander H. Holley, a Governor of Connecticut, and an uncle of Alexander Lyman Holley, the metallurgist. He entered the United States Military Academy in 1829, but was obliged by sickness to withdraw; served for several years in the lower house of the New York Legislature, was long a resident of Niagara Falls, and was widely known as a public speaker. Besides frequent contributions to newspapers and magazines, he published "Niagara: Its History and Geology" (1872) and "Magnetism; or, The New Cosmography" (1894).

Holman, William Steele, jurist, born in Vernaetau, Dearborn County, Ind., Sept. 6, 1822; died in Washington, D. C., April 22, 1897. He was a son of Judge Jesse Lynch Holman; took a partial course at Franklin College, Indiana; and was admitted to the bar and began practice at Aurora, Ind. When twenty-one years old he was elected a judge of probate, and after holding the office for three years he was prosecuting attorney for two years. In 1850 he was a member of the State Constitutional Convention, in 1851-52 was in the Legislature, and in 1852-56 was a judge of the Court of Common Pleas. He was elected to Congress as a Democrat in 1856, and, with the exception of the Thirty-ninth, Forty-fifth, Forty-sixth, and Fifty-fourth Congresses, was re-elected to each succeeding one, thus serving sixteen terms in the House of Representatives. At the outset of his congressional career Judge Holman became conspicuous as a champion of economy, and from his constant objection to new appropriations and measures that he considered extravagant he was nicknamed "The Great Objector" and "The Watchdog of the Treasury." During the civil war he was a steadfast champion of the National cause and a firm supporter of President Lincoln.

Holmes, George Frederick, educator, born in Demerara, British Guiana, in 1820; died in Richmond, Va., Nov. 4, 1897. He was educated at Durham University, England; came to the United States in 1838; taught in Virginia, Georgia, and South Carolina; and was admitted to the bar of the last-named State by special act of the Legislature before he was naturalized in 1842. In 1845 he

became a professor in Richmond College, in 1846 was elected President of the University of Mississippi; and in 1847 was made Professor of History, Political Economy, and International Law in William and Mary College. From 1847 till his death he was Professor of History and Literature in the University of Virginia, and during this long period he missed not more than five lectures. Prof. Holmes was at one time assistant editor of "The Saturday Review," was the author of a series of treatises for use in Southern schools and colleges, and had written a large number of political essays.

Holmes, Samuel, benefactor, born in Waterbury, Conn., in 1824; died in Montclair, N. J., Dec. 9, 1897. He was a corporate member of the American Board of Commissioners for Foreign Missions, a member of the Executive Committee of the American Missionary Association, and for many years was treasurer, secretary, or vice-president of the American Educational Society. His gifts included four perpetual scholarships at Yale for students from Waterbury, and \$25,000 for the founding of a professorship at Yale Divinity School. (See GIFTS AND BEQUESTS).

Hopkins, Perry, clergyman, born a slave at Eastern Shore, Md., in 1822; died in New York city, Aug. 20, 1897. After obtaining his freedom he settled in New York city, where he supported himself as a laborer and school janitor. He was converted at a mission meeting more than forty years ago, studied for the ministry of the African Methodist Episcopal Church, and after ordination organized congregations among the negro population of the city and its vicinity. His success in gathering and instructing the people of his race soon led to his election as a bishop of his church and his assignment to the diocese that includes New York, Massachusetts, and Maine.

Hosmer, Mrs. Margaret (Kerr), journalist and writer of short stories, born in Philadelphia, Dec. 1, 1830; died there, Feb. 1, 1897. In her girlhood she went with her father to California, and there married, in 1853, Granville Hosmer, chief editor in the Philadelphia, Nevada, and California mines. She was for some years the Washington correspondent of the "Alta California" and the "Golden Era," the latter of which she edited for some time with Bret Harte. After 1882 she wrote but little and lived in seclusion in Philadelphia. Her published books comprise "The Morrisons: A Story of Domestic Life" (New York, 1864); "The Back Court" (Philadelphia); "Catey's Three Dresses"; "Courts and Corners"; "Dismal Castle brightened"; "The Story of a Week"; "The Sultan's Spell"; "John Hartman"; "Ten Years of a Lifetime" (1866); "Lenny the Orphan" (1869); "Juliet the Heiress" (1869); with Julia Hopeton, "Under the Holly" (1869); "Child Captives" (1870); "Rich and Poor" (1870); "Three Times lost" (1870); "Little Rosie Series" (1870); "Blanche Gilroy" (1871); "Lilly's Hard Words" (1871); "The Sin of the Father" (1872); "A Rough Boy's Story" (1873); and "Chumbo's Hut" (1880).

Houghton, George Hendricks, clergyman, born in Deerfield, Mass., in 1820; died in New York city, Nov. 17, 1897. He was graduated at the University of the City of New York in 1842 and at the General Theological Seminary in 1845, and after ordination in the Protestant Episcopal Church became assistant to the Rev. Dr. Muhlenberg at the Church of the Holy Communion in New York and instructor in Hebrew at the General Theological Seminary. In 1848 he organized the parish of the Transfiguration, and for nearly two years held services regularly in a private dwelling. In 1850 the congregation erected a church building on 29th Street near Fifth Avenue. For ten years the young

rector struggled hard for the benefit of his parish, giving to it all the means he had acquired before organizing it, and engaging in literary and other pursuits to aid it. The modest building was enlarged from time to time, the activities of the parish were increased and quickened, and at the time of the rector's death the property of the church was free from debt and there was an endowment of \$100,000. The parish has a free library, St. Christopher's class for the instruction of young girls, St. Ann's Guild of working women, St. Monica's Guild of colored women, an altar society, Holy Innocents' Guild, Maternity Society for helping poor women and their children, Missionary Aid Society, two Sunday schools, and a children's sewing school. Dr. Houghton introduced into New York city from the English Church the Community of St. John the Baptist, which undertakes the rescue of fallen women, and was warden of the band that has carried on work at its Midnight Mission and St. Michael's Home, at Mamaroneck. Long before the Church of the Transfiguration attained a world-wide celebrity and a new name its modest rector had made himself the friend of everybody. He labored on the one spot for nearly fifty years, refusing all preferments of his church and tempting calls to service elsewhere. In December, 1870, when George Holland, the actor, died, a committee of the old Wallack company, headed by Joseph Jefferson, waited on the rector of a fashionable church on Fifth Avenue with the request that he would conduct the funeral services. The rector declined, and referred Mr. Jefferson to "the little church around the corner." Dr. Houghton placed himself and his church at the committee's disposal, and the body of Holland was received into the church for Christian rites. Within a few days the details of the incident had spread through the country and prompted the song that was sung on two continents, "God bless the Little Church around the Corner." Since then the funerals of actors who died in New York have generally been held in this church. (See GIFTS AND BEQUESTS.)

Hovey, Charles Edward, lawyer, born in Thetford, Orange County, Vt., April 26, 1827; died in Washington, D. C., Nov. 17, 1897. He was graduated at Dartmouth College in 1852, and after a service as principal of the high school in Framingham, Mass., he removed to Peoria, Ill., and was appointed principal of the boys' high school there. In 1856 he was appointed superintendent of the newly organized public-school system of Peoria, and the same year was president of the State Teachers' Association. The organization of the Illinois Normal University was largely due to his efforts, and he was its president from 1857 till the beginning of the civil war. In August, 1861, he was commissioned colonel of the 33d Illinois Infantry, composed chiefly of college students; in 1862 he was promoted brigadier general; and for gallantry at Arkansas Post, Jan. 11, 1863, he was brevetted major general of volunteers. He served in the operations around Vicksburg and contracted an illness that forced him to resign in May, 1863. Since 1869 he had practiced law in Washington.

Howe, Albion Paris, soldier, born in Standish, Me., March 13, 1818; died in Cambridge, Mass., Jan. 25, 1897. He was graduated at the United States Military Academy and entered the army as 2d lieutenant in the 4th Artillery in 1841; was promoted 1st lieutenant, June 18, 1846; captain, March 2, 1855; major, Aug. 11, 1863; lieutenant colonel, 2d Artillery, April 10, 1879; and colonel, April 19, 1882; and was retired June 30 following. In the volunteer service he was commissioned a brigadier general, June 11, 1862; brevetted major general, July 13, 1865; and mustered out of the service

Jan. 15, 1866. During his active service he was brevetted captain, Aug. 20, 1847, for meritorious conduct in the battles of Contreras and Churubusco; major, July 1, 1862, for Malvern Hill; lieutenant colonel, May 3, 1863, for Salem Heights; colonel, Nov. 7 following, for Rappahannock Station; and brigadier general and major general, United States army, March 13, 1865, for gallant and meritorious services during the war. He was Professor of Mathematics at the Military Academy in 1843-'46; served on garrison duty and as instructor at the Artillery School at Fort Monroe from the close of the Mexican War to the beginning of the civil war; was Gen. McClellan's chief of artillery in the West Virginia campaign in 1861; commanded a brigade of light artillery in the Army of the Potomac in the Peninsula campaign of 1862; took part in the battles of Malvern Hill, Manassas, South Mountain, Antietam, Fredericksburg, Chancellorsville, Gettysburg, and Rappahannock Station; and was on duty in Washington as chief of artillery in 1864-'66.

Hubbard, Gardiner Greene, philanthropist, born in Boston, Mass., Aug. 25, 1822; died in Washington city, Dec. 11, 1897. He was a son of Justice Samuel Hubbard and his wife, Mary Anne Greene, daughter of Gardiner Greene, said to have been one of the three wealthiest men in the United States. Young Hubbard was graduated at Dartmouth in 1841, studied at Harvard law school, and in 1843 was admitted to the bar and began practice in association with Benjamin R. Curtis. On the appointment of Mr. Curtis to the United States Supreme Court Mr. Hubbard practiced for some years alone, but later formed a partnership with John M. Pinkerton. In 1870 failing health led him to abandon his profession, and in 1873 he removed to Washington, which thereafter was his home. Meanwhile he had become active in the affairs of Cambridge, which continued to be his summer residence, and he was president of a street railway connecting Cambridge with Boston, which was the first horse-car railway outside of New York city. About 1860 his daughter Mabel lost her hearing in consequence of severe illness, and Mr. Hubbard was led to study the means of preserving her speech, for he was advised that she would become dumb in three months. He became satisfied that deaf persons could be taught to speak, and for that purpose he opened a school, which he maintained at his own expense. The success of the undertaking and his persistent urging the matter upon public attention resulted in the establishing of Clarke School for the Deaf and Dumb, in Northampton, Mass., of which he was a trustee and president of the board from its inception till his death. For five years after his removal to Washington he practiced law, but in 1878 he turned his attention to the development of the telephone invented by his son-in-law, Alexander G. Bell, and became the first President of the American Bell Telephone Company. It was he who recognized the value of the Berliner crude battery transmitter and purchased it before any separate company could be formed to control it. He went to Europe and organized several telephone companies, among them the International and the Oriental. Valuable concessions were granted to him by the Russian Government, and he repaid the empire by giving it one of the best telephone systems in Europe. In 1876 he was appointed a special commissioner to investigate the subject of railway mail transportation, and he became a strong advocate of Government ownership of telegraphs. Mr. Hubbard was a commissioner from Massachusetts to the World's Fair held in Philadelphia in 1876, and was chief of the Jury of Awards at the Tennessee Centennial Exposition,

held in 1897. He was elected a regent of the Smithsonian Institution in 1895, and was a member of its Executive Committee. In 1895 he was made president of the joint commission of the scientific societies of Washington; also he was President of the National Geographical Society. Mr. Hubbard was Vice-President of the American Association of Inventors and Manufacturers. He was one of the trustees of Columbian University, and received the degree of LL.D. from that institute in 1888. At Dartmouth he founded a lectureship on important incidents in American history. Mr. Hubbard acquired a large fortune and possessed valuable collections of engravings and antiquities, and a fine library.

Ide, Horace K., soldier, born in Barnet, Vt., Jan. 15, 1842; died in Brattleboro, Vt., March 31, 1897. He enlisted as a private in Company F, 1st Vermont Cavalry; served through the war; was twice taken prisoner and twice severely wounded; took part in 42 engagements; and was mustered out with the rank of brevet major general, May 13, 1865. After the war he was active as a Republican in State politics, and served several terms in the Vermont Legislature. He resided in St. Johnsbury, Vt., but spent his winters in Florida because of impaired health, resulting from wounds.

Janssens, Francis, clergyman, born in Tilburg, Holland, Oct. 17, 1847; died at sea between New Orleans and New York, June 10, 1897. When thirteen years old he entered the seminary of the diocese of Bois-le-Duc, where he passed through the great and small departments, and then, with the intention of engaging in missionary work in the United States, continued his studies in the American College at Louvain, Belgium. He was ordained a priest of the Roman Catholic Church on Dec. 21, 1867; went to Richmond, Va., in the following year, and remained there till May, 1881. During this period he served as first assistant in the Cathedral of St. Peter, as its rector, as secretary and chancellor of the diocese, and as vicar general, and was identified with the administrations of Bishops McGill, Gibbons, and Keane. On April 7, 1881, he was appointed Bishop of Natchez, and was consecrated May 1. Aug. 7, 1888, he was promoted to the archiepiscopal see of New Orleans. At the time of his death there were under his jurisdiction 207 priests, 161 churches, 60 chapels and stations, 22 colleges and academies, 103 parochial schools, 23 charitable institutions, and a Roman Catholic population estimated at 325,000.

Jermain, James Barclay, philanthropist, born in Albany, N. Y., Aug. 13, 1809; died there, July 12, 1897. He was a son of Silvanus P. Jermain. He was educated at Middlebury and Amherst Colleges, took up the study of law, and, after the death of his father, from whom he inherited much wealth, applied himself almost wholly to the management of his property and to philanthropy. He built the Jermain Memorial Church at Watervliet, N. Y., at a cost of \$120,000, and endowed a professorship in Williams College with \$50,000. He built the Home for Aged Men in the town of Colonie and the Fairview Home for Children, the latter at a cost of \$60,000, and expended nearly \$100,000 on the building of the Young Men's Christian Association in Albany. (See GIFTS AND REQUESTS.)

Jewett, Lyman, missionary, born in Waterford, Me., March 9, 1813; died in Fitchburg, Mass., Jan. 7, 1897. He was graduated at Brown University and at Newton Theological Institution, ordained in the Baptist Church Oct. 6, 1848, and sent to the East Indian field by the American Baptist Missionary Union immediately afterward. On April 16, 1849, he reached the Nellore Mission, which had been without American helpers for more than

three years, and at once set about reorganizing it, with the result that on Dec. 31, 1851, he delivered his first regular Telugu sermon in the chapel. The union decided in 1853 to continue this mission. Though his work did not receive the encouragement at home that he had looked for, Dr. Jewett labored the more diligently. He learned the language of the Telugus, made excursions into the neighboring villages, aroused such interest that considerable audiences gathered in the streets to listen to his preaching, and translated the New Testament into the language of the people. In 1861 and 1875 he returned to the United States for a season of rest, resuming his mission work after each visit, and continuing it till, weighted with years, he was induced to surrender his work into younger hands.

Johnson, Richard W., soldier, born near Smithland, Livingston County, Ky., Feb. 7, 1827; died in St. Paul, Minn., April 21, 1897. He was graduated at the United States Military Academy, and entered the army as brevet 2d lieutenant in the 6th Infantry in 1849; was promoted 2d lieutenant in the 1st Infantry, June 10, 1850; 1st lieutenant in the 2d Cavalry, March 3, 1855; captain, Dec. 1, 1856; major, 4th Cavalry, July 17, 1862; and was retired with the rank of major general, Oct. 12, 1867; changed to brigadier general by act of Congress, March 3, 1875. In the volunteer service he was commissioned a brigadier general, Oct. 11, 1861; was brevetted major general, March 13, 1865; and was mustered out of the service Jan. 15, 1866. During the civil war he was brevetted lieutenant colonel, Sept. 20, 1863, for gallantry at Chickamauga; colonel, Nov. 24 following, for Chattanooga; and brigadier general and major general, United States army, and major general, United States volunteers, March 13, 1865, for the Nashville campaign and for services during the war. He served at Fort Snelling, Minn., and at Forts Duncan, Terrett, Mason, and Belknap, Texas; took part in the engagement with the Comanche Indians at the head waters of the Concho river in the Wichita expedition of 1858 and the successful action against the Indians between Kickapoo and Brady creeks; and accompanied Major Thomas on his expedition to the head waters of the Concho and Colorado rivers in 1860. He took part in Gen. Patterson's Shenandoah campaign, and was engaged in the actions at Falling Waters, Martinsburg, and Bunker Hill. Later he commanded a brigade in Gen. Anderson's army before Louisville, Ky., and with his command, then forming a part of the Army of the Ohio, marched through northern Alabama, Tennessee, and Kentucky. He was defeated by Morgan's cavalry near Gallatin, Tenn., Aug. 28, 1862, and taken prisoner. After being exchanged he was given command of a division, which he led in the battles of Stone River, Liberty Gap, Chickamauga, and Missionary Ridge. In the Georgia campaign he commanded a division of the 14th Corps of the Army of the Cumberland; was severely wounded in the battle of New Hope Church; and, too feeble for active field work, was appointed by Gen. Sherman chief of cavalry of the Military Division of the Mississippi, and ordered to Nashville to equip and forward cavalry. From Nov. 8, 1864, till Oct. 12, 1865, he was in command of a division of cavalry, and was officially commended by Gen. Thomas for his operations at the battle of Nashville. Gen. Johnson was Professor of Military Science in Missouri State University in 1868-'69, and in the University of Minnesota in 1869-'71. He published a "Manual for U. S. Breech-loading Carbine and Navy Revolver," and a "Memoir of Major-Gen. George H. Thomas" (1881).

Jones, Charles W., lawyer, born in Ireland in 1834; died in Detroit, Mich., Oct. 12, 1897. He

came to the United States in 1844; worked as a mechanic in Alabama, Louisiana, and Mississippi till 1854; settled in Pensacola, Fla., and was admitted to the bar in 1857. In 1872 he was a delegate to the National Democratic Convention and an unsuccessful candidate for Congress, in 1874 was elected to the State Legislature, and in 1875 and 1881 was elected to the United States Senate, the first time as a Conservative Democrat, succeeding Abijah Gilbert, Republican. In his best days he was a successful lawyer, a diligent student, and an animated, pleasing speaker; but in the latter part of his life his mind became clouded.

Kenaday, Alexander McConnell, soldier, born in Wheeling, W. Va., in 1824; died in Washington, D. C., March 25, 1897. In early life he worked at the printer's trade and as a steamboat man in St. Louis and New Orleans. While he was in the last city the Mexican War broke out, and, at once enlisting, he was made a sergeant in the 3d United States Dragoons, attached to Gen. Worth's brigade. While Gens. Worth and Pillow were engaged in a conference the Mexican guns set fire to a large wagon loaded with cartridges. Sergeant Kenaday and one of his men jumped into the wagon, and, at the imminent peril of their lives, threw package after package of cartridges, covered with gunny bag that was exceedingly hot to handle without gloves, into a ditch partially filled with water, while another man turned them over in the water with his saber, extinguishing the burning coverings. The prompt unloading of the wagon probably saved the lives of Gens. Worth and Pillow and of many other officers and men. For many years Mr. Kenaday had been engaged in procuring pensions for survivors of the Mexican War.

Keyes, Emerson Willard, educator, born in Jamestown, N. Y., June 30, 1828; died in Brooklyn, N. Y., Oct. 17, 1897. He began teaching in his native county in 1844; was graduated at the Normal School, Albany, in 1848, and, after teaching in several seminaries and academies, removed to New York city in 1856. In 1857 he was appointed deputy superintendent of public instruction of New York, which office he held eight years, during which time he aided in organizing teachers' institutes. He was admitted to the bar in Albany in 1862; appointed deputy superintendent of the banking department of the State in 1865; was acting superintendent in 1865-'66; and resigned to become State bank examiner in 1870. After holding the last-named office for three years, he practiced law in New York city till 1882, and from that year till his death he was chief clerk of the Brooklyn Department of Public Instruction. The chapter on education in the Greater New York charter was prepared from ideas furnished by him. Besides many special reports, treatises, and other papers on educational topics, he published "New York Court of Appeals Reports" (4 vols., Albany, 1867-'69); "History of Savings Banks in the United States" (2 vols., New York, 1876-'78); "New York Code of Public Instruction" (Albany, 1879); and a treatise on "Principles of Civil Government Exemplified in the State of New York."

Kilgore, Constantine Buckley, jurist, born in Nemman, Ga., Feb. 20, 1835; died in Ardmore, Indian Territory, Sept. 23, 1897. He removed with his parents to Texas when eleven years old, and there acquired a common-school education. When Texas adopted the ordinance of secession, to which measure he was strongly opposed, he enlisted in the 10th Texas Regiment as a private. He rose to the rank of captain in 1861; was appointed adjutant general of Ector's brigade, Army of Tennessee, in 1862; was wounded in the battle of Chickamauga in 1863; and was captured and confined as a pris-

oner in Fort Delaware during 1864. After the war he was admitted to the bar, and began practice at Wills Point, Texas. In 1875 he was a member of the State Constitutional Convention, and in 1880 was a presidential elector on the Democratic ticket. He was elected a State Senator in 1884, and president of the Senate for two years in 1885, and a Representative in Congress in 1886, 1888, 1890, and 1892. In March, 1895, he was appointed United States district judge for the Southern District of Indian Territory, which office he held at the time of his death.

Kimball, Alonzo S., educator, born in Center Harbor, N. H., in 1843; died in Worcester, Mass., Dec. 2, 1897. He was graduated at Amherst College in 1866; established the departments of physics and electrical engineering at Worcester Polytechnic Institute, and since 1872 had been Professor of Physics there. For several years he was also a lecturer at Mount Holyoke College. Prof. Kimball was a frequent contributor to scientific publications and the "Transactions" of technical societies.

King, Horatio, lawyer, born in Paris, Me., June 21, 1811; died in Washington, D. C., May 20, 1897. He received a common-school education, and in 1829 was apprenticed to the printer's trade in the office of the "Jeffersonian," of his native place. Within two years he bought the paper, and in 1833 removed it to Portland, where he published it for five years. In 1839 he was appointed a clerk in the Post Office Department in Washington, where he remained more than twenty years. In 1850 he originated and had charge of important changes in the foreign mail service; in 1854 became First Assistant Postmaster General; in January, 1861, was made acting Postmaster General; and in February became Postmaster General. He held this office nearly a month, when President Lincoln appointed a successor. During his tenure of office he devised the official-penalty envelope. In 1862 he was appointed a member of the commission to carry out the provisions of the Emancipation Proclamation in the District of Columbia, and after retiring from that office he engaged in law practice in Washington. Throughout the civil war he was a steadfast Union Democrat, and afterward he was for many years Secretary of the Washington Monument Association. In 1896 he received the degree of LL. D. from Dickinson College. He published "An Oration before the Union Literary Society of Washington" (1841); "Turning on the Light," a review of President Buchanan's administration; and "Sketches of Travel; or, Twelve Months in Europe" (1878).

Lambert, Thomas Scott, physician, born near Boston, Mass., May 22, 1810; died in Stamford, Conn., March 21, 1897. He was educated at Williams College; took his degree in medicine at Castleton, Vt.; and became a specialist in anatomy and physiology. The greater part of his life was spent in lecturing on his specialties and on educational topics. About 1852 he published "Lambert's Anatomy," which was a text-book for many years.

Lane, George Martin, educator, born in Charlestown, Mass., Dec. 24, 1823; died in Cambridge, Mass., June 30, 1897. He was graduated at Harvard in 1846, taught there a year, and spent four years at the Universities of Berlin and Göttingen. In 1851 he was appointed Professor of Latin at Harvard, and in 1869 was elected Pope professor. He resigned this chair in 1894, and was elected professor emeritus and given the degree of LL. D. The introduction of the Latin system of pronunciation, now almost universal in the colleges and preparatory schools of the United States, was due in a large measure to his efforts. Dr. Lane co-operated in the preparation of Harper's "Latin Lexicons."

For many years he had been engaged in the preparation of a Latin grammar, but his extreme solicitude for accuracy caused so much re-casting of the work that he did not live to see it published. He was the author of the once widely popular college song "The Lone Fishball."

Langford, William Speaight, clergyman, born in Fall River, Mass., April 17, 1840; died at Haines Falls, N. Y., July 2, 1897. He entered Kenyon College, Gambier, Ohio, took the collegiate and theological courses, and was ordained priest in the Protestant Episcopal Church in 1868. In 1875-'85 he was elected the first general secretary of the Domestic and Foreign Missionary Society of the Protestant Episcopal Church, and held the office till his death.

Langston, John Mercer, lawyer, born in slavery in Louisa County, Va., Dec. 14, 1829; died in Washington, D. C., Nov. 15, 1897. He was the youngest of three sons of Ralph Quarles by a negro slave, and when he was five years old his father died, after providing in his will for the freedom of the boys and the education of the youngest. John accompanied W. D. Gooch, a friend of the father's, when he removed to Chillicothe, Ohio, and lived in the family for five years. Then Mr. Gooch determined to settle in Missouri. John agreed to go with the family, but on the way Mr. Gooch was arrested on a charge of attempting to kidnap the boy and take him into a slaveholding State, and the court decided that Mr. Gooch could not take the boy beyond the jurisdiction of the court which had appointed him John's guardian. John was then placed at school in Cincinnati, where he was fitted for Oberlin College. He was graduated at the collegiate department in 1849, and at the theological department in 1852; studied law privately in Elyria, as he was unable to gain admission to any regular law school, and was admitted to the bar in 1855. For fifteen years he practiced in the courts of Ohio with success. In 1868-'70 he was inspector general of the Freedmen's Bureau; in 1869-'76 was dean of the law department of Howard University; in 1871 was appointed to the Board of Health of the District of Columbia, and was its attorney for seven years; and in 1877-'85 was minister resident and consul general to Hayti and *chargé d'affaires* in Santo Domingo. On his return he was elected President of the Virginia Normal and Collegiate Institute, where he remained three years, when he was elected to Congress as a Republican from the 4th Virginia District. His seat was contested, but was awarded to him in September, 1890. During the two last years of his service at Howard University he was vice-president and acting president of the institution. He received the degree of LL. D. from Howard University.

Lansil, Wilbor Henry, artist, born in Bangor, Me., Feb. 24, 1835; died in Dorchester, Mass., June 26, 1897. He was a younger brother of Walter F. Lansil, the Venetian painter, was educated in the Bangor public schools, and removed to Boston in 1872. After twelve years of mercantile service he went abroad with his brother to study painting. He applied himself wholly to animal work, particularly cattle. On his return he established his home and studies in Dorchester, where he kept a fine herd of cattle for continuous study. His most noteworthy paintings include "Repose near the Sea," "Sundown on the Coast," "The Hillside Pasture," "Stable Interior," "On the Seacoast," "The Return at Sundown," "The Return of the Herd," and "Banks of the Neponset."

Laurie, Thomas, clergyman, born in Edinburgh, Scotland, May 19, 1821; died in Providence, R. I., Oct. 10, 1897. He came to the United States with

his parents in 1830, and was graduated at Illinois College in 1838, and at Andover Theological Seminary in 1841. He went as missionary to the Nestorians in Kurdistan, but joined the Syrian mission in 1844, returning home in 1846. From 1848 to 1851 he was pastor of a church in South Hadley, Mass., and he was pastor at West Roxbury in 1851-'67. In 1860 he became the first pastor of the Pilgrim Church in Providence, and he was pastor thereafter at the time of his death. His published works include "Dr. Grant and the Mountain Nestorians" (Boston, 1855); "Woman and her Saviour in Persia" (1863); "Glimpses of Christ" (1866); "The Holy Volume; or, The Contributions of Foreign Missions to Science" (1883); and "Assyrian Echoes of the Word" (1894).

Lea, Matthew Carey, chemist, born in Philadelphia, Pa., Aug. 18, 1823; died there, March 15, 1897. He was the eldest son of Isaac Lea, famous as a geologist and mineralogist. On account of chronic illness he was educated at home, and later studied law and was admitted to the bar, but never practiced. Entering the private laboratory of James C. Booth, he acquired great proficiency in chemistry, and during the remainder of his life his leisure was devoted to chemical investigations. His name is best known in connection with problems in photographic chemistry, and the younger Silliman, in his compilation of "American Contributions to Chemistry," credited him in 1875 with the titles of more than fifty papers, most of which were published in the "American Journal of Science." Mr. Lea was particularly fortunate with his researches on the action of light and other forms of energy on silver salts. He described the photo-bromide and the photo-iodide of silver, and in 1887 published a paper on the "Identity of the Photo-salts of Silver with the Material of the Latent Photographic Image." His most remarkable discovery, made in 1889, was that silver is capable of existing in three allotropic states. Mr. Lea was elected to the National Academy of Sciences in 1892. He was the author of a "Manual of Photography" (Philadelphia, 1868; 2d ed., 1871), which is a standard authority.

Lee, Samuel Phillips, naval officer, born in Fairfax County, Va., Feb. 13, 1812; died near Washington, D. C., June 5, 1897. He was a grandson of Richard Henry Lee; was appointed a midshipman in the navy, Nov. 22, 1825; promoted passed midshipman, June 4, 1831; lieutenant, Feb. 9, 1837; commander, Sept. 14, 1855; captain, July 16, 1862; commodore, July 25, 1866; and rear admiral, April 22, 1870; and was retired Feb. 13, 1873. During his active service he was on sea duty for twenty-one years and three months, and on shore or other duty ten years and four months. In the early part of his career he filled several appointments to coast-survey duty. He served in the Mexican War, and in November, 1860, was assigned to command the sloop of war "Vandalia" on the East Indies station. On reaching the Cape of Good Hope he learned of the outbreak of the civil war, and, risking the penalty of acting against orders, he immediately returned with his ship. He maintained an effective blockade of the harbor of Charleston till Jan. 20, 1862, when he was ordered to join the expedition against New Orleans, and commanded the sloop of war "Onesida." When Farragut began moving his vessels Lee was in command of the advance division below Forts Jackson and St. Philip. After the passage of the forts the vessel was one of the first three that encountered the Confederate fleet, and she saved the "Varuna" by driving off two rams. The vessel also took part in the capture of the Chalmette batteries below New Orleans, became the advance guard above the city, led the advance division below Vicksburg, and was the second in line in both passages of the bat-

teries there. For these services Capt. Lee was appointed an acting rear admiral, Sept. 2, 1862, and ordered to the command of the North Atlantic blockading squadron. He retained this command two years, taking part in 91 actions and expeditions, and capturing or destroying 54 blockade-running steamers. On Oct. 21, 1864, he was ordered to command the Mississippi squadron, and for his skill in supporting the army under Gen. Thomas he received a vote of thanks from Congress. He was detached from this command Aug. 14, 1865; was on examining-board duty till 1869; and commanded the North Atlantic squadron in 1870-'72.

Lindsley, John Berrien, physician, born in Princeton, N. J., Oct. 24, 1822; died in Nashville, Tenn., Dec. 7, 1897. He was a son of the Rev. Philip Lindsley, Chancellor of the University of Nashville, and was graduated at that institution in 1839 and attended the medical departments of the Universities of Louisville and Pennsylvania, being graduated at the latter in 1843. He then studied theology, and was ordained by the Presbytery of Nashville in 1846. For a time he was stated supply to the Smyrna and Hermitage churches, and later, for a year, preached to slaves in the Nashville district. From 1838 to 1850 he was pupil of Gerald Troost, and in 1850 succeeded his teacher as Professor of Chemistry in the University of Nashville. He was also chancellor of the university from 1853 to 1873, retaining his chair in Chemistry until 1870. The stone edifice that constitutes the main portion of the university owes its erection largely to his energy, and he himself gave over \$10,000 for its construction. He was instrumental in organizing the medical department of the university in 1850, and was its first dean. His salary for twenty-three years he gave to his assistants in the university or employed in the support of the "Nashville Journal of Medicine and Surgery," which he edited. He organized Montgomery Bell Academy in 1867 in accordance with the designs of the founder, and brought it to a high state of efficiency. In 1870 he resigned his active connection with the academy and participated in the founding of the Tennessee College of Pharmacy, in which he was Professor of *Materia Medica* from 1876 until his death. He was called to the chair of Chemistry and State Medicine in the medical department of the University of Tennessee in 1880, and held this place also until his death. He was a member of the Nashville Board of Education in 1856-'60, superintendent of city schools in 1860, and secretary of the State Board of Education from its inception in 1875. Dr. Lindsley was also health officer of Nashville in 1876-'80. From 1877 till his death he was secretary and executive officer of the State Board of Health. The degree of D. D. was conferred on him by Princeton in 1856. He wrote papers on prison reform and African colonization, which were reprinted and widely circulated. He edited the "Medical Annals of Tennessee" (Nashville, 1886) and the "Encyclopedia of Tennessee History."

Linton, William James, artist and author, born in London, England, in 1812; died in New Haven, Conn., Dec. 29, 1887. It is chiefly on his work as an engraver that Linton's fame depends; as a painter he never achieved a wide reputation. In 1828 he became the apprentice of G. W. Bonner, an English engraver, who in his time enjoyed a high reputation. In 1842 he became the partner of Orrin Smith, and shortly afterward he began to produce the illustrations to the "History of Wood Engraving" ("Illustrated London News," 1846-'47), perhaps the earliest of his works that attracted the attention of the public, though in 1833 he had published his "Pictorial Illustrations of the Bible." Linton was always a zealous Chartist, and early in his career became

associated with the chief political refugees of his day. It was he who helped Mazzini in drawing the attention of the House of Commons to the opening of exiled politicians' letters by Sir James Graham in 1844, and it was he who four years later carried to the French Provisional Government the first congratulatory address from British workmen. In 1851 he became the editor of the "Leader," a republican print that was written almost entirely by himself, and attracted much attention at the time, though to his extreme regret the British Government refused to pay any attention even to the most violent articles that appeared in it. He had the most advanced republican ideas, and sacrificed much in the visionary attempt to establish an European commonwealth. When he came to this country in 1867, it was not because he hoped to find here the ideal form of government that seemed to him not impossible. A republican government, in his opinion, should be a model of law and order, ours he described as an anarchical democracy. Before he came to this country he was for some years editor and manager of "Pen and Pencil," and a regular contributor of verse to the "Nation," the "Spectator," and the "Westminster Review." He also published and illustrated books. For some years after his arrival here he lived in New York, and ultimately he took up his abode in New Haven, Conn., where he spent the remainder of his life. Here he opened a large engraving establishment and printing house, the Avondale Press, whence many works of great beauty were issued. Here he printed the memorable folio, "The Masters of Wood Engraving" (1889), which has justly been described by Mr. Walter Crane, his distinguished pupil, as "in every way complete as a history, learned in technique, and sumptuous as a book." The first edition of this, one of his most important works, was not issued for profit, but merely as a work of love. No more than three copies were printed. Many others, now of almost equal rarity, were issued from the same press, such as "Love Lore," and "In Dispraise of Woman," each of which was limited to fifty copies, and the volume entitled "European Republicans: Recollections of Mazzini and his Friends," the work that Linton hoped above all others to be remembered by. But, however ably Linton argued the cause of the republicans, however interesting his reminiscences of them were, it is neither by this work nor by any other in which he appeared as their advocate that he is now remembered, but rather as one of the last and most distinguished of the old school of engravers. He was a follower of Bewick and the early English woodcutters, and had very little in common with our present day practitioners of the art. He began to work long before the introduction of photography, which has not only gone far toward depriving the wood engraver of the means of gaining a livelihood, but has vastly changed the method of such as still practice the craft. Wood engraving as practiced by Linton and his predecessors was indeed a distinct art, in which the engraver had a better chance of preserving his individuality and independence than he has to-day, when he is expected more servilely to follow the artist whose work it is his business to reproduce. Since the introduction of photography as a medium of reproduction, the engraver has become more and more subordinated to the draughtsman: Linton, on the other hand, and the engravers of his school were craftsmen who worked hand in hand with the artist. It was not the sole effort of these men to reproduce as faithfully as possible a chalk, pencil, pen, or wash drawing; the artist invariably drew direct upon the wood, and artist and craftsman combined, each making allowance for the limitation of the

other, in the production of a work of art. Linton's work was the logical development of Bewick's; our typically modern work, say Mr. Cole's, is in no sense a development of Linton's. Whether it be better or worse is a matter of individual opinion. It is something entirely different; therefore a comparison between Mr. Linton's work and what he called the "American new development" is manifestly impossible. Suffice it that Linton was the most distinguished exponent in his time of the older traditions. The objection generally raised to such work as his is that two temperaments are constantly at variance in the production of it: that of the draughtsman and that of the craftsman. A long and heated controversy arose a few years ago during Linton's residence here as to the merits of the two styles. His opponents declared that such work as his had too little of the artist's intention in it and too much of the engraver's. Linton, on the other side, as champion of the companionship of the "arts and crafts," denounced the modern men for their want of art, and because they cared so little for line and values. Clever and effective he acknowledged their work to be—almost as good, in short, as photography. Linton was a great representative of an art that is now dead, or at least dormant. His work—even if it did, as some think, possess too much of his own individuality and too little of the artist's—was always artistic and simple; it invariably showed a fine feeling for line, and was technically excellent in the highest degree. In 1858 Linton married Miss Eliza Lynn, who, as Mrs. Lynn Linton, has published many books that have been favorably received both in Europe and in this country. As an engraver, poet, and scholar, Linton achieved a fine reputation, and there is no doubt that he was one of the most remarkable men of his time. He received the master's degree at Yale, and was a member of the Society of American Painters in Water Colors and an Associate of the National Academy of Design. It is impossible to give here a complete list of his works. The titles of a few of the more important ones follow: "Claribel and Other Poems" (1865); "The Flower and the Star" (1878); "Some Practical Hints on Wood Engraving" (1879); "A History of Wood Engraving in America" (1882); "A Manual of Wood Engraving" (1884); "A Manual of Wood Engraving" (1887); "Poems and Translations" (1889); "Masters of Wood Engraving" (1889); "Life of Whittier" (1893); and his reminiscences in 1895. He edited "Rare Poems of the Sixteenth and Seventeenth Centuries" in 1882, and, in company with Richard H. Stoddard, "English Verse" in 1883. Some of his best illustrations were those to the "History of Wood Engraving" in the "Illustrated London News" (1846-47), to the "Works of Deceased British Painters," published by the London Art Union (1860), to Dr. Holland's "Kathrina" (1869), to William Cullen Bryant's "Flood of Years" (1879), and to "Thanatopsis" (1878).

Love, John James Hervey, physician, born in Harmony, Warren County, N. J., April 3, 1833; died in Montclair, N. J., July 30, 1897. He was graduated at Lafayette College and at the medical department of the University of the City of New York. From 1857 till 1862 he was superintendent of public schools of Bloomfield, N. J. In August, 1862, he was commissioned surgeon of the 13th New Jersey Volunteers; on March 23, 1863, he was assigned to duty as surgeon in chief of the 3d brigade, 1st division, 12th Army Corps, Army of the Potomac; on Aug. 1 following he was promoted to the grade of surgeon in chief of the 1st division of the corps; and on Jan. 28, 1864, he resigned his commission and returned to Bloomfield. When Montclair was set apart from Bloomfield Dr. Love under-

took a reorganization of the public schools, and much of their high character is due to his efforts. He was instrumental in founding the Mountside Hospital, of which he was president until his death, and was an organizer and trustee of the Presbyterian Church. Dr. Love was President of the Essex District Medical Society in 1875, and of the Orange Mountain Medical Society in 1886.

Lowell, John, jurist, born in Boston, Mass., Oct. 18, 1824; died in Brookline, Mass., May 14, 1897. He was graduated at Harvard College in 1843, and was admitted to the bar in 1849. He practiced in Boston until 1865, when President Lincoln appointed him United States district judge for the District of Massachusetts. On Dec. 18, 1878, he was promoted by President Hayes to the bench of the United States circuit court, where he remained till 1884. He published a treatise on bankruptcy.

Lunt, Orrington, philanthropist, born in Bowdoinham, Me., in 1815; died in Evanston, Ill., April 5, 1897. He removed to Chicago in 1840. In the civil war he prepared the first regiment to start from Chicago for Cairo, and subsequently raised a large amount of supplies for the soldiers. In association with John Evans (see obituary in this volume) and others, he was a founder of the present city of Evanston, Ill., of the Northwestern University, and of its theological department, the Garrett Biblical Institute. He had been a member of the Executive Committee of the university since its incorporation, and first vice-president of its trustees since 1875. He gave the institution \$200,000.

Lusk, William Thompson, physician, born in Norwich, Conn., May 23, 1828; died in New York city, June 12, 1897. He entered the class of 1859 of Yale College, but withdrew before graduation; studied medicine in Heidelberg and Berlin; and served in the National army, rising from the ranks to the grade of assistant adjutant general in 1861-'63. In 1864 he was graduated at the Bellevue Hospital Medical College, and then continued his studies in Edinburgh, Paris, Prague, and Vienna, settling in New York to practice in 1865. He was Professor of Physiology in the Long Island Hospital College in 1868-'71; lectured on the same branch in Harvard Medical School in 1870-'71; and was Professor of Obstetrics and Diseases of Women and Children and of Clinical Midwifery in Bellevue Hospital Medical College from 1871, and president of the college from 1890. In 1871 he was editor of the "New York Medical Journal." He received the degrees of A. M. and LL. D. from Yale College. Of his numerous publications, "The Science and Art of Midwifery" (New York, 1881; enlarged ed., 1885) has been translated into several European languages.

Lyman, Theodore, naturalist, born in Waltham, Mass., Aug. 23, 1833; died in Nahant, Mass., Sept. 10, 1897. He was graduated at Harvard in 1855, and at Lawrence Scientific School in 1858, after which he pursued scientific studies abroad. On his return he was appointed a volunteer aid-de-camp on the staff of Gen. George G. Meade with the rank of lieutenant colonel, Sept. 2, 1863, in which capacity he continued until April 20, 1865. In 1865 Col. Lyman was appointed the first Fish Commissioner of Massachusetts, a place which he held until 1882, during which time he made successful experiments in the cultivation and preservation of food fishes. In 1883 he was elected to Congress as an Independent, on the issue of reform in the civil service. He was active in the interests of Harvard, and was an overseer of the university in 1868-'80, and again in 1880-'87. He was also interested in the administration of charities, serving as President of the Boston Farm School and as a trustee of the National

Peabody Education fund. For a time he was a trustee of the Peabody Museum of Archaeology, and later was its president. His scientific work was largely on the radiated animals, and was accomplished in the Museum of Comparative Zoölogy in Cambridge, where in 1860 he was made an assistant in zoölogy. His principal publications were: "Illustrated Catalogue of the Ophiuride and Astrophytida in the Museum of Comparative Zoölogy" (Cambridge, 1865); "Supplement" (1871); "Report on Ophiuride and Astrophytida dredged by L. F. de Pourtales" (1869); "Old and New Ophiuride and Astrophytida of the Hassler Expedition" (1875); "Dredging Operations of the United States Steamer 'Blake': Ophiurians" (1875); "Prodrome of the Ophiuride and Astrophytida of the 'Challenger' Expedition" (Part I, 1878; Part II, 1879); and "Report on the Ophiuride dredged by H. M. S. 'Challenger' during the years 1873-'76" (London, 1882). He also published "Papers relating to the Garrison Mob" (1870). For several years he was a paralytic. By his will \$10,000 was bequeathed to Harvard, and a collection of scientific books to the Museum of Comparative Zoölogy in Cambridge.

McDonald, Alexander, journalist, born in Lynchburg, Va., about 1827; died there, Dec. 14, 1897. He was editor of "The Lynchburg Virginian" from 1850 till 1893, was elected to the Virginia Senate in 1891, and was appointed United States minister to Persia in 1893. He had previously served as a commissioner to the Vienna and Paris expositions.

McGiffin, Philo Norton, naval officer, born in Pennsylvania in 1863; died in New York city, Feb. 11, 1897. He was graduated at the United States Naval Academy in 1882 and sent to the China station. He became greatly interested in the country, and at the outbreak of the war between France and China he resigned from the navy and, with the permission of the United States Government, entered the service of China. During this war he captured the only vessel the French lost, at Yantse. After the war he went to England to superintend the building of several gunboats for the Chinese navy, one of which, the "Chen-Yuen," became the flagship of the fleet in the battle of the Yalu river, in the war between China and Japan, on Sept. 17, 1894. Capt. McGiffin was second in command of this vessel, and on the death of his superior officer became commander of the fleet. His vessel was struck over 400 times by Japanese missiles, and narrowly escaped destruction. During the fight one of the "Chen-Yuen's" heaviest guns was prematurely discharged, and Capt. McGiffin and many of the crew were injured by the shock. In the fight Capt. McGiffin received so many wounds that he partly lost both his sight and hearing. He refused to commit suicide after the battle, as is the Chinese custom with defeated officers, and was obliged to leave the country. His mind became affected as a result of his injuries, and shortly after his arrival in New York city it was found necessary to send him to the Post-Graduate Hospital. He succeeded in eluding the vigilance of his attendants and shot himself with a revolver which he had smuggled in among writing materials.

McGowan, Samuel, jurist, born in Laurens County, S. C., in 1819; died in Abbeville, S. C., Aug. 9, 1897. He served through the Mexican War, entering the American army as a private and receiving promotion to the rank of captain. After the war he was admitted to the bar, practiced at Abbeville, and became active in politics. He served twelve years in the lower house of the Legislature. Upon the secession of the State he was appointed brigadier general in the Confederate army. He took part in the capture of Fort Sumter by Gen.

Beauregard, and in the battles of Cold Harbor, the second Manassas, Chancellorsville, and Spottsylvania Courthouse. In 1865 he was a member of the South Carolina Reconstruction Convention, and was elected to Congress, but admission was denied to him as to other Southern representatives. When the Democrats secured control of the State government in 1879, Gen. McGowan was elected justice of the Supreme Court, and he held this office till December, 1893.

McIlvaine, Joshua Hall, educator, born in Lewis, Del., March 4, 1815; died in Princeton, N. J., Jan. 30, 1897. He was graduated at Princeton College in 1837, and at the Theological Seminary in 1840; was pastor of Presbyterian churches in Little Falls, Utica, and Rochester, N. Y., till 1860; and was Professor of Belles-lettres at Princeton in 1860-'70. He resigned his chair to take a pastorate in Newark, N. J., where he remained four years. He founded Evelyn College for young women at Princeton in 1887, and was its president till his death. In 1859 he delivered a course of six lectures before the Smithsonian Institution on "Comparative Philology in Relation to Ethnology," and in 1869 a course on "Social Science" before the University of Pennsylvania. His more prominent publications embrace "The Tree of Knowledge of Good and Evil" (1854); "Elocution: The Sources and Elements of Power" (1870); "The Wisdom of Holy Scriptures, with Reference to Skeptical Objections" (1883); and "The Wisdom of the Apocalypse" (1886). He received the degree of D. D. from the University of Rochester in 1854.

McKinley, Nancy Allison, mother of President McKinley, born near the present city of Lisbon, Ohio, April 21, 1809; died in Canton, Ohio, Dec. 12, 1897. In 1829 she married William McKinley, a young iron manufacturer, who died in 1892. Nine children were born of this marriage, of whom four survive.

McLaws, Lafayette, soldier, born in Augusta, Ga., Jan. 15, 1821; died in Savannah, Ga., July 24, 1897. He was graduated at the United States Military Academy and commissioned brevet 2d lieutenant in the 6th Infantry in 1842; served in the Indian Territory and in Mexico till after the capture of Vera Cruz; was promoted captain Aug. 24, 1851; took part in the Utah expedition in 1858, and the Navajo Indian campaign in 1859-'60; and resigned his commission March 23, 1861. Upon the secession of his native State he was commissioned brigadier general in the Confederate army. His services in an action near Lee's Mill, in the battle of Williamsburg, and in the retreat of the army to Richmond attracted the attention of Gen. Johnston, on whose recommendation he was promoted to major general, May 23, 1862. He was placed in command of a division comprising Kershaw's and Semmes's brigades, with which he engaged in the battles of Savage's Station and Malvern Hill. At the beginning of the Antietam campaign he was placed in command of a corps, with orders to capture Maryland Heights. He constructed a road for his cannon up the side of the mountain overlooking Harper's Ferry, opened fire on that place, and speedily secured its surrender. He rested there a few hours, and then resuming the march reached Sharpsburg in time to repel the attack on the Confederate left and restore the line, which had been

broken by the defeat of the troops under Gen. Jackson and Hood. At Fredericksburg his men were posted along the bank of the Rappahannock, opposite the city, and on Marye's Hill. In the second day's fight at Gettysburg his division was attached to Gen. Longstreet's corps, which drove back Gen. Sickles's corps. At the siege of Knoxville he was ordered by Gen. Longstreet to assault Fort Saunders. He protested against the movement on the ground that it involved too serious risks with no compensatory probabilities of success. On a repetition of orders he made the attempt, and was soon convinced of the correctness of his judgment, and ordered a retreat. For this act he was summoned before a court-martial, by which his conduct was justified. During Gen. Sherman's march to the sea Gen. McLaws commanded the military district of Georgia, and had charge of the defenses of Savannah. In March, 1865, he commanded a division in the battles of Averysboro, N. C. (16th), and Bentonville (21st). His command was surrendered with the army under Gen. Joseph E. Johnston. In 1875 he was appointed collector of internal revenue at Savannah, and in 1876 postmaster of that city.

McMillan, Samuel James Renwick, jurist, born in Brownsville, Pa., Feb. 22, 1826; died in St. Paul, Minn., Oct. 3, 1897. He was graduated at Duquesne College, Pittsburg, in 1846; studied law in the office of Edwin M. Stanton, afterward secretary of war; was admitted to the bar in 1849; and settled in Stillwater, Minn., to practice in 1852. In 1856 he removed to St. Paul, where a year later he was elected judge of the 1st Judicial Circuit of Minnesota. He was appointed an associate justice of the Supreme Court of the State in 1864, and held the office till 1874, when he was appointed Chief Justice. In February, 1875, he was elected United States Senator. He was re-elected in 1881. While in the Senate he was chairman of the Committee on Claims and succeeded Roscoe Conkling at the head of the Committee on Commerce, and was also a member of the Committee on the Judiciary. In 1890 he was appointed by the Presbyterian General Assembly one of two representatives of the West on the Committee of Revision of the Confession of Faith.

McPherson, John Roderic, capitalist, born in York, Livingston County, N. Y., May 9, 1833; died in Jersey City, N. J., Oct. 8, 1897. He engaged in farming and stock raising when eighteen years old, and settled in Jersey City in 1858. There he entered the live-stock trade on an extensive scale; invented new devices and methods for the treatment of animal matter; and designed and put into operation a great *abattoir* system. He was a member of the Board of Aldermen of Jersey City in 1864-'70, and its president for three years; established a gas-light company and became its president; was president of several savings banks and a Western stock-yard company; and owned a paper mill near the Delaware Water Gap. In 1871 he was elected to the New Jersey Senate, and in 1877, 1883, and 1889 was elected to the United States Senate. During his last term in the United States Senate he was chairman of the Committees on Naval Affairs and the Potomac River Front, and a member of the Committees on Finance, Immigration, Coast Defenses, and Woman Suffrage (select). In 1884, 1888, and 1892 he was a delegate to the National Democratic Convention. After the death of Daniel Manning, Secretary of the Treasury, President Cleveland urged Senator McPherson to accept the office; but local party reasons led him to decline it.

Mallory, George Scovill, clergyman, born in Watertown, Conn., June 5, 1838; died in New York city, March 2, 1897. He was graduated at Trinity College in 1858, and at Berkeley Divinity School in 1862; was ordained deacon in the Protestant Epis-

copal Church, June 4, 1862; and was Professor of Ancient Languages at Trinity College in 1862-'64 and Brownell Professor of Languages in 1864-'72. In 1872 he was elected a trustee and became Treasurer of Trinity College; in 1874 received the degree of S. T. D. from Hobart College, and in 1891 that of L. L. D. from the University of the South. In 1869 Dr. Mallory became part owner of "The Churchman," a weekly religious journal in New York city, of which he was editor until his death. With his brother he built the Madison Square Theater, 1880.

Maretzek, Max, operatic manager, born in Bruun, Austria, June 28, 1821; died on Staten Island, N. Y., May 14, 1897. He was graduated at the University of Vienna. When eighteen years old he produced in his native town an original opera on "Hamlet," and when twenty-two he had become a successful orchestral conductor. He made a conducting tour of Germany, England, and France; spent some time in Paris arranging ballets for Carlotta Grisi and Lucille Graham; and in 1844 was appointed assistant to Balfe, director of her Majesty's Theater in London. While in London he conducted the negotiations with Meyerbeer, under which Jenny Lind was first permitted to sing in concerts in London. In 1848 he came to New York city and became musical director at the Astor Place Opera House. The following year he began his career as an *impresario*. He opened the new Academy of Music with Grisi and Marie, Oct. 2, 1854; produced for the first time "Semiramide," and, for the first time in the United States, "Il Trovatore," in 1856; and introduced Adelina Patti to the public in 1858. He returned to the Academy of Music in 1864, and remained there till the building was burned in 1866, losing in the fire a great deal of valuable scenery, costumes, and the music of 50 operas. He took charge of the rebuilt Academy in 1867, left it for Pike's (now the Grand) Opera House in 1869; returned to the Academy in 1869; brought out Pauline Lucca in 1872; produced "Sleepy Hollow," an original American opera, in 1878; and then practically retired from the operatic field.

Martin, Homer Dodge, artist, born at Albany, N. Y., Oct. 28, 1836; died in St. Paul, Minn., Feb. 12, 1897. He received his early education in the town of his birth, and at a very early age showed a remarkable taste for art and a talent for drawing. He had little opportunity, however, for scholastic training in painting, and probably little taste for it. Excepting a few weeks' study under William Hart, he may be said to have been practically a self-taught painter. Nevertheless, his progress was far more rapid than that of most men with better opportunities for study, and he had the good fortune to have one of his canvases hung at the annual exhibition of the National Academy of Design, in New York, when he was about twenty years of age. Thenceforward his progress as an artist was rapid. In 1862 he took up his abode in New York city, where he had a studio for many years. Six years later he was elected an associate member of the Academy of Design, and in 1875 a full member. The following year, and again in 1880 and 1881, he traveled in England, and from 1882 to 1886 he lived in France, spending much of his time at Villerville and Honfleur. Long before this his individuality was well established, but his visits to Europe were not without their effect upon his art. In the course of his travels and during his residence on the Continent he worked indefatigably, and, as he was a man of a plastic mind, his art became considerably modified, not alone by what he saw of other men's work, but by the study of Nature under different aspects. Nor did his sojourn in France and his wanderings in England result in any detriment of his individuality. Martin was a

man of very broad vision, and his vision only became broader with travel; and it is generally conceded that his work in England and in Normandy was hardly, if at all, inferior to that which he produced in his own country. Indeed, some of his finest canvases—such as "The Thames at Richmond" and the "Landscape on the Seine," to name only two—were painted abroad. He possessed a remarkably vigorous mind, deep artistic feeling, and acute perception; and his artistic career may be said to have been one of almost uninterrupted progress. It has been said of him that his early work was entirely in keeping with the doctrines and theories of what is commonly known as the Hudson river school, and this is true in a sense. Superficially, there was little to distinguish it from that of his fellows; but even when he was most strongly influenced by the traditions of his time and by his surroundings something of his own personality was evident in his least individual productions. The hardness and almost preraphaelite minuteness of his coworkers was not to his taste. Even in his early works it may be seen that he had a broader manner of seeing things than most painters of his time, and that he sought rather to soften down than to accentuate Nature's crudities. It was not long before he broke away from traditions and achieved a style that was entirely his own. That he was somewhat influenced by certain painters of the Barbizon school, as well as by others, is evident; but it is equally certain that no American painter of his time possessed more individuality than he. While his inferior works are, perhaps, somewhat "painty" in quality, his finest productions are technically excellent, possess a rare poetic feeling, a distinction, and a richness and mellowness of color that are to be found in few landscapes by his contemporaries. His work was always refined and large in conception, and he understood the beauty and charm of atmosphere. Strangely enough, it was a long time before his sterling qualities as a painter gained general recognition. Though he had long been known as one of our most distinguished artists by those who understood his work, the public at large was inclined to consider him a somewhat insignificant painter. It was only shortly before his death that he won the reputation that he had long deserved. During the latter years of his life he produced much less work than in his earlier days—partly because of the general loss of his health, for he suffered for a long time from the cancer that ultimately resulted in his death, and partly because his eyesight failed. Nevertheless, his latest work is quite equal if not somewhat superior to that which he produced in his prime. What place he will hold among his fellow-artists in the estimation of posterity it is impossible to say. Perhaps he can hardly lay claim to a place beside Inness, but certainly he must be ranked among the greatest American landscape painters of his time. He generally loved to interpret Nature in her more somber and pensive aspects; but that he was capable of seeing her in many different moods was made evident when 44 of his canvases were brought together shortly after his death and placed on exhibition at the Century Club, in New York. Martin was hardly less remarkable for his social qualities than for his artistic attributes. He was a man of wide culture, very well read, individual in his opinions and convictions, and gifted with remarkable critical and conversational powers. He was the intimate friend of Mr. Whistler, Albert Moore, and many other of the famous artists as well as literary men. Some of his finest works are in the possession of Messrs. T. B. Clarke, William C. Brownell, G. A. Hearn, G. Thompson, and Montgomery Schuyler.

Of his more famous canvases it will be sufficient to mention here the following: "Landscape on the Seine," presented to the Metropolitan Museum, in New York by a few of his friends; "An Equinoctial Day" (in the possession of Dr. F. N. Otis); "Brook in the Woods" (Dr. Mosher); "In the Adirondacks" (T. B. Clarke); "Morning" (Montgomery Schuyler); "Adirondacks" (Century Club); "Church at Cinqueboef" (W. T. Evans); "Newport Neck" (Lotos Club); "Morning on the Lake"; "Cloudy Day"; "Hemlock Woods"; "The Thames at Richmond"; "Idling"; "The Footpath"; "Evening on the Saranac"; "Sand Dunes on Lake Ontario"; and "White Mountains, from Randolph Hill." Mr. Martin was a member of the Society of American Artists, of the Artists' Fund Society, and of the Century Club.

Mason, Alexander Macomb, soldier, born in Washington, D. C., in 1841; died there, March 17, 1897. In early life he was appointed a midshipman in the United States navy, and in 1857-'58 served on the "Niagara" while that vessel was assisting in laying the Atlantic cable. When Virginia adopted the ordinance of secession he resigned, and entered the Confederate naval service, distinguishing himself especially in the engagement in Hampton Roads. After the war he rendered military service in Chili, China, and Cuba till 1870, when he went to Egypt, with whose Khedive he soon became a favorite. He was selected to reorganize the Egyptian army and navy, made the first survey of Lake Albert Nyanza, was appointed governor of equatorial Africa by Gen. Gordon, and in 1877 was sent to Massowah to keep the peace between the Soudanese and the Abyssinians. In 1878 he served with Gen. Gordon in Khartoum, and in 1884 was appointed by the Khedive Governor of Massowah and High Commissioner of the Soudan. During his service in Egypt he was director general of public lands. He was also sent on important political missions.

Mason, John Sanford, soldier, born in Steubenville, Ohio, Aug. 21, 1824; died in Washington, D. C., Nov. 29, 1897. He was graduated at the United States Military Academy and commissioned 2d lieutenant in the 3d Artillery in 1847, and was immediately ordered to duty in Mexico, where he served to the close of the war. He was promoted 1st lieutenant, Sept. 7, 1850; captain, 11th Infantry, May 14, 1861; major, 17th Infantry, Oct. 14, 1864; lieutenant colonel, 4th Infantry, Dec. 11, 1873; and colonel, 9th Infantry, April 2, 1883; and was retired Aug. 21, 1888. In the volunteer service he was commissioned colonel of the 4th Ohio Infantry Oct. 3, 1861, was promoted brigadier general Nov. 29, 1862, and was mustered out April 30, 1866. In the civil war he was brevetted major in the regular army, Sept. 17, 1862, for gallantry at Antietam; lieutenant colonel, Dec. 13 following, for Fredericksburg; colonel, March 13, 1865, for meritorious services during the war; and brigadier general, same date, for services in the field.

Mayer, Alfred Marshall, physicist, born in Baltimore, Md., Nov. 13, 1836; died in Maplewood, N. J., July 13, 1897. At an early age he exhibited mechanical ingenuity, and he left college to enter the workshop and draughting room of a mechanical engineer. Here he remained two years. Meanwhile he studied by himself the laws of physics and mechanics that were applied in his daily labors. A laboratory course followed, and for two more years he studied chemistry, chiefly the principles and processes of quantitative analysis. In 1856 he was appointed Professor of Physics and Chemistry in the University of Maryland, and in 1859 accepted a similar chair in Westminster College, Fulton, Mo., but he relinquished this place two years later, owing to the insignificance of the equip-

ment. In 1863-'64 he studied physics, mathematics, and physiology in the University of Paris, where he came largely under the influence of Regnault, who confirmed his bias in favor of pure science. He returned to the

United States in 1865, and soon afterward was called to the chair of Physics and Chemistry in Pennsylvania College, Gettysburg, whence in 1867 he passed to Lehigh University, where he remained until 1871, having charge of the department of astronomy, and superintended the erection of the observatory there. Prof. Mayer then accepted the chair of Physics in Stevens

Institute of Technology, Hoboken, N. J., and he continued in charge of that department until his death. Prior to 1871 his publications were for the most part contributed to the "American Journal of Science," and included studies on "The Estimation of the Weight of very Small Portions of Matter" (1857); "Researches in Electro-Magnetism" (1870); and "Observations on the Magnetic Declination in Connection with the Aurora of October 11" (1870). While in charge of Lehigh Observatory he alone erected the instruments and accomplished the tedious task of adjusting them. At this time he made a series of observations of Jupiter, the publication of which was made in England. In 1869 he had charge of the party sent by the "United States Nautical Almanac" office to Burlington, Iowa, to observe the solar eclipse of Aug. 7. He took 41 successful photographs. Four of these were taken during the eighty-three seconds of totality. He published in 1871-'75, in the "American Journal of Science," a series of brilliant investigations under the title of "Researches in Acoustics." These included experiments showing that the translation of a vibrating body causes it to emit waves differing in length from those produced by the same vibrating body when stationary; a method of detecting the phases of vibration in the air surrounding a sounding body, leading to his invention of the tophophone; a mode of measuring the wave lengths and velocities of sound in gases, resulting in the invention of an acoustic pyrometer; the determination of relative intensities of sound; five new methods of sonorous analysis for the decomposition of a compound sound into its elementary tones; the discovery that the fibrils of the antennæ of the male mosquito vibrate sympathetically to notes that have the range of pitch of the sounds given out by the female mosquito; and the determination of the laws of vibration of tuning forks, especially in the direction of the bearing of these laws on the action of the chronoscopes that are used in determining the velocities of projectiles. In 1876-'78 he contributed a series of papers to the "Scientific American Supplement," under the title "On the Minute Measurements of Modern Science." His later papers include "The Effect of Magnetization in changing the Dimensions of Iron and Steel Bars" (1873); "Method of investigating the Composite Nature of the Electric Discharge" (1876); "Experiments with Floating Magnets" (1878); "A New Spherometer" (1886); "On the Coefficiency of Expansion and Diathermancy of Ebonite" (1886); "Measures of Absolute Radiation" (1886); "Cubical Expansion of Solids by Vessels or Hydrometers made of the Material of these Solids" (1890); "Physical Properties of Hard

Robber" (1891); "Soundwaves in Contrast Colors" (1893); "Researches on the Kettles of Hays" (1896); and "Equilibrium of Forces acting on the Friction of Disks and Rings of Metal with Determinations of Surface Tension" (1897). His pronounced great ingenuity and skill in construction and a remarkable degree of delicacy and precision as an experimenter. The degree of Ph.D. was conferred on him by Gettysburg College in 1866, and in 1871 he was elected to the National Academy of Sciences, to whose "Memoirs" he contributed papers. In 1866 he served as one of the associate editors of the "American Journal of Science," and contributed five papers to its pages, but failing eyesight compelled him to relinquish the work. He edited "Sport with Gun and Rod in American Woods and Waters" (New York, 1883), writing the chapters on "The Shotgun" and "The Blowgun." His publications in book form include "Lecture Notes on Physics" (Philadelphia, 1868); "The Earth a Great Magnet" (New Haven, 1872); "Light" (New York, 1877); and "Sound" (1878).

Meade, Richard Worsam, naval officer, born in New York city, Oct. 9, 1837; died in Washington, D. C., May 4, 1897. He was the eldest son of Capt. Richard W. Meade, U. S. N., and a nephew of Gen. George G. Meade. He was appointed a midshipman in the navy Oct. 2, 1850; was promoted passed midshipman, June 20, 1856; master, Jan. 22, 1858; lieutenant, the day following; lieutenant commander, July 16, 1862; commander, Sept. 20, 1868; captain, March 13, 1880; commodore, May 5, 1892; and rear admiral, Sept. 7, 1894; and was retired May 20, 1895. During his active career he was on sea service for eighteen years and three months, and on shore or other duty for nineteen years and one month. From Oct. 29, 1861, till Jan. 3, 1862, Meade was instructor in gunnery on the receiving ship "Ohio" at Boston. In the last half of 1862 he commanded the ironclad "Louisville," and was employed in breaking up guerrilla warfare on the Mississippi river between Memphis and Helena, and in co-operating with the Western armies. During the draft riots in New York city, in July, 1863, he commanded the naval battalion in the lower part of the city, and dispersed several disorderly gatherings. He commanded the steam gunboat "Martlethead," of the South Atlantic blockading squadron from Sept. 12, 1863, to May 3, 1864; was on packet duty on Stono river, S. C.; took part in the battle there, Dec. 25, 1863; and successfully resisted the attempts of the Confederates to sink his vessel, drive the National transports out of the inlet, and turn Gen. Gillmore's left flank. In the last movement the "Martlethead" was struck thirty times in the hull. Subsequently he landed, captured two 8-inch guns, and destroyed the enemy's batteries. For these actions he was officially thanked by Admiral Dahlgren and recommended for promotion. From May 3, 1864, till July 7, 1865, he served in the Western Gulf blockading squadron, and captured or destroyed seven blockade runners. In 1866-'70 he inspected all the principal gun foundries in the country; in the summer of 1870 commanded the schooner yacht "America," and defeated the English yacht "Cambria" in a race in New York harbor; and in 1872 negotiated a commercial treaty in the Samoan Islands, for which he was commended by the Secretary of the Navy. Between March 21, 1871, and April 1, 1873, he passed 431 days under way and actively cruising with the "Narragansett," sailing under canvas about 60,000 miles, visiting nearly every quarter of the Pacific Ocean, surveying harbors and islands, collecting unpaid gratuities, and negotiating treaties. In 1893 he was appointed naval commissioner to the World's Columbian Ex-

position, and in August, 1894, succeeded Admiral Stanton in command of the North Atlantic squadron. An unfortunate disagreement between Admiral Meade and the Navy Department over the manner in which he had been treated officially culminated in May, 1895. In an interview published in the "New York Tribune" Admiral Meade was represented as criticising the administration of President Cleveland and Secretary Herbert, and using the expression, "I am an American and a Union man—two things this administration can't stand." When he was called on by Secretary Herbert to affirm or deny this expression, he returned a noncommittal answer; and as there were rumors that he was to be court-martialed for disrespect to the President, he asked to be retired. The President, in granting the application, rebuked Admiral Meade for his conduct.

Merrick, Edward T., jurist, born in Wilbraham, Mass., July 9, 1809; died in New Orleans, La., Jan. 12, 1897. He was admitted to the bar of Ohio in 1838, and to that of Louisiana in 1839, and began to practice in Clinton, La. In 1854 he was elected judge of the 7th Judicial District of Louisiana, and in 1855 and 1863 Chief Justice for terms of eight years each. Judge Merrick rendered a decision in 1856 which first gave the celebrated *Myra Clark Gaines* case a standing in court. He was opposed to secession and the war. His position with reference to the doctrine of State rights was set forth in a decision rendered in 1863, in which he held that, so long as any part of the State was not in the hands of United States troops, State authority could be maintained. After retiring from the bench Judge Merrick was engaged in private practice with a son till within five years of his death.

Mettam, Charles, architect, born in Dublin, Ireland, in May, 1819; died in Bayonne, N. J., Dec. 5, 1897. He was educated in architectural and civil engineering in his native city, and practiced there and in England till 1848, when he came to New York city. In 1854, when the subject of rapid transit was being discussed, he proposed in the "Scientific American" an elevated structure on posts in the streets similar to the present system. He was a member of the old 12th Regiment of New York Militia, and when in April, 1861, he went to Washington the officials of the War Department persuaded him that he could render more valuable service as a civil engineer. Accordingly, he was assigned to duty, under Gen. Delafield, in constructing the fortifications in New York harbor. Mr. Mettam patented many articles used in the building trade, including the rolling iron shutter. Among the numerous buildings planned and erected by him are the New York Historical Society building, the Eye and Ear Infirmary, the College of Physicians and Surgeons (now Packard's College), and the Brandreth and Gilsey buildings. He also designed the funeral car that bore the remains of President Lincoln in New York.

Miller, Samuel A., lawyer and scientist, born in Cookeville, Ohio, Aug. 28, 1836; died in Cincinnati, Ohio, Dec. 19, 1897. He was educated at the Ohio University and at the Cincinnati Law School; was admitted to the bar in 1860; and, excepting one year, practiced continuously in Cincinnati till his death. In early life he became interested in geology, and later he served on the geological commissions of Ohio, Indiana, Illinois, Missouri, and Wisconsin. He gathered a rare collection of fossils and geological specimens and a large library of scientific works, and was a frequent contributor to scientific periodicals and "Proceedings." Among his numerous publications are the following: "North American Geology and Palaeontology"; "Palaeozoic Fossils"; "Mesozoic Fossils"; and "Cenozoic Fossils."

He received the degree of Ph. D. from Ohio University in 1893.

Moore, Michael, soldier, born in New York city, July 4, 1800; died in Brooklyn, N. Y., Aug. 2, 1897. At the beginning of the War of 1812 Michael and an elder brother walked to Albany and enlisted in the 13th United States Infantry, and soon afterward Michael was detailed as a drummer boy. He took part in the capture of Fort George, Upper Canada, in the battles of Queenstown and Stony Creek, in the attempt to capture Montreal, and in the defense of Sackett's Harbor. After peace was declared he enlisted in the regular army. In 1821 he took part in establishing a military post at Sault Ste. Marie; in 1826 served in the escort of Gov. Cass on his expedition to the head of Lake Superior to negotiate a treaty with the Indians; in 1832 fought in the Black Hawk war; and in 1837-'40 was in the Seminole war in Florida. On the expiration of his term of service he re-enlisted, and from 1841 till 1869 was engaged in recruiting duty, principally at Bedloe's island. In January, 1869, he was commissioned a second lieutenant in the 9th Infantry, and in 1872 he was retired for "disability from old age." He was a charter member of the Military Society of the War of 1812.

Mora, Antonio Maximo, claimant, born in Cuba in 1818; died in New York city, April 24, 1897. He inherited extensive sugar plantations in Cuba not far from Havana, which were the cause of his memorable claim against the Spanish Government and of international negotiations extending over more than twenty-five years. A Cuban revolt broke out Oct. 18, 1868, and continued eight years. One of the measures employed by the Spanish Government to crush the insurgents was the embargo of estates in Cuba, the income from which the Government believed was used to aid the revolt. The owners of some of these estates claimed to be citizens of the United States, and they called on the United States Government to demand a release of the embargoes and compensation for damages. The claim of Mr. Mora was the most notable of these because of its size, the value of the seized property being placed at \$3,000,000. From the great mass of documents that accumulated during the negotiations for a settlement, it appears that Mr. Mora came to New York city and declared his intention of becoming a citizen of the United States in 1853. Under a general embargo decree of April 20, 1869, his property in Cuba was seized, and in 1870 he was sentenced to death for acts alleged to have been done prior to May, 1869. With his brother, José Maria, Antonio escaped to New York, and at once laid his case before Hamilton Fish, then Secretary of State, declaring that he had in nowise engaged in the rebellion nor aided it. Diplomatic correspondence was immediately opened with Spain. Under a decree of Sept. 15, 1873, the Spanish Government released the embargoes against all American property in Cuba except the Mora plantations. It was agreed between the two governments that claims for damages by alleged or *de facto* citizens of the United States should be submitted to an international commission. In the Mora case the arbitrators disagreed on the question of American citizenship, and the umpire, in a decision filed Feb. 22, 1883, dismissed Mora's claim, on the ground that the seizure of his property was made nine days before May 14, 1869, the date of his certificate of naturalization, and that accordingly at the time of the seizure Mora was a subject of Spain. In May, 1883, Secretary Frelinghuysen asked in a diplomatic note for the restoration to Mora of the embargoed estates. The case again dragged till 1886, when the American minister to Spain concluded an arrangement with the Spanish Minister

of Foreign Affairs, that the Colonial Secretary propose to the Cortes that the sum of \$1,500,000 be inserted in the Cuban budget of 1887-'88 to pay Mora for his estates. Mr. Mora accepted this compromise, but the Cortes refused to appropriate the money unless there should be an arrangement between the two governments covering all claims held by either. Protracted correspondence between the two governments ensued, the United States insisting on a prompt settlement and Spain making many promises that were not fulfilled. Under a strong pressure by Secretary Olney and an agreement by Mr. Mora to waive the interest on the claim from 1886, amounting to \$800,000, the Spanish Cabinet decided, on Aug. 13, 1895, to pay the claim in a lump sum in the following month, and accordingly, on Sept. 14, the Spanish minister at Washington delivered to the State Department a draft on the financial agent of the Spanish Government at London for the amount. Mr. Mora had been put to great expense in his contest, and his interest in the amount that was finally paid was \$994,509.

Morais, Sabato, clergyman, born in Leghorn, Italy, April 29, 1824; died in Philadelphia, Pa., Nov. 11, 1897. He was of Portuguese ancestry, and was educated for the ministry in his native city. In 1846 he was called to London as the head instructor of Hebrew in the orphans' school of the Portuguese congregation. In 1851 he came to the United States and was elected minister of the Congregation Mickoe Israel of Philadelphia, the oldest Jewish congregation in Pennsylvania. This office he held till his death. Shortly before he settled in Philadelphia a religious movement, originating in Germany, had gathered considerable strength in the United States. It aimed to cast aside the traditional observances and customs of the Jewish Church, to alter the ritual and to introduce innovations antagonistic to historical Judaism. Dr. Morais united with a few ministers who were endeavoring to counteract this influence soon after his arrival, and till his death he was recognized as the foremost champion of American Hebrew orthodoxy. He was opposed to slavery, and for his influential service in the National cause during the civil war he was elected an honorary member of the Union League Club of Philadelphia. When Maimonides College was opened in Philadelphia, in 1867, he became Professor of Biblical Literature and he occupied that post five years. Subsequently he inaugurated a movement that resulted in the establishment of the Jewish Theological Seminary in New York city, and from its opening, in 1887, till his death he was president of its faculty. He received the degree of LL. D. from the University of Pennsylvania in 1887. Among his writings, none of which he would allow to be issued in book form, are "Specimens of Italian Hebrew Literature," "The Ritual Question," "The Falashas," English translations of the works of Maimonides and Samuel David Luzzatto, articles on great Hebrew scholars of different ages, lectures on "Post-Biblical History" and on the "Bible, Talmud, and the Jewish Religion," and numerous biographical studies.

Morfit, Campbell, chemist, born in Hereulaneum, Mo., Nov. 19, 1820; died in London, England, Dec. 8, 1897. He became a student in Columbian University, but before completing the course began studying chemistry with James C. Booth in Philadelphia. Afterward he was employed in a manufactory of commercial chemicals, of which he became proprietor. He organized the chemical department of the Maryland Institute; was Professor of Applied Chemistry in the University of Maryland in 1854-'58; and practiced his profession in New York city in 1858-'61. In the last year he re-

moved to London, England, where he resided till his death. He received the honorary degree of M. D. from the University of Maryland. After settling in London he gave much attention to the improvement of technical processes, and became widely known by his preparation of condensed food rations. His publications include "Chemistry as applied to the Manufacture of Soaps and Candles" (Philadelphia, 1847); "Chemical and Pharmaceutical Manipulations" (1848); "The Arts of Tanning and Currying" (1852); "Perfumery: Its Use and Manufacture" (1853); "Oleic Soaps" (London, 1871); and "Pure Fertilizers and Phosphates" (1873). In collaboration with Dr. James C. Booth he published "Progress of Chemical Arts" and edited the "Encyclopaedia of Chemistry" (both 1851) and prepared a report to the United States Ordnance Department on "Gun Metal" (1853).

Morse, Henry Woolson, composer, born in Charlestown, Mass., in 1858; died in New York city, May 3, 1897. He was graduated at the Massachusetts Institute of Technology; studied painting in Paris, and executed creditable pieces in landscape and animal life; and, removing to New York city, applied himself wholly to composition of light operas. His first composition, "Cinderella at School," was produced at Daly's Theater in 1882, and had a run of more than one hundred nights. "King Cole II" was brought out in Philadelphia in 1889; "The Merry Monarch," in New York city in 1890; "Wang," in New York in 1891; and "Lost, Strayed, or Stolen," his last work, in New York in 1897. Other works of which the music was either composed or revised by him are "The Lion Tamer," "The Rainmaker of Syria," "Prince Ananias," "The Devil's Deputy," "Panjandrum," and "Dr. Syntax."

Mundy, Johnson Marchant, sculptor, born near New Brunswick, N. J., May 13, 1832; died in Tarrytown, N. Y., Aug. 16, 1897. He was the youngest child of Frederick Mundy and Mary Marchant, and was of German and English descent. Part of his childhood and early youth was spent in Geneva, N. Y. Although living where the atmosphere of art was unknown, he early developed an aptitude for copying forms of nature with whatever materials were at hand. He decorated his school-books with original illustrations and molded bits of clay into attractive forms. At twelve years of age he was instructed in the use of crayons, and began to work with serious enthusiasm at sketching and at portraiture. He visited New York with the hope of making there a permanent home where he could pursue his studies and perfect himself in his favorite art. Almost by accident he was led into a marble yard which at that time occupied the corner of Broadway and 28th Street. He with difficulty persuaded the proprietor to engage his services, but when fairly at work showed himself to be a true artist in both design and execution. This was his first experience in chiseling, and was the realization of a long-cherished dream. After familiarizing himself with the technical details of marble cutting he began to chafe under the restrictions of his employer's limited orders. In the spring of 1854 he entered the studio of the sculptor Henry K. Brown, who at that time was engaged upon the model of his equestrian statue of Washington, which was later placed at the southeast angle of Union Square, New York. The sculptor, apprehending young Mundy's talent, took pains to instruct him in the manipulation of clay. Mundy retained his place during the ensuing seven years, familiarizing himself with the various processes peculiar to clay, plaster, marble, and bronze, and supporting himself the while by crayon portraiture. The first order for a work in marble was received in 1858, when

the Geneva Chapter of the Alpha Delta Phi engaged him to model a portrait bust of President Benjamin Hale, which he began in the autumn of 1860. His connection with H. K. Brown was severed, and in 1863 he took up his residence in Rochester, N. Y. Here he established the first school in that city for instruction in drawing and in modeling from the antique and from life. During the twenty years of his residence in Rochester he modeled and executed in marble a large number of busts, among the most notable of which are those of Bishop William H. De Lancey, President Martin B. Anderson, Dr. Chester Dewey, Frederick Douglass, and Dr. W. W. Ely. His hand was also employed at intervals on statuettes and medallions, which showed his imaginative quality. But he was handicapped in all his labor by imperfect eyesight. At an early age he developed a serious malady, one of the symptoms of which was night blindness. Although he rested and took long sea voyages, his blindness gradually increased until in 1883 the left eye was entirely useless, and cataract developed to dim the little remaining sight of the right eye. He had lost none of the vigor of youth, and his ambition was as stimulative as ever. He took up his residence in the home of his sister in Tarrytown, and there executed his most important works under the disadvantage of almost total blindness. To model a statue of heroic size had long been his desire, and learning that the Grand Army Veterans of Tarrytown had been making futile efforts to obtain funds for a bronze statue to be placed upon the soldiers' monument in Sleepy Hollow, he offered his services free for this great work. He completed the work in two years of arduous application. The statue was exhibited, cast in bronze, and finally unveiled on Decoration Day, 1890. The figure represents a vidette in the volunteer service of the National army, and has been called the most spirited and graceful military figure in this country. The crowning effort of his life was his heroic statue of Washington Irving. As preparation for modeling this great work, he sought to become familiar with the great writer's mind and character through communion with those who knew him in life. He had long conversations with his relatives and personal friends, and became thoroughly imbued with the spirit of the man whose likeness he was to model. With the aid of magnifying glasses, he was able to see some of the best portraits of Irving. For four months he worked entirely upon the head, and after that was perfected he worked on the various parts, until the figure was complete. This task consumed eighteen months. The statue represents the author sitting in an armchair in his habitual easy manner while in conversation, one hand holding his eyeglasses, with the other left free for gesticulation or for the friendly hand clasp which he so readily extended. Mundy was obliged to model the statue in parts, and put it together without the usual aid of a small model from which to copy the parts. Small models of this kind are made with the modeling stick, and as they are in miniature many parts are too small for the fingers to accomplish unaided. As Mundy was guided by the sense of touch alone, such aids to his work were out of the question; therefore the harmony of his statue seems all the more remarkable. Delicate calculation was used with phenomenal accuracy, as was proved when the various parts were placed in position. At night many hours were devoted to a careful examination of the day's work, when the imperfections became more noticeable, for the dim glimmer of the light that reached his consciousness in the daytime tended to obscure the model's ideal. (See "Annual Cyclopædia" for 1891, page 300, for an engraving of the statue).

Nelson, Thomas Leverett, jurist, born in Haverhill, N. H., March 4, 1827; died in Worcester, Mass., Nov. 21, 1897. He was graduated at the University of Vermont in 1846; studied law, and was admitted to the bar in 1855. For many years he was associated with United States Senator George F. Hoar in practice in Boston. In 1870-'73 he was city solicitor of Worcester; in 1879 was appointed United States district judge for Massachusetts; and subsequently, on the organization of the United States Circuit Court of Appeals, was appointed one of its justices. He received the degree of LL. D. from the University of Vermont in 1879.

Neuendorff, Adolph Heinrich Anton Magnus, musical director, born in Hamburg, Germany, June 13, 1843; died in New York city, Dec. 4, 1897. He came to the United States when twelve years old, and while attending a public school in New York city studied music. When fifteen years old he made his public appearance as a pianist at the old Dodworth Hall, and a year afterward he was employed in an orchestra and also as a chorus master. In 1860-'62 he played the violin on a concert tour with his father in South America, and on his return played in an orchestra in New York city for a year, and then became musical director at the German Theater in Milwaukee, Wis. The following season he became chorus master for Carl Anschütz in his season of grand German opera productions in New York; soon afterward succeeded him as conductor; and held the place till 1867, when he assumed the musical direction of the new Stadt Theater in New York. He established the Germania Theater in New York in 1872, and managed it for eleven years; in 1878 succeeded Theodore Thomas as conductor of the New York Philharmonic Society; and in 1884-'89 directed a series of promenade concerts in Boston. Since 1895 he had applied himself chiefly to concert work. He succeeded Anton Seidl as director of the Metropolitan permanent orchestra, and his last public appearance was as conductor of this orchestra at the Madison Square roof-garden concerts in the summer of 1897. While at the Stadt Theater he produced about forty operas. In 1892-'95 he was in Vienna, where his wife, Georgine von Januschowsky, sang at the Imperial Opera House. His compositions include the operas "The Rat Charmer of Hamelin" (1880); "Don Quixote" (1882); and "Prince Waldmeister" (1887); besides symphonies, overtures, and cantatas.

Oller, Jacob Franklin, clergyman, born in Waynesboro, Pa., in 1825; died in Baltimore, Md., Jan. 30, 1897. He entered the ministry of the German Baptist Brethren Church in 1857; was consecrated a bishop in 1882; and while discharging his episcopal duties retained his pastorate of the church in Waynesboro till his death. He was also treasurer of a large manufacturing concern.

Ordway, Albert, soldier, born in Boston, Mass., Feb. 24, 1843; died in New York city, Nov. 21, 1897. He entered Lawrence Scientific School, of Harvard College, shortly before the civil war, and in April, 1861, withdrew and enlisted as a private in the 4th battalion, Massachusetts Militia. In September following he became 1st lieutenant in the 24th Massachusetts Infantry, which accompanied Gen. Burnside's expedition to New Berne, N. C. He remained in that district till 1863, took part in all the operations there, and became adjutant of his regiment and an aid and acting adjutant general on the staff of Gen. Henry Prince. In July, 1863, he accompanied Gen. Prince on his transfer to the Army of the Potomac, and received a staff appointment in the 2d division of the 3d Army Corps. At the close of the campaign of that year he rejoined his regiment in Florida, and became ordnance

officer of the fortifications at Jacksonville. In 1864 his regiment was transferred to the Army of the James, when he was detached and first made division ordnance officer and afterward appointed to the staff of Gen. Terry. After the occupation of Richmond he was promoted to be colonel of his regiment, and, for gallant and meritorious services, brevetted a brigadier general. His regiment was selected for special duty in Richmond, and he was appointed provost marshal general of the State. In February, 1866, he was mustered out of the volunteer service, and engaged in business in Richmond till 1877. He then settled in Washington, D. C., and at the time of his death was brigadier general and commander of the National Guard of the District of Columbia. Gen. Ordway was President of the American Ordnance Company.

Ordway, Alfred, painter, born in Roxbury, Mass., March 9, 1821; died in Melrose, Mass., Nov. 17, 1897. He was educated in the public schools of Lowell; began studying art in boyhood, and made numerous creditable crayons and pastels; and opened his first studio in Boston in 1845. With the exception of two years spent in New York city—part of the time at the National Academy of Design, and a short period in Virginia—his entire professional life was identified with that of Boston. In 1856-'63 he was director of the art exhibitions of the Boston Athenaeum. He was a founder of the Boston Art Club, and had been its secretary, treasurer, and president. Mr. Ordway made a specialty of portraiture and landscape work, and was a frequent exhibitor in local exhibitions.

Osborne, Phoebe Sayre, educator, born in Madison, N. J., March 14, 1812; died in Chicago, Ill., Jan. 20, 1897. In 1828 she removed to New York city with a sister, and, having ample means at her command, engaged in charitable work. Two years afterward philanthropic citizens established a charity public school, which became known as the Ragged School, and the two sisters were installed as teachers. The success of this effort induced the city council in 1836 to open two schools—one for boys, the other for girls—for public education, and the sisters were employed as the first teachers in Public Schools Nos. 1 and 2. Mrs. Osborne had lived in Chicago since 1873.

Paddock, Algernon Sidney, lawyer, born in Glens Falls, N. Y., Nov. 9, 1830; died in Beatrice, Neb., Oct. 17, 1897. He was educated at Glens Falls Academy, studied law, and, removing to Omaha in the spring of 1857, was admitted to the bar, and became active in the development of Nebraska Territory. In 1858 he was an unsuccessful candidate for the Territorial Legislature, in 1859 was a delegate to the first Republican convention in that Territory, and in 1860 a delegate to the Republican National Convention. Soon after President Lincoln's inauguration Mr. Paddock was appointed Secretary of the Territory, and he held this office till the admission of Nebraska as a State in 1867. He was a delegate to the Republican National Convention in 1864, an unsuccessful independent Republican candidate for Congress in 1866, was appointed Governor of Wyoming Territory in 1868, but declined the office, and was elected United States Senator in 1875 and 1887. Between his two terms in the Senate he served four years on the Utah Commission. In his last term he was chairman of the Committee on Agriculture and Forestry, and a member of the Committees on Pensions, Public Lands, and Indian Depredations (select).

Pancoast, William Henry, surgeon, born in Philadelphia, Pa., Oct. 16, 1835; died there, Jan. 5, 1897. He was a son of the distinguished surgeon Joseph Pancoast, M. D., was graduated at Haverford College in 1853 and at Jefferson Medical Col-

lege in 1856, and spent three years in special study in Europe. On his return he established himself in surgical practice in Philadelphia and soon acquired a wide reputation for the business and skill of his operations. In the civil war he served as a surgeon with the Army of the Potomac. He succeeded his father as Professor of Surgery in Jefferson Medical College in 1874, and was President of the Medical-Chirurgical College in Philadelphia in 1886-'86. Dr. Pancoast was the first President of the Red Cross Society of Philadelphia, president of one of the sections of the Pan-American Medical Congress held in Washington, and author of several papers at the International Medical Congress in Boston. In 1874 he secured the bodies of the Siamese twins, and demonstrated that they could not have been separated without causing their death.

Parmelee, Dubois D., chemist, born in Redding, Conn., in 1830; died in New York city, April 16, 1897. He was graduated in medicine and chemistry at the University of the City of New York in 1858, applied himself to experimental chemistry, and invented the cold process of manufacturing rubber. For several years, and till the expiration of the Goodyear patents, he was engaged in the rubber business in Salem, Mass. Subsequently he was consulting chemist to a large belting and packing company in New York city. Dr. Parmelee was an active member of the American Institute, and many of his inventions were exhibited there.

Pasko, Wesley Washington, editor, born in Waterloo, Seneca County, N. Y., Jan. 4, 1840; died in New York city, Dec. 15, 1897. He learned the printer's trade in Utica, N. Y., and worked a year on the "New York Tribune." In the civil war he enlisted as a private in the 16th New York Heavy Artillery, and after the war he was engaged in editorial work in Albany and Troy, N. Y., till 1867, when he became connected with the education department of the State. Here he assisted in codifying the school laws, in preparing official reports for the Superintendent of Public Instruction, and in compiling a volume on the conditions of education in the United States and abroad. About this time he also wrote "Men who Advertise." In 1870 he edited "Old New York." Subsequently he edited the "Albion" in New York and a weekly newspaper in Lancaster, N. H. He was editor for a Cincinnati publishing house in 1879-'83, and at this time wrote several books of biography and local history. In 1883 he returned to New York and applied himself to the literature of printing. He was elected librarian of the New York Typothetae in 1885, and subsequently was its secretary. In 1891 he was a delegate to the annual convention of the United Typothetae of America. Mr. Pasko was a frequent contributor to the "American Bookmaker" and "The Printer and Bookmaker" of New York, compiled the "American Dictionary of Printing and Bookmaking," and published "The History of Printing in New York, from its Beginning to the Present Time." He was also the inventor of the Pasko press, probably the smallest cylinder press ever made, designed to print small bulletins for the Stock Exchange. His surname was originally Probasco, but was changed subsequently to 1872.

Peele, John Thomas, painter, born in Peterborough, England, in 1822; died in 1897. In 1845 he removed with his parents to New York city, and soon developed such a taste for portrait painting that he was sent abroad to study. In 1846 he returned to New York and continued his studies in the National Academy of Design, of which he was elected an associate. From portrait painting he turned to *genre* work, making a specialty of studies of child life. He returned to England in 1851 and for several years resided on the Isle of Man. His

"Children in the Wood" (1847) was bought by the late Prince Consort, and is now in Queen Victoria's collection at Osborne. The "Girl and Kitten" is owned by the National Academy of Design. "Jennie's Pet" was exhibited in the loan collection at the Metropolitan Museum in the season of 1896-97, and "Sunny Days of Childhood" is owned in Chicago. Among his other works in the United States are "Grandma's First Lesson in Knitting," "Music of the Reeds" (1857), "Asleep on Duty," "The Song of the Shirt," "The Prayer for Health," "The Mountain Maid," "Spring Wild Flowers," and "The Wreath of Wild Flowers." Other works are "Highland Supper," "The Little Laundress," "Recitation for Grandpa," "A Bit of Gossip," and "The Bird's Nest" (1885). He was a member of the Society of British Artists, and exhibited frequently in London and New York.

Peyton, Jesse Enlows, "father of centennials," born in Mayesville, Nicholas County, Ky., Nov. 10, 1815; died in Haddonfield, N. J., April 28, 1897. He was brought up on his father's farm, and on attaining his majority went to work in a general store at Flat Rock, Ky. In 1841 he removed to Philadelphia and entered a dry-goods house, in which he subsequently became a partner. Soon afterward, on being informed that Henry Clay was financially embarrassed, he collected sufficient funds among his manufacturing and mercantile acquaintances to liquidate Mr. Clay's debts. In 1854 he retired from business, and acquired large interests in coal lands in what is now West Virginia. He also became active in politics. In January, 1860, he made a tour of the principal Southern cities to convince himself of the probable extent of the threatened secession. The same year he was one of the founders in Philadelphia of what became known as the Constitutional Union party, and represented the 1st New Jersey District at the convention that nominated John Bell and Edward Everett for President and Vice-President. After President Lincoln's inauguration he sent Mr. Peyton on a secret mission to Kentucky to endeavor to restrain the State from leaving the Union. Subsequently Mr. Peyton organized the first cavalry regiment that reached Washington at the beginning of the civil war, and the 3d and 11th Pennsylvania Volunteers, paying all the expenses personally. He was best known in later days as the "father of centennials," as he had suggested and done much to promote the centennial observance of Independence Day, Bunker Hill, Yorktown, Va., and the inauguration of American constitutional government. His last scheme was to organize a celebration of the birth of Jesus Christ by all Christian nations, in Jerusalem, in 1900.

Phillips, Stephen H., lawyer, born in Salem, Mass., about 1823; died there, April 8, 1897. He was graduated at Harvard College in 1842; studied at Dane Law School, and was admitted to the bar in 1846. During 1847-'50 he edited the "Boston Law Reporter," in the last year removed to Salem, and in 1851 was appointed district attorney for Essex County. He served two years as city solicitor of Salem, and from 1858 to 1861 was Attorney-General of Massachusetts. Afterward he was judge advocate general of the State militia. In 1866 he was appointed by King Kamehameha V. Attorney-General of the Hawaiian Government and one of the four cabinet ministers. He held this office till 1873, and during that period frequently acted as Minister of Foreign Affairs and of Finance.

Picknell, William Lamb, painter, born in Hinesburg, Vt., Oct. 23, 1854; died in Marblehead, Mass., Aug. 8, 1897. When seventeen years old he went to Europe and studied painting. He exhibited at the Royal Academy in London and at

the Paris Salon. He returned to the United States in 1882 with but few paintings, having sold nearly all his work abroad. In 1881 he received a silver medal at the Mechanics Fair in Boston, and in 1884 a gold medal. He was elected a member of the Society of American Artists in 1880, and of the Society of British Artists in 1884. Good specimens of his landscapes are in the Walker Art Gallery in Liverpool, the Metropolitan Museum of Art in New York, the Museum of Fine Arts in Boston, the Art Museum in Philadelphia, and the Carnegie Gallery in Pittsburg. His most noteworthy works are "Route de Concarneau" (1880), for which he received the Lippincott prize in Philadelphia and a medal at Atlanta in 1896; "On the Borders of the Marsh" (1880); "A Stormy Day" (1881); "Sunshine and Drifting Sand" (1883); "A Sultry Day" (1884); "Winty March" (1885); "Bleak December" and "After the Storm" (1886); "November Solitude" (1887); "Edge of Winter," exhibited at the Columbian Exposition in 1893; "Old Fort at Antibes," exhibited at the Paris Salon in 1894; "Morning on the Loing," for which he received a gold medal at the Paris Salon in 1895; and "River Loing at Moret."

Pierce, Edward Lillie, lawyer, born in Stoughton, Mass., March 29, 1829; died in Paris, France, Sept. 5, 1897. He was a brother of Henry Lillie Pierce (see obituary in "Annual Cyclopaedia" for 1896), and was graduated at Brown University in 1850 and at Harvard Law School in 1852. At the law school he was the prize essayist, and a year after graduation there he published a paper on "Secret Suffrage," which was reprinted by the Ballot Society of England and quoted as an authority on the floor of Parliament. As this publication long antedated the Australian movement, Mr. Pierce has been called the father of ballot reform. In 1857 he published an elaborate treatise on "American Railroad Law," the first law book on the subject, which was rewritten, expanded, and republished under the title of "Pierce on Railroads" in 1881. During the Know-nothing excitement of 1857 he published a pamphlet, which was widely circulated, on the "Effect of Proscriptive or Extreme Legislation against Foreigners in Massachusetts and New England, on Free Labor, Free States, and the Cause of Freedom in the West." He returned to Boston to practice, was a delegate to the Republican National Convention in 1860, and was active in the ensuing canvass. In February, 1861, when the Massachusetts Legislature was considering a proposition for the repeal of the "Personal Liberty" laws, he made an eloquent appeal and argument which were largely instrumental in preventing the abrogation or modification of those laws. Soon afterward he enlisted as a private in the 3d Massachusetts Regiment, and in July was detailed to gather the fugitive slaves at Hampton, Va., and to organize and set them at work on the intrenchments. In December, 1861, his term of enlistment having expired, he was sent by Secretary Chase to the Sea Islands to report on the condition of the negroes who had fled to the abandoned plantations there, and in March following he was placed in charge of them. He found 200 plantations and about 10,000 negroes, caused 15,000 acres to be planted in cotton, corn, and potatoes, organized the negroes into an orderly community, and, with the large force of teachers he took with him, founded schools and taught the negroes how to become self-supporting. The success of his work here led him to urge the formation of freedmen's aid societies for similar work elsewhere. In 1863 he was appointed collector of internal revenue for the 3d Massachusetts District, which office he held three years. From May, 1866, till October, 1869, he was

district attorney for Norfolk and Plymouth Counties, and from the last date till 1874 he was secretary of the Board of State Charities. During his tenure of the last office he made a tour of the charitable institutions of England and the Continent, and made reports on his observations. In 1875-'76 he was a member of the Legislature and chairman of the House Committee on the Judiciary, and prepared and carried to enactment the first general law regulating municipal indebtedness ever adopted in the United States. He was again elected to the Legislature in 1895 and 1896. Mr. Pierce was a founder of the free public library at Milton, Mass., and a member of the Massachusetts Historical Society. His last literary work of importance was the completion of his "Memoirs and Letters of Charles Sumner" (Vols. I and II, Boston, 1877; Vols. III and IV, 1896). Previous to finishing this work he compiled a "Genealogy of the Pierce Family." A collection of his addresses and papers, entitled "Emancipation and Citizenship," was published in 1896.

Pleasanton, Alfred, soldier, born in Washington, D. C., June 7, 1824; died there, Feb. 17, 1897. He was graduated at the United States Military Academy and commissioned a brevet 2d lieutenant in the 1st Dragoons in 1844; was promoted

2d lieutenant, 2d Dragoons, Nov. 3, 1845; 1st lieutenant, Sept. 30, 1849; captain, 2d Cavalry, March 3, 1855; and major, Feb. 15, 1862; resigned Jan. 1, 1868; commissioned major, U. S. A., Oct. 19, 1888; and was retired Oct. 23 following. In the volunteer service he was commissioned a brigadier-general July 16, 1862; was promoted major general June 22, 1863; and was mustered out Jan. 15, 1866.

He was brevetted 1st lieutenant, May 9, 1846, for gallantry in the battles of Palo Alto and Resaca de la Palma; lieutenant colonel, Sept. 17, 1862, for Antietam; colonel, July 2, 1863, for Gettysburg; brigadier general, March 13, 1865, for the campaign in Missouri; and major general, the same date, for meritorious services in the field during the war. On leaving West Point he was ordered to duty at Fort Atkinson, Iowa, whence in 1845 he marched with Capt. Sumner's expedition to the Devil's lake region, now in North Dakota, 3,000 miles. After the Mexican War he was assigned to garrison duty, first in Monterey, Mexico, and afterward at Santa Fé, New Mexico. In 1849-'50 he served on the staff of Gen. Persifer F. Smith in California, and for two years thereafter he was engaged in fighting the Apache and Navajo Indians in New Mexico. He was acting assistant adjutant general on the staff of Gen. William S. Harney in the Sioux campaign in 1859, and adjutant general in the operations against the Seminoles in Florida and in those in Kansas, Oregon, and Washington Territory. When Fort Sumter was fired on he was in St. Joseph, Mo., on his way to his regiment in Utah. He hastened to Pennsylvania, reported to Gen. Robert Patterson for immediate service, and was ordered to Wilmington, Del., to organize a force with which to protect the railroad. Within a week he mustered and equipped a full regiment. The men became so much attached to him that they petitioned Gen. Scott to place him in command, but he was ordered to rejoin his regiment. His efficiency in an emergency had been noted, however, and after the first battle of Bull Run he was ordered with his dragoons to Washington. He

reached the city in the autumn of 1861, and served with distinction through the Peninsula campaign in Virginia. When Gen. Lee crossed Maryland, Gen. Pleasanton was placed in command of a division of cavalry. He was engaged in the actions at Boonesboro, South Mountain and Antietam. He won great credit at Chambersville, May 2, 1863, by the skillful handling of a small force of cavalry and light artillery when Jackson attacked the right flank. At Gettysburg he commanded the entire cavalry of the Army of the Potomac. In 1864 he was transferred to Missouri, and drove the Confederates under Gen. Price from the State. He resigned his commission in 1868; was for some time a collector of internal revenue in New York city; was commissioner of internal revenue in 1870-'71; and subsequently became a railroad president. He was proud of the facts that in the winter of 1863-'64 a committee of Congress had recommended him for the command of the Army of the Potomac and that he had served through 105 battles.

Poor, Daniel Warren, clergyman, born in Tillinghally, Ceylon, Aug. 21, 1818; died in Newark, N. J., Oct. 11, 1897. He was a son of the Rev. Daniel Poor, D. D., a noted scholar and missionary, and was graduated at Amherst College in 1837, and at Andover Theological Seminary in 1842. In 1843-'48 he was pastor of a Presbyterian church in Fairhaven, Mass. He then organized the High Street Presbyterian Church, Newark, N. J., of which he was pastor till 1869, aided in organizing three German churches, and was a founder of the German Theological Seminary, at Bloomfield, N. J. In 1869-'72 he was pastor of the First Presbyterian Church in Oakland, Cal. In this time he organized the San Francisco Theological Seminary, and was its Professor of Ecclesiastical History and Church Government from 1871 till 1876. In 1876-'80 he was secretary of the Presbyterian Board of Education in Philadelphia. He received the degree of D. D. from Princeton in 1857. Dr. Poor was one of the translators and editors for Lange's "Commentary," his part being "The Epistles to the Corinthians" (1868). He also was associated with Henry Clay Fish in the publication of "Select Discourses from the French and German" (New York, 1858).

Porter, Albert Gallatin, lawyer, born in Lawrenceburg, Ind., April 30, 1824; died in Indianapolis, Ind., May 3, 1897. By working as a ferryman on the Ohio river he earned money to take a college course, and he was graduated at Asbury University in 1843. Two years afterward he was admitted to the bar, and settled in Indianapolis. He was a city councilman and corporation attorney for two terms each; became reporter of the Supreme Court of Indiana in 1853, and published five volumes of "Decisions"; joined the Republican party in 1856, and was elected to Congress in 1858 and 1860. While in Congress he served on the Committees on the Judiciary and on Manufactures. At the expiration of this second term he resumed law practice. In 1878 he was appointed Comptroller of the Currency. He held this office till 1880, when he was elected Governor of Indiana, serving in 1881-'84. In 1889 he was appointed minister to Italy. He resigned the post in September, 1892, and resumed law practice.

Ponder, James, shipbuilder, born in Milton, Del., Oct. 31, 1819; died there, Nov. 5, 1897. He was of English extraction and owned the estate in Delaware acquired by patent by his great-grandfather. He became a partner of his father in the business of building, buying, and selling vessels in 1843; and after the death of his father, in 1863, carried on the business alone and added to it the pur-

chase and shipment of grain, lumber, ship timber, and bark. He also built a large steam sawmill, and engaged extensively in agriculture and peach growing. In 1857 he was elected to the Legislature, in 1864 to the State Senate, and in 1867 to the presidency of the last-named body. He was elected Governor of Delaware in 1870, as a Democrat, and served four years.

Powers, Daniel William, banker, born in Batavia, N. Y., June 14, 1818; died in Rochester, N. Y., Dec. 11, 1897. He was brought up on a farm, became a clerk in a hardware store in Rochester when nineteen years old, and engaged in the banking business in 1850. Dealings in Government bonds during the civil war yielded him large returns, and he subsequently acquired much real estate. He erected the Powers Hotel and the Powers Commercial Building in Rochester, and established an art gallery and a law library, the last containing the law library of Roscoe Conkling.

Preston, Margaret Junkin, author, born in Philadelphia, Pa., in 1825; died in Baltimore, Md., March 28, 1897. She was a daughter of the Rev. George Junkin, founder and President of Lafayette College, Easton, Pa., and President of Washington College, Lexington, Va. From the time of her marriage to Prof. John T. L. Preston, of the Virginia Military Institute, in 1857, till the death of her husband, about 1891, she lived at Lexington, Va. Mrs. Preston began contributing to "Sartain's Magazine," in Philadelphia, in 1849, and published her first book, "Silverwood," a novel, in 1856. After her marriage she became a frequent contributor, chiefly in verse, to the "Southern Literary Messenger." During the civil war she wrote her best-known volume of verse, a narrative poem entitled "Beechenbrook" (New York, 1866), which made her extremely popular in the South. "Old Songs and New" appeared in 1870. The "Book of Monograms" contains an account of the ramblings of herself and her husband in Europe after the war. Her other works include "Cartoons" (1876); "For Love's Sake" (1886); "Colonial Ballads, Sonnets, and Other Verses" (1887); "Aunt Dorothy" (1890); and a translation of the "Dies Ira" (1855).

Proctor, Joseph, actor, born in Marlboro, Mass., May 7, 1816; died in Boston, Mass., Oct. 2, 1897. He entered mercantile life in Boston, and before long he was enrolled in a company of youthful players. With very little special training, he made his first appearance on the stage as Damon in "Damon and Pythias," on Nov. 29, 1833. Next he appeared as Rolla in "Pizarro." He played a star engagement at the Tremont Theater, and then appeared with the stock company of the Pearl Street Theater, Albany, N. Y., till 1837, when he and Mr. Connor were engaged at the Walnut Street Theater, Philadelphia, opening in "Thalaba." The next year he returned to Boston, and after one season made a starring tour of the West. On May 6, 1839, he opened the rebuilt Bowery Theater, New York city, appearing as Nathan Slaughter in "Nick of the Woods." He played this part more than 2,500 times. In 1859 he went to England, played in London one hundred nights, beginning with "Othello"; and afterward played in other English cities, and then on the Continent. In 1861, while he was playing in Glasgow, his company included the present Sir Henry Irving. He returned to Boston in the autumn of 1861; played an engagement at the Howard Athenaeum, under the management of Edwin L. Davenport; and starred in a round of Shakespearean characters, "Nick of the Woods," and other dramas till 1869. After managing a theater in Sacramento, Cal., for nearly three seasons, he retired for two years; then reappeared in his familiar parts; and continued his professional work till his

final retirement, in 1885. The fiftieth anniversary of his first appearance on the stage was made the occasion of a grand benefit testimonial at the Boston Theater, Nov. 29, 1883.

Pullman, George Mortimer, inventor, born in Chautauque County, New York, March 3, 1831; died in Chicago, Oct. 19, 1897. He learned the trade of cabinetmaker in Albion, N. Y. In 1853, when the Erie Canal was being widened, he took contracts for moving large buildings that stood in the way of the improvement. He was successful in this, and six years later he removed to Chicago and entered upon the work of raising large blocks of brick and stone buildings. The city had been built, some blocks on one level and some on another, and an effort was being made to bring all to one level. Meanwhile he had been studying the problem of making long railway journeys comfortable, and soon after his removal to Chicago he converted two old railway coaches into sleeping cars. These were used successfully, and very soon there was a demand for more. He perfected his invention, and in 1863 began building the cars that have since borne his name. The first, which was called the "Pioneer," was built at a cost of \$18,000. In 1867 he organized the Pullman Palace Car Company, of which he was president from that time till his death. In 1887 he devised the vestibule train. In 1880 he founded the town of Pullman, near Chicago, a model village, with his factories for its industry, in which 5,000 of the inhabitants are employed. It is said that statistics prove this to be one of the most healthful places in the world. Mr. Pullman was interested also in other enterprises, one of the most important being the Metropolitan Elevated Railroad in New York city.

Raymond, Minor, educator, born in New York city, Aug. 29, 1811; died in Evanston, Ill., Nov. 25, 1897. He was graduated at Wesleyan Academy, Wilbraham, Mass., in 1831; became a member of the faculty, and remained there ten years; held pastorates in Worcester, Boston, and Westfield in 1841-48; and was principal of Wesleyan Academy in 1848-64. Through his efforts Fisk Hall was built in 1851 and Binney Hall in 1854, and after the fire that destroyed the academy buildings in 1856 he secured a large part of the funds to rebuild them. In 1864 he was elected Professor of Systematic Theology in Garrett Biblical Institute of the Northwestern University, Evanston, Ill., and he held the chair for thirty years. He received the degree of D. D. from Wesleyan University in 1854, and that of LL. D. from Northwestern University in 1884. He published "Systematic Theology" (3 vols., Cincinnati, 1877).

Reid, John C., journalist, born in Kenosha, Wis., about 1837; died in New York city, Jan. 25, 1897. He learned the printer's trade in Chicago and at the beginning of the civil war enlisted as a private in an Illinois regiment. At the expiration of his term he re-enlisted in an Ohio regiment, of which he became quartermaster; was captured and taken to Andersonville, but escaped through the aid of friendly negroes. After the war he settled in New York city, and was first employed as a compositor on the "New York Times." He was soon promoted to the place of proof reader, was made night editor in 1871, and was managing editor

from 1872 till 1889. On leaving the "Times," he was for a while in charge of the London edition of the "New York Herald," and after his return to the United States had an editorial place in journals in New York city and in New Haven, Conn.

Reid, Sam Chester, lawyer, born in New York city, Oct. 21, 1818; died in Washington, D. C., Aug. 13, 1897. He was a son of Captain Samuel Chester Reid, United States navy, and went to sea when sixteen years old. Four years afterward he was attached to the Government survey of the Ohio river for a year, and then settled in Natchez, Miss., where he studied law, and became a United States deputy marshal. In 1841 he was admitted to the bar of Mississippi; in 1844 to that of Louisiana; and in 1846 to that of the United States Supreme Court. During the Mexican War he was a member of a company of Texas Rangers, and distinguished himself at Monterey. After the war he was employed on the "New Orleans Picayune." He reported the proceedings of the Secession Convention of Louisiana in 1861, and was a correspondent with the Confederate armies for several Southern newspapers during the civil war. After the war he resumed law practice, and lectured in the principal cities of the South on "The Restoration of Southern Trade and Commerce." In 1874 he established the Mississippi Valley and Brazil Steamship Company, in St. Louis. His father had commanded the American privateer "General Armstrong" in a memorable engagement with a British squadron in the harbor of Fayal in 1814, and had lost his vessel. Soon afterward a claim was made on Congress for indemnity. The claim slumbered for many years; all the principals died; and Mr. Reid, taking it up for the heirs, advocated it vigorously for several years, and secured an appropriation from Congress for its payment about ten years ago. He published "The United States Bankrupt Law of 1841" (Natchez, 1842); "The Scouting Expeditions of McCulloch's Texas Rangers" (Philadelphia, 1847); "The Battle of Chickamauga" (Mobile, 1863); and "The Daring Raid of Gen. John H. Morgan in Ohio" (Atlanta, 1864). He also reported and edited "The Case of the Private-Armed Brig of War 'General Armstrong'" (New York, 1857). At the time of his death he was rewriting a memoir of his father to replace one that was burned. He had also prepared "The Life and Times of Col. Aaron Burr," but the manuscript was lost in a fire in 1850.

Rhind, Alexander Colden, naval officer, born in New York city, Oct. 31, 1821; died there, Nov. 8, 1897. He was appointed a midshipman in the navy, Sept. 3, 1838; was promoted passed midshipman, July 2, 1845; master, Feb. 21, 1853; lieutenant, March 17, 1854; commander, Jan. 2, 1863; captain, March 2, 1870; commodore, Sept. 30, 1876; and rear admiral, Oct. 30, 1883; and was retired on the following day. During his active career he was on sea service for nineteen years and five months, and on shore or other duty for ten years and seven months. He was on coast survey duty in 1845-'56; was attached to the home squadron, and served along the coast

at North Edisto, had a shore fight with a mounted force at Seabrook's plantation, South Carolina, and received the thanks of the Navy Department for his capture and destruction of the water-boats building South Edisto, Dawley, and Lee, 1841 vessels. In the attack on the defenses of Charleston, April 7, 1863, he commanded the ironclad "Keshik," which was struck ninety times in thirty minutes and was pierced by nineteen shots. The sinking condition of his vessel obliged him to withdraw from action, but he kept her afloat in smooth water till the fore wing was sinking, when she went down, but without losing a man. Later in the year, as commander of the "Paul Jones," he took part in the operations against the defenses of Charleston. On Aug. 13, 1864, with the "Agawam," he engaged the three batteries at Deep Bottom in a manner that elicited the commendation of his superior officers and a second letter of thanks from the department. His most conspicuous feat, characterized by Rear-Admiral Porter as "the most perilous adventure that was, perhaps, ever undertaken," was performed on the night of Dec. 23, 1864, when he commanded the powder boat "Louisiana," loaded with 215 tons of gunpowder and bombs fitted with time fuses, and exploded her at a point within 350 yards of Fort Fisher. The explosion did not have the contemplated effect on the fort. Rear-Admiral Porter recommended the promotion of Commander Rhind, Lieutenant Preston, and all the volunteer crew. After the war Captain Rhind commanded the naval rendezvous at New York, 1868; the Brooklyn Navy Yard in 1869-'70; and the "Congress," of the European squadron, in 1872-'73. He was lighthouse inspector in 1876-'79, President of the Board of Inspection in 1880-'82, and Governor of the Naval Asylum in 1883. Admiral Rhind was a son of Charles Rhind, a shipowner, United States minister to Turkey in 1827, and on his mother's side was descended from Cadwallader Colden.

Rice, William, clergyman, born in Springfield, Mass., March 10, 1821; died there, Aug. 17, 1897. He was educated at Wesleyan Academy, Wilbraham, Mass.; entered the ministry of the Methodist Episcopal Church in 1841; and after holding numerous pastorates was obliged by failing health to retire from pulpit work. In 1856, as a member of the General Conference, he took an active part in the controversy concerning slavery. Since 1861 he had been librarian and secretary of the Springfield city library, and for nearly twenty years he had been a member of the State and city boards of education. Wesleyan University conferred the degree of D. D. on him, and for many years he was a trustee of the university and president of the Board of Trustees of Wesleyan Academy. Dr. Rice published "Moral and Religious Quotations from the Poets," a "Pastor's Manual," and a catalogue of the library; and in 1876 the "Methodist Hymnal" was published under his direction.

Richards, David, sculptor, born in Abergonolwyn, North Wales, in 1829; died in Utica, N. Y., Nov. 28, 1897. He was brought up on a farm in his native land, removed early in life to Utica, and there followed the stonecutter's trade. In his leisure he learned to model in clay and to carve in marble, and after studying in Italy he established himself as a sculptor in Utica. He executed a good many outdoor statues, and did much decorative work, but never entered public competitions. Among his works are "Love"; "Boy chasing Butterfly"; "The Barber Dentist"; statues of President Grant, Gov. Seymour, and Harding; a statuette of Thomas Paine; and the models of a column and statues for the Soldiers' Monument at Mount Hope Cemetery, Rochester, and "The Pilgrim's Rest" at Cypress Hills Cemetery, Long Island.

of Mexico during the war with that country; returned to coast-survey duty in 1849 and 1851; and was appointed commander of the gunboat "Crusader," South Atlantic blockading squadron, in 1862. He was several times engaged with the Confederates

Ricker, Joseph, clergyman, born in Parsonsfield, Me., June 27, 1814; died in Augusta, Me., Sept. 4, 1897. He was graduated at Waterville College (now Colby University) in 1839; was immediately appointed editor of "Zion's Advocate," the organ of the Baptist Church in Maine; and four years later entered the ministry. For more than twenty-five years he was chaplain at the Massachusetts State Prison; for seven years was secretary of the Massachusetts Baptist convention, and for two years of the Maine convention; and, after holding pastorates in Gloucester, Belfast, and Augusta, Me., and in Woburn and Milford, Mass., he gave his entire time to superintending the missionary and educational work of his denomination. He did effective work in putting the training schools of Colby University at Waterville, Hebron, and Houlton on a sound financial basis, and to the school at Houlton (now known as the Ricker Classical Institute) he gave \$10,000. He received the degree of D. D. from Waterville College in 1868.

Ricord, Frederick William, librarian, born in Guadeloupe, West Indies, Oct. 7, 1819; died in Newark, N. J., Aug. 12, 1897. He was a son of Jean Baptiste Ricord, physician and scholar, and a nephew of Philippe Ricord, the distinguished French surgeon. Frederick was educated at Hobart and Rutgers Colleges, studied medicine and law, but had no liking for either; and, settling in Newark, N. J., opened a classical school and conducted it twelve years. In 1849 he was elected librarian of the Newark Library Association, and he held the office for twenty years. In this period he was elected a member of the first board of education of the city, and served in it for sixteen years, six years as its secretary and three as its president. He was also State Superintendent of Public Schools four years. He served three terms as sheriff of Essex County, in 1869-'73 as mayor of Newark, and subsequently as police justice and as lay judge of the Court of Common Pleas. For many years he was librarian of the New Jersey Historical Society, and also editor of its numerous publications. He wrote and published "An English Grammar"; a "History of Rome" (New York, 1852); "Life of Madame de Longueville," from the French of Victor Cousin (1854); "The Henriade," from the French of Voltaire (1859); "English Songs from Foreign Tongues" (1879); and "The Self-Tormentor, from the Latin of Terentius, with more English Songs" (1885). He edited many volumes of "The Colonial Documents of New Jersey," published by the New Jersey Historical Society, and compiled the greater part of the volume treating of New Jersey in the series "Memorial History of New York." At the time of his death he had ready for the press a translation of another work of Terentius, a collection of original poems, and more "Songs from Foreign Tongues"; and had in preparation "The Governors of New Jersey," a "History of New Jersey," and other books.

Roberts, William Randall, merchant, born in County Cork, Ireland, Feb. 6, 1830; died in New York city, Aug. 9, 1897. He removed to New York city in 1849, and engaged successfully in mercantile business for many years, retiring in 1869. In 1865 he was elected president of the Fenian Brotherhood, and in the following year actively promoted the raid into Canada, for which he was imprisoned by the United States Government. He was elected to Congress as a Democrat in 1870 and 1872, and to the New York Board of Aldermen in 1877, and was defeated for sheriff in 1879. In 1885 he was appointed United States minister to Chili, and while serving there was stricken with paralysis, in May, 1889. He was brought back to New York and remained a helpless invalid till his death.

Robertson, Thomas James, legislator, born in Fairfield County, S. C., Aug. 3, 1823; died in Columbia, S. C., Oct. 13, 1897. His ancestors were among the first settlers in the county and were active Whigs in the Revolutionary War. He was graduated at South Carolina College in 1843, and became a planter. In 1857-'58 he was aid-de-camp to Gov. Allston, and throughout the civil war was conspicuous for the firm and open support he gave to the National cause. He was a member of the State constitutional convention that was held under the reconstruction acts of Congress, and in 1868 was elected without opposition to one of the vacant seats in the United States Senate. In 1870 he was re-elected for a full term, and was appointed chairman of the Committee on Manufactures and a member of the committees on the District of Columbia and on Enrolled Bills (select).

Robeson, George Maxwell, lawyer, born in Belvidere, Warren County, N. J., in 1829; died in Trenton, N. J., Sept. 27, 1897. He was graduated at Princeton College in 1847; studied law, was admitted to the bar in 1850, and soon afterward removed to Camden. In 1858 he was appointed prosecutor of the pleas for Camden County; in 1867 became Attorney-General of New Jersey; and in June, 1869, was appointed Secretary of the Navy. He went out of the naval office March 4, 1877, after serving for some time in 1876 as Secretary of War also on the resignation of Gen. Belknap. In 1878 and 1880 he was elected to Congress, and in 1882 was defeated for a third term. His administration of the Navy department was the subject of much adverse criticism and of congressional investigation in 1876 and 1878; but the Judiciary Committee of the House unanimously declared that the charges against him were not sustained. After retiring from Congress, Mr. Robeson practiced law in Trenton till within a few years of his death.

Robinson, John Cleveland, soldier, born in Binghamton, N. Y., April 10, 1817; died there, Feb. 18, 1897. He entered the United States Military Academy in 1835; withdrew to study law three years afterward; was commissioned 2d lieutenant in the 5th Infantry, Oct. 27, 1839; promoted 1st lieutenant, June 18, 1846; captain, Aug. 12, 1850; major, 2d infantry, Feb. 20, 1862; and colonel, 43d Infantry, July 28, 1866; and was retired with the rank of major general, May 6, 1869. In the volunteer service he was commissioned colonel of the 1st Michigan Infantry, Sept. 1, 1861; promoted brigadier general, April 28, 1862; brevetted major general, June 27, 1864; and mustered out Sept. 1, 1866. In the regular army he was brevetted lieutenant colonel, July 1, 1863, for services at the battle of Gettysburg; colonel, May 5, 1864, for the battle of the Wilderness; brigadier general, March 13, 1865, for Spottsylvania; and major general, same date, for services in the field during the war. His first military service was as a quartermaster in the army of occupation of Mexico at Corpus Christie, Texas, in 1845. He served with distinction at Palo Alto, Resaca de la Palma, and Monterey, and in the closing operations of the war; was engaged in campaigns against Indians in Texas in 1853-'54, and in Florida in 1856; and accompanied the expedition to Utah in 1857-'58. In February, 1861, he was ordered from duty at Fort Columbus, N. Y., to Fort McHenry, Baltimore. He reached Baltimore at a critical moment, and prevented the loss of Fort McHenry to the Government. From May till September, 1861, he was on duty at Detroit, Mich., and Columbus, Ohio, mustering volunteer troops, and after his promotion to brigadier general of volunteers he commanded a brigade at Newport News and the troops in the neighborhood of Portsmouth, Va., till May, 1862.

He was then given command of the 1st brigade, Kearny's division, Army of the Potomac; took part in the seven days' battle before Richmond; and commanded a division at Fredericksburg, Chancellorsville, Gettysburg, the operations at Mine Run, and the battles of the Wilderness and Spottsylvania. In the last battle, while leading a charge of his division, he was wounded in his left knee, which necessitated the amputation of his leg at the thigh. For his gallantry on this occasion he was presented with a congressional medal of honor. After recovering from his wound he commanded the military division of northern and western New York, the departments of the South and the Lakes, and the post of Fort Wayne, Mich., till his retirement. In 1872 he was elected Lieutenant Governor of New York on the ticket headed by Gen. John A. Dix.

Rollins, Alice Wellington, author, born in Boston, Mass., June 12, 1847; died in Bronxville, N. Y., Dec. 5, 1897. She was the daughter of Ambrose Wellington, a lawyer; was educated at home and in Europe; taught for several years in Boston; and married Daniel M. Rollins, a merchant of New York city, in 1876. After her marriage she traveled extensively, and lived for a time in Brazil. Her publications comprise "The Story of a Ranch," "From Palm to Glacier," "The Ring of Amethyst," and "The Story of Azron," the last two being poems. For children she published "Little Page Fern" and "The Finding of the Gentian." She also published the booklets "Aphorisms for the Year" and "Unfamiliar Quotations"; a novel based on tenement-house reform, "Uncle Tom's Tenement" (1888); and a dramatic colloquy, "Dealing in Futures."

Rollins, Daniel G., lawyer, born in Great Falls, N. H., Oct. 18, 1842; died in Somersworth, N. H., Aug. 30, 1897. He was a son of Judge Daniel G. Rollins; was graduated at Dartmouth in 1860 and at Harvard Law School in 1862; and was admitted to the bar in 1863. After practicing in Portland, Me., three years, he removed to New York city to accept the appointment of assistant United States district attorney, which he held till 1869. In 1869-'73 he was engaged in private practice; in 1873-'80 was assistant district attorney of New York County; in 1880-'82 was district attorney; in 1882-'88 was surrogate of the county. While in the district attorney's office he conducted several notable prosecutions, including the Lambert and Case insurance trials, the Wetmore and Joe Coburn cases, and a series of arson and perjury trials, in which, in the estimation of insurance officials, he did much to check incendiarism. His most enduring reputation was made while he presided over the surrogate's court. Wills involving many millions of dollars were probated before him without contest or delay; but there were many others whose contest developed unusual complications. Among the notable wills contested before him were those of James Stokes, involving \$10,000,000; Sarah Burr, \$5,000,000; and Jesse Hoyt, \$11,000,000; and the Hammersley, Darling, and Paine wills, involving smaller amounts but many perplexing questions of law. Toward the end of his term he was defeated by a small majority in an election for judge of the Supreme Court of New York, and after his retirement he resumed practice. He received the degree of LL. D. from Dartmouth College in 1884.

Ross, Christian K., merchant, born in 1823; died in Philadelphia, Pa., June 21, 1897. He was engaged in the wholesale dry-goods business for many years prior to 1876, and from that year till his death was master warden of the port of Philadelphia. On July 1, 1874, while his two sons, Walter and Charles,

were playing in front of their home in the German-town district, they were invited by two men in a buggy to take a ride. The boys clambered into the buggy and were liberally supplied with candy till they reached Palmer and Richmond streets, when Walter, who wanted some fireworks, was given a quarter of a dollar and sent into a store to make a purchase. When he came out, the buggy, men, and Charlie, a beautiful child of four years, had disappeared. Walter was found by a friend of the family, who took him home, and immediately after he had told his story a search was begun for his younger brother. From this incident was developed the "mystery of little Charlie Ross," which, despite the efforts of the detectives and police authorities of the entire country, and of numerous volunteer searchers, never has been satisfactorily explained. A few days after the disappearance Mr. Ross received a letter from the supposed abductors, which declared that Charlie would not be returned without the payment of a large ransom, and that an attempt to recover him through the agency of detectives would result in his immediate death. Two days afterward Mr. Ross received a demand for \$20,000. The money was promptly raised, and Mr. Ross was about to follow the instructions in the letter, when the police officials took up the case, and Mayor Stokely offered a reward of \$20,000 for the arrest of the kidnappers and the return of the boy. In the ensuing four months Mr. Ross received sixteen letters from the kidnappers, but these furnished no clue to the writers. Interest in the case increased daily; photographs of the missing boy were sent to every part of the United States and to many foreign seaports, and hundreds of apparent clues were investigated, but without encouraging results. On the night of Dec. 14, 1874, the residence of Judge Van Brunt, at Bay Ridge, N. Y., was entered by burglars, who were attacked by members of the family. One burglar, William Mosher, was shot dead, and another, Joseph Douglass, was mortally wounded. The latter acknowledged that he and Mosher had stolen Charlie Ross, and declared that Mosher knew all about the boy. Walter Ross identified the dead burglars as the men who had driven him and Charlie in the buggy. The only further explanation of the mystery was the declaration by the police that, while Mosher and Douglass were trying to escape from officers who wanted them for several burglaries, they had drowned the boy in the North river. The body of a boy of about Charlie's age was found in the river shortly after the death of the burglars, but it was not fully identified as that of Charlie.

Ruggles, Daniel, soldier, born in Barre, Mass., Jan. 31, 1810; died in Fredericksburg, Va., June 1, 1897. He was graduated at the United States Military Academy and commissioned a brevet 2d lieutenant in the 5th Infantry in 1833; served in the war against the Seminole Indians in Florida in 1839-'40; took part in the military occupation of Texas in 1844-'45; and in the Mexican War was present at the battles of Palo Alto, Resaca de la Palma, the siege of Vera Cruz, Churubusco, Molino del Rey, Contreras, and Chapultepec, and the capture of the city of Mexico. He was promoted captain in 1846, and brevetted major and lieutenant colonel for services in Mexico. On May 7, 1861, he resigned his commission to enter the Confederate service, in which he was appointed a brigadier general. He commanded a division at the battles of Shiloh and Baton Rouge; was promoted major general in 1863; commanded the department of the Mississippi; and was commissary general of prisoners at the close of the war. In 1874-'78 he lived on his ranch at Palaflo, Texas, and afterward he was engaged in the real-estate business in Fredericksburg.

Ruggles, Edward Rush, educator, born in Norwich, Vt., in 1836; died in Hanover, N. H., Oct. 30, 1897. He taught at Bradford (Vt.) Academy; went to Canada to perfect himself in French and to teach at the mission of Grande Ligne; and then went abroad for further study. In 1864-'66 he was instructor in English and French at the Dresden Polytechnic School, and in the last year was appointed instructor in modern languages at Dartmouth College. He became Professor of Modern Languages in the Chandler Scientific School in 1867, and since 1893 had been Professor of German at Dartmouth. Prof. Ruggles, who was regarded as one of the best German scholars in the United States, received the degrees of A. M. and Ph. D. from Dartmouth in 1864 and 1885 respectively.

Rulison, Nelson Somerville, clergyman, born in Carthage, N. Y., April 24, 1842; died in Mannheim, Germany, Sept. 1, 1897. He was educated at Gouverneur Academy in his native town, and received his training for the ministry in the General Theological Seminary, New York city, being graduated in 1866. In the same year he was admitted to deacon's orders in the Episcopal Church, and not long afterward to priest's orders. From 1867 till the close of 1869 he was rector of Zion Church, Mount Morris, N. Y., and subsequently he founded, and was the first rector of St. John's Church on the Heights in Jersey City. In 1877 he was called to the rectorship of St. Paul's Church, Cleveland, and he remained there until he was consecrated Assistant Bishop of Central Pennsylvania. After that event his episcopal residence was at South Bethlehem, Pa. In 1895, on the death of the senior bishop, he succeeded to the office. The enormous amount of work involved in administering the affairs of his diocese made great inroads upon his naturally strong constitution, and in the last years of his life he was obliged to seek an entire change of scene in the hope of recovering his former health. But the change had been made too late. Besides sermons and essays, and contributions in prose and verse to religious periodicals, he published a "History of St. Paul's Church, Cleveland, Ohio" (1877).

Russell, John Henry, naval officer, born in Frederick City, Md., July 4, 1827; died in Washington, D. C., April 1, 1897. He was appointed a midshipman in the United States navy, Sept. 10, 1841; was promoted passed midshipman, Aug. 10, 1847; master, Sept. 14, 1855; lieutenant, the following day; lieutenant command-

er, July 16, 1862; commander, Jan. 28, 1867; captain, Feb. 12, 1874; commodore, Oct. 30, 1883; and rear admiral, March 4, 1886; and was retired Aug. 27 following. During his active career he was on sea service for twenty years and nine months, and on

shore or other duty for nineteen years and eleven months. He made his first cruise in the sloop "Cyane" of the Pacific squadron in 1841-'43, and had his first experience of war on the "St. Mary's" in the Gulf of Mexico in 1846. He took part in the capture of Corpus Christi and the securing of Fort Taylor at Brazos. He also served on the blockade at Vera Cruz prior to the capture of the city. In 1848 he was graduated at the United States Naval Academy, and was ordered on coast-survey duty.

He accompanied the North Pacific exploring expedition of 1853-'56 as acting lieutenant and navigator, and on this cruise, notwithstanding the Chinese had refused all intercourse, secured by his personal boldness an official audience for the American and British envoys. He also made explorations in the arctic region which disclosed numerous errors in the charts. In 1860-'61 he was on duty at the Washington Navy Yard. He was ordered to the Norfolk Navy Yard, and had charge of the last boat that left that yard, April 28, 1861. While attached to the frigate "Colorado" off Pensacola, Fla., he performed during the night of Sept. 14, 1861, one of the most thrilling feats of the civil war. In command of a boat expedition of 100 sailors, he undertook to cut out or destroy the privateer "Judah," lying at that port under the protection of strong shore batteries and a force of 8,000 men. The expedition was detected before it reached the privateer, and fire was opened on the boats; but the sailors pressed on, and after a hand-to-hand fight, in which 20 of the "Colorado's" men were killed or wounded, the "Judah" was captured. While the troops in the navy yard were being assembled, the "Judah" was set on fire and sank, and the survivors of the expedition returned to their frigate. For this feat Lieut. Russell received the personal thanks of President Lincoln, the congratulations of the Navy Department, and the thanks of the State of Maryland. Subsequently he took part in the operations of Farragut's fleet at New Orleans and on the Mississippi river up to Vicksburg; received the garrison of Fort Jackson as prisoners on his ship; and was thanked by Farragut for saving the lives of the officers and men in the flagship's boat during a guerrilla attack at Baton Rouge. In 1869, while commanding the "Ossipee," of the Pacific squadron, he rescued the passengers and crew of the Pacific mail steamer "Continental" during a gale, and in 1875, while serving in the North Atlantic squadron, saved the vessels of the squadron from an epidemic of yellow fever at Key West.

Sage, Henry Williams, philanthropist, born in Middletown, Conn., Jan. 31, 1814; died in Ithaca, N. Y., Sept. 17, 1897. Feeble health caused him to abandon plans for a professional life, and in 1832 he entered his uncle's mercantile house. He purchased the business in 1838, and managed it till 1854, when he became interested in the lumber regions of Canada and the West. He bought large tracts of timber around Lake Simcoe, in Canada, and was highly successful in his operations. Subsequently, in partnership with John McGraw, he built the largest sawmill in the world at Winona, Mich., and became one of the most extensive land owners in that State. In 1847 he was elected to the Legislature as a Whig; in 1857 removed to Brooklyn, N. Y.; and in 1880 returned to Ithaca. His early benefactions included the endowment of the Lyman Beecher lectureship on preaching at Yale College, the building and endowment of several churches and schools, and the building of the public library at West Bay City, Mich. From its inception Mr. Sage was deeply interested in Cornell University. He was elected a trustee in 1870, and had been president of the board since 1875. Besides his gifts to the institution, he managed its pine lands for many years, and realized about \$6,000,000 for them, although, but for his objections, the board of trustees would have sold them at one time for \$1,000,000. His principal gifts to the university are the Sage College for Women, \$266,000; Susan Lynn Sage chair of Philosophy, \$50,000; Sage School of Philosophy, \$200,000; University Library Building, \$260,000, and endowment \$300,000; Museum of Classical Archaeology, collection and equipment, \$20,000; house for Sage

Professor of Philosophy, \$11,000; and contribution toward paying off a floating indebtedness, \$30,000. (See GIFTS AND BEQUESTS.)

Sartain, John, artist, born in London, England, Oct. 24, 1808; died in Philadelphia, Pa., Oct. 25, 1897. He studied painting with John Varley and Henry Richter, learned the art of line and mezzotint engraving, and produced fine specimens of each branch before leaving England.

In 1820 he removed to Philadelphia, and continued his study of painting with Joshua Shaw and Manuel J. de France. During the first ten years of his residence in Philadelphia he painted portraits in oil and miniatures on ivory, drew on wood for book illustrations, and designed vignettes for

bank notes. In 1840 he became connected with "Graham's Magazine." To this periodical he contributed many of his best miniature engravings. Three years afterward he became proprietor and editor of "Campbell's Foreign Semi-Monthly Magazine." He also acquired an interest in "The Electric Museum," for which he engraved many plates. In 1848 he bought a half interest in "The Union Magazine," published in New York, which he transferred to Philadelphia and renamed "Sartain's Magazine." In this he first published the famous poem of "The Bells," after making the author rewrite it three times. He brought this magazine to a high standard of excellence, and while acting as its managing editor engraved a very large number of illustrations for magazine and book publications. He also produced numerous prints for framing, of which the most noteworthy are "The County Election in Missouri," after Bingham (about 1855); "Christ Rejected," after West (1862); "Men of Progress, American Inventors" (1862); "Zeisberger preaching to the Indians at Goshosunk" (about 1862); "The Ironworker and King Solomon" (1876); "John Knox and Mary, Queen of Scots," after Leutze; "Homestead of Henry Clay," after Hamilton; and "Edwin Forrest" and "The Battle of Gettysburg," after Rothermel (1876-'77). Mr. Sartain had charge of the art department at the Centennial Exhibition at Philadelphia, and for his services there received numerous honors. He gathered a great collection of illustrated books, original paintings, and prints, the engravings alone numbering more than 20,000.

Sedgwick, John, jurist, born in New York city, June 22, 1829; died in Norfolk, Conn., Sept. 11, 1897. He was graduated at the University of the City of New York in 1847, was admitted to the bar in 1852, and was assistant district attorney of New York in 1856-'61. He was defeated as Republican candidate for the office of city judge and recorder, but in 1871 was elected a judge of the Supreme Court of New York, and in 1885 was re-elected on a combined ticket of Republicans and Democrats. His re-election was a compliment to his honesty and ability displayed in the disruption of the Tweed ring. He became a justice of the Supreme Court of New York in 1895, when under the new Constitution the Superior Court was merged in that tribunal, and in May, 1896, retired.

Seward, Clarence Armstrong, lawyer, born in New York city, Oct. 7, 1828; died in Geneva, N. Y.,

July 24, 1897. He was a nephew of William H. Seward, in whose family he was brought up, and was graduated at Hobart College in 1848, and was admitted to the bar in 1850. He began practice in partnership with Samuel Blatchford, removed with him to New York city in 1854 and, on the further elevation to the bench Mr. Seward became head of the law firm of Blatchford, Seward, Gross & Fiske. Mr. Seward made a specialty of the laws of patents and common carriers. He was judge advocate general of New York in 1856-'60; Assistant Secretary of State of the United States under his uncle, and Acting Secretary during the latter's illness in 1865 following the attempt to assassinate him; was a delegate to the National Republican Convention of 1878; and a presidential elector in 1880. Mr. Seward conducted many diplomatic negotiations for the Government, and had much to do with bringing about the creation of the State of West Virginia. He was an original member of the Union Club, and had been its president since 1880. He collected an exceptionally fine library. He assisted Judge Blatchford in compiling the "New York Civil and Criminal Justice" (Auburn, 1846).

Seymour, Augustus Sherrill, jurist, born in Ithaca, N. Y., Nov. 30, 1826; died in New York city, Feb. 19, 1897. He was graduated at Hamilton College and the Dwight Law School, began practicing law in New York city in 1859, removed to New Berne, N. C., in 1865, and became city judge in 1868. He served in both branches of the Legislature and in the State Constitutional Convention of 1871; was elected judge of the Superior Court of the State in 1874, and held the office till 1882, when he was appointed judge of the United States District Court of Eastern North Carolina. The last office he retained until his death. Judge Seymour compiled a "Digest of the Laws of North Carolina" (1878).

Shelby, Joseph Orville, soldier, born in Lexington, Ky., in 1831; died near Adrian, Mo., Feb. 13, 1897. He removed with his parents to Waverly, Mo., in 1850, and engaged in the manufacture of rope. Subsequently he became owner of a large plantation in Lafayette County. During the Kansas-Missouri border troubles he was an active proslavery leader, and early in the civil war he raised and equipped a company of cavalry for the Confederate service. Soon afterward he was commissioned colonel and brigadier general, and given command of a brigade that saw much hard service in Missouri, Arkansas, Louisiana, and Texas. He commanded a division in the raid under Gen. Sterling Price into Missouri, and saved that general's army on its retreat to Texas. After the surrender of the Confederates in the Trans-Mississippi Department at Shreveport Gen. Shelby marched a force of 1,000 well-equipped cavalrymen into Mexico, where he offered to raise an army of 40,000 veteran American soldiers to sustain the empire. Maximilian declined his overtures, and his force soon disbanded. Gen. Shelby himself became a freight contractor in the city of Mexico, but returned to his farm in Missouri in 1867. In 1893 he was appointed United States marshal for the Western District of Missouri.

Sheldon, Edward Austin, educator, born in Perry Center, Wyoming County, N. Y., Oct. 4, 1823; died in Oswego, N. Y., Sept. 16, 1897. He was educated at Hamilton College, began teaching in Oswego in 1848, and was Superintendent of Public Schools in Syracuse in 1851-'53, and in Oswego in 1853-'69. While holding the last-named office he was the first to introduce object teaching in the United States, and in 1861 he organized the first training school for teachers. In 1863 the Oswego training school was made a State normal school.

and he was principal of it from that year till his death. His special work in recent years comprised the adding of kindergarten work to the normal-school departments, the perfecting of a system whereby kindergartens may be incorporated harmoniously in primary-school work, the unifying of the school systems of the State, and the bringing of industrial training into its true educational relation with other instruction. Dr. Sheldon's publications include a "First Reading Book and Reading Charts" (New York, 1862); "Manual of Elementary Instruction" (1862); "Series of Reading Books and Charts" (1874); and "Lessons on Objects" (1875).

Skilton, Julius Augustus, physician, born in Troy, N. Y., June 29, 1833; died in Brooklyn, N. Y., Nov. 20, 1897. He was graduated at Rensselaer Polytechnic Institute in 1849 and at Albany Medical College in 1855, and practiced in Troy till the beginning of the civil war. In 1861 he was commissioned assistant surgeon to the 30th New York Volunteers, and in 1862 surgeon of the 87th. He served under Gen. Philip Kearny in the Peninsula campaign, and after the seven days' fight was left in charge of the wounded on the field when the army retreated. With such of the wounded as could be removed he was taken to Richmond, and after a short confinement in Libby Prison he was exchanged and returned to New York. In 1863 he took part in organizing the 14th New York Cavalry, of which he was commissioned surgeon, and with which he served during the draft riots in New York city. Afterward he accompanied the regiment to New Orleans, was appointed medical director of the Cavalry Department of the Southwest in 1864, and served through the Red River campaign, in which he was wounded. On being mustered out of the service he went to Vera Cruz as correspondent for a New York newspaper, and witnessed the events leading to Maximilian's dethronement and death. Subsequently he was appointed medical officer of the escort that accompanied President Juarez to the city of Mexico. In 1869 he was appointed United States consul to the city of Mexico, and from 1872 till 1878 he was consul general. Pending the resumption of diplomatic intercourse he also acted in special matters for the governments of England, France, and Austria. He made extensive archaeological explorations, and gathered a valuable collection of specimens, now in Yale University Museum. After the expiration of his term as consul general he engaged in railroad and mining operations in Mexico till about twelve years ago, and then became head of a firm of electrical engineers in New York city. Among his publications is one on the mining districts of Mexico.

Smith, Job Lewis, physician, born in Spafford, Oneida County, N. Y., Oct. 15, 1827; died in New York city, June 9, 1897. He was graduated at Yale College in 1849, and at the College of Physicians and Surgeons, New York city, in 1853. He made a specialty of diseases of children, and passed his entire professional life in New York. From 1878 till within a short time of his death he was Professor of the Diseases of Children in Bellevue Hospital Medical College, and for many years was Physician to the City Hospital, the New York Foundling Asylum, and the New York Infant Asylum. Dr. Smith published a "Treatise on the Diseases of Children" (8th ed., 1896).

Smith, John Eugene, soldier, born in Bern, Switzerland, Aug. 3, 1816; died in Chicago, Ill., Jan. 29, 1897. He was a son of John Banler Smith, an officer under Napoleon, who removed with his family to Philadelphia a few months after John's birth. The son received an academic education, learned the jeweler's trade, and followed it in St.

Louis, Mo., and in Galena, Ill. On the inauguration of Gov. Richard Yates in 1861, he was appointed an aid on the Governor's staff, and from April till July was engaged in raising, organizing, and forwarding troops. After the first battle of Bull Run he recruited the 45th Illinois Volunteers, known as the Washburn Lead-Mine Regiment, and was commissioned its colonel. He took part in the capture of Forts Henry and Donelson, the battle of Shiloh, and the siege of Corinth; was promoted brigadier general Nov. 29, 1862; commanded the 8th division, 16th Army Corps, in the following month, and the 3d division, 17th Corps, during the Vicksburg campaign; and with the 15th Corps was at the capture of Mission Ridge, and in the Atlanta and Carolina campaigns. In April, 1866, he was mustered out of the volunteer service, and in July was commissioned colonel of the 27th United States Infantry. He was assigned to the 15th Infantry and transferred to the 14th in 1870, and retired May 19, 1881. Gen. Smith was brevetted major general of volunteers, Jan. 12, 1865, for faithful service and gallantry in action, and brigadier general and major general United States army, March 2, 1867, for the siege of Vicksburg and the action at Savannah.

Spangler, Andrew M., journalist, born in York, Pa., in 1818; died in Philadelphia, Pa., Nov. 2, 1897. In early life he was editor of the "Lancaster Gazette," and founder and editor of "The Farm Journal." Afterward he established and edited "The Progressive Farmer" and "The Cultivator"; and at times he was editorially connected with "The Evening Herald," "The Star," "The Globe," "The Evening Journal," and "The Age," all in Philadelphia. Early in the civil war he aided in organizing the Philadelphia Home Guards, and through the war he was active in raising money and supplies for sick and wounded soldiers. Mr. Spangler had been a member of the Board of Education of Philadelphia for many years. He was acknowledged authority on fishing, and published "A Paradise for Gunners and Anglers" and "Near-by Fresh- and Salt-Water Fishing."

Spaulding, Elbridge Gerry, banker, born in Summer Hill, Cayuga County, N. Y., Feb. 24, 1809; died in Buffalo, N. Y., May 5, 1897. He studied law, was admitted to practice in Genesee County, and in 1834 settled in Buffalo. In 1836 he became city clerk, attorney of the Supreme Court, and solicitor in Chancery; in 1847 was elected mayor; and in 1848 was elected to the Assembly. He practiced law with much success till about 1850, when he became a banker. At his instigation the Farmers' and Mechanics' Bank of Batavia was removed to Buffalo, and after the passage of the Federal banking law it was reorganized with Mr. Spaulding as president and principal stockholder. In 1849-'51 he was a Whig Representative in Congress, in 1853 was State Treasurer, and in 1858-'63 was again in Congress. In his last term in Congress, as chairman of the subcommittee of the Committee on Ways and Means charged with the preparation of financial measures, he drafted the legal-tender and the national currency bank acts, and secured their adoption as war measures. From this circumstance he became known as the "father of greenbacks." In 1869 he published a "History of the Legal-Tender Paper Money used during the Great Rebellion," and in 1876 delivered an address before the National Banking Association at the Centennial Exhibition in Philadelphia on "One Hundred Years of Progress in the Business of Banking."

Starkweather, Mary Ann Theresa, philanthropist, born in Waterville, Oneida County, N. Y., Sept. 22, 1819; died in Ypsilanti, Mich., Sept. 24, 1897. She was a sister of the late John S. New-

berry, of Detroit, Mich., and widow of John Starkweather, one of Michigan's early educators. Her husband died in 1883, and soon afterward, by the death of an uncle, she came into possession of a large estate. From that time till her death she was noted for her large public benefactions. In 1896 she gave to the Ladies' Library Association of Ypsilanti her handsome residence; in 1888 gave to Highland Cemetery a \$10,000 chapel; soon afterward gave to the city a costly fountain and the statue that surmounts the Soldiers' Monument; and recently she erected a \$10,000 building for the Students' Christian Association of the State Normal College.

Stevens, Abel, clergyman, born in Philadelphia, Pa., Jan. 19, 1815; died in San José, Cal., Sept. 11, 1897. He was educated at Wesleyan University; joined the New England Conference of the Methodist Episcopal Church, and became pastor of a church in Boston, Mass., in 1834; and spent a year in the service of the university. After a second pastorate in Boston, he made a European tour in 1837, and on his return was stationed in Providence, R. I. In 1840-'52 he was editor of "Zion's Herald" in Boston; in 1853-'54 of "The National Magazine" in New York; in 1856 he was elected editor of "The Christian Advocate and Journal"; and in 1860-'74 was an associate editor of "The Methodist." Subsequently he spent many years in travel and in residence at Geneva, Switzerland, where he was pastor of the Union Church. He received the degree of LL. D. from Indiana University in 1856. He was most widely known as the historian of Methodism. His publications include "Memorials of the Introduction of Methodism into New England" (2 vols., Boston, 1847-'52); "History of the Religious Movement of the Eighteenth Century, called Methodism" (3 vols., 1858-'61); "History of the Methodist Episcopal Church in the United States" (4 vols., 1864-'67; Vol. V, 1895); "The Centenary of American Methodism" (1865); "The Women of Methodism; Its Three Foundresses" (1866); "A Compendious History of American Methodism" (1867); "Madame de Staël: A Study of her Life and Times" (1881); "Character Sketches" (1882); and "Christian Work and Consolation" (1885).

Stevenson, John D., soldier, born in Staunton, Va., June 8, 1821; died in St. Louis, Mo., Jan. 22, 1897. He took a partial course at the College of South Carolina, was graduated in law at Staunton in 1841, and began practicing in Franklin County, Mo., in 1842. In 1846 he raised a company of volunteers, with which he served under Gen. Stephen W. Kearny in the invasion of New Mexico. He removed to St. Louis after his return, served in both branches of the Legislature, and was president of the Senate. In 1861 he recruited the 7th Missouri Volunteers, of which he was commissioned colonel. During the siege of Corinth he commanded the District of Savannah. Afterward he commanded a brigade in Tennessee; was promoted brigadier general of volunteers, Nov. 29, 1862; served through the Vicksburg campaign; commanded an expedition that drove the Confederates from northern Louisiana; and occupied and fortified Decatur, Ala. Toward the close of 1864, being left without a command, he resigned his commission. On July 28, 1866, he was appointed colonel of the 30th United States Infantry, and during the reconstruction period he was stationed in northern Georgia. He was brevetted major general of volunteers and brigadier general, U. S. A., March 2, 1867, for distinguished services during the war and for gallantry in leading a charge at Champion Hill. Subsequently he commanded the 23th United States Infantry till his resignation, Jan. 1, 1871. After retiring from the army he resumed law practice.

Stokes, Ellwood H., clergyman, born in Medford, N. J., Oct. 10, 1815; died in Ocean Grove, N. J., July 16, 1897. He was of Quaker parentage, and when thirteen years old was apprenticed to a bookbinder in Philadelphia. In 1842 he was appointed a class leader in the Methodist Episcopal Church; in 1843 was licensed to preach and assigned temporarily to the Salem circuit, and in 1844 was given a charge in the Medford circuit. From the last year till 1875 he held appointments in New Jersey, and built churches in Newark and Trenton. He was an organizer of the Pitman Grove Camp-Meeting Association; was President of the Ocean Grove Camp-Meeting Association from its organization, in 1869, till his death; and since 1875 had been occupied principally with the work at Ocean Grove. Largely through his efforts the greatest camp-meeting grounds in the world were there established. The erection of the great Auditorium, that cost \$70,000, was the crowning work of his life. He published a volume of letters from Europe and two volumes of poems. (See GIFTS AND BEQUESTS.)

Storow, James J., lawyer, born in Boston, Mass., July 29, 1837; died in Washington, D. C., April 15, 1897. He was graduated at Harvard College in 1857, and at the Harvard Law School in 1858; was admitted to the bar in 1860; and early acquired reputation as a talent lawyer. From 1879 till his death he was chief counsel for the Bell Telephone Company, and in this post he prepared all the cases concerning the company before the United States courts, and appeared in all the final appeals before the Supreme Court. He was best known to the public through his services as counsel to the Venezuela Government in its controversy with Great Britain over the boundary line. After the British and Venezuelan ministers in Washington had agreed on the terms of the arbitration treaty, Mr. Storow accompanied the latter to Venezuela, where, despite considerable opposition, he was instrumental in bringing the treaty into favor and securing its acceptance.

Swain, David Gaskill, soldier, born in Salem, Ohio, Dec. 22, 1832; died in Washington, D. C., Aug. 17, 1897. He was admitted to the bar in 1858, and practiced at Salem. He was commissioned 2d lieutenant in the 65th Ohio Infantry, Oct. 4, 1861; was promoted 1st lieutenant, Nov. 4 following; captain and assistant adjutant general, May 16, 1862; and major, Feb. 7, 1865; and was mustered out of the volunteer service, Sept. 15, 1866, having been appointed 2d lieutenant in the 34th United States Infantry, July 28 preceding. On Dec. 9, 1869, he was promoted major and judge advocate, and on Feb. 18, 1881, brigadier general and judge advocate general of the army. He was brevetted lieutenant colonel and colonel of volunteers, March 13, 1865, and 1st lieutenant, captain, and major, United States army, March 2, 1867, for faithful and meritorious services during the war. Gen. Swain was engaged in the battles of Shiloh, Murfreesborough, Perryville, Chickamauga, where he was wounded, and at Missionary Ridge, and served on the staffs of Gen. William S. Rosecrans and George H. Thomas. In 1884 he was involved in sensational proceedings, for which he was court-martialed and suspended from rank and duty for twelve years, and on Dec. 22, 1894, the unpunished portion of the sentence was remitted by the President and he was retired. He sued to recover full pay for the period of his suspension, but the Supreme Court decided against him on appeal.

Sweetser, Moses Foster, author, born in Newburyport, Mass., Sept. 22, 1848; died in Dorchester, Mass., in July, 1897. He was educated at Beloit and Columbian Colleges and made a protracted

tour of Europe and the East. On his return he produced a large number of books, including "New England" (1873); "The Middle States" (1874); "The White Mountains" (1875); "The Maritime Provinces" (1876); and "Pocket Guide to Europe" (1883). He published nineteen guidebooks, and also wrote "Artist Biographies," in 18 volumes.

Tenney, Asa W., jurist, born in Dalton, N. H., in 1833; died in Brooklyn, N. Y., Dec. 11, 1897. He was brought up on his father's farm, began teaching when sixteen years old, and was graduated at Dartmouth College in 1859. After studying law and serving as a school commissioner two years at Lancaster, N. H., he removed to New York city in 1862, and was admitted to the bar. During the draft riots he was one of a company of citizen volunteers who defended the house of Mayor Opdyke against the mob. In 1867, when the Republicans of Georgia were endeavoring to restore their party organization, Mr. Tenney was selected by Horace Greeley to visit the State and aid the work. He delivered addresses in Atlanta and Savannah, under police protection, that were printed and circulated as Republican campaign documents. In 1873 he was appointed United States attorney for the Eastern District of New York, and he held the office more than twelve years. On the expiration of his last term he applied himself to private practice in Brooklyn. In July, 1897, he was appointed United States district judge for the Eastern District of New York. Hard work to clear the docket by the end of the term resulted in a fatal prostration.

Terry, William Richard, soldier, born in Liberty, Va., March 12, 1827; died in Chesterfield, Va., March 28, 1897. He was graduated at the Virginia Military Institute in 1850, and was engaged in business till the beginning of the civil war. He entered the Confederate service as a captain of cavalry, was soon afterward commissioned colonel of the 24th Virginia Regiment, and in May, 1864, was promoted brigadier general. After the war Gen. Terry was a State Senator eight years, and superintendent of the Richmond Penitentiary.

Thayer, Alexander Wheelock, born in South Natick, Mass., in 1817; died in Trieste, Austria, July 15, 1897. He was graduated at Harvard University in 1843, and at the Harvard Law School in 1848. While employed as an assistant in the university library he resolved to write a life of Beethoven, and in 1849 he went to Germany to collect material for this purpose, intending from the first that the biography should first be printed in German. He was United States consul at Trieste from 1859 to 1882, and he continued to reside there after the latter date, employed upon his great work. The first volume, which takes the life of his subject to 1796, appeared at Bonn in 1866; the second, which carried it to 1806, was issued in 1872; the third, which carried the narrative to 1816, was published in 1879. A fourth and concluding volume was nearly completed at the time of Mr. Thayer's death. No English version of the work has yet appeared. Besides many contributions to American newspapers and about 20 articles in Grove's "Dictionary of Music and Musicians," he wrote "The Hebrews and the Red Sea" (Andover, 1883), and "Signor Masoni, and Other Papers of the Late I. Brown." (See GIFTS AND BEQUESTS.)

Thomas, Henry Goddard, soldier, born in Portland, Me., April 5, 1837; died in Oklahoma, Jan. 23, 1897. He was graduated at Amherst College in 1858, and was admitted to the bar in Maine. In April, 1861, he enlisted as a private in the 5th Maine Volunteers; in June he was promoted captain; and in August he was commissioned captain in the 11th United States Infantry. He was promoted major and transferred to the 20th Infantry,

Sept. 21, 1866; transferred to the 4th Infantry, Oct. 22, 1876; and to the pay department, May 23, 1878; and was retired July 2, 1891. In the volunteer service he was commissioned colonel of the 79th United States Colored Infantry, March 20, 1863; transferred to the 19th United States Colored Infantry, Jan. 16, 1864; promoted brigadier general, Nov. 30 following; and mustered out Jan. 15, 1866. During the civil war he was brevetted major, U. S. A., May 12, 1864, for gallantry at Spottsylvania; lieutenant colonel, July 30, for services in front of Petersburg; and colonel and brigadier general, and major general of volunteers, March 13, 1865, for meritorious services during the war. Gen. Thomas was engaged in the first battle of Bull Run; the actions at Snicker's Gap, Va., Bristol Station, Rappahannock Station, and Mine Run, Va.; and the battles of the Wilderness, Spottsylvania, Petersburg, and Hatcher's Run. He was the first regular army officer to accept a colonelcy of colored troops.

Thompson, Daniel Greenleaf, author, born in Montpelier, Vt., Feb. 9, 1850; died in New York city, July 10, 1897. He was the youngest son of Daniel Pierce Thompson, author of "The Green Mountain Boys." He was graduated at Amherst in 1869. Previous to graduation, in connection with his college duties, he served several terms as Assistant Secretary of State of Vermont. In the autumn of 1869 he removed to New York city, where he gave private instruction and studied law. In April, 1870, he became teacher of classics in the Springfield, Mass., High School, where he remained until the summer of 1872. In July of that year he published "A First Book in Latin," and in the autumn he resumed the study of law in New York, and in December was admitted to the bar. He was continuously in active practice of law from that date. His hours of leisure were given to study and literary work, and he made notable contributions to periodicals. His publications in book form were: "A System of Psychology" (2 vols., 8vo, 1884); "The Problem of Evil" (1886); "Religious Sentiments of the Human Mind" (1888); "Social Progress" (1889); "The Philosophy of Fiction in Literature" (1892); and "Politics in a Democracy" (1893), an essay upon present political tendencies, which has since been translated into Dutch, by Dr. D. C. Nijhoff. He also delivered addresses before many societies and on various occasions, one of the last being an address before the "Woman's Law Class" of the University of the City of New York, at the closing exercises, April 4, 1894. Mr. Thompson served as a member of the Committee of One Hundred at the Columbian Celebration in the autumn of 1892, and held numerous honorary offices in connection with public movements. In 1888, he was elected to the presidency of the Nineteenth Century Club, which office he held two years. At the time of his death he was a member of the executive council and secretary of the Authors Club. He was also a member of the Century Club, Manhattan Club, Reform Club, Bar Association, Lawyers' Club, Sons of the Revolution, the Patria Club, and of the New England Society. Amherst gave him the degree of Ph. D. in 1894.

Thompson, William, soldier, born in Pennsylvania in 1813; died in Tacoma, Wash., Oct. 7, 1897. He entered the National army as a captain in the 1st Iowa Cavalry, July 31, 1861; was promoted major, May 18, 1863; and colonel, June 20, 1864; was mustered out March 15, 1866; appointed a captain in the 7th United States Cavalry, July 28, 1866; and retired Dec. 15, 1875. He was brevetted brigadier general of volunteers, March 13, 1865; major and lieutenant colonel, U. S. A., March 2, 1867, for services in action at Prairie Grove and Bayou Metee, Ark.; and brigadier-general, U. S. A., by act of Congress in 1896.

Thorne, Edwin F., actor, born in New York city in 1845; died there, May 4, 1897. He was a son of Charles R. Thorne, and brother of Charles R. Thorne, Jr., and had been on the stage from early youth, making his first appearance at Winter Garden Theater, New York city. In 1860, with his father and three brothers, he went to California, where he became popular in juvenile parts. Subsequently he made a tour round the world, returning to New York in 1865. He was associated with Nat. C. Goodwin in producing "The Black Flag" in New York, and afterward appeared but seldom, owing to feeble health.

Thorne, Joseph, inventor, born in Marlboro, Ulster County, N. Y., Feb. 17, 1826; died in Sing Sing, N. Y., May 4, 1897. He was of Quaker parentage, served through the Mexican War, and became an engineer. From early youth he was fond of machinery, and for a time he was associated with Elias Howe while he was perfecting his sewing machine. Afterward he was connected with the Singer Company, and established and operated a factory in Scotland. Among his many inventions were a typewriter, a sewing machine, and the typesetting and distributing machine bearing his name.

Tilton, Elizabeth Richards, wife of Theodore Tilton, born in Brooklyn, N. Y., in 1835; died there, April 13, 1897. She married Theodore Tilton in 1855, and was the cause of the sensational suit brought against Henry Ward Beecher by her husband in 1874. After the trial Mr. and Mrs. Tilton separated, he taking up a permanent residence in Paris, France, and she passing the remainder of her life in seclusion in Brooklyn. She united with a small religious circle, known as Christian Friends and as Plymouth Brethren, and many of its meetings were held at her home. For several years Mrs. Tilton was totally blind, but within the past year her sight was restored by a surgical operation.

Truesdale, Hiram C., jurist, born in Rock Island, Ill., in 1800; died in Phoenix, Ariz., Oct. 28, 1897. He was graduated at Iowa State University in 1880; studied law there; and removed to Minneapolis, Minn., to practice. In 1895 he made his residence in Phoenix, where he soon became known as an expert in mining laws. He was appointed Chief Justice of the Territory in June, 1897, and was fatally prostrated immediately after trying the noted suit of Warner ex. Wells, which involved the valuable Hillsdale mining property.

Trumbull, James Hammond, philologist, born in Stonington, Conn., Dec. 20, 1821; died in Hartford, Conn., Aug. 5, 1897. He entered Yale with the class of 1842. Feeble health prevented his graduation, but in 1850 his name was restored to its place in his class, and he was given the degree of A. M. In 1842-'43 he aided the Rev. James H. Linsley in compiling catalogues of the mammalia, reptiles, fishes, and shells of Connecticut. In 1847 he became Assistant Secretary of Connecticut, and he held that place until 1851, and again in 1858-'61, and he was State librarian and register in 1854-'55, and Secretary in 1861-'65. He was President of the Connecticut Historical Society twenty-six years. Dr. Trumbull was librarian of the Watkinson Library of Reference in Hartford from 1863 till 1891. He became a member of the American Philological Society on its organization, in 1869, and was its president in 1874-'75. He was elected a member of the National Academy of Sciences in 1872, in consideration of his great knowledge of the Indian languages of North America. He was the author of a dictionary and vocabulary of John Eliot's Indian Bible, and was said to be the only living American able to read that work. The degree of LL. D. was conferred upon him by Yale in 1871 and by Harvard in 1887, and Columbia gave him that of

LL. D. in 1887. He contributed to the proceedings of societies, to periodicals, and to encyclopedias. Among his articles are those on the significance of the word "Shawmut," the supposed Indian name of Boston (1866), on the significance of "Massachusetts" (1867), on the Algonkin name of "Manitou" (1870), and on the "Indian Languages of America." His publications include "The Colonial Records of Connecticut" (3 vols., Hartford, 1850-'59); "Historical Notes on Some Provisions of the Connecticut Statutes" (1860-'61); "The Defense of Stonington against a British Squadron, August, 1814" (1864); Roger Williams's "Key into the Language of America" (Providence, 1866); "Thomas Leachford's 'Plain-Dealing, or News from New England, 1642'" (Boston, 1867); "The Origin of McFingal" (1869); "The Composition of Indian Geographical Names" (1870); "The Best Method of studying the Indian Languages" (1871); "Some Mistaken Notions of Algonkin Grammar" (1871); "Historical Notes on the Constitution of Connecticut" (1872); "Notes on Forty Algonkin Versions of the Lord's Prayer" (1873); "On the Algonkin Verb" (1876); "The True Blue Laws of Connecticut and the False Blue Laws invented by the Rev. Samuel Peters" (1876); and "Indian Names of Places in and on the Borders of Connecticut, with Interpretations" (1881). He edited "The Memorial History of Hartford County" (2 vols., Boston, 1886). In the various bibliographies on the languages of North American Indians compiled by James C. Pilling and published by the Bureau of American Ethnology a full bibliography of his works will be found. The catalogue of Americana belonging to George Brinley was made by him at the time of the sale of the collection, 1879-'86, and gained for him the reputation of the "most learned and acute bibliographer in America."

Tucker, John Randolph, statesman, born in Winchester, Va., Dec. 24, 1823; died in Lexington, Va., Feb. 13, 1897. He was a grandson of St. George Tucker, and son of Henry St. George Tucker, and was graduated at the University of Virginia in 1844. The following year he was admitted to the bar and began to practice in Winchester. In 1857-'65 he was Attorney-General of Virginia, and in 1870-'74 was Professor of Equity and Public Law at Washington and Lee University. From 1874 till 1887 he represented the 10th Virginia District in Congress, in which he was a member of the Committee on Ways and Means for eight years, chairman of the Committee on Judiciary for four years, and a member of the Committee on Civil-Service Reform. Among his notable speeches were those opposing protective duties in tariff legislation; on the electoral commission bill and the constitutionality of the presidential count of 1876; and Chinese immigration in 1883. Some of his most famous addresses were those delivered before the Social Science Association in 1877, before the law school of Yale College in 1887, and at the unveiling of the statue of Gen. Jackson in Richmond. At the close of his congressional service he resumed his professorship at Washington and Lee University, and at the time of his death was also dean of its law school. He received the degree of LL. D. from Yale in 1887.

Tucker, Joshua Thomas, clergyman, born in Milton, Mass., Sept. 20, 1812; died in Boston, Mass., June 11, 1897. He was graduated at Yale College in 1833, and at Lane Theological Seminary in 1837. He engaged in the home-mission work of the Presbyterian Church in Chester, Ill., for a few months; was ordained by the presbytery of Alton, Ill., and had charges in Rushville in 1838, and in Hannibal, Mo., in 1840-'46. In 1846-'48 he held a pastorate in St. Louis, and was associate editor of the "Her-

aid of Religious Liberty"; in 1849-'67 was pastor of the Congregational church in Holliston, Mass.; and in 1868-'78 of the Second Church in Chicopee, Mass. Dr. Tucker was a founder of the "Boston Review," and its editor in 1861-'68, and one of the editors of the "Boston Recorder" in 1863-'64, and of the Springfield "Union" in 1871-'77. He received the degree of D. D. from Iowa College in 1875. His publications include: "The Sinless One" (1855) and "Christ's Infant Kingdom" (1870).

Tyler, William Seymour, classical scholar, born in Hartford, Pa., Sept. 2, 1810; died in Amherst, Mass., Nov. 19, 1897. He was graduated at Amherst College in 1830, and was Professor of Greek there from 1843 to 1893, when he resigned. His writings include: "The Germania and Agricola of Tacitus, with Notes for Colleges" (New York, 1847); "The Histories of Tacitus, with Notes for Colleges" (1849); "Prayer for Colleges" (1855); "Memoir of Rev. Henry Lobdell" (Boston, 1859); "Plato's Apology and Crito, with Notes" (New York, 1860); "The Theology of the Greek Poets" (Boston, 1867); "History of Amherst College during its First Half Century, 1821-1871" (Springfield, Mass., 1873); "Demosthenes, De Corona," edited (Boston, 1874); "Homer's Iliad, Books XVI-XXIV," edited (New York, 1886).

Voorhees, Daniel Wolsey, lawyer, born in Liberty, Ohio, Sept. 26, 1827; died in Washington, D. C., April 10, 1897. While an infant he was taken by his parents to their home in Indiana. He was graduated at Indiana Asbury (now De Pauw) University in 1849; was admitted to the bar and

began practice in Covington, Ind., in 1851; and was defeated as Democratic candidate for Congress in 1856. In 1859-'61 he was United States district attorney for Indiana; in 1861-'66 and 1869-'73 was a Representative in Congress; and in 1877-'97 was Senator from Indiana. Because of his tall, erect figure he was called the "tall

sycamore of the Wabash." On entering the Senate he was immediately appointed to the Committee on Finance, with which he served till the close of his last term. He was also a member of the Committees on Immigration, Library, and International Expositions (select). His maiden speech in the Senate was an argument in favor of the free coinage of silver and the preservation of the greenback currency as full legal-tender money. In 1893, however, he voted to repeal the silver-purchase clause of the Sherman act. For this, although he retained the chairmanship of the Finance Committee till December, 1895, nominally, he was displaced as the leader of the majority side by Senator Jones, of Arkansas, early in 1894. To Senator Voorhees more than to any one else is due the erection of the building in which the Congressional Library is now installed. In 1880, in a speech on the condition and necessities of the library, he prepared the way for the appointment of the joint select committee to provide additional accommodations, and for seventeen years he was chairman of it. In January, 1897, he was defeated for re-election to the Senate by Charles W. Fairbanks, Republican.

Wales, Leonard Eugene, jurist, born in Wilmington, Del., Nov. 26, 1823; died there, Feb. 8, 1897. He was graduated at Yale College in 1845,

and was admitted to the bar in 1848. For two years he was associate editor of the "Delaware State Journal," the organ of the Whig party in Delaware. In 1849 he was appointed clerk of the United States court for the district of Delaware, and in 1853 and 1854 was elected city solicitor. In 1861 he enlisted in the 1st Delaware Volunteers, and in 1863 was appointed a commissioner of enrollment to superintend the draft of troops. While serving in the last-named office he became, in October, 1864, associate judge of the State courts for Newcastle County. He held this post till March, 1884, when he was appointed judge of the United States district court for the district of Delaware.

Walker, Francis Amasa, economist, born in Boston, Mass., July 2, 1840; died there, Jan. 5, 1897. He was a son of Amasa Walker, author of "The Science of Wealth." He was graduated at Amherst in 1860, receiving two prizes for *extempore* speaking, and

studied law. He joined the 15th Massachusetts Volunteers as sergeant major Aug. 1, 1861, and was made assistant adjutant general of the brigade under Gen. Darius N. Couch, Sept. 14, 1861, with the rank of captain. On Aug. 11, 1862, he was promoted adjutant general of Gen. Couch's division, with the rank of major, and he was made colonel on the staff of the 2d Army Corps on Dec. 23, 1862. He continued with that corps as adjutant general, serving successively under Gen. Gouverneur K. Warren, Gen. Andrew A. Humphreys, and Gen. Winfield S. Hancock until he was captured at Reams's Station, Aug. 25, 1864. He was sent to Libby Prison, but was soon paroled, and after being exchanged rejoined the army early in 1865. His health was impaired by his imprisonment, and he resigned Jan. 12, 1865. He received the brevet of brigadier general of volunteers, March 13, 1865, at the special request of Gen. Hancock. His staff associates spoke of him as "a man who comprehended a position at once and saw the strength and weakness of a line of battle or of the position of the enemy." He taught Latin and Greek in Williston Academy in 1865-'67, whence in 1868 he passed to the place of assistant editor of the Springfield "Republican," serving as chief editorial writer. On the recommendation of David A. Wells, special Commissioner of the Revenue in the United States Treasury Department, he was appointed his deputy Jan. 15, 1869, and was made chief of the Bureau of Statistics, which place he held until his appointment in 1870 to the superintendency of the ninth census, which he held until April 1, 1879. Meanwhile, in November, 1871, he was appointed Commissioner of Indian Affairs in the Department of the Interior, and he held this office until 1873. In 1873 he was called to the chair of Political Economy in Sheffield Scientific School, Yale University, which he held until his election in 1881 to the presidency of the Massachusetts Institute of Technology, in Boston, where he then continued until his death. From May to November, 1876, he was chief of the Bureau of Awards at the Centennial Exposition held in Philadelphia,

and in 1870 he was made superintendent of the tenth census. He adopted new methods of enumeration and secured the power to appoint a force of enumerators, properly supervised, in districts comprehending a certain number of enumeration districts. The census of 1870 was confined to a few topics and the results were given in 4 volumes. The results of the census of 1880 were comprised in 22 volumes and a compendium (in 2 parts). His work at the Institute of Technology was mainly executive, but he gave to it his ceaseless care and thought, and he saw the institute expand until the student roll increased from 302 to 1,198. He gave special courses of lectures at Johns Hopkins University in 1877-'79, and at Harvard University in 1882, 1883, and 1896. Gen. Walker was greatly interested in common-school education, and strongly advocated the introduction of mechanical instruction and practice into the course of study. While a resident of New Haven he was a member of its local school committee (1877-'80) and of the State Board of Education (1878-'81), and on his removal to Boston he became a member of its school committee (1885-'88) and of the State Board of Education (1882-'90). He was chairman of the Massachusetts Topographical Survey Commission in 1884-'90, a member of the Art Commission of Boston in 1890-'97, a member of the Park Commission of Boston in 1890-'96, and a trustee of the Boston Public Library in 1896. In 1878 he represented the United States at the International Monetary Conference in Paris, and in 1889 the French Government made him an officer in the Legion of Honor. He was elected to the National Academy of Sciences in 1878, and was its vice-president in 1890. He was President of the American Statistical Association from 1882 till his death, and President of the American Economic Society from 1885 till 1892. In 1893 he was elected a correspondent of the French Institute, and in 1894 a corresponding member of the British Association for the Advancement of Science. The degree of A. M. was conferred on him in 1863 by Amherst and in 1873 by Yale; that of Ph. D. by Amherst in 1875 and by Halle (Germany) in 1894; and that of LL. D. by Amherst and Yale in 1881, by Harvard in 1883, by Columbia in 1887, by St. Andrews, Scotland, in 1888, by Dublin in 1892, and by Edinburgh in 1896. His writings included contributions to encyclopedias, to reviews, and to proceedings of societies. He compiled "Commerce and Navigation of the United States" (2 vols., Washington, 1868-'69); "Statistical Atlas of the United States" (1874); "Judges' Reports on Awards" (8 vols., Philadelphia, 1878); and was the author of "The Indian Question" (Boston, 1874); "The Wages Question" (1876); "Money" (1878); "Money, Trade, and Industry" (1879); "Land and its Rent" (1883); "Political Economy" (New York, 1883; briefer course, 1884; new ed., 1887); "History of the Second Army Corps" (1886); and "General Hancock," in Great Commanders Series (1894). See the address on "Francis Amasa Walker," together with a "Bibliography of his Writings and Reported Addresses," by Carroll D. Wright, in No. 38 of the "Quarterly Publications of the American Statistical Society" (Boston, 1897).

Warner, James M., soldier, born in Middlebury, Vt., in 1836; died in New York city, March 16, 1897. He was graduated at the United States Military Academy and appointed a brevet 2d lieutenant in the 10th Infantry in 1860; was on duty on the plains till the outbreak of the civil war; was ordered to Washington, and on the organization of the 1st Vermont Heavy Artillery was commissioned its colonel, and served on the defenses of Washington till after the Wilderness campaign. On May

19, 1864, he was seriously wounded, but he rejoined his regiment in time to accompany it to Washington, then menaced by the Confederates under Gen. Early. He was brevetted brigadier general of volunteers in 1864, and in command of a brigade took charge of the line from Fort Stevens to Fort Reno at Tenallytown. Gen. Warner participated in the Shenandoah campaign under Gen. Sheridan, and commanded a brigade at Sailor's Creek and at Appomattox Courthouse. He was brevetted lieutenant colonel and colonel in the regular army. In 1865 he resigned, removed to Albany, N. Y., and became connected with financial and manufacturing concerns. He was postmaster of the city during the administration of President Harrison.

Warner, Samuel Adams, architect, born in Genesee, N. Y., about 1822; died in Brooklyn, Long Island, N. Y., June 22, 1897. He was a son of Cyrus L. Warner, an architect of New York city. Samuel entered his father's office and learned the profession. On the death of Cyrus, in 1851, Samuel succeeded to the business, and in 1862 admitted a younger brother, Benjamin, into partnership, subsequently taking in also his nephew, Charles S. Warner. Samuel remained in active practice till nine months prior to his death, planned and constructed large public buildings in Texas, Louisiana, and South Carolina, and was the architect of the Marble Collegiate Church and many structures in the "dry-goods" district in New York city.

Warren, Willis, preacher, born a slave in Georgia, in 1824; died in Lee County, Ga., in February, 1897. For fifty-five years he was a Baptist preacher. Before the war his owner, Col. Jordan, seeing the great influence he had over his slaves, relieved him from work on the plantation, that he might apply his whole time to preaching. When freed by the emancipation proclamation, he remained at his post, but extended his work till he united the negroes in three surrounding counties into an association, of which he was the head. He exercised a personal supervision over his large field, ordained preachers, made every member pay him a *per capita* tax annually, and built four of the largest churches in that part of the State, which gathered a membership of nearly 6,000. He also practiced medicine among his people.

Wheatcroft, Nelson, actor, born in London, England, Feb. 13, 1852; died in New York city, March 3, 1897. He made his first appearance in Swansea, Wales, and secured his first regular engagement there in 1873, playing the part of John Casper Lavater in "Not a Bad Judge." Subsequently he appeared at the Theater Royal, in Bristol; made a provincial tour with Sarah Thorne, playing in "The Woman in Red" and "Lady Audley's Secret"; took the part of Rashleigh Osbaldistone in "Rob Roy," at Sadler's Wells Theater, with Kate and Virginia Bateman; and made a tour of the principal South American cities. In August, 1884, he made his first appearance in New York city, at the Park Theater, in "The Corsican Brothers & Co., Limited." For three seasons he played in several cities in "The Duke's Motto," "The Ticket-of-Leave Man," "The Dead Heart," and Bartley Campbell's "Separation." In 1886 he was engaged by Daniel Frohman for the stock company of the Lyceum Theater, New York, and among his parts were Matthew Culver in "The Wife"; Gaston de Verneuil in "The Marquise"; Richard van Buren in "The Charity Ball"; Sir John Harding in "The Idler"; and Tom Coke in "Old Heads and Young Young Hearts." He starred for a time in 1891 in his own play, "Gwynn's Oath"; then joined Augustus Pitou's company, appearing in the chief parts in "A Modern Match" and "Geoffrey Middleton, Gentleman"; and on the opening of the

Empire Theater, New York, played as Martin Parlow in "The Girl I left behind me." He thereafter applied himself to the direction of the Empire Dramatic School, which he founded.

White, Sarepta C., missionary, born in 1810; died in San Francisco, Cal., Dec. 9, 1897. She married Dr. Elijah White, a physician of the Methodist Board of Missions and the first Indian agent appointed for the Pacific coast, and went with him to Oregon in 1815. On their way they spent some time in Honolulu, where Mrs. White taught in one of the first schools established there. For about five years the Whites were stationed near Salem, Ore., and during this period Mrs. White organized and conducted a school of 100 Indian girls and boys, and also practiced medicine, after studying with her husband. On one occasion she traveled several hundred miles in a canoe down the Willamette river and up the Columbia, to attend the wife of Dr. Marcus Whitman, and on her return her canoe was upset and her baby was drowned. In 1842 she returned to New York and completed her medical studies, and from 1852 till 1882 she practiced in San Francisco.

Whiting, Henry L., topographical engineer, born about 1812; died in West Tisbury, Mass., Feb. 4, 1897. In 1844 Prof. Whiting, Prof. Shaler, of Harvard, and Gen. Francis A. Walker were appointed Massachusetts topographical survey commissioners, and they worked together till 1892, when Gen. Walker resigned and Desmond Fitzgerald succeeded him. Prof. Whiting was chairman of the commission from its organization till his death.

Wight, Charles Copeland, educator, born in Richmond, Va., in September, 1841; died in Baltimore, Md., June 25, 1897. He was graduated at the Virginia Military Institute just as the civil war broke out, and served on the staff of Gen. Jackson through the valley campaign. After the war he became a teacher in Baltimore. At the time of his death he was Professor of English History in Baltimore City College.

Willard, Joseph, hotel keeper, born in Vermont in 1817; died in Washington, D. C., Jan. 17, 1897. With his brothers Cabet and Henry he went to Washington about fifty years ago, and found employment in the old Metropolitan Hotel. A few years later Joseph and Cabet established a small boarding house on the site of their future hotel. As their business increased they acquired one building after another, and about 1860 the small buildings gave way to the structure known as Willard's Hotel. The opening of the enlarged hotel was deemed a matter of such local importance that a number of the most eminent public men in Washington accepted invitations to make speeches. Joseph and Henry had equal shares in the property till a few years ago, when Joseph became sole owner.

Williams, Charlotte Louisa, educator, born in Morristown, N. J., in 1842; died in New York city, Oct. 9, 1897. She married the Rev. W. W. Williams, of Philadelphia, was superintendent of the New York Infirmary for ten years; and, on the organization of the Teachers' College of New York city, was elected its principal by a unanimous vote. She held the last office till her death, and brought the college to a high degree of excellence.

Williams, Nelson Grosvenor, soldier, born in Bainbridge, N. Y., May 4, 1823; died in Brooklyn, N. Y., Dec. 1, 1897. He entered the United States Military Academy in 1839, in the same class with Ulysses S. Grant, but withdrew at the end of his first year. In 1861 he was commissioned colonel of the 3d Iowa Volunteer Infantry, with which he served in Missouri till March, 1862. At the battle of Shiloh he commanded the 1st brigade, 4th division, Army of the Tennessee. Here he was injured

by the fall of his horse when it was shot. For his gallantry in this battle Gen. Hurlbut commended him to the favor of the commander in chief and the Government. Before he fully recovered from his temporary paralysis he rejoined his regiment and took part in the siege of Corinth. He was promoted brigadier general, Nov. 29, 1862, but was obliged by his injuries to resign soon afterward. Since 1869 he had been in the customhouse service in New York city, and nearly all the time in charge of one of the public stores. Gen. Williams was an artist of high merit, particularly in water colors.

Willis, Albert Sydney, diplomatist, born near Shelbyville, Ky., Jan. 22, 1843; died in Honolulu, Hawaii, Jan. 6, 1897. He was graduated at the Louisville High School in 1860, and at the Louisville Law School in 1866. In 1870 and 1874 he was elected attorney for Jefferson County, and in 1876-'87 was representative in Congress from the Louisville district. He was defeated for re-election in 1886, after a fierce political struggle, precipitated by the reappointment of Mrs. W. R. Thompson as postmistress of Louisville, which had been recommended by Mr. Willis. In September, 1893, he was appointed United States minister to Hawaii, succeeding Commissioner Blount. He was conveyed to his post on a naval vessel, and was received by President Dole. In accordance with his instructions, he called on the dethroned queen and inquired whether, in the event of her restoration, she would grant full amnesty as to life and property to all who had been or who were then in the Provisional Government, or who had been instrumental in the overthrow of her Government. After a slight hesitation, Lilioukalani replied: "My decision would be as the law directs, that such persons should be beheaded and their property confiscated to the Government." Minister Willis communicated the reply to the President, and he disposed of the matter by referring it to Congress (see "Annual Cyclopædia" for 1894, article HAWAII). During his residence in Honolulu, Minister Willis's social surroundings were far from pleasant. He died at his post after an illness of several months.

Wilson, Grenville D., composer, born in Plymouth, Conn., Jan. 26, 1833; died in South Nyack, N. Y., Sept. 20, 1897. After teaching music in Boston he became instructor in that department in Temple Grove Seminary, Saratoga Springs, N. Y. He taught Mlle. Albani in Saratoga, and while there was associated with Louis M. Gottschalk. When Dr. Leopold Damrosch was organizing the great May Music Festival that was given in the 7th Regiment armory Prof. Wilson trained 70 voices for him. He organized the Nyack Choral Society in 1879, and conducted it till his death. He composed about 300 pieces of music, of which the best known is "The Shepherd Boy."

Winans, William Lewis, capitalist, born in Baltimore, Md., in 1822; died in London, England, June 25, 1897. He was the youngest of the two sons of Ross Winans, inventor, engineer, and locomotive builder. On reaching their majority the brothers were associated in business with their father, who had established in Baltimore the largest railroad machine shops in the country. In 1842 the head of the firm was solicited to go to Russia and equip a projected railroad between St. Petersburg and Moscow. Declining to make the journey himself, he sent his two sons, and in 1843 they signed the first contract with the Russian Government for \$3,000,000. The railroad was constructed and thoroughly equipped, and this work brought to the firm other advantageous contracts by which a great fortune was accumulated. Thomas De Kay Winans returned to the United States; but, William, from an uncontrollable horror of crossing the ocean, estab-

lished himself permanently in England. He maintained several costly establishments there and in Scotland; was passionately fond of music, sporting, and building models of steam vessels after original designs; and left an estate of \$12,000,000.

Winsor, Justin, historian, born in Boston, Mass., Jan. 2, 1831; died in Cambridge, Mass., Oct. 22, 1897. He was educated at Harvard and Heidelberg Universities, was superintendent of the Boston Public Library in 1868-'77, and from 1877 till his death was librarian of Harvard University. He was the author of many reforms in indexing and cataloguing. He was a founder of the American Library Association, and its president in 1876-'80, and again from June 25, 1897, till his death. In

July, 1897, he attended the International Convention of Librarians in London, England. After spending three months in restful sojournings, he returned home in October, but contracted a fatal cold on the voyage. He received the degree of LL. D. from the University of Michigan in 1886, and from Williams College in 1893. In connection with his library work Dr. Winsor

gave much attention to historical research, and published a large number of noteworthy volumes. He was an ex-president of the American Historical Association and vice-president and corresponding secretary of the Massachusetts Historical Society. His publications include "History of Duxbury, Massachusetts" (Boston, 1849); "Bibliography of the Original Quartos and Folios of Shakespeare, with Particular Reference to Copies in America" (1876); "Reader's Handbook of the American Revolution, 1761-'83" (1880); "Arnold's Expedition against Quebec, 1775-1776" (1886); "The Manuscript Sources of American History" (New York, 1887); "Notes on the Spurious Letters of Montcalm" (Cambridge, 1887); "Christopher Columbus" (1891); "The Mississippi Basin: The Struggle in America between England and France" (1895); "and 'The Westward Movement: The Struggle for the Trans-Allegheny Region, 1763-1797'" (1898). He also edited the "Memorial History of Boston" (4 vols., Boston, 1880-'81); "Narrative and Critical History of America" (8 vols., 1883-'89); "Harvard University Bulletin" (since 1877); "Library of Harvard University: Bibliographical Contributions" (since 1877), to which he also contributed important papers; and the "Record of the 250th Anniversary of the Founding of Harvard College" (1887).

Wiswell, Rebecca, philanthropist, born in Provincetown, Mass., in 1806; died in Plymouth, Mass., Oct. 29, 1897. When eighteen years old she became a nurse, and she followed that vocation throughout her active life. For many years she was closely identified with the work of Rev. Phineas Stowe, of the Boston Baptist Bethel. Early in the civil war she prepared and sent daily to the Statehouse in Boston packages of lint. Dorothea L. Dix summoned her to Washington in March, 1862, and for two years she was on duty at the Seminary Hospital. Afterward she ministered to the sick and wounded in the Shenandoah valley, and was then transferred to Fort Monroe, where she served till the close of the war. Miss Wiswell, known in the army as "Aunt Rebecca," was a member of the Collingwood Woman's Relief Corps; was a familiar figure at all the Grand Army celebrations in Bos-

ton; and received marked attention at the national encampment in Washington in 1887.

Wood, De Volson, engineer, born in Saratoga, N. Y., June 1, 1832; died in Haledon, N. J., June 27, 1897. He was graduated at the Albany Normal School in 1853, and at the Rensselaer Polytechnic Institute as a civil engineer in 1857, having been a tutor and professor in the normal school and first principal of the Napamoch (N. Y.) school of the meantime. In 1857-'72 he was assistant and then Professor of Civil Engineering at the University of Michigan; in 1872 became Professor of Mathematics and Mechanics in Stevens Institute of Technology, Hoboken; and since 1885 had been Professor of Engineering there. He received the degree of A. M. from Hamilton College and M. Sc. from the University of Michigan, both in 1859. He invented an ore dock, a rock drill, an air compressor, and several pumps, and was an expert on the subjects of water wheels and hydraulics. He published "Treatise on the Resistance of Materials" (New York, 1871); "A Treatise on the Theory of the Construction of Bridges and Roads" (1872); "The Elements of Analytical Mechanics" (1876); "Principles of Elementary Mechanics" (1878); "The Elements of Co-ordinate Geometry" (1879); "The Mechanics of Fluids" (1884); "Trigonometry, Analytical, Plane, and Spherical" (1885); and "Thermodynamics" (1887).

Woods, Samuel, jurist, born in Quebec, Canada, in 1822; died in Philadelphia, Pa., Feb. 17, 1897. In his infancy his family removed to Meadville, Pa. He was graduated at Allegheny College in 1842, and settled in Morgantown, now in West Virginia, to practice law. In 1861 he was a member of the Virginia convention that passed the ordinance of secession; in 1872 was a delegate to the West Virginia Constitutional Convention; and in 1880-'90 was judge of the Court of Appeals of his State.

Worden, John Lorimer, naval officer, born in Sing Sing, N. Y., March 12, 1818; died in Washington, D. C., Oct. 18, 1897. He was appointed a midshipman in the navy, Jan. 10, 1834; was promoted passed midshipman, July 16, 1840; lieutenant, Nov. 30, 1846; commander, July 16, 1862; captain, Feb. 3, 1863; commodore, May 27, 1868; and rear admiral, Nov. 20, 1872; and was retired at his own request and by special act of Congress with full sea pay, Dec. 23, 1886. He was on sea duty twenty-one years and three months, and on shore or other duty twenty-four years and eight months. His early service comprised duty in connection

with the Brazilian, Mediterranean, Pacific, and home squadrons, and at the Naval Observatory at Washington in 1844-'46 and 1855-'56. On April 6, 1861, he reported at Washington under orders for special service, and the next morning left for Pensacola, Fla., with orders for the commanding officer of the squadron there to reinforce Fort Pickens. He set out on his return the same day, but was arrested near Montgomery, Ala., and detained as a prisoner of war till Nov. 4, and, after several transfers, was exchanged on the 18th. From Nov. 29, 1861, till Jan. 16, 1862, he was on duty at the naval rendezvous at New York. On the last day he was ordered to the command of the first ironclad vessel, the

"Monitor," built for the navy under the plans and superintendence of John Ericsson. He hastily left New York on the vessel for an experimental trip, though provided with ammunition and shot as a precaution against a possible encounter. After a dangerous voyage in the novel craft he reached Hampton Roads in good shape on March 8, the day the Confederate ironclad ram "Merrimac" had come down from Norfolk and destroyed the wooden frigates "Congress" and "Cumberland." Lieut. Worden, seeing the helplessness of the wooden vessels, anchored his craft near the "Minnesota," which, in endeavoring to escape from the "Merrimac," had grounded on a shoal, and awaited the events of the morrow. Early in the morning the "Merrimac" reappeared, and headed for the "Minnesota." When she was within a mile of her intended victim, the "Monitor" suddenly steamed out. The "Merrimac" poured a broadside of shot upon "the cheese box on a raft," but every shot that struck her turret glanced off without injury. While manœuvring to get as close as possible to the "Merrimac," the "Monitor" fired deliberately about once in seven minutes, and every shot struck her antagonist. After the fight had thus lasted about two hours the "Merrimac" attempted to ram the "Monitor"; but Lieut. Worden handled his craft so skillfully that the blow glanced off harmlessly. At 11:30 A. M. the "Monitor's" commander was blinded by bits of cement thrown into his eyes when a shot struck the pilot-house as he was looking through the conning slit, and was obliged to relinquish the command to Lieut. Samuel D. Greene, who continued the fight till the "Merrimac" withdrew to Norfolk. This battle was a victory for the "Monitor," in that she completely frustrated the plans of the Confederate commander. It also revolutionized the navies of the world. For this action Lieut. Worden received the thanks of the Navy Department and of Congress, and, almost immediately after his arrival in Washington, the personal congratulations of President Lincoln. As soon as he was able to return to duty he was appointed assistant to Admiral Gregory in superintending the construction of ironclads. He commanded the ironclad "Montauk" from Oct. 8, 1862, till April 16, 1863, and with her attacked Fort McAllister, on the Ogeechee river, and destroyed the Confederate privateer "Nashville" under the guns of that fort. Subsequently he took part in the attack on the defenses of Charleston by the ironclad fleet under Admiral Dupont. In 1870-74 he was superintendent of the United States Naval Academy, and in 1875-77 commander in chief of the European squadron. After his retirement he had lived in Washington.

Wormley, Theodore George, chemist, born in Wormleysburg, Pa., April 1, 1826; died in Philadelphia, Pa., Jan. 3, 1897. He studied at Dickinson College; was graduated at the Philadelphia Medical College in 1849; and was Professor of Chemistry and Natural Sciences at Capitol University, Columbus, Ohio, in 1852-65, and of Chemistry and Toxicology at Starling Medical College in 1854-77. From the last year till his death he was Professor of Chemistry and Toxicology in the medical department of the University of Pennsylvania. While in Ohio he served for several years as State gas commissioner and as chemist to the State Geological Survey. In 1876 he was appointed a member of the Centennial Medical Commission. He received the degrees of Ph. D. and LL. D. from Dickinson and Marietta Colleges in 1870. Dr. Wormley published "Methods of Analysis of Coals, Iron Ores, Furnace Slags, Fire Clays, Limestones, and of Soils" (1870) and "The Micro-Chemistry of Poisons" (1867); edited the "Ohio Medical and

Surgical Journal" in 1862-64; and contributed reports to the "Geological Survey of Ohio" (1871) and a series of articles on "Chemical Reactions" to the London "Chemical News" in 1859-63.

Worthen, William Ezra, civil engineer, born in Amesbury, Mass., March 14, 1819; died in New York city, April 2, 1897. He was graduated at Harvard College in 1838, began the practice of civil engineering at once, and for ten years was engaged in surveys and investigations relating to the water supply of Boston and in other hydraulic work. He designed and constructed the Suffolk, Tremont, Lawrence, Appleton, and Hamilton Mills in Lowell; visited Europe in 1849; and on his return established himself in New York city, where he also engaged in architectural work and became engineer and Vice-President of the New York and New Haven Railroad. After 1854 he was employed extensively as a practicing and consulting engineer. He planned and built heavy masonry dams across rivers for the establishment of water powers; designed and erected the first pumping engine at High Bridge, New York city; was sanitary engineer of the Metropolitan Board of Health of that city in 1866-69, and chief engineer of the first rapid-transit commission there; and was chief engineer of the Chicago main drainage channel in 1890-91. His services as an expert were in frequent demand for planning, constructing, or improving water and sewer systems. Mr. Worthen was President of the American Society of Civil Engineers in 1887. Besides a large number of technical reports he published a "Cyclopadia of Drawing" (New York, 1857); "First Lessons in Mechanics" (1862); and "Rudimentary Drawing for Schools" (1863).

OBITUARIES, FOREIGN. Alcock, Sir Ruth-
erford, a British diplomatist, born in 1809; died in London, Nov. 2, 1897. He was the son of a noted physician, and was himself educated for the medical profession, and as an army surgeon served through the Carlist war in Spain and won medals and decorations for his services at San Sebastian and the taking of Irun. After the war was ended, in 1837, he was a member of various mixed commissions that settled the claims of the British auxiliary forces. In 1844 he was appointed British consul at the newly opened port of Fuchow, and two years later was transferred to Shanghai, where he was instrumental in founding the municipal government. In time he was transferred to Canton, and after completing his term of office there he was appointed in 1858 consul general to Japan, and a year later elevated to the post of minister, one of action and of danger during the early stages of European intercourse, when the truculent and formidable anti-foreign element constantly threatened him with violence and assassination. In 1861 an armed band of ronins stormed the British legation in the middle of the night, killing or wounding many of the inmates. In the following year the guard of the Prince of Satsuma killed the Englishman Richardson, who was riding with ladies in the park. For this the English Government exacted an indemnity of £100,000 from the Government of the Tycoon. An additional payment of £25,000 and an apology were demanded from the Prince of Satsuma, and when a year passed without satisfaction being rendered the minister had the English fleet bombard the town of Kagoshima until the prince made his submission. Though criticised by many for his retaliatory policy, Mr. Alcock received the honor of knighthood for his action. For the international exhibition of 1862 he got together a fair representative collection of Japanese art and products after all assistance had been refused by individual Japanese and by the Government of Japan, which five years later sent over to the Paris Exposition a large exhibit in

charge of its own commissioners. In 1864 further trouble arose with the Japanese Government, which only acceded to the demand of the British minister for freedom of commerce and intercourse after a combined fleet had attacked and destroyed the batteries at Shimonoseki. In 1865 this energetic diplomatist was transferred to Peking, and at once began negotiations for a revision of the treaty of Tientsin, which resulted in the convention of Peking providing that inland transit dues may be commuted by paying an additional 24-per-cent. duty with the 5-per-cent. import duty. Sir Rutherford Alcock supported the mission of Mr. Burlingame as the first diplomatic representative of the Chinese Government in Europe at its inception, but later he did his best to render the mission abortive. He retired in 1871. He was a British commissioner at the Paris Exposition of 1878, was a member in 1881 of a commission that inquired into the condition of the London hospitals in regard to arresting the spread of infectious diseases, and from 1876 was President of the Royal Geographical Society. Sir Rutherford Alcock was one of the earliest connoisseurs who communicated a knowledge and appreciation of Japanese art to Europeans. He was the author of "The Capital of the Tycoon," "Elements of Japanese Grammar" (1861), and "Art and Industries of Japan" (1878).

Alfieri di Sostegno, Marchese Alberto, an Italian politician, born in 1827; died in Florence, Dec. 18, 1897. His father, Cesare Alfieri, was a leader of Italian Liberalism and one of the founders of the kingdom of Italy. The son, who after his father's death became head of an historic family, was elected a Piedmontese Deputy in 1857, and, except for an interval in 1865, sat continuously in the Italian Chamber till 1870, when he was nominated a Senator of the united kingdom of Italy. He was a moderate Liberal, belonging to the school that advocated a free church in a free state. Disappointed by the continual antagonism between the civil and religious authorities, and hostile to the policy of the triple alliance, he bore but a minor part in recent Italian politics, but wrote on political subjects and on education, and in 1871 founded a school of political and social science in Florence. "L'Italia Liberale" (1872) is an exposition of his political opinions.

Alula, Ras, an Abyssinian general, born in 1845; died in February, 1897. He was of humble origin, and by his courage and military talents raised himself from a private soldier in the service of the Prince of Tigre to be the latter's most valued lieutenant. It was chiefly through Alula's ability that the prince won the throne of Ethiopia, and after he was crowned as the Negus Johannes he left Ras Alula in chief command on the northern frontier, appointing him generalissimo of the national forces and governor of the royal province of Tigre. Transferring his residence to Asmara after the surrender of Bogos to Abyssinia, he became a vigilant observer of the plans of the Italians, and after his success at Dogali their pronounced and relentless enemy. The Negus Menelek retained him in the same posts, and valued his services as highly as did his former king. Alula was strong, handsome, fearless, of imperious disposition, terrible in his wrath, mercilessly cruel, but of simple and abstemious habits, and deeply attached to his only wife.

Asnyk, Adam, a Polish poet, born in Kalisch in 1838; died in Cracow, Aug. 2, 1897. He was educated in the universities of Warsaw, Breslau, and Heidelberg, and began to publish lyrics in a literary journal of Lemberg in 1864. From 1870 he made Cracow his home. His collected poems reached the third edition in 1880. His poetical style is remarkable for nobility and beauty and its occasional pi-

quant touches of irony. While ranking as the greatest of contemporary Polish lyric poets, he wrote also three dramas of high quality: "The Jew," "Cola Rienzi" (1874), and a tragedy derived from Lithuanian history entitled "Kajstut" (1878).

Aumale, Henri Eugène Philippe Louis, Duc d', a French prince of the ex-reigning family of Bourbon-Orléans, born in Paris, Jan. 16, 1822; died in Zucco, Sicily, May 6, 1897. He was the fourth son of Louis Philippe of Orléans, who became King of the French, and Amélie, Princess of Bourbon-Sicily, and was educated with his brothers at the college of Henri IV, where he specially distinguished himself in his studies. When his father became King in 1830, after the expulsion of Charles X, the young princes were prepared for a military life. The Duc d'Aumale entered the army in 1839 as a captain in a line regiment, and in the following year he went to Algeria as aid-de-camp to his brother, the Duc d'Orléans. He gained distinction in the campaign, and was made a lieutenant colonel in the same year, but was attacked with fever and recalled to France in 1841. The triumphal honors that were paid to the youthful soldier excited the envy of a Democratic revolutionist named Quénisset, who aimed a bullet at the prince riding into Paris at the head of his troop. In 1842 the Duc d'Aumale returned to Algeria, and as commander of the subdivision of Medeah he conducted one of the most brilliant campaigns of the war, capturing the camp and treasure of Abd-el-Kader and taking 3,600 prisoners. For this service he was made a lieutenant general, and was appointed to the command of the province of Constantine. In 1844 he distinguished himself once more by conducting the operations against Biskarah. On Nov. 25 of that year he married a princess of the Two Sicilies, and daughter of Prince Leopold of Salerno, his cousin Caroline, who died on Dec. 6, 1869. In 1847 the duke succeeded Marshal Brigueaud as Governor General of Algeria. The revolution of 1848 compelled him to resign his post to Gen. Cavaignac. He joined his exiled brothers in England, and during the time of his banishment devoted himself to literary studies and writing at Claremont and Twickenham, having from his estates in Sicily and other property an ample income independent of the great estate of Chantilly, valued at 35,000,000 francs, which was confiscated by the Emperor Louis Napoleon in 1853. He published two articles in the "Revue des Deux Mondes" under an assumed name in 1855. In 1861 he issued a pamphlet addressed to Prince Jérôme Bonaparte, for which the publisher and printer were prosecuted and condemned to fine and imprisonment. This led the author to challenge Prince Napoleon to a duel, and the refusal of the Bonapartist prince to meet him excited much indignation in France, and fastened a stigma on Prince Napoleon that he could not outlive. The Duc d'Aumale presided at the dinner for the Literary fund in London in 1862, where he made a speech that attracted attention. In 1863 he began the publication in Paris of his "Histoire des Princes de Condé," but the police seized the copies before the publication was completed, giving ground later for a lawsuit. On the outbreak of the war between France and Germany the Duc d'Aumale formally offered his sword to France, and Napoleon refused to accept his services. He returned to France, in spite of the objections of Thiers, as soon as the third republic succeeded the empire, having in February, 1871, been elected to the Assembly by the Department of the Oise. In his address to the constituency he declared his predilection for a liberal monarchy, at the same time expressing his willingness to conform to liberal republican institutions if the nation adopted them deliberately.

When the law banishing the Orleans princes was at last repealed he returned to France on June 8, 1871, and on Dec. 19 he took his seat in the National Assembly. Two weeks later he was elected a member of the French Academy to succeed Montalembert. He was made a general of division in the army of France on March 10, 1873, and acted as president of the military tribunal before which Marshal Bazaine was arraigned. As the most illustrious of the Orleansist princes he was considered by many as a candidate for the throne preferable to his nephew, the Comte de Paris. When the latter acknowledged the prior claims of the Comte de Chambord, and recognized the latter as the legitimate head of the house of Bourbon, he did so with the assent of the Duc d'Aumale. The greater part of his confiscated property, including Chantilly, was restored to the duke in 1872. He declined to be a candidate for the Assembly in February, 1876, in order that he might give his undivided attention to his military command. In 1883 he and his nephews the Duc de Chartres and the Duc d'Alençon were retired from active service in accordance with the act carried through by Gen. Thibaudin, then Minister of War, removing from command members of families that had once reigned in France. In 1886 Gen. Boulanger struck his name from the army list, an act against which he addressed a forcible and touching appeal to President Grévy. In consequence of this letter the Cabinet pronounced a decree of banishment, and the duke retired to Brussels. He retorted by making a free gift to the Institute of France of Chantilly, with its woods, meadows, ornamental waters, buildings, and the trophies, historical relics, and treasures of art contained in them, to be preserved forever by that learned body as a complete and varied monument of French art in all its branches. This gift to the nation he intended to make on his death, and he reserved the right to use the place as a residence while he remained alive. The Institute of France accepted the trust amid popular enthusiasm, and petitioned the Government to revoke the decree of banishment, which was finally done after the downfall and flight of Boulanger. Of the Duc d'Aumale's two sons, Louis Philippe, Prince de Conde, died of typhoid fever in Australia in 1865, at the age of twenty, and François, Duc de Guise, died in 1872.

Ayres, Sir Henry, an Australian statesman, born in England in 1821; died in Adelaide, June 11, 1897. Emigrating to South Australia in 1840, he studied and practiced law, became secretary of the Burra Burra mines in 1845, was elected a member of the Legislative Council in 1857, and for thirty-six years represented Adelaide in the South Australian Parliament. For twelve years he was president of the Legislative Council after having held a Cabinet office several times. He was eleven times a member of the Cabinet and seven times Premier. He was knighted in 1872.

Banks, Mrs. Isabella (Varley), an English novelist, born in Manchester, March 25, 1821; died in London, May 5, 1897. When but eighteen years old she became the head of a long-established school in Manchester for young ladies, which she managed successfully several years. On Dec. 27, 1846, she was married to Mr. George Lunnans Banks, a Manchester journalist and poet, to whom she was of great assistance in his literary work. A daughter of Mr. and Mrs. Banks became the wife of William Black, the well-known novelist. Mrs. Banks's first book was entitled "Ivy Leaves: A Collection of Poems" (1844), and her second one, issued soon after her marriage, was a "Lace-Knitter's Guide," which after a number of years was followed by "Light Work for Leisure Hours." Her fame as a novelist

was established by the appearance of "God's Providence House" in 1865. It was her first effort in fiction, and still continues popular. Her subsequent works include "Daisies in the Grass: Songs and Poems," with her husband (London, 1865); "Stung to the Quick: A North Country Story" (London, 1867); "The Manchester Man" (1872); "Glory: A Wiltshire Story" (London, 1877); "Caleb Booth's Clerk," a Lancashire novel (London, 1878); "Ripples and Breakers," a book of verse (London, 1878); "Woovers and Winners," a Yorkshire story (London, 1880); "More than Coronets" (Manchester, 1881); "Through the Night: Tales of Shades" (Manchester, 1882); "Forbidden to Wed" (London, 1883); "The Watchmaker's Daughter and Other Tales" (1883); "Sybilla and Other Tales" (1884); "In his Own Hand" (London, 1885); "Geoffrey Ollivant's Folly" (1886). A number of songs by Mr. and Mrs. Banks were set to music and were widely popular.

Bardoux, A., a French statesman, born in Bouges in 1829; died in Paris, Nov. 23, 1897. He was the son of the tax collector of Bouges, and studied and practiced law at Clermont, where he defended a Republican editor who was prosecuted by the Government of Napoleon III. After the fall of the empire he was elected mayor of the commune, and in 1871 was elected at the head of the poll a Deputy for the Puy de Dôme. In the National Assembly he distinguished himself in debate and took a prominent part in committee and in the meetings of the Left Center. He was appointed undersecretary of the Ministry of Justice in 1875, but resigned when the Government pronounced against the *scrutin de liste*. He was returned for Clermont in 1876, voted against all Radical motions for the abolition of the concordat, took a leading part in the crisis of 1877, and when the Broglie Cabinet resigned he was appointed Minister of Education in the Cabinet formed by M. Dufaure on Dec. 14, 1876. Being left out of the succeeding ministry, formed by M. Waddington, he continued to advocate *scrutin de liste* with Gambetta. He was defeated in the elections of 1881, and in the following year was made a life Senator. In the Senate he spoke often on educational questions. He was the author of several historical works, and in 1890 was elected a member of the Academy of Moral Sciences.

Barnato, Barney I., an English speculator, born in London in 1852; committed suicide at sea, June 14, 1897. He was the son of Jewish parents named Isaacs, which name he changed to Barnato. When twenty-three years old he was at Cape Town when the diamond fields began to attract adventurers. He went to Kimberley with a traveling circus as odd man, and for some time played the clown. Being left penniless here, he became a diamond peddler and afterward a small jobber in shares. Three years later he was buying mines, and by 1878 he had become owner of four valuable claims, which he sold to a company in 1881. Barnato's most important transaction about this time was the sale of the Kimberley mine, of which he was chief proprietor, for \$27,500,000. At one time he was the principal rival of Cecil Rhodes in South Africa, but the consolidation of the De Beers Company and the Kimberley mine terminated the rivalry. Barnato next turned his attention to the Rand. He promoted the Primrose, Glencairn, New Cræsus, and Rodepot companies, and became interested in the Johannesburg Stock Exchange, Johannesburg Water Company, and other concerns. So great was the confidence inspired by his industry that in one day \$5,500,000 were subscribed for shares in one of his enterprises. His success as a speculator led him to London. Although his reputation as a daring operator had preceded him, he was looked on with

suspicion by the leading stock brokers of that city, and never obtained their confidence. But a part of the press was with him, and, consequently, for a short time he received some public support. He reached the height of his popularity in July, 1865, and for a while he was lionized, but his career was meteorlike. Having little experience of the London market, he soon lost heavily. One of his disastrous mistakes was the formation of a trust company, which held a few good securities and a large number of uncertain ones, under the name of the Barnato Banking Company. So great was the demand for participation in this enterprise that the one-pound shares rose to four pounds at the opening of the subscription lists, only to fall below par soon afterward. In November, 1895, the Lord Mayor of London gave a banquet in honor of Barnato, in return for which the latter, to be under no obligation, handed the mayor a check for \$50,000, said to be a donation to the fund for the benefit of the poor in Spitalfields, with which the mayor was intimately connected. In 1888 Barnato had been returned to the Legislative Assembly of Cape Colony as member for Kimberley after a fierce contest, and he was re-elected in 1894, although he had been burned in effigy a short time before. Complications arising out of Dr. Jameson's raid into the Transvaal, necessitated Barnato's return to South Africa, and here he remained some time adjusting his affairs. But the pressure of his daring transactions broke down his health and shattered his nerves. Hoping to relieve the strain by a sea voyage, he set sail for England in the care of two nurses and accompanied by his wife, but he grew no better. In a fit of despondency, during which he eluded his attendants, he jumped overboard and was drowned. Although he was at one time reputed to have \$85,000,000, it is doubtful if, even had the shares he held in his own companies maintained their value, he ever had more than \$35,000,000. The value of his estate at the time of his death has been given as \$3,000,000.

Barry, Charles Robert, an Irish jurist, born in Limerick in 1824; died in Dublin, May 15, 1897. He was educated at Trinity College, Dublin, was called to the Irish bar in 1848, and became known as a sound and shrewd lawyer, especially in criminal practice, and an effective advocate. He became a Queen's counsel in 1859, was soon afterward appointed Crown prosecutor, and in 1865 was made law adviser at Dublin Castle. His method of prosecuting the Fenian prisoner James Stephens and his companions, charging them with the intention of killing the Roman Catholic clergy who were opposed to them, rendered him an object of popular odium. Consequently he lost in 1868 his seat in Parliament, where he had represented the borough of Dungarvan since 1865. His professional and political services, however, were recognized by his appointment to the office of Solicitor-General. He was made Attorney-General when that office became vacant, and in that capacity framed the Irish land act of 1870. In 1872 he was appointed a justice of the Queen's bench, and in 1883 was elevated to the Court of Appeal. He served on the commission for the revision of the commercial law.

Bent, James Theodore, an English traveler, born in Liverpool, March 30, 1832; died in London, May 6, 1897. He was graduated at Oxford in 1853, and at one time superintended excavations in Greece in behalf of the British Museum and the Hellenic Society. His writings include "A Freak of Freedom, or The Republic of San Marino" (London, 1879); "Genoa: How the Republic Rose and Fell" (1880); "Life of Giuseppe Garibaldi" (1881); "The Cyclades, or Life among the Insular Greeks" (1885).

Berardi, Léon, a Belgian journalist, born in Marseilles, Nov. 22, 1818; died in Brussels, April 20, 1897. He went to Paris at an early age and mingled in the literary and political controversies of the first years of the reign of Louis Philippe. His reputation as a political writer led to his selection in 1846 to be M. Perrot's assistant in the editorship of the "Independence Belge." After ten years he became editor in chief, and he soon transformed that journal, while preserving its character as the organ of the Belgian Liberals, into an international repository of intelligence and a universal exponent of Liberal ideas and of views transmitted from countries outside of the centers of European thought and activity.

Berti, Domenico, an Italian statesman, born in Cumiana in 1820; died in Rome in April, 1897. He was born in poor circumstances, pursued his studies amid difficulties, and became professor in the normal school at Novara. He began to write political letters for a Liberal journal in 1846, when all Italy was stirred with the national idea, and at the age of thirty he was elected to the Chamber from Savigliano. In the year following he was chosen Professor of Philosophy in the University of Turin, retaining the chair ten years. During his professorship he contributed to the history of Italian philosophy a "History of Philosophy in Italy from the Time of St. Thomas," "Pica da la Mirandola," and "Giordano Bruno: His Life and Works." He also edited a collection of Cavour's unpublished letters and produced studies on Gioberti, Cesare and Vittorio Alfieri, and King Carlo Alberto. He was Minister of Public Instruction in 1866 and several times thereafter, and Minister of Agriculture, Industry, and Commerce in the Cabinet of Cairoli, and again in that of Depretis, and in this capacity he proposed solutions for some of the questions arising out of the relations between capital and labor, which included employers' liability and a system of insurance against accidents. In 1871 this champion of union was called to the professorship of the History of Philosophy in the university of the new capital, and this chair he filled till 1877. After sickness had compelled him to resign his mandate of Deputy he was nominated a Senator in 1895.

Bianchi, Angelo, an Italian prelate, born in Rome, Nov. 19, 1817; died there, Jan. 22, 1897. He was created a cardinal Sept. 25, 1882, and was consecrated Bishop of Palestrina on May 24, 1889. He was prolatary to the Pope.

Blondin, Jean François Gravelet, a French acrobat, born in St.-Ouen in 1824; died in London, Feb. 22, 1897. He was trained as a performer on the tight rope from childhood, and was the most noted one in France when he joined, in 1851, the Ravel troupe, which for eight years exhibited in the principal cities of the United States. Conceiving the plan of walking across the chasm of Niagara on a rope, he took up his abode there to study the conditions, stretched a hempen rope 1,300 feet long just below the falls, 175 feet above the torrent, and on June 30, 1859, performed the feat in the presence of 30,000 spectators. He repeated the performance blindfolded, and again with a man on his back, and at the Crystal Palace in London trundled a wheelbarrow, with his baby daughter in it, over a rope 200 feet long.

Borda, Juan Idiarte, President of Uruguay, died in Montevideo, Aug. 25, 1897. He was stabbed and killed as he was leaving the cathedral after a service in memory of Uruguayan independence, by a member of the Blancos, who had stirred up insurrection in the beginning of the year.

Bourbaki, Charles Denis Sauter, a French general, born in Pau, April 22, 1816; died in Ba-

yonne, Sept. 22, 1897. He was of Greek parentage. After completing his military studies at St.-Cyr he entered the foreign legion in Algiers and won high renown by his gallant conduct in the African expedition, so that his name was already well known in France when he was placed in command of a part of the Algerian troops that were sent to the Crimea and received their first introduction to regular European warfare. The performances of Gen. Bourbaki and his command at Alma, Inkerman, and Sebastopol made him one of the most popular officers of the army and earned his promotion to general of division in 1857. In the Italian war he won fresh successes and glory. When the war against Prussia was declared in July, 1870, Gen. Bourbaki was called to the command of the Imperial Guard forming part of Marshal Bazaine's army. He took part in the actions around Metz, which resulted in the French forces being surrounded and besieged. Before Marshal Bazaine capitulated on Oct. 27, 1870, he sent Gen. Bourbaki on a secret mission to the enemy and, with a safe conduct obtained from the Germans, to the Empress in London. As Bourbaki had taken no part in the councils of war, and had never been mixed up in politics, his connection as an emissary in the negotiations of Bazaine with the enemy and with the Emperor and Empress was regarded as a blunder rather than a disgrace, and it was commonly supposed that Bazaine, who was popularly regarded as a traitor to France through fidelity to the empire, wanted to have this brave and loyal soldier out of the way when he capitulated. After failing in his mysterious mission, Bourbaki offered his services to Gambetta, who was organizing the army of national defense. He was placed at first in command of the Northern Army, and subsequently transferred to the Army of the Loire. His inspiring qualities as a patriotic leader and his brilliant dash as a commander in battle availed nothing against the technical proficiency of the German army and the scientific strategy of its generals. Near the end of the siege of Paris he undertook a desperate attempt to create a diversion by leading the Army of the East against the German line of communication in a desperate endeavor to relieve Belfort and break into southern Germany. It was only a forlorn hope, and he was easily outmaneuvered by Manteuffel. After three days of desperate fighting at Villersexel his raw troops, worn out with fatigue and weakened by hunger and cold, were driven across the Swiss frontier and there disarmed. In order to escape the humiliation of defeat, Bourbaki withdrew into his cabinet, pressed a pistol against his head, and pulled the trigger, but the bullet failed to penetrate the temple. Gen. Bourbaki became military governor of Lyons after the peace and as soon as he recovered from his self-inflicted wound, and in 1879 was placed on the retired list. He was an unsuccessful candidate for the Senate in 1885.

Boyce, George Price, an English artist, born in London, Sept. 24, 1826; died there, Feb. 9, 1897. After spending three years in an architect's office, he took up painting. About 1850 he found a friend in Dante Rossetti, near whom in Chelsea he lived from 1870, but his style shows no trace of Rossetti's influence. He was elected an associate of the Old Society in 1864, and was thenceforward a frequent contributor of water-color drawings to its exhibitions, the delicate, unobtrusive character of his work never failing to win the admiration of the more refined, though hardly calculated to secure the praise of the indifferently cultured. Sincerity is the strongest note of his work, as it was of the man, who was modest and undemonstrative, and was best appreciated by those who knew him best. The earliest of his works exhibited in London

were "The Royal Oak, Bettws-y-Coed," "Beeches," "Timber Yard, Chiddingstone," and "East End of Edward the Confessor's Chapel, Westminster," the two last-named pictures being shown at the Academy in 1853.

Brahms, Johannes, a German composer, born in Hamburg, May 7, 1833; died in Vienna, April 3, 1897. He was the son of a player in the orchestra of the Hamburg opera, and began the study of music at the age of ten, with Eduard Marxsohn, of Altona, for his teacher, learning harmony, counterpoint, and composition before he was fourteen. At that age he played in public works of Bach and Beethoven and variations of his own on a folk song, but was not paraded as a musical prodigy; on the contrary, his teacher kept him hard at work until he was twenty. Then he made a concert tour with Remenyi. His compositions soon attracted the attention of the musical world, especially after Schumann, to whom Joachim sent Brahms with a letter of introduction, heralded him in his musical paper as the composer for whose advent Germany was waiting. Only a few critical minds accepted Schumann's estimate of the newcomer, whose style was so severe that his opponents declared that his music was mathematical and formal only, without inspiration or emotional impulse. In time it caused as much discussion as the music of Wagner, and like that master Brahms gradually found popular recognition for a part of his compositions, and these moved and delighted in a high degree many who disliked them at first. Brahms became director of the orchestra and chorus in Detmold. When he played his first piano concerto in Leipzig in January, 1859, it was harshly criticised. In 1862 the people of Vienna paid much attention to his performances after cultivated musicians there signified their admiration for his compositions. He traveled for several years, and in 1867 settled permanently in Vienna. In 1866 he composed the austere and dignified "German Requiem," which was much censured by musicians of the romantic school. He composed the "Triumphlied" in celebration of the German victory in the Franco-Prussian War of 1870. In 1871 he accepted the directorship of the Society of Friends of Music, which he held till 1875. His "Academic Overture" was presented as a thesis, for which the doctor's degree in philosophy was conferred upon him by the University of Breslau. The University of Cambridge twice offered to make him a doctor of music, but he would not make the necessary journey to England. Brahms was strongly averse to popular laudation and empty honors. The best-known and esteemed of his works are the sonatas for the piano, his second concerto for piano and orchestra, the "Academic Overture," the "Tragic Overture," the Hungarian dances, variations on the choral of "St. Anthony," his four symphonies, especially those in D and F, his clarinet quintet, and his piano quintet. Much of his other chamber music has found widespread recognition. He composed trios, quartets, quintets, and two wonderful sextets. Many of his songs rank in general esteem among music lovers with the best works of the kind. His first song was "Liebestreu." Very little development or change of style is noticeable between his latest and his earliest productions. Among his later works are the cantata of "Rinaldo," the rhapsodies from Goethe's "Hartzeise," and his "Song of the Fates." His latest songs dealt with sacred themes. The "Schicksalslied" is an example of a new form of short choral works, of which he produced several. Of great orchestral works he composed, besides the four symphonies, two overtures. Every one of his works has a distinct originality and individuality of its own, and in melodic invention and thematic

development, often following entirely new lines, possesses peculiar elements of grace and beauty and of force and majesty. Brahms's admirers and the partisans of Wagnerism carried on a long and fierce controversy, in which each master was derided and condemned as devoid of all musical conceptions, but Brahms was not responsible for the polemic and had no contempt for Wagner's music.

Brewer, Ebenezer Cobham, an English clergyman, born in London, May 2, 1810; died in Edwinstowe, Nottinghamshire, March 6, 1897. He was educated at Cambridge, where he took a first-class degree in civil law in 1835. He was ordained deacon in 1835 and priest in 1836, but devoted his life to literature and education rather than to the Church. He published a great number of educational books and reference works, most of which have enjoyed a wide popularity; but his distinction as a writer arises from the valuable aid that he has afforded to others. His works include: "A Guide to Roman History"; "Poetical Chronology of Inventions, etc."; "Guide to Scientific Knowledge," of which 25,000 copies were printed in two years and which was translated into French by its author (London, 1850); "A Guide to Scripture History" (1860); "Political and Literary History of France," which had reached an eighth edition in 1893 (1863); "Smaller History of France" (1864); "Guide to Every-Day Knowledge" (1864); "The Young Tutor" (1864-'66); "My First Book of Astronomy" (1866); "First Book of Chemistry" (1866); "First Book of Facts and Discoveries" (1866); "First Book of the History of Rome" (1866); "First Book of French History" (1866); "First Book of Grecian History" (1866); "Great Central Points of Medieval and Modern History" (1870); "Dictionary of Phrase and Fable," which passed to its twenty-fifth edition in 1894 (1870); "Pathway through Bible History" (1873); "Guide to Christian Evidences" (1874); "Errors of Speech and Spelling" (1877); "The Reader's Handbook of Allusions, References, Plots, and Stories," which reached its twelfth edition in 1888 (1880); "Rules for English Spelling" (1880); "The Political, Social, and Literary History of Germany" (1881); "Smaller History of Germany" (1882); "Etymological Dictionary" (1882); "Guide to English Composition: Authors and their Works, with Dates" (1884); "Dictionary of Miracles" (1884); "Historic Note Book" (1890).

Brown, Thomas Edward, an English clergyman and educator, born in Douglas, Isle of Man, in 1830; died in Clifton, England, Oct. 30, 1897. He was educated at King William's College, Isle of Man, and later won a fellowship at Oriel College, Oxford. In 1863 he was appointed second master at Clifton College, which office he held till his retirement, in 1892. His life was subsequently spent at Ramsey, on the Isle of Man, but his death occurred while he was on a visit to Clifton. As a teacher he endeared himself to generation after generation of Clifton College boys, and his lectures, which were more than commonly attractive, and even brilliant, were eagerly attended. He contributed to reviews and other periodicals, but to the literary world was known as the author of several volumes of poems, mainly in the Manx dialect. "The Doctor" is his most famous poem, and by more than one competent critic has been given high rank among modern poems. He was not a prolific writer, and his published books comprise only the following: "Betsy Lee" (London, 1873); "Fo'e's'le Yarns" (1881); "The Doctor and Other Poems, in the Manx Patois" (1887); "The Manx Witch and Other Poems" (1889); "Old John and Other Poems" (1893).

Bucknill, Sir John Charles, an English alienist, born in Market Bosworth, Leicestershire, in

1817; died in Bournemouth, July 20, 1897. He was educated at Rugby, studied medicine in University College, London, was graduated with honors in 1840, and became a fellow of the college. He was medical superintendent of the county lunatic asylum of Devon from 1844 till 1862, and then was the Lord Chancellor's medical visitor of lunatics for four years. He founded the "Journal of Mental Science" in 1853, and edited it for nine years. He was also one of the original editors of "Brain." Sir John Bucknill was one of the originators of the volunteer movement started in 1852, served as a volunteer for many years, and for his early connection with the institution was knighted in 1864. He lectured and wrote much on subjects connected with psychology and mental pathology. Among his works are "Unsoundness of Mind in Relation to Criminal Acts" (1857); "The Mad Folk of Shakespeare" (1859); "The Medical Knowledge of Shakespeare" (1860); "Notes on American Asylums" (1876); "Habitual Drunkards and Insane Drunkards" (1878); and "Care of the Insane and their Legal Control" (1880). He was also the joint author of "Manual of Psychological Medicine."

Burckhardt, Jakob, a Swiss art historian, born in 1818; died there, Aug. 8, 1897. He was the author of several works on the Italian Renaissance, the best of which are "Geschichte zu den Kunstwerken Italiens" and "Geschichte der Renaissance in Italien." For more than forty years he lectured on the history of art in the university of Basel, where he settled in 1844, after completing his studies at Berlin under Ranke and Franz Kugler. In 1855 he went to the Zurich polytechnic school as professor of the same subject, but after three years he returned to Basel. His first important publication, a large work on the epoch of Constantine the Great, appeared in 1855. A work on the civilization of the Italian Renaissance was published in 1858, and his history of the Renaissance in 1865. He resigned his chair in 1893.

Burlet, Jules, a Belgian statesman, born in 1845; died in Nivelles, Feb. 28, 1897. While Burgomaster of Nivelles he was elected a Deputy in 1884, and became a conspicuous champion of the Clerical policy and the Protectionist movement. After being elected a Senator he was called into the Cabinet in May, 1893, upon the retirement of the Comte de Merode from the Ministry of Foreign Affairs, after the adjournment of the debate for the annexation of the Congo State. The excitement caused by the attack made on him by M. Woste, upon the withdrawal of Gen. Brassine's scheme of military reform, is believed to have brought on the cerebral congestion from the effects of which he finally died, while holding the post of minister to Portugal.

Calderwood, Henry, a Scottish philosopher, born in Peebles, Scotland, May 10, 1830; died Nov. 19, 1897. He was educated at the University of Edinburgh, and ordained minister of the Greyfriars United Presbyterian Church in Glasgow in 1856. He resigned his charge in 1868 to become Professor of Moral Philosophy in the University of Edinburgh, an office which he held until his death. He was the first chairman of the Edinburgh School Board, and was all his life a total abstainer. He was the author of "The Philosophy of the Infinite" (1854); "Caffres and Caffre Missions" (1858); "Moral Philosophy as a Science and as a Discipline" (1868); "Handbook of Moral Philosophy" (1872); "On Teaching: Its Ends and Means" (1874); "The Relations of Mind and Brain" (1879); "The Parables of Our Lord interpreted in View of their Relations to each Other" (1889); "The Relations of Science and Religion" (1891); and "The Evolution of Man's Place in Nature." He com-

pleted shortly before his death a "Life of David Hume" for the "Famous Scots Series."

Canovas del Castillo, Antonio, a Spanish statesman, born in Malaga in 1830; died in Santa Agueda, Aug. 8, 1897. His family, which was not wealthy, intended to educate him for an engineer, but he turned with avidity to literary studies, and displayed such remarkable talent and activity that he acquired a local reputation for learning before he was sixteen, and had already published a volume of poems and was the editor of a newspaper, "Young Malaga." He went to Madrid in 1845, and through the influence of his uncle, Serafin Estebanez Calderon, a Senator and a well-known writer, found employment in a railroad office, an easy berth in which he could follow literature concurrently with his paid duties. In the course of four years he published a history of the decadence of Spain and an historical novel, besides many pieces of poetry and newspaper articles. In 1849 he embraced the journalistic profession, becoming the editor of "La Patria," a journal of the Opposition, whose conductor was necessarily involved in dangerous political conspiracies against the palace favorites then in power. He sided with the military party in the struggle that ended in the revolution of 1854. During the rising he remained in Madrid, where, as the directing spirit of the revolutionary junta, he exhibited political tact and a fearless spirit that attracted the regard of O'Donnell, the head of the revolution. He was elected Deputy for Malaga. Canovas allied himself to the faction of Espartero, and was thenceforward constantly in office, first as Governor of Cadiz, in 1855. As minister to Rome, in 1856, he drew up an historical memorandum on the relations of Spain to the Holy See that served as the basis for the concordat. From 1858 to 1861 he was Undersecretary of State in the Ministry of the Interior, and in 1864 was called into the Cabinet. In 1865 he became Minister of Finance and Minister of the Colonies under O'Donnell, and in the latter capacity drew up the law for the abolition of slavery. On the eve of the revolution of 1868 he stood up in the Cortes for the application of Liberal principles in the monarchy. When the Republicans triumphed he was banished. He devoted himself to the restoration of the Bourbons, and was the chief of the movement that placed Alfonso XII upon the throne. As leader of the Alfonsists, the party that had upheld the claims of the legitimate and constitutional monarchy, he was called to the premiership in 1874, after the pronunciamiento of Gen. Martinez Campos, but in the following year retired in consequence of differences in his party. After three months the division was healed, and he was recalled to the head of the Government, which he directed with tact and discretion till the return from Cuba of Gen. Martinez Campos in 1879. He became Premier for the third time after ten months of Liberal administration under Martinez Campos. Early in 1881 his ministry was overthrown on a question of finance, and he was succeeded by Sagasta. In January, 1884, the fusionists, under Sagasta, were defeated in the Cortes, and Canovas again formed a ministry, which was upheld in the general election that followed. In the crisis of November, 1885, he was defeated by Sagasta once more and compelled to resign. Canovas became President of the ministry again in July, 1890, after the fall of the Sagasta ministry, and was confirmed by an overwhelming victory in the general election. He entered upon the office for the last time on March 23, 1895. On June 2, 1897, he offered his resignation to the Queen Regent, but was persuaded to remain in office. He met his death at the baths of Santa Agueda, where an Italian anarchist named

Golli, trusting to avenge the cruelties practiced upon his Barcelona comrades in prison, lay in wait for several days, and finally approached the Premier in the gallery of the bathing establishment and fired three shots from a revolver, one of which took effect in the forehead and one pierced his breast.

Cavalcaselle, Giovanni Battista, an Italian art historian, born in Legnano in 1820; died in Rome early in November, 1897. He studied art in the academy at Venice, and followed in turn painting and engineering until he met in Germany the English art writer, Sir Joseph Crowe, with whom he entered into a literary partnership. In 1848 he interrupted his labors to throw himself into the political national movement. Caught by the Austrians at Cremona, he was condemned to death, but made his escape and took refuge in Rome, where he fought under the triumvirate. When the Pope returned to the papal states Cavalcaselle was banished and retired to London, where he collaborated with Crowe, then English commercial *attaché* in Paris, in a large work on the Flemish school of painting. He returned to Italy after a few years, and then took up his abode in Leipsic in order to bring out the celebrated "History of Italian Painting," of which likewise Crowe was part author. Subsequently he established himself in Italy, became an adherent of the royal Government after 1870, and was appointed director general of fine arts.

Cave, Sir William Lewis, an English jurist, born in Desborough, England, July 3, 1832; died near Epsom, Sept. 7, 1897. He was educated at Oxford, was called to the bar, and by his logical acumen and his knowledge won early a high place at the bar, though he had no gift of eloquence and was blunt and direct in his speech. He edited "Addison on Contracts" and other text-books, was for some time recorder of Lincoln, gained an intimate knowledge of criminal law as editor of reports of Crown cases reserved, had an unrivaled knowledge also of real estate and rating questions and of some departments of commercial law, and was retained in almost all important cases years before he was made a Queen's counsel, in 1875. In 1881 he was appointed a judge of the Queen's bench. His decisions were fearless, if sometimes overconfident, and were always given in language unmistakably clear. He was especially sound in criminal law, differing often from Lord Coleridge. When the new bankruptcy law came into operation he settled many questions of practice and helped to reconcile the legal and mercantile communities to its novelties.

Dawes, William, an English architect, born in Gloucester in 1840; died Feb. 16, 1897. He practiced his profession in Manchester, where he built several schools, but to the general public was known as a humorous writer under the name of Elizer Goff. His first book, "Elizer Goff: His Travels, Trubbles, and Other Amoozements," was published in London in 1872, and was followed by "Elizer Goff: His Christmas Book" (1872); "Elizer Goff's Kronikle of a King" (1878); "Elizer Goff's Great Fite" (1881); "The Bore and Pigskin Papers" (1883); "Central African Buster, etc." (1886); and "Senior Devle" (1886).

Drummond, Henry, a Scottish theologian, born in Stirling, Scotland, in 1851; died in Tunbridge Wells, England, March 11, 1897. His father was a justice of the peace at Stirling. The son was educated at the Universities of Edinburgh and Tübingen, became a minister of the Free Church of Scotland, and, after a short stay in Malta as a missionary, was appointed in 1877 lecturer on science at the Free Church College in Glasgow. In 1884 he was raised to the rank of professor. He accompanied Sir Archibald Geikie on geological expedi-

tions to the Rocky mountains and Africa, and traveled in Australia, China, and Japan. As conductor

of a workmen's mission in Glasgow he had great influence as an evangelist over young men, and as a teacher and theological writer he aroused enormous enthusiasm.

His first published book, "Natural Law in the Spiritual World" (1883), created a sensation, at first in Scotland and afterward in all English-speaking countries, and was read in translations in several others. His Lowell Lectures, delivered in the United States, in which he endeavored to show that a struggle for the life and benefit of others is not less a factor in the evolution of society than the selfish struggle for individual existence, was published under the title of "The Ascent of Man" (1894). Several of his devotional books, especially "The Greatest Thing in the World" and "Pax Vobiscum," have been very popular. Prof. Drummond was the author also of some graphic and fascinating books of travel, the most interesting of which is his "Tropical Africa."

Eddy, E. M. G., an Australian railroad administrator, born in England, July 24, 1851; died in Brisbane, Australia, June 21, 1897. He entered the service of the London and Northwestern Railway in 1865 as a clerk in the superintendent's office, became district superintendent at Chester in 1875, was transferred to a similar post in the London division in 1878, and became assistant superintendent of the whole line in 1885. The carrying of the line up the west coast to Edinburgh and the fast express service between the metropolis and the Scotch capital was chiefly due to him. When the general manager of the Caledonian Railway became seriously ill in 1887 Eddy was called to take the chief executive command of that line for the interim, and from this post he was invited in August, 1888, to assume the office of Chief Commissioner of Railways in New South Wales. He accepted on the condition that he should have a free hand in the administration and financial management of the colonial railroads and tramways. He went out to Australia with the avowed intention of proving that state railroads could be made a success, and he achieved his purpose by dint of a bitter contest with the forces of state socialism and political interests, though the more recent developments of state socialism damped his earlier zeal. He revolutionized the railway and tramway system of New South Wales and retrieved the financial fortunes of the Government. Against an accumulated deficit of nearly £142,000 in the seven years preceding, he showed for the six years of his administration an accumulated increase of £2,030,000, raising the gross revenue between 1888 and 1896 from £2,300,000 to £3,110,000, and the net revenue from £765,000 to £1,322,000, while the percentage of working expenses to gross earnings went down fully 10 per cent. At the same time rates and fares were largely reduced, roadbeds, train service, and rolling stock were enormously improved, and the staff, though reduced in number, received higher salaries.

Edwards, Charles A., a British soldier, born in 1864; died in British Central Africa, May 10 1897. He came from a Welsh family that had contributed several members to the Indian civil service and the British army. After serving in Burma in the Welsh Fusiliers, he qualified for the Indian staff corps and became a lieutenant in the first of the Sikh regiments. In 1892 he was sent to Central Africa as second in command of the Indian contingent. In the following year he took out another hundred Sikhs, and in 1895 he joined Sir Harry Johnston in India, and assisted in placing the affairs of the Indian contingent in Central Africa on a footing satisfactory to the Indian Government. The Sikhs now serving in Central Africa were recruited by him, and he created and organized the small native army under English officers and Sikh noncommissioned officers. This force, composed of former slave-raiders as well as slaves, has been a powerful instrument in suppressing slave raids and a bulwark against Arab and Zulu aggressions.

Elias, Sey, an English explorer, died in London, May 31, 1897. He went out to China at an early age, and was employed for a time in a business office. In 1871 he conceived the daring project of returning to Europe overland, and with a single Chinese servant he made his way from Peking through the series of a sanguinary Mohammedan rebellion then going on, across the desert of Gobi by an untraveled route, across Siberia in the depth of winter, emerging at St. Petersburg. He formed a plan then to visit the forbidden city of Lhasa, but was hindered by political difficulties, and took service under the Indian Government, which sent him to Yunnan and afterward to Ladak, and thence on a mission to Chinese Turkestan, with the object of establishing political relations between the mandarins and the Indian authorities. He visited the same countries again in 1885, traversed the entire length of the Pamirs and Badakshan and Afghan Turkestan, and then returned to India by way of Chitral and Gilgit. In 1889 and 1890 he demarcated the frontier between Siam and the Shan States of Burma. In 1891 he was appointed consul general of Great Britain at Meshed, Persia.

Falke, Jakob, a German historian, born in Ratzeburg in 1825; died in Vienna, June 12, 1897. He studied philology and history at Erlangen and Göttingen, taught in the gymnasium of Hildesheim in 1850, and was afterward tutor in the family of Prince Solms-Braunfels till 1853, when he went to Vienna and devoted himself to antiquarian researches. He was conservator of the Nuremberg German Museum from 1855 till 1858, then returned to Vienna, and became custodian and in 1885 director of the Austrian Museum. He was the author of a large number of interesting historical works relating to æsthetics and fashion. In "German Costumes and Fashions" he treats of the history of dress in connection with the changing spirit of the times. Some of his other writings are "A Contribution to the History of Costume in the Middle Ages," "History of Modern Taste," "Art at Home," "Hellas and Rome," and "History of Costume among Civilized Nations."

Fournier, Alix, a French composer, born in 1866; died in Joinville in September, 1897. He produced songs that have been sung everywhere, such as "Chanson Molave," "Floreat," "J'ai vu s'envoler mon beau rêve," "Soir tombe," "Ave Maria," and "Le Fil de la Vierge," also several cantatas and the opera "Stratonice," rich in melody and harmonic combinations and in unexpected touching lyric passages.

Fourton, M. de, a French statesman, born in Ribérac in 1836; died in Paris, Dec. 6, 1897. Under the empire he was appointed mayor of his native place. In 1871 his citizens sent him to represent them in the National Assembly. He took his place

in the Right Center, and in 1872 M. Thiers intrusted to him the portfolio of Public Works, but in a few weeks he retired with Jules Simon. He entered for five days the last Cabinet formed by M. Thiers on May 19, 1873, as Minister of Worship. On Nov. 26, 1873, after the septennate was voted, he was called to the Ministry of Public Instruction, Worship, and Fine Arts. His assumption of office was signalized by the retirement of numerous professors suspected of liberal tendencies and by the re-establishment of the censure. In 1877 he was made Minister of the Interior in the Broglie Cabinet. In 1877 Marshal MacMahon called him to this post again. He was the minister who counter-signed the manifesto of Sept. 19, 1877, in which Marshal MacMahon announced that if the Deputies elected would not act in harmony with the Government he would depend on the Senate alone. The new Chamber appointed a committee to inquire into the abuses of power of which the Cabinet was accused, and on May 23, 1878, the ministers had to resign. In 1880 M. de Fourtou was made a Senator. He sat on the Right, but never took a prominent part in the discussions. In 1889 he re-entered the Chamber of Deputies, and there he preserved an attitude of complete silence and indifference. He once fought a duel with Gabbasta.

Franks, Sir Augustus Wallaston, an English archaeologist, born in Geneva, Switzerland, in 1826; died in London, May 22, 1897. He was educated at Eton and Cambridge, being graduated in 1849. His antiquarian and artistic tastes manifested themselves early, and even before he took his degree he had published "A Book of Ornamental Glazing Quarries" (1849). He became an assistant in the British Museum in 1851, and for many years was keeper of the Department of British and Mediæval Antiquities, resigning in 1895. In 1853 he was elected a fellow of the Society of Antiquaries, was twice director of that society, and was its president from 1892 until his death. In 1888 he was knighted. He was long recognized as almost the highest authority in such departments as the arts of the Renaissance and Oriental ceramics. He made many valuable contributions to the museum, including a superb collection of Chinese and Japanese porcelain and pottery, exhibited for years at the Bethnal Green Museum. His personal influence secured to the British Museum also gifts and legacies of other valuable collections. He published "Recent Excavations and Discoveries on the Site of Ancient Carthage" (1860); "Horne Ferales," by J. M. Kemble (edited, 1863); "Guide to the Christy Collection of Prehistoric Antiquities and Ethnography" (1868); "Catalogue of a Collection of Oriental Porcelain and Pottery," a work of much value (1876); and "Japanese Pottery" (edited, 1880).

Fresenius, Carl Remigius, a German chemist, born in Frankfort-on-the-Main in 1818; died in Wiesbaden, June 11, 1897. After leaving school and passing through an apprenticeship with an apothecary he prepared himself for his later vocation in the University of Bonn, whence he went into the laboratory of Liebig, who, in 1841, made him his assistant. After taking his doctor's degree in 1842 he settled in the following year in the University of Giessen, which he left in 1845 to become Professor of Physics, Chemistry, and Technology in the agricultural institute at Wiesbaden. In 1848 he founded the chemical laboratory that in the course of a half century has extended his fame to all countries. About 1860 he added to it a school of pharmacy, and in 1895 a bacteriological laboratory. In 1862 he started the journal of analytical chemistry which, together with his manual of qualitative analysis, established his reputation as chief of analytical chemists. He published works on the

measurement of alkali and acid reactions, on a new method of testing potash and soda, on acid fermentation of fruit and wine, on a new method of detecting arsenical poisoning, on the ammonia in the atmosphere, etc., and innumerable analyses of medicinal spring waters. His methods of instruction and his laboratory apparatus have been adopted generally.

Ghika, Prince Ion, a Roumanian statesman, born in 1817; died in Bucharest, May 4, 1897. His family had long been conspicuous in the history of the Danubian principalities, and he, after studying in Paris, where he imbibed the humanitarian and democratic spirit of the romantic school, endeavored to awaken among his countrymen ambition for national reform and independence. He took part in the Ibraila conspiracy in 1841, and was shut out for a time from public life and honors. After devoting himself during this period to literary and scientific work and to his duties as Professor of Mathematics and Political Economy in the University of Jassy, he became once more an active politician when the principalities seemed ripe for a new revolution. As one of the leaders of the National party he had a great deal to do with organizing the revolutionary movement of 1848. The Provisional Government of the principalities sent him as its diplomatic agent to Constantinople, where he continued to reside as an exile after the fall of his political friends at Bucharest. In 1854, on the recommendation of Lord Stratford de Redcliffe, he was appointed by the Sublime Porte to the governorship of Samos, and for five years he administered the affairs of the island with remarkable success. In 1859, when Prince Couza had at last accomplished the union of Moldavia and Wallachia, Prince Ghika returned to Bucharest, became a prominent member of the Liberal Opposition, and was a leader in the movement that culminated in 1866 in the deposition of the reigning prince and the election of Prince Karl of Hohenzollern-Sigmaringen as constitutional ruler of Roumania. Prince Ghika was Prime Minister in 1867, and again in 1870, and held portfolios in several other cabinets. In 1880 he was appointed Roumanian minister in London, where he remained until failing health compelled him to resign in 1887. He was a distinguished and a voluminous author, and for his literary services was elected President of the Roumanian Academy.

Gilbert, Sir John, an English artist, born in Blackheath, near London, in 1817; died in Villers-sur-Mer, France, Oct. 6, 1897. He entered a real-estate agent's office in London, where, instead of familiarizing himself with the details of the profession, he educated himself as an artist. When but nineteen years old he exhibited his first picture, "The Arrest of Lord Hastings by the Protector, Richard II, Duke of Gloucester," at the Suffolk Street Gallery, London. In 1838 a portrait by him was accepted by the Royal Academy. One of his pictures was accepted by the British Institution in 1839, and from that time till his death he was constantly represented at this gallery, and occasionally at the Royal Academy. Although exhibiting in the art galleries, Gilbert was not above taking commissions for work in black and white. In this connection he received from Henry Vizetelly, acting in behalf of Herbert Ingram, proprietor of Old Parr's Life Pills, and subsequently founder of the "Illustrated London News," in 1841, a commission to supply him for advertising with an engraving of Old Parr's gravestone in Westminster Abbey, and with "designs to be made of Old Parr gathering medicinal herbs, of his introduction to King Charles, and of other incidents in the old Shropshire peasant's apocryphal long life." This led to Gilbert's connection with the "Illustrated London News" in

the following year. The first design for illustrated journalism from his pencil was one of a state fancy-dress ball held by command of Queen Victoria at Buckingham Palace. Writing on the subject of Gilbert's remarkable versatility, in his "Glances back through Seventy Years," Ingram says: "In 1842 it would have been well-nigh impossible to have kept an illustrated paper going had not Mr. John Gilbert's facile and imaginative pencil been available for the purpose." When, in 1843, the "Pictorial Times" was launched, its proprietors immediately secured the services of John Gilbert, who contributed to its pages considerably more drawings than to the "Illustrated News," although subsequently he was retained on the staff of the latter journal for some years. Gilbert also drew weekly illustrations for the "London Journal," and for a time was connected with "Punch," but was forced out by its editor, Douglas Jerrold. Years afterward "Punch" renewed its connection with him. Gilbert illustrated many of the best editions of the British classics, and concluded with an edition of Shakespeare, on which he was engaged many years, and which was considered to contain the finest complete set of illustrations ever made. He was elected an associate of the Society of Painters in Water Colors in 1852, and one year later was made a member. He painted "The Queen inspecting the Coldstream Guards in the Hall of Buckingham Palace" in 1856, and after viewing this picture John Ruskin remarked that Gilbert, unlike other painters of royalty, had "retained his presence of mind" and given a scene perfectly natural as well as perfectly artistic. In 1871 Gilbert became President of the Society of Painters in Water Colors. He soon afterward received the honor of knighthood, was elected an associate of the Royal Academy in 1872, and was made a full member in 1876. Among other honors conferred upon him are the Cross of the Legion of Honor, the freedom of the city of London (he was the only artist to be so honored), honorary membership in the Royal Society of Painters in Water Colors of Belgium, and in the Society of Artists of the same country. He was elected President of the Liverpool Society of Painters in Water Colors and honorary member of the Royal Society of British Artists. Some years before his death he decided to present his work to the nation, and accordingly in 1893 he distributed his paintings among the public art galleries of London, Liverpool, Manchester, and Birmingham. Most of his pictures are historical. They comprise such subjects as "The Murder of Thomas à Becket," "Charge of the Cavaliers at Naseby," "Wolsey and Buckingham," and "The Entry of Joan of Arc into Orleans." In 1874 he exhibited at the Royal Academy "The Field of the Cloth of Gold"; in 1875, three pictures, among which was "Tewkesbury Abbey: Queen Margaret carried Prisoner to Edward after the Battle of Tewkesbury"; in 1876, "The Crusaders" and "Richard II resigning the Crown to Bolingbroke"; in 1887, "Cardinal Wolsey at Leicester Abbey" and "Doge and Senators of Venice"; in 1889, "Ego et Rex Meus" and "Onward." The range of Gilbert's power, the vividness of his dramatic sense, the perfect command of his materials, added to the individuality by which he revolutionized the art of drawing on wood, place him immeasurably above his contemporaries in his own line.

Godefroid, Félix, a French musician, born in Namur in 1818; died in Villers-sur-Mer in July, 1897. He was admitted to the Paris Conservatory at the age of twelve, and at the age of nineteen he composed his famous "Dance of Sylphs." The first harpist of his time, he introduced important improvements in the mechanism of his instrument, increasing the size of the strings and the volume of

sound. He wrote masses and other pieces for the harp and orchestra, and many charming harp solos.

Godfrey, G. W., an English dramatist, died in London, April 10, 1897. He was for many years a clerk in the Admiralty Office, retiring in 1894. His plays were therefore written in his leisure hours, but such was his knowledge of stage craft and the brightness of his dialogue and biting satire on the manners and customs of modern society that the best actors appeared in the casts, and they made great hits on the London stage. Their titles are "Queen Mab," "The Queen's Shilling," "Vanity Fair," "The Parvenu," "My Milliner's Bill," and "The Mysogynist."

Goto Shojiro, Count, a Japanese statesman, born in 1837; died in Tokio, Aug. 4, 1897. He was a leader in the movement that culminated in the restoration of the Mikado in 1867, and to his services in that period he owed his title and a considerable hereditary income. In later events he failed to display sufficient force and sagacity to bring him to the front. He associated himself in 1873 with the Saigo party, which advocated recourse to arms in Korea. In 1887 he fell into disgrace through his connection with a weak political agitation.

Goulbourn, Edward Meyrick, an English clergyman, born in London, Feb. 11, 1818; died in Tunbridge Wells, May 3, 1897. He was educated at Eton and Oxford, and became a fellow of Merton College in 1841. In 1850 he succeeded Dr. Tait as head master of Rugby School, from which he retired in 1858. In the following year he became vicar of St. John's, Paddington, his fame as a preacher at this time being very general. He was a profound scholar as well as an acute reasoner, and to his possession of these qualities was added a grace of delivery that invariably charmed his hearers. In 1866 he was appointed Dean of Norwich, and he resigned that office June 16, 1889. From that time he lived in semi-retirement at Tunbridge Wells. As a writer his reputation was very wide in the religious world, his best-known work being "Thoughts on Personal Religion" (1862), a book which has exerted a strong influence in deepening religious feeling. His other works include "The Doctrine of the Resurrection of the Same Body," forming the Bampton Lectures for 1850 (1850); "Devotional Forms" (1851); "Rudimentary Treatise on Grammar" (1852); "Parochial and Other Sermons" (1853); "Introduction to the Devotional Study of the Holy Scriptures" (1854); "The Idle Word: Short Religious Essays on the Gift of Speech" (1855); "The Book of Rugby School" (1856); "The Inspiration of the Holy Scriptures" (1857); "Sermons" (1862); "The Education of the World," a reply to "Essays and Reviews" (1862); "Popular Objections to the Book of Common Prayer considered" (1868); "The Functions of Our Cathedrals" (1869); "The Principles of the Cathedral System" (1870); "The Great Commission" (1872); "The Child Samuel" (1876); "The Collects of the Day: An Exposition" (1880); "Everlasting Punishment" (1880); "Meditations upon the Liturgical Gospels for the Minor Festivals" (1886); "Three Counsels of the Divine Master for the Conduct of the Spiritual Life" (1888); "The Ancient Sculptures in the Roof of Norwich Cathedral," with Henry Symonds (1876); "Life, Letters, and Sermons of Herbert de Losinga" (1879); "Farewell to Norwich Cathedral" (1891). Although in early life attached to the evangelical school, in the latter part of his career he was counted among the moderate High Churchmen.

Guarino, Giuseppe, an Italian prelate, born in Montedoro, March 6, 1827; died in Messina, Sept. 22, 1897. He rose to be Archbishop of Messina and a cardinal, receiving the berretta Jan. 16, 1893.

Havelock-Allan, Sir Henry Marshman, an English general, born in Chinsurah, India, Aug. 6, 1830; died at Ali Mesjid, in the Kharbar pass, Dec. 30, 1897. His father was Gen. Henry Havelock, and his mother was a daughter of Dr. Marshman, a Baptist missionary in India. He entered the army as an ensign in 1846, received a lieutenant's commission when eighteen years of age, and was a captain at twenty-seven. On his father's staff he saw service in the Persian campaign, distinguishing himself in the capture of Mohumrah. He was his father's aid through the mutiny campaigns, and was present at the battles of Futtehpur, Aong, Pandoo, Nuddes, Cawnpore, Buserut, Gunge, Mungarwar, and Alumbagh, and in the relief of Lucknow and the defense of the residency, and in both these actions was wounded. After he was promoted captain he took part under Gen. Franks in the actions of Nusrutpur, Chanda, Umeerpur, and Sultanpur. In 1858 he was breveted major and was created a baronet, his father, for whom the honor was intended, having died. On the staff of Gen. Luard he was present at the relief of Aizimghur and in the operations against the Jugdespur rebels. Later in the year he commanded a cavalry detachment in Oude under Lord Clyde, and was present at Burgudea, Musjeedia, and Rapttee. For his brilliant services in India he was frequently mentioned in dispatches, and was made a brevet lieutenant colonel, though barely thirty years of age. After two years of staff duty at Aldershot, he took part, in 1863, in the war against the Maoris of New Zealand, being present at Rangariri, Paterangi, and Orakau, and in command at the battle of Wairre. From 1867 till 1869 he was assistant quartermaster general in Canada, becoming in 1868 a colonel, and then served in the same capacity on the staff in Ireland till 1872. He was made a major general in 1878 and lieutenant general in 1881. His passion for seeing fighting was such that he acted as a newspaper correspondent in order to witness the actions of the Franco-German and Russo-Servian wars, and in 1882 he went to Egypt and was in the foremost fighting line at Kassassin, causing an insurance company to cancel the policy on his life. When not in active service Sir Henry Havelock took an earnest interest in politics. He entered the House of Commons as an advanced Liberal in 1874, and represented Sunderland till 1881, when he was appointed to the command of a brigade at Aldershot. In 1884 he was returned as a Liberal for Durham, and in 1886 was elected again as a Liberal-Unionist. Losing his seat in 1892, he was returned again in 1895. The surname Allan was coupled with his own in 1880, in compliance with the testamentary request of a relative. Sir Henry Havelock-Allan was a member of the political staff that accompanied Sir William Lockhart in the campaign against the Afridis, and while running out to visit a newly recaptured post in the pass he went ahead of the escort, and was killed by Afridi sharpshooters living in wait for stragglers.

Heaton, John Aldam, an English decorative artist, born in Yorkshire in 1830; died in Hampstead, London, Nov. 20, 1897. His early training among the looms of his native shire gave him the technical knowledge of fabrics that was afterward so useful to him, and his extraordinary sensitiveness to color enabled him to arrange the greatest variety of combinations of tint and ornament. He designed innumerable patterns in furniture, wall papers, and stained glass, and in his early days was to some extent a follower of pre-raphaelite ideas. In 1889 he published in two folio volumes "Furniture and Decoration in England during the Eighteenth Century," which ranks as the final authority on the subject.

Heemskerck, M. A. J., a Dutch statesman, born in 1818; died at the Hague, Oct. 10, 1897. He belonged to the old Conservative party, and formerly was a leading figure in the politics of the Netherlands. He possessed vast knowledge and great political sagacity, was more than once intrusted with the formation of a cabinet, and several times was a cabinet minister.

Hewlett, Henry Gay, an English writer, born in London, April 4, 1832; died Feb. 25, 1897. His wide acquaintance with black-letter history and law, almost in effect a family inheritance, led to his appointment in 1865 as keeper of the Land Revenue Records and Record Agent for the Crown, which place he resigned in 1895. He was long the friend of Henry Chorley, the well-known critic, and as his literary executor edited the "Autobiography, Memoirs, and Letters of Henry Fothergill Chorley" in 1873. His published works include "The Heroes of Europe: A Biographical Outline of European History, A. D. 700-1700" (1860); "Shakespeare's Curse, and Other Poems" (1861); "A Sheaf of Verse" (1877); "Rogeri Wendover Liber qui dicitur Flores Historiarum" (1886); "Post-Norman Britain" (1887); and "The Wayfarer's Wallet," verse (1888).

Holden, Sir Isaac, a British inventor, born in Hurlet, near Paisley, in 1807; died in Keighley, Yorkshire, Aug. 13, 1897. He was the son of a coal miner, attended a grammar school at Kilbarchan for two years, worked a short time in a cotton mill, returned to school at the age of thirteen, and after learning Latin and bookkeeping became a teacher at Paisley, and in 1828 a teacher of mathematics in an academy at Leeds. Subsequently he taught Latin and Greek, science, and history in Reading, and while there made experiments which resulted in the discovery of the lucifer match, but did not secure a patent. He had hoped to become a preacher, having embraced the Wesleyan doctrines at an early age, but abandoned his ambition and in 1830 entered the service of a wool-comber at Collingworth. Finding here full scope for his inventive powers, in a few years he completely revolutionized the process of wool-combing. In 1846 he removed to Bradford, and in association with S. C. Lister, afterward Lord Masham, perfected many improvements in wool-combing machinery. In 1848 they established shops at St. Denis, in France, and after these were closed, in 1860, they opened still larger works at Bradford, which grew to be the most extensive in the world, employing, with the branch shops in Croix and Rheims, more than 4,000 persons. The firm acquired an honorable reputation for efforts to improve the social and intellectual status of the work people. Mr. Holden entered the House of Commons as a Liberal in 1865, resigned his seat in favor of his son-in-law, Alfred Illingworth, in 1868, and was not successful in his efforts to obtain another till 1882. He was re-elected in 1885 and 1886, finally retiring in 1892. He was created a baronet in 1893.

How, William Walsham, an English prelate, born in Shrewsbury, Shropshire, Dec. 13, 1823; died at Leenane, Connemara, Ireland, Aug. 10, 1897. He was a graduate of Oxford, and after taking holy orders became curate of St. George's, Kidderminster, in 1846. His next curacy was at Holy Cross, Shrewsbury, which he received in 1848 and relinquished in 1851 to become rector of Whittington, Shropshire. He remained at Whittington twenty-eight years, during which time he became widely known as a writer, and in 1879 was appointed to the living of Saint Andrew Undershaft in London. This office he held a few months only, till his consecration as Suffragan Bishop of Bedford in July of that year. In his new office his work lay wholly in East London, where he not only won the regard of his clergy,

but the love and respect of even the worst characters in that part of the metropolis. He was a total abstainer and took an active part in temperance work, but without bitterness or intolerance. When the see of Wakefield was created, in 1888, he was appointed its bishop, and he held that office at the time of his death. Few prelates were more generally loved than the Bishop of Wakefield. He avoided controversy wherever possible, and was almost as popular with nonconformists as with Churchmen. His abilities as a diocesan were not undervalued by various prime ministers. While Bishop of Bedford he was offered the important bishopric of Manchester on the death of Bishop Fraser, in 1885, and in 1889 the high office of Bishop of Durham was pressed upon his acceptance. Both these offers he declined, as he did the archbishopric of York, which is generally supposed to have been offered to him in 1891. In the present year he came prominently before the public as the author of the "Jubilee Hymn," and one of his latest acts was to give the profits of this hymn to the Prince of Wales's Hospital fund. As a hymn writer he will be longest remembered. A large number of his hymns will be found in nearly all important collections of religious poetry. As regards both sentiment and literary form they are among the best of their class. His published writings include "Plain Words" (1859-75); "Collection of Lyrical Pieces" (1860); "Psalm LI: Sermons" (1861); "Pastor in Parochia," his most famous work (1868); "Private Life and Ministrations of a Parish Priest" (1873); "Plain Words to Children" (1876); "Commentary upon St. John" (1879); "The Papal Claims in the Light of Scripture History" (1881); "Commentary upon St. Matthew" (1881); "Lectures on Pastoral Work" (1883); "The Boy Hero" (1884); "Words of Good Cheer" (1885); "Was Lost and is Found," verse (1885); "Poems" (1886); "Hymns" (1886); "Ballad of the Chorister Boy" (1887); and "Letter Booklets" (1888).

Hutton, Richard Holt, an English journalist, born in 1826; died in London, Sept. 9, 1897. He came from a family prominent among the Unitarians, and was educated at University College, London. He taught mathematics at Bedford College, wrote for the "National Review" and other journals, and theological articles for the "Inquirer," until he passed over to the Church of England, and became literary editor of the "Spectator" in 1861. He wrote on political, theological, and philosophical subjects, and was the author of "Studies in Parliament," a life of Newman, and other books.

Jennings, Sir Patrick Alfred, an Australian politician, born in Newry, Ireland, in 1831; died in Sydney, New South Wales, July 10, 1897. He went to Victoria in 1852 as a gold seeker, and was fairly successful, became a magistrate at St. Arnaud, and in 1863 removed to New South Wales, where he became a sheep raiser, leasing a run in the Riverina district, which the squatters wished to separate from New South Wales and erect into a separate colony. The agitation led to increased representation in the Parliament, and he obtained a seat in the Legislative Council, which he resigned in 1869 to enter the Assembly, to which he was elected from the Murray district. He was afterward asked to join the ministry, but failed to be elected at Mudjee, and remained out of Parliament till 1880. He served meanwhile as commissioner for the colony at various international exhibitions, and was knighted for his services in organizing the first Australian exhibition in 1879. He returned to office as vice-president of the Executive Council in 1883, became colonial Treasurer in the Dibbs ministry in 1865, and in 1886 formed a ministry, but resigned in 1887, and was sent to England as representative at the

colonial conference. He entered the Legislative Council in 1890, and was a delegate to the Federal convention held in Sydney in 1891. He was created an hereditary marquis by the Pope.

Jervois, Sir William Francis Drummond, an English general, born in Gower, Somerset, in 1821; died Aug. 17, 1897. He was the son of a general officer, was educated at Westmore Academy, and entered the Royal Engineers in 1839, becoming a captain in 1847, brevet lieutenant-colonel in 1861, colonel in 1872, major-general in 1877, and lieutenant-general in 1882. From 1841 till 1848 he was employed in making roads and bridges and establishing military posts at the Cape of Good Hope, where he took part in an expedition against the Boers in 1842 and in the Kafir war of 1846, during which he made a map of Kaffraria. In 1852 he designed the fortifications of Anglesey. He served on a committee that effected great improvements in barrack accommodation, became assistant-inspector-general of fortifications in 1856, and was secretary of a committee to report upon the defenses of the country in 1859, as well as of the permanent Defense Committee, and became the confidential adviser of Lord Palmerston and his successors on matters connected with defense. He was appointed deputy director of fortifications in 1862. He was sent in 1863 on a special mission to report upon the fortifications of Canada, New Brunswick, and Nova Scotia, and drew up the plans for the fortification of Quebec adopted by the Imperial Government, designed the fortifications at Portsmouth, Plymouth, Pembroke, Portland, Cork, the Thames, the Medway, and other places. He planned improvements and additions to the fortifications of Bermuda, Halifax, Malta, and Gibraltar, and in 1871 designed fortifications carried out at Bombay, the Hugh, Aden, and other places by the Indian Government. In 1874 he was created a knight commander of the order of St. Michael and St. George, and in the following year was appointed Governor of the Straits Settlements. During the two years that he held this post he suppressed a formidable revolt on the Malay Peninsula. Going to Australia in 1877 to advise the colonial authorities on the defense of their chief ports, he was appointed Governor of South Australia. In 1882 he was made Governor of New Zealand, and while there planned the fortifications constructed in the principal ports. Until he retired in 1889 he continued to be the chief adviser of all the Australasian governments on all matters connected with defense.

Jones, William Basil, an English prelate, born in Gwynfryn, Wales, Jan. 2, 1822; died in Lampeter, Jan. 14, 1897. He was educated at Shrewsbury School, gained a classical scholarship at Trinity College, Oxford, in 1840, and several other scholarships in the university, where he remained as a tutor and fellow, first of Queen's and afterward of University college till 1865, acting also as examining chaplain for Dr. Thomson, Archbishop of York, from 1861 and vicar of Haxby from 1863 till he left the university to enter upon a pastorate at Bishopthorpe. He was made Archdeacon of York in 1867 and a rural dean in 1869. In 1874 he was nominated Bishop of St. David's in succession to Bishop Thirlwall. The evil of the nonresidence of the Welsh clergy, which Bishop Thirlwall had made efforts and sacrifices to remove, was considerably abated in this see through the energy of the new bishop. In the exciting questions of ritualism, board schools, and the burial of nonconformists he took a moderate and conciliatory attitude, and tried to have the principle prevail that Wales should be treated in all ecclesiastical as well as social and political matters as a part of England. Dr. Basil Jones was the author of "Vestiges of the

Gael in Gwynedd" (1851); "Notes on (Edipus Tyrannus" (1862); of numerous published sermons; and, with E. A. Freeman, of "The History and Antiquities of St. David's."

Joergensen, Adolf Ditlev, a Danish historian, born in Gravenstern, Schleswig, June 11, 1840; died in October, 1897. He was educated at Flensburg and at the University of Copenhagen, and became a teacher in the grammar school at Flensburg in 1863. When the Germans occupied the province in 1864 they dismissed him from his post. He then devoted himself to the study of Danish history, received an appointment in 1869 in the royal archives, of which he was made keeper a few years later, and which he thoroughly classified. Among his chief works are "Contributions to the History of the Middle Ages" (1871) and "The Founding and First Development of the Scandinavian Church" (1874-78).

Kneipp, Sebastian, a German therapist, born in Stefansried, Bavaria, May 17, 1821; died in Worshofen, Swabia, June 17, 1897. He was trained as a weaver, and followed the trade till his majority, when he prepared himself for the Catholic priesthood and studied medicine in order to develop the system of water cure that he had tried experimentally in his own case and under which he had brought himself into a vigorous state of health after having been weakly and apparently consumptive from early youth. He began to apply his treatment to the country people of the neighborhood in 1848 with such success as to bring patients from far and wide and extend his reputation to distant countries. Father Kneipp took no pay for his medical advice and treatment, but lived simply on his stipend as a priest. He attended personally to every case, and administered the baths with his own hands until, after the publication of a book on his method of hydrotherapy, the crowds of patients that flocked to the village to seek his cure necessitated the employment of assistants. Hence the Kneipp Verein was established to carry on the work. It has been supported by charitable contributions, and has grown into a large institution, caring for 1,200 patients or more. In 1894 Father Kneipp was called to Rome to treat Pope Leo, to whom he brought relief in serious gastric troubles. A sanitarium, based on the Kneipp system, was established in New Jersey in 1896. The main elements of the treatment consist in the application of sunshine, fresh air, and water. Its most striking feature is a walk in the early morning, barefoot, through the dew or snow. Other important features are baths of certain kinds taken at stated times, the use of clothing that admits light and air, total abstinence from alcohol, and limitations on the eating of meat.

Knight, Charles Parsons, an English artist, born in Bristol, Feb. 15, 1829; died in London, Jan. 22, 1897. He was educated by his father, Canon Knight, of Bristol Cathedral, and began his career as a mid-shipman, but left the service at the end of his first voyage. His short experience of the sea was of much service to him in his later profession, since few artists of his time surpassed him in drawing waves, depicting light effects in water, and representing ships' hulls and rigging. His studies were pursued at the life school of the Bristol Academy, as well as along the coasts and rivers of Somerset and Devon, and the first pictures ever exhibited by him were of the harbor of Bristol and the windings of the Avon. His first picture at the London Academy, "Durham from the North," was exhibited in 1857. A picture exhibited in London in 1861, "The Stone Walls of Old England, Speeton Cliffs, Yorkshire," is one of his most brilliant works. As a general thing, the public did not

greatly care for his pictures, while artists admired and praised them. His themes in the main were drawn from England, Scotland, and South Wales, and were often views of the coast.

Legge, James, a Scotch scholar, born in Huntley, Aberdeenshire, Scotland, in 1815; died in Oxford, Nov. 29, 1897. He was graduated at the University of Aberdeen in 1835, and subsequently studied at the Highbury Theological College. In 1829 he went to China, living in Hong-Kong from 1842 to 1873, and was pastor of the Congregational church there for the greater part of the time. From 1873 until his death he was Professor of Chinese at Oxford. He was a profound as well as industrious scholar, and received from the French Institute in 1875 the Julien Prize for his translation of the Chinese classics. His translations and other writings include "The Notions of the Chinese concerning God and Spirits" (1852); "Confucian Analects," edited and translated (1861); "Works of Mencius," edited and translated (1861); "The Shu King; or, Book of Historical Documents," edited and translated (1865); "Life and Teachings of Confucius" (1867); "The Shi King; or, Book of Poetry," edited and translated (1871); "The Ch'un Ch'in with the Tso Chwan," edited and translated (1872); "The Life and Works of Mencius" (1875); "The Book of Ancient Chinese Poetry, in English Verse" (1876); "Sacred Books of China," translated (Oxford, 1879-86); "The Religions of China; Confucianism and Taoism, described and compared with Christianity" (1880); "Record of Buddhist Kingdoms," translated (1886); and "The Nestorian Movement of Hsi-an-fu in Shen-Hsi, China" (1888).

Lockwood, Sir Frank, an English lawyer, born in Manchester in 1846; died in London, Dec. 19, 1897. He was the son of a business man. He entered Caius College, Cambridge, in 1865, and was called to the bar at Lincoln's Inn in 1874. He was one of the most successful of English advocates, especially in the defense of prisoners, and one of the most popular members of the bar possessing versatile talents and a sparkling wit. His historic ability would have made him famous on the stage. He had a genius for caricature, which he turned to account in drawings published in "Punch" and illustrations for one or two books. No one excelled him as a merry after-dinner speaker and storyteller. At the bar he was impressive, severe, denunciatory, ironical, witty, suave, as the exigencies of the case demanded, and his cross-examinations were greatly dreaded by witnesses. He was elected to Parliament in 1885 as a Liberal for York city, and delighted the house with his bright and ingenious speeches. In October, 1894, he was appointed Solicitor-General, and was knighted.

Luys, Jean Bernard, a French alienist, born in Paris in 1828; died there in August, 1897. He was physician in chief to the Ivry asylum and the author of important works on the nervous system, including "Iconographie des Centres Nerveux," "Physiologie et Pathologie Cérébrales," and "Hypnotisme Experimental."

Malcolm, Sir George, an English general, born in Bombay in 1818; died in Leamington, April 6, 1897. He was an India merchant's son, and after receiving his education at Addiscombe entered the Bombay army in 1836. In the Afghan campaign of 1838 he served in the commissary general's department, and was present at the capture of Ghuzni and the occupation of Cabul. From 1840 till 1842 he was constantly engaged against the Beluchis in command of a detachment of the Sind horse in eastern Kutchi, in 1843 he participated in operations against Mir Shah Mohammed, and in 1844 and 1845 served again in Kutchi in Sir Charles Napier's campaign against the hill tribes. In the

Punjab campaigns of 1848 and 1849 he was present at Multan and Gujarat and took part in the final defeat of the Sikhs and the occupation of Peshawar, receiving the brevet of major. He commanded a detachment of Mahratta horse in Persia in 1857. In 1858 he commanded the field force that reduced the fortress of Sherapur, and was in command later of the force that captured Murgood. He commanded a division in the Abyssinian war of 1868. He became a colonel in 1860, major general in 1867, lieutenant general in 1875, and general in 1877.

Marquardsen, Heinrich von, a German politician, born in Schleswig, Oct. 26, 1826; died in Erlangen in November, 1897. After completing his juristic studies he settled in Heidelberg in 1856 as *Privatdozent*, and in 1861 was called to Erlangen as regular professor of German public law. He earned a high reputation for learning in public and private law, produced a large number of works, and was a member of the Institute of International Law from its foundation. In 1869 he was elected to the Bavarian Chamber, in which he sat till 1893. In 1871 he was elected to the German Reichstag from the district of Erlangen and Fürth, which had already sent him in 1868 to the Customs Parliament in Berlin. He was a member of the Reichstag till his death, and was one of the Liberal party, and by reason of knowledge of parliamentary institutions and all branches of law and his great skill in debates he had a strong influence in shaping legislation. He was one of the authors of the press law and a prominent member of the committee that revised the procedure of civil and criminal courts.

Mecklenburg-Schwerin, Friedrich Franz, III, Grand Duke of, born at Ludwigslust, March 19, 1851; died in Cannes, April 10, 1897. He married, in 1879, the Russian Grand Duchess Anastasia Michailovna, and succeeded his father, Friedrich Franz II, in 1883. He was a Prussian cavalry general. His successor is Franz Friedrich IV, his son, born April 9, 1882.

Mellhae, Henri, a French dramatist, born in 1830; died in Paris, July 6, 1897. He was one of the most skillful and prolific playwrights in France, and not one is more popular or widely known. In the time of the empire he enlivened Paris with the gay operettas to which Offenbach fitted his lively and humorous music, such as "La Belle Hélène," "La Grande Duchesse," "La Vie Parisienne," "La Périole," "Les Brigands." The "Petit Duc" of Lecoq was also his libretto. For more than forty years he delighted Paris theater goers with a constant succession of comedies, in nearly all of which he had the collaboration of able dramatists, such as Ludovic Halévy, André Gille, or Louis Ganderax, but which are known by his name. Some of the most successful were "Frou-Frou," "L'Été de la St. Martin," "Les Sonnettes," "Toto chez Tata," "Ma Camarade," "Pépa," and "Fanny Lear." He was part author of the operas "Carmen" and "Manon." Toward the end of his career he attained great success with "Ma Cousine" and "Dioré" at the Variétés and with "Petite Marquise" at the Théâtre Français, where "Grosse Fortune" was also brought out. These were all the work of his unaided pen. At the Palais Royal his "Gotte" and "La Boule" were produced. Before he began to write for the stage he drew humorous pictures with amusing legends for the "Vie Parisienne." Until he joined with Ludovic Halévy he determined never to have a collaborator. Among his early works was "Le Copiste," the little masterpiece called "L'Autographe," "Un Petit-Fils de Mascarille," and "La Vertu de Célimène," which attracted the serious attention of critics. Some of his other works are the one-act dramas "La Clef de Merella," "Les Brebis de Panurge," "Le Brésilien,"

"L'Ingénue," "Le Petit Hôte," "Le Roi Canadien," and "Lolotte"; and "Le Réveron" and "La Cigale," in three acts. Mellhae was elected to the French Academy in 1889.

Meyer, Juergen Bona, a German philosopher, born in Hamburg in 1829; died in Bonn, June 20, 1897. He became *Privatdozent* at the University of Berlin in 1862 after writing a work on the natural history of Aristotle, and in 1866 was called to Bonn, where he taught until his death. He published treatises on the philosophy of Kant, philosophical questions of the time, and the end of the universe and universal sorrow, besides numerous philosophical essays.

Monesillo y Viso, Antolino, a Spanish prelate, born in Corral de Calatraba, Sept. 2, 1811; died Aug. 12, 1897. He rose to be Archbishop of Toledo, and was created a cardinal Nov. 10, 1884.

Montpensier, Infanta Marie Louise Ferdinande, Duchess of, born in Madrid, Jan. 30, 1832; died in Seville, Feb. 2, 1897. She was the daughter of Ferdinand VII of Spain and the younger sister of Queen Isabella, the grandmother of the present King of Spain. She married in 1846 the Duke of Montpensier, son of Louis Philippe. Her great fortune, estimated at 100,000,000 francs, is divided between her son, Don Antonio, husband of the Infanta Eulalia, and her daughter, the Countess of Paris.

Mundella, Anthony John, an English statesman, born in Leicester, 1825; died in London, July 14, 1897. He was the son of an Italian refugee, and in 1848 he joined a hosiery firm in Nottingham which built up an immense business. As one of the most successful business men of the place he was made alderman and sheriff. He was an advocate of conciliation in labor disputes, and helped to organize a board of arbitration in the Nottingham hosiery trade, Sheffield, which knew him from lectures that he delivered on this subject, elected him a member of Parliament in 1868 over J. A. Roebuck, who had disappointed the Radicals and trade unions. He continued to sit as one of the members for Sheffield till the redistribution, when he was elected for the Brightside division, which he represented until he died. He looked sharply after the trading interests of Sheffield, laboring to keep Government orders for material there, opposing the establishment of a Government gun factory, and securing the insertion in the customs and inland revenue bill of 1892 of a clause prohibiting the importation of foreign goods bearing private trade marks. He was also the prime mover in the trade-mark conference at Rome in 1886. His industry and ability were recognized in the House of Commons soon after he entered it. Having shown a great interest in educational subjects, he was appointed in 1880 vice-president of the council on education in Mr. Gladstone's Government, and in this capacity he devoted himself to promoting the development of the board schools without seeking to hamper the voluntary schools. When Mr. Gladstone formed the short-lived ministry of 1886 he took Mr. Mundella into the Cabinet as President of the Board of Trade. He worked indefatigably and gained a high reputation for energy and administrative ability, though his legislative projects for the regulation of railroad and canal traffic and the suppression of fraudulent marks on merchandise failed to pass. When the Home Rule ministry of 1892 was formed he returned to the same office, and carried through a bill for the arbitration of labor disputes and one for regulating the hours of railroad servants. In May, 1894, he resigned because he had been a director in a New Zealand loan company that had pursued unbusinesslike methods.

Mutsu, Munemitsu, Count, a Japanese statesman, died in Yokohama, Aug. 10, 1897. He was prominent in Japanese politics before the Chinese war, which found him in the responsible office of Minister of Foreign Affairs, which he continued to fill till 1897.

Newman, Francis William, an English scholar and philosopher, born in London, June 27, 1805; died in Weston-super-Mare, Somerset, Oct. 4, 1897. He was two years younger than his famous brother, Cardinal Newman, whom he survived seven years. He was educated at Oxford and was a fellow from 1826 to 1830, resigning in the latter year because of conscientious scruples against signing the Thirty-nine Articles for his master's degree. After holding professorship in Bristol College and Manchester New College, successively, he was appointed Latin professor in University College in 1846, and he remained there until his resignation in 1863. The divergence in faith and thought between the brothers Newman began in their undergraduate days at Oxford and is typical of the two most prominent aspects of religious thought of the century. "Have a care," exclaimed the elder brother in response to some doubts uttered by Francis; "if you go that far, you will go further." "When I see further I will go further," was the reply of Francis, and on that principle he always acted. The estrangement between the brothers on account of religious differences lasted forty years, but when they were old the breach was healed and nothing was said about their points of difference. The year after the cardinal's death, however, Prof. Newman unwisely published some rather peevish reminiscences of his brother, which showed complete misapprehension of the cardinal's thought, and which can be excused only by reason of the author's failing mental powers. To the spiritual history of these two brothers the poet Clough alludes in his poem "Qua Cursum Ventus." The contributions of Prof. Newman to the religious thought of his time were important and far-reaching. "The Soul," the most noted work of his, having been for nearly half a century the delight of the spiritually minded. His personality was most interesting and the remarkably wide reach of his mind made conversation with him a continual stimulus. He was an ardent vegetarian, but could hardly be called an ascetic. He was twice married, and for many years of his later life he resided at Weston-super-Mare, not far from Bristol. His writings, which are very varied, embrace "A Grammar of the Berber Language"; "Lectures on Logic" (1838); "The Difficulties of Elementary Geometry" (1841); "Catholic Union" (1844); "A State Church not Defensible" (1846); "A History of the Hebrew Monarchy" (1847); "Contrasts of Ancient and Modern History" (1847); "The Constitution and Moral Right or Wrong of our National Debt" (1849); "The Soul: Its Sorrows and Aspirations" (1849); "Crimes of the House of Hapsburg" (1851); "Royal Rome" (1852); "Personal Narrative" (1855); "The Iliad of Homer faithfully translated in Unrhymed English Metres" (1856); "Solomon's Song of Songs: A New Translation" (1857); "Theism" (1858); "Hiawatha translated into Latin" (1862); "English Institutions and their Reforms" (1865); "A Handbook of Modern Arabic" (1866); "Miscellaneous" (1869); "Dictionary of Modern Arabic" (1871); "Gleanings of the Near Future" (1871); "Religion and History" (1877); "Libyan Vocabulary" (1882); "A Christian Commonwealth" (1883); "Essay on Duty" (1884); "Miscellaneous," Volume II (1887); "Kanael Vocabulary" (1888); "Reminiscences of Two Eyes and of Two Wars" (1888). His most noted work was probably his "Phases of Faith," but "The Soul" represents him at his best.

Oertel, Max Josef, a German pathologist, born in Dillingen, Bavaria, March 20, 1835; died in Munich, July 19, 1897. After first studying philology and history at Munich, he devoted himself to natural science and medicine, and in 1860 became assistant to Prof. von Pfénfer in the latter's private hospital. He made a special study of laryngeal diseases, and when a chair of laryngology was founded at Munich in 1867 he became the incumbent. Prof. Oertel acquired a high reputation by his researches into the etiology and pathological anatomy of diphtheria, and was the first one to trace the cause of this malady to the development of a germ, the *micrococcus diphtheriticus*. The results of his studies were published in a monograph on the "Epidemic of Diphtheria." His noted work on "Therapeutics of Disorders in the Circulation of the Blood" put forward a new and effective method of treating and removing these conditions.

Oliphant, Mrs. Margaret Oliphant (Wilson), an English novelist, born in Wallyford, near Musselburgh, Midlothian, Scotland, in April, 1828; died in Wimbledon, England, June 25, 1897. While she was still a child her parents removed to Liverpool, and there, and in the neighboring Birkenhead, her youth was mainly spent. On her marriage in 1852 to Mr. Oliphant, an artist in stained glass, she went with her husband to London, but at the period of his death in 1859 she was living with him in Rome. Later she removed to Windsor, which was her home for nearly thirty years, till three years previous to her death she removed to Wimbledon. For many years her family consisted of two sons and two orphan nieces whom she educated and cared for. The elder son died in 1890 when he had nearly reached the age of thirty-five, and the second son, with whom she wrote "The Victorian Age of Literature," after many years of invalidism, died in 1894. She began to write early, and as pictures of Scottish life and character her "Mrs. Margaret Maitland" and "Adam Graeme," written in her early days of authorship, are much superior, in the opinion of sober critics, to any of the recent Scottish fictions so popular in the present decade. But the best among all her many novels are those comprising the "Chronicles of Carlingford," and of these "Salem Chapel" and "Phoebe Junior" are the chief. In these, and several later ones, the wit and humor displayed, the keen analysis of character, and the shrewd yet kindly wisdom apparent throughout were the delight of a wide circle of readers, and placed her high among novelists of the second rank and even, in the minds of many, established a claim to admittance into the first. But the defect of her work, as a whole, lay in its construction; her plots are often ineffective and conventional, and the strain of continuous production for so many years sometimes made itself manifest in the later half of a story whose opening was singularly promising. She understood both the shallows and the depths of human character, and could describe them as felicitously as she could accurately observe them; but, as one critic has said, "the genius that builds up a great work of imagination

complete in all its parts, the architectonic faculty, was denied her." At one period of life she wrote several short tales of the supernatural, among which "The Beleaguered City" is the finest, though "The Little Pilgrim" is probably the best known. They were not at first printed with her name on the title page, and appeared thus, as she herself explains, in a letter which never has appeared in print, "from a mere caprice, or rather, in the first case [an allusion to "The Little Pilgrim," the earliest of them all], from a desire for the freedom of saying my say upon very serious subjects without the impertinence of a personality." Besides her many novels and tales she wrote biographies and historical works, the quality of which varies considerably. Her biography of Edward Irving is a remarkably sympathetic piece of work, and her life of her kinsman, the gifted and erratic Laurence Oliphant, is in many respects admirably done. But her life of Sheridan must be placed at the other end of the scale from these, and her "Makers of Florence" and similar works, though widely popular, are more entertaining than valuable. A few among the best of her later fictions are "Within the Precincts," a locality easily recognized as Windsor, "Harry Joscelyn," "The Ladies Lindores," and "The Sorceress." As an author Mrs. Oliphant was without doubt the most industrious woman that England has ever seen; for, besides the astonishingly large number of books that bear her name upon the title page, she wrote an immense number of reviews and other articles, few of which appeared with her signature and the precise number of which she herself probably never had estimated. The quality of this part of her work was often of great excellence, for she was a clear-eyed critic and had the courage to utter just what she thought. Perhaps her latest contribution to a periodical was the article in "Blackwood's Magazine" for June, 1897, entitled "Tis Sixty Years Since," a masterly survey of the Victorian period. It was her custom to begin writing after the members of her household had gone to bed and to remain at her desk until 3 or 4 o'clock in the morning. In this way she secured herself from interruption, and, pursuing this custom year after year, she was enabled to pour forth an astonishing amount of writing. Through all her literary life her associations with the publishing house of Messrs. Blackwood were on the most friendly footing, her latest work of importance being the history of their establishment, which was published posthumously. As a contributor to "Blackwood" she was for a long series of years the most regular as she was one of the most valued. When one considers the vast amount of her work, the high quality of it as a whole is surprising. She attained a praiseworthy level of production very early, and, in spite of occasional departures from this standard, continued upon this plane throughout, a remarkable instance of the association of ceaseless literary activity prolonged over nearly a half century, with the preservation of a high average of work. She had very little sympathy with certain tendencies in modern fiction, and in private life was very severe in her judgment of them. She was well aware that life has a seamy side, but she never chose to depict that side in the very modern realistic fashion. She looked out upon life in a cheerful, healthy way, regarded humanity with kindly tolerance, and exerted a wholesome, beneficent influence over the English fiction of her day. Her work was all conscientiously performed, and dying she had no cause to wish a line of it blotted. A nearly complete list of her published works includes "Passages in the Life of Mrs. Margaret Maitland" (1849); "Merkland" (1850); "Caleb Field" (1851); "Harry Muir" (1853); "Katie Stewart" (1856); "The Quiet Heart" (1856); "Zaidee"

(1856); "Magdalen Hepburn: A Story of the Scottish Reformation" (1856); "The Athelings" (1857); "Adam Graeme of Mossgray" (1857); "Lillicleat" (1857); "The Three Gifts" (1857); "The Days of my Life" (1857); "Sundays" (1857); "Orphans" (1858); "The Laird of Norlow" (1858); "Lucy Crofton" (1859); "Agnes Hopetoun's Schools and Holidays" (1859); "The House on the Moor" (1860); "The Last of the Mortimers" (1861); "The Life of Edward Irving," a biography (1862); "Chronicles of Carlingford: Salem Chapel" (1863); "Chronicles of Carlingford: The Rector and the Doctor's Family" (1863); "Heart and Cross" (1863); "Chronicles of Carlingford: The Perpetual Curate" (1864); "Agnes" (1865); "A Son of the Soil" (1866); "Chronicles of Carlingford: Miss Majoribanks" (1866); "Madonna Mary" (1866); "The Monks of the West," translated from the French of Count de Montalembert (1867-79); "The Brownlows" (1868); "The Minister's Wife" (1869); "Historical Sketches of the Reign of George the Second" (1869); "The Three Brothers" (1870); "John: A Love Story" (1870); "Saint Francis of Assisi" (1871); "Squire Arden" (1871); "Ombra" (1872); "Memoir of Count de Montalembert" (1872); "Chapters of Recent French History" translated from the French of Montalembert (1872); "At his Gates" (1872); "May" (1873); "Innocent: A Tale of Modern Life" (1873); "The Makers of Florence" (1874); "A Rose in June" (1874); "For Love and Life" (1874); "The Story of Valentine and his Brother" (1875); "White-ladies" (1876); "The Curate in Charge" (1876); "Phurbe, Junior, a Last Chronicle of Carlingford" (1876); "Mrs. Arthur" (1877); "Young Musgrave" (1877); "Carità" (1877); "Dante" (1877); "Dress" (1878); "The Primrose Path" (1878); "Within the Precincts" (1879); "The Greatest Heiress in England" (1879); "He that Will not when he May" (1880); "A Beleaguered City" (1880); "Cervantes" (1880); "Harry Joscelyn" (1881); "The Literary History of England 1790-1825" (1882); "In Trust" (1882); "A Little Pilgrim in the Unseen" (1882); "It was a Lover and his Lass" (1883); "The Ladies Lindores" (1883); "Sheridan" (1883); "Hester" (1883); "The Wizard's Son" (1884); "Sir Tom" (1884); "Two Stories of the Seen and the Unseen: The Open Door, Old Lady Mary" (1884); "Madam" (1885); "Oliver's Bride" (1886); "A Country Gentleman" (1886); "Effie Ogilvie" (1886); "A House Divided against Itself" (1886); "The Son of his Father" (1887); "The Makers of Venice" (1887); "Joyce" (1888); "The Second Son" (1888); "Memoir of Principal Tulloch" (1888); "The Land of Darkness" (1888); "Molière," with F. Tarver (1889); "Neighbors on the Green" (1889); "Lady Car" (1889); "A Poor Gentleman" (1889); "Mrs. Blencarren's Troubles" (1890); "Royal Edinburgh" (1890); "Sons and Daughters" (1890); "Kirsteen" (1890); "Jerusalem, the Holy City" (1891); "The Heir Presumptive and the Heir Apparent" (1891); "The Marriage of Elinor" (1892); "The Victorian Age of English Literature" (with F. R. Oliphant, 1892); "The Cuckoo in the Nest" (1892); "Diana" (1892); "Thomas Chapnergh: A Biography" (1893); "Lady William" (1893); "The Sorceress" (1893); "Prodigals and their Inheritance" (1894); "Historical Characters of the Reign of Queen Anne" (1894); "A House in Bloomsburg" (1894); "Sir Robert's Fortune" (1894); "The Makers of Modern Rome" (1895); "Old Mr. Tredgold" (1895); "The Story of a Governess" (1895); "Who was Lost and is Found" (1895); "A Child's History of Scotland" (1895); "Two Strangers"; "The Unjust Steward" (1896); "Jeanne D'Arc: Her Life and Death" (1896); "The Modern Sin"; "The Ways

of Life" (1897); "Annals of a Publishing House: William Blackwood and his Sons, their Magazine and Friends" (1897).

Palgrave, Francis Turner, an English poet, born in 1824; died Oct. 24, 1897. He was the son of Sir Francis Palgrave; went from the Charterhouse School to Oxford, and was elected a fellow of Exeter College after taking a first-class in classics in 1847. From 1850 till 1855 he was vice principal of the Kneller Hall Training School, and he then became examiner and assistant secretary in the Education Office, where he remained until he was elected Professor of Poetry at Oxford in 1885, on the death of Principal Shairp. He published "Idyls and Songs" (1864); a book of hymns in 1867; "Lyrical Poems" (1871); "Visions of England" (1882); and "Amenophus and Other Poems" (1892). He was the author also of critical essays on art. His chief work was a collection of the songs and lyrics of English poets, published in 1861 under the title of the "Golden Treasury," which was followed by other anthologies, such as the "Children's Treasury," "Treasury of English Sacred Poetry," and volumes selected from the poetry of Shakespeare, Tennyson, Keats, and Herrick. Shortly before his death he completed a second series of the "Golden Treasury," containing the work of Victorian poets.

Pearson, John Loughborough, an English architect, born in Brussels, Belgium, July 15, 1817; died in London, Dec. 11, 1897. He was the son of William Pearson, an English painter in water colors, and at the age of fourteen entered the architect's office of Ignatius Bonomi, in Durham. After a time he went to London, studied with Salvin, and later with Philip Hardwick, whose assistant he became. His private practice began with the erection, in 1843, of St. Ann's Chapel, Ellerker, Yorkshire, the drawings of which make it manifest that even thus early he had acquired an extensive knowledge and appreciation of mediæval design. The first work that brought him prominently forward was the Church of the Holy Trinity at Westminster, which was greatly admired by Barry, Scott, and Pugin, but in the main did not differ greatly from the better class of Gothic at that time in its accurate following of mediæval detail. Before this he had engaged in several restorations, one of the most important of which was that of the church of Stow-in-Lindsey, Lincolnshire, where he restored the Norman vaulting. He early discovered that vaulting was neither so difficult nor so expensive as had been thought, and from about this time covered his larger churches with brick vaults on stone ribs. In this portion of his career he came under the influence of early French work, and throughout his life he was affected by its spirit, his spires in particular exhibiting this. His first really individual work was St. Peter's, Vauxhall, built in 1861, a church whose somewhat forbidding exterior hardly prepares one for its impressive interior. In 1871 he designed St. Augustine's, Kilburn, the most important of all his parish churches. The originality of treatment apparent in this church is equally observable in the London Church of St. John, Red Lion Square, which was designed in 1874, and displays an unusual amount of constructive skill. The detail of both churches, as well as that of much of Mr. Pearson's later work, is thirteenth century English. Of a little later date than these are the churches of St. Michael, Croydon; St. John, Upper Norwood; and St. Alban, Birmingham—all vaulted, cruciform structures, with aisles and chapels, and each possessing very distinctive features. Later notable buildings designed by him are the churches of St. Stephen, Bournemouth; St. Agnes, Toxtith Park; All

Saints, Hore; the strikingly original parish church of Headingley, near Leeds; the Catholic Apostolic Church at Maida Vale; the Astor estate office on the Thames Embankment, erected in 1893; and additions to Sidney Sussex and Emmanuel College, Cambridge. As a restorer of English cathedrals he was perhaps best known, and he was the most conservative as well as the most learned of English restorers. In his management of restorations, decayed material was removed to be replaced with new, isolated stones were removed one by one, disintegrated masses taken down and replaced, stone for stone, moldings and ornaments were copied from the originals, if anything was left to copy; if not, they were confessedly new and would be so seen by any architect, at least, even though following the style and motive of the old work. In 1870 he became architect to Lincoln Cathedral, and on the death of Street, in 1881, succeeded him as architect to Bristol Cathedral, completing the nave and western towers, and designing the reredos. The extensive restorations in Peterborough in the same decade, which involved the taking down and rebuilding of the lantern tower, were conducted by him, as were the very recent repairs of the west front. He was also architect to Rochester and Chichester Cathedrals, the recent conservative restoration of the western façade of the former structure being his; while at the time of his death he was engaged upon a design for the completion of the northwest tower at Chichester. Extensive alterations at Wakefield Cathedral had been planned by him in the last months of his life, and he had long been consulting architect to the cathedrals of Exeter and Gloucester. The alterations at Westminster Hall, completed in 1884, were by him; but his most important work as a restorer was at Westminster Abbey. Here he restored the upper portion of the north transept front and the south aisles of nave and choir, works which have not been suffered to pass without criticism, but which the judgment of experts on the whole has highly approved. The great work of Mr. Pearson, the only modern Gothic structure that fully deserves to be called a cathedral, is Truro Cathedral, on the plans of which he began working in 1878. This great building is of the double cruciform plan, and when completed will possess all the important features of the great mediæval cathedrals of England. It will consist of nave and aisles, with southern porch, western spired towers and porch, greater transept with lantern and spire, choir with aisles and eastern transepts, and on the north a cloister garden and octagonal chapter house. The foundation stone was laid May 20, 1880, and in November, 1887, the completed portion was opened for service. Mr. Pearson did not confine himself to the working out of one especial phase of Gothic, but his favorite style was the early pointed; to this he imparted his own individuality, setting his impress upon all that he did, and escaping most successfully the monotony which this development of Gothic sometimes exhibits. He was full of original ideas, and one of the first to break away from the old habit of copying and to design modern buildings in the true mediæval spirit, and was, in fact, the founder of the school of modern Gothic architecture. Like other architects, he had mannerisms, among which was a fondness for small details. He liked to place lofty flanking turrets beside his gables, to minimize his spires in order to display tower angles, and, in general, to emphasize vertical lines. He designed a great number of schools, mansions, country seats, vicarages, and other structures; but these, however excellent of their kind, probably contributed little to his reputation. On Dec. 15 his funeral took place in Westminster Abbey, his body being laid to rest

close to the pulpit in the nave, and very near the graves of his distinguished predecessors, Barry, Street, and Sir Gilbert Connell.

Plunket, William Conyngham, Baron, an Anglican prelate, born in Dublin in 1828, died there, April 1, 1897. He was the son and heir of the third Lord Plunket by a daughter of C. K. Bushe, Lord Chief Justice of Ireland, was graduated at Trinity College, Dublin, in 1853, ordained in 1857, and became chaplain to his uncle, Thomas Plunket, Bishop of Tuam, from whom in 1858 he received the living of Kilmoglan and Cummer in the west of Ireland, where he took a great interest in the missions for the conversion of Catholics to the English Church, a movement which roused fierce and violent opposition among the Irish, but received warm support in England. When the Irish Church was disestablished in 1869, Lord Plunket, who in that year had become presenter of St. Patrick's Cathedral, took a prominent part in the work of reconstructing its machinery on the new basis of a voluntary organization with lay representation, and exerted an effective influence in preserving its intrinsic identity with the English establishment, which the extreme Protestant party was disposed to sacrifice. In 1876 he was elected Bishop of Meath, and in 1884 he was translated to the metropolitan see of Dublin when it was vacated by the resignation of Archbishop French. As Archbishop of Dublin he played an important part in the recent history of the English Church in Ireland. He was associated with the evangelical party, and sustained amicable relations with the dissenting bodies. His bold course in seeking to found a Reformed Episcopal Church in Spain under Bishop Cabrera gave rise to an episode in international politics. He was interested in the promotion of Irish elementary schools and served as one of the commissioners of national education. He founded the Church of Ireland training college and the Alexandra school. He was an ardent supporter of all philanthropic enterprises that he deemed to be of benefit to Ireland.

Pollock, Sir Charles Edward, Baron, an English jurist, born in London in 1823; died there, Nov. 21, 1897. He was a son of the veteran Chief Baron Sir Frederick Pollock and the grandson of a Scotch saddler who was the leader in his trade in London in the last century, and whose numerous descendants have attained the highest place in the law, the army, literature, and official life. He had no university training, but read law with his father and served as his private secretary when he was Attorney-General, was called to the bar in 1846, reported cases for some years and wrote books on county court procedure, merchant shipping, the law of evidence, and other subjects. His practice gradually increased, and the ablest and most ambitious of law students sought to become his pupils. He was retained and employed as arbitrator in many important references. He became a bencher of the Inner Temple in 1866, joined the fraternity of sergeants at law in 1872, and returned to his old inn in 1882 after that society was dissolved. He was raised to the bench in 1873, and knighted. As a judge he exhibited often his remarkable erudition, especially in curious and antiquarian phases of the law, but he was too kindly and sympathetic to be a great judge, and as referee had fallen too much into the habit of compromise.

Pulszky, Ferencz Aurel, a Hungarian patriot, born in Epirus in 1814; died Sept. 9, 1897. A book of sketches of travel in England procured his election to the Hungarian Academy at the age of twenty-three. He entered politics, and in 1839 was elected to represent his native county of Saros in the Hungarian Chamber. In 1848, while Hungary was still governed from Vienna, he was nominated

secretary in the Hungarian Ministry of Finance, but as soon as the revolution broke out he threw up his office and plunged with ardor into the movement, and was a member of the National Government. Kossuth sent him in 1849 to represent Hungary abroad. After the patriots were vanquished he remained as an exile in foreign parts, and accompanied Kossuth on his travels and sojourn in America, about which he subsequently wrote a volume that was published simultaneously in English and German. Meanwhile the council of war sitting in Budapest had condemned him to death as *guilty*. In 1860, attracted by the movement for Italian national independence, Pulszky hastened to the scene of the conflict and enrolled himself in Garibaldi's legion. He was captured at Aspromonte and kept a prisoner at Naples for a while, and then released. When the amnesty of 1866 and the reconciliation with Austria reopened to Pulszky the gates of his country he returned to Hungary and was one of those who rallied to Deak and the policy of conciliation on the basis of the autonomy of the Hungarian state. He was a member of the Hungarian parliament from 1867 till 1875. In 1869 he was appointed director of the National Hungarian Museum, and in 1872 he was made director general of all the museums, public collections, and libraries of Hungary. In 1884, in spite of his advanced age, he re-entered the Chamber, and gave proof, as in the various other functions that he discharged, of remarkable energy and indefatigable industry. Among the productions of his pen are an archaeological study of the age of copper in Hungary and a volume of autobiographical reminiscences.

Preyer, Thierry Wilhelm, a German physiologist, born in Manchester, England, in 1841, died in Wiesbaden, July 15, 1897. He studied in Bonn, Berlin, Heidelberg, Vienna, and Paris, taking his doctor's degree in philosophy in 1862 and in medicine in 1866, and in 1869 he became Professor of Physiology at Jena. He conducted laboratory investigations in quantitative spectral analysis, the qualities of the different senses, and the perception of sound. His best known work is "The Soul of the Child." Other books of his are "Prussic Acid," "On the Task of Natural Science," "On the Causes of Sleep," "The Struggle for Existence," "Elements of General Physiology," and "Hypnotism."

Renouf, Sir Peter Le Page, an English archaeologist, died in London in October, 1897. He was a disciple of Newman, and published some essays on religious history. Then he devoted himself to the study of Oriental languages and to researches in Egyptology. His principal works are a treatise on the religion of ancient Egypt, published in 1879, and an edition of the papyrus of Ani, issued in 1890. He was honorary conservator of the Egyptian collections in the British Museum.

Richter, Albrecht, an Austrian politician, born in Bohemia in 1845; died in Vienna, March 3, 1897. Dr. Richter was a prominent lawyer in Vienna, who, as a member of the Municipal Council, resisted with vigor and eloquence the anti-Semitic movement from its inception. In 1894 he was elected burgomaster of the Kaiserstadt, but the Windischgrätz ministry, dominated at the time by Clerical and anti-Semitic influences, vetoed the election on the ground that Dr. Richter, who had married a Jewess and stood outside of the pale of the Catholic Church, belonged to no recognized religious confession. This decision gave an impetus to the anti-Semitic movement, and paved the way for the eventual triumph of Dr. Lueger. Dr. Richter was one of the principal promoters of the various schemes for the extension and improvement of the city of Vienna.

Riehl, Wilhelm Heinrich von, a German historian, born in Biebrich in 1823; died in Munich, Nov. 16, 1897. After studying theology and philosophy at different universities, he devoted himself to historical studies at Giessen. He became a journalist at Frankfurt in 1845, and was afterward connected with papers in Karlsruhe, Wiesbaden, and Augsburg until 1853, when King Maximilian appointed him Professor of History at the University of Munich. In 1885 he became director of the National Museum and conservator of Bavarian monuments of art and antiquities, while still retaining his professorship. Prof. Riehl was a composer, and published several musical works. His books on the history of civilization and manners are very numerous, and he wrote several historical novels. Among his best known works are "Middle-Class Society," "Country and People," "Family Book of Travels," "Stories from Ancient Times," and "Studies of the History of Civilization during Three Centuries."

Rocca, Enrico Morozzo della, an Italian general, born in 1807; died in August, 1897. As a cadet of a Piedmontese family whose nobility dates from the thirteenth century, he was placed at court when nine years old as a page to the Prince of Carignano, and later passed through the military academy, which he left in 1825 to join the staff with the grade of lieutenant. He did good work in geodetical and topographical surveying till Carlo Alberto, whom he had served as page, came to the throne in 1831, and called him to court to be squire to the Duke of Savoy. After the defeat at Novara and the abdication of the King in favor of Vittorio Emanuele, the latter intrusted to Gen. della Rocca the portfolio of Minister of War, which he was not long able to retain amid the continual political storms of the period. He continued, however, to be one of the intimate confidential advisers of his sovereign, and it was he and Cavour, his old comrade, who urged Vittorio Emanuele to take part in the Crimean expedition with the view of securing the future co-operation of Napoleon III in the unification of Italy.

Rosmead, Lord (formerly Sir HERCULES ROBINSON), a British administrator, born in Rosmead, County Westmeath, Ireland, in 1824; died in London, Oct. 28, 1897. He was a son of Admiral Hercules Robinson, was educated at Sandhurst, held a commission in the army for a short time, then served in various positions in the Irish civil service, and in 1854 was appointed President of Montserrat and Lieutenant Governor of St. Christopher. On completion of his term of five years he was made Governor of Hong-Kong. He served in 1863 on a commission to inquire into the financial condition of the Straits Settlements. In 1865 he was transferred from Hong-Kong to Ceylon, where he served until he was appointed, in 1872, Governor of the self-governing colony of New South Wales. He heartily indorsed the incipient project of Australian federation, and was already an Imperialist, bringing to a successful issue the annexation of the Fiji Islands in 1874. In 1879 he went to New Zealand, but was governor of that colony only a year and a half, when he was called away to undertake the difficult duties of Governor of the Cape of Good Hope and High Commissioner of South Africa. He had hardly reached Cape Town when, on Dec. 16, 1880, the Transvaal declared its independence. The campaign that followed ended with the disastrous battle of Majuba Hill, after which he made peace in accordance with the demands of the Liberal party at home, though much against the sentiment of the English party at the Cape. In the nine years that followed Sir Hercules Robinson, to whom in the delicate situation of South Afri-

can affairs the home Government allowed extraordinary liberty of action, and who by his tact and diplomacy and his sagacity in yielding to forces that he could not resist, and displaying unexpected energy and activity wherever English prestige and power could be advanced, played a greater part than any other colonial governor of the century. Trusted by the Liberal party, he, in conjunction with Cecil Rhodes, made it responsible for the most ambitious of forward movements, and they even gained the support of the Dutch of Cape Colony for their imperial designs, playing upon their fears of German expansion. The Afrikander Bond, formed with sentiments of direct antagonism to English rule under the system of conciliation adopted by Sir Hercules Robinson, became the mainstay of the policy of British imperial extension. After Bechuanaland was made a British protectorate, in 1885, Sir Charles Warren, who led the expedition that occupied the country, proposed to divest Sir Hercules Robinson of the office of high commissioner and have the Imperial Government take the direct and sole control of the territories to be acquired in the north, holding that the Governor of Cape Colony was too much under the influence of the Cape Dutch and their brothers of the Boer republics. This controversy revived the jealousies between the Dutch and the English which the conciliatory policy of Sir Hercules Robinson had succeeded in allaying, but his final victory restored to a considerable extent the mutual confidence between the parties. In the year in which his term expired the British South Africa Company obtained a charter to administer the territories that the Portuguese had been forced by menaces to relinquish, up to and beyond the Zambesi as far as Lake Tanganyika. Sir Hercules Robinson retained the confidence of the Dutch to the last, and, when a convulsion in the Transvaal seemed again to be impending, the Liberal Government, in 1895, sent him out again as Sir Henry Loch's successor, although his appointment was the subject of sharp criticism, because during his retirement he had entered into relations with various South African companies. Cecil Rhodes was still Premier, and no break had occurred between him and the Dutch leaders, and hence the former conditions were expected to be restored by him and Sir Hercules Robinson, whom President Krüger had said that he preferred to all other British governors. With his usual diplomatic skill he endeavored to compose the quarrels between the Uitlanders and the Transvaal Government. Then came the Jameson raid and the explosion of the plot in which his own officers were implicated, of which Cecil Rhodes was the main instigator. He himself rested under suspicion, as well as the colonial authorities at home. Panic and universal distrust pervaded South Africa, and race feeling was aroused almost to the pitch that would precipitate civil war. In these trying circumstances the aged and sickly governor acted with energy and discretion, displaying his political ability as he never had done before. He promptly disavowed Dr. Jameson's action, and endeavored to arrest his march. Then he proceeded to Pretoria, and negotiated the release of Dr. Jameson and his fellow officers. His failure to obtain any immediate redress for the grievances of British subjects, and thus rehabilitate British prestige and justify the revolutionary conspiracy, was keenly criticised by the imperialists in England and South Africa, but the best politicians concluded that he had extricated his Government from a difficult and humiliating situation as well as could be done. His career, however, was considered at an end; and after being elevated to the peerage, having already received the colonial order of knighthood and a

baronetage for his previous services in South Africa, he remained a short time to inaugurate a new policy of conciliation, and was then replaced, in the spring of 1897, by Sir Alfred Milner.

Ross, Alexander Milton, a Canadian naturalist, born in Belleville, Ontario, Dec. 13, 1832; died in Detroit, Mich., Oct. 27, 1897. He came to New York city when a boy, was for a time a compositor on the "Evening Post," and subsequently studied medicine under Dr. Valentine Mott, receiving a degree in 1855. He joined Walker's filibustering expedition to Nicaragua, and later served with John Brown in Kansas. During the civil war he acted as surgeon in the National army, and at its close served similarly in the Mexican army under Juarez. He then returned to Canada and became an enthusiastic collector and classifier of Canadian fauna. He was a member of the College of Physicians and Surgeons of Quebec and Ontario, and was appointed Commissioner of Agriculture for Ontario. In 1876 he was knighted by the Emperor of Russia and the Kings of Italy, Greece, and Saxony, and in 1877 by the King of Portugal. The Kings of Belgium and Denmark made him their consul in Canada, and in 1879 he received from the French Government the decoration of the *Académie Française*. His writings include "Recollections of an Abolitionist" (Montreal, 1867); "Birds of Canada" (1872); "Butterflies and Moths of Canada" (1873); "Flora of Canada" (1873); "Forest Trees of Canada" (1874); "Ferns and Wild Flowers of Canada" (1877); "Mammals, Reptiles, and Fresh-water Fishes of Canada" (1878); "Vaccination a Medical Delusion" (1885); and "Medical Practice of the Future" (1887).

St. Martin, Vivien, a French geographer, born in Martin-de-Fontenay, Calvados, in 1802; died in Paris, Jan. 3, 1897. He went to Paris at an early age, and when only twenty-three published a universal atlas that was regarded as one of the most complete of the time. In 1828 he founded, with M. Balleul, the "Bibliomappe," a periodical that developed a popular taste in geographical studies, but ceased to appear in 1830. In 1838 he published a new work on French geography. From 1836 he was engaged for several years in translating Sir Walter Scott's novels and on historical books. Resuming his geographical work, he edited "Nouvelles Annales des Voyages" from 1845 to 1854, and published two volumes of the "Histoire Universelle des Découvertes Géographiques," which was interrupted by the revolution of 1848. This important work on the history of geography and geographical discoveries was finally completed on a smaller scale in 1873. He published monographs on the primitive peoples of the Caucasus, ancient Asiatic geography and ethnography, Greek and Latin geographical knowledge of India, and northern Africa in classic antiquity. From 1863 till 1873 he edited the "Année Géographique," an annual record of exploration, besides writing constantly for the press. In 1876 he undertook the editorship of the "Nouveau Dictionnaire de Géographie Universelle," which was only completed in 1896. He presented, in 1888, to the Academy of Inscriptions a mass of materials that he had collected for a historical dictionary of ancient geography.

Sanfelice di Acquavella, an Italian prelate, born in Aversa, April 18, 1834; died in Naples, Jan. 3, 1897. He was Archbishop of Naples, and was created a cardinal on Mar. 24, 1884. Cardinal Sanfelice endeared himself to the people among whom he lived by his heroic charitable labors during the cholera year and at the time of the earthquake at Casamicciola, when he opened all the churches for the reception of the sufferers, and was indefatigable in his care of the wounded.

Siciliano di Rende, Camillo, an Italian prelate, born in Naples, June 9, 1847; died May 16, 1897. He became Archbishop of Legnano, and was created a cardinal on Mar. 14, 1887.

Skelton, Sir John, a Scottish jurist, born in Edinburgh in 1831; died there July 20, 1894. He was the son of a writer to the Signet, was educated at St. Andrews and Edinburgh universities, embraced the profession of the law, was admitted into the faculty of advocates in 1854 and after a career of successful practice was appointed by Mr. Darnley in 1868 Secretary of the Board of Supervision, of which he became chairman in 1892. After the Local Government Board for Scotland was established in its place he was elected the first vice-president of that body. After his retirement in 1897 he received the honor of knighthood. He published a treatise on the treatment of pauperism in 1876, and a handbook on public health in 1890. Under the pseudonym of "Shirley" he contributed to the Scotch magazines. Among his published works are a volume of essays entitled "Nuga Critica" (1862), "A Campaigner at Home" (1865), "The Impachment of Mary Stuart" (1876), "Essays in Romance" (1878), and the novel of "Crookit Meg" (1880). In later years he distinguished himself by his earnest and able efforts to rehabilitate the reputation of Mary, Queen of Scots. His chief historical works were "Maitland of Lethington and the Scotland of Mary Stuart" (1887) and "Mary Stuart" (1893). His "Table Talk of Shirley," of which one volume appeared in 1865 and a second in 1897, contains anecdotes and reminiscences of many literary characters of the past generation.

Steenstrup, Japetus, a Danish scientist, born in Vang in 1813; died in Copenhagen in July, 1897. He became professor of mineralogy and botany at the Academy of Sciences in 1841, and in 1845 professor of zoology in the University of Copenhagen and at the same time director of the Zoological Museum. He resigned his chair in 1885. The number and value of his works in natural history and anthropology gave him a wide reputation in the world of science, and caused the Institut de France and the Academies of Science in Rome and St. Petersburg to elect him a corresponding member. His researches in natural history led him to occupy himself with early man, and in the latter part of his life he published works dealing with extinct fauna, prehistoric mounds, Kjökkenmøddings, and the discovery of Gundestrup.

Stephan, Dr. von, a German postal reformer, died April 8, 1897. He had been for many years the head of the Imperial Post Office, was its organizer in the early period of the empire, and originated a very perfect system and introduced many improvements in the postal service. The postal card was his invention.

Sterneck, Baron, von Ehrenstein, an Austrian admiral, born in 1809; died in Vienna, Dec. 5, 1897. He entered the navy at the age of seventeen, and became commander of a frigate in the North Sea in succession to Admiral Tegethoff in 1864. In 1866 he commanded Admiral Tegethoff's flagship at the battle of Lissa, which he won for the Austrian fleet by ramming with his ironclad and sinking the "Re d'Italia," the largest of the Italian vessels. For this he was decorated with the Maria Theresa order. After the war he took a prominent part in the work of reorganizing the Austrian navy, and on the death of Tegethoff he succeeded to his post at the head of the service. He continued the task of his famous predecessor with a success that naval authorities of all countries have regarded with admiration in view of the small means placed at his disposal for the creation of a modern navy.

Stoughton, John, an English historian, born in Norwich, Nov. 18, 1807; died in Ealing, Oct. 25, 1897. He was educated as a solicitor, his father's profession, but decided to become a Christian minister, chose the Congregational denomination, entered Highbury College at the age of twenty-one, and after completing his studies became associate pastor of the Congregational Church at Windsor. Ten years later he took charge of the church at Kensington, where he remained until he retired in 1874. He continued to an advanced age to fill the chair of Historical Theology at New College, which he had accepted in 1872. He received the degree of D. D. from Edinburgh University in 1872. Dr. Stoughton was much interested in the work of the missionary and Bible societies and in the Young Men's Christian Association and the Evangelical Alliance from their inception, and was one of the founders of the Congregational Union, the object of which was to promote co-operation among the Congregational churches without destroying their individual independence. He was identified with every movement to bring about harmonious feeling and action between Churchmen and nonconformists, and was a close friend of Dean Stanley and others of the evangelically inclined clergy. Dr. Stoughton made a life-long study of the Puritan period of English history. He first published "The Ecclesiastical History of England from the Opening of the Long Parliament to the Death of Oliver Cromwell" (1867), treated the next succeeding period in "The Church of the Restoration," and followed this up with volumes on the reigns of Queen Anne and the first three Georges, and concluded the series with "Religion in England from 1800 to 1851."

Sylvester, James Joseph, an English mathematician, born in London, Sept. 3, 1814; died March 15, 1897. He was educated at St. John's College, Cambridge, where, however, he could not take his degree on account of being a Jew. He was for some time Professor of Natural Philosophy in University College, London, and subsequently Professor of Mathematics at the University of Virginia. He held the same chair at the Royal Military College, Norwich, 1855-'71, and at Johns Hopkins University, Baltimore, 1873-'83. In December, 1883, he became Professor of Geometry at Oxford, and he held that chair ten years. He was a mathematician of extraordinary gifts, which could be best appreciated only by specialists, and was a member of many learned societies in Europe and America, having been a fellow of the Royal Society for nearly fifty years. He founded the "American Journal of Mathematics," of which he was the first editor, and published many scientific papers, and was the discoverer of a much discussed theory of reciprocants. His only works in book form are "Nugæ Mathematicæ" (London, 1866) and "Laws of Verse, or Principles of Versification exemplified in Metrical Translations" (1870).

Teck, Mary Adelaide Wilhelmina Elizabeth, Duchess of, an English princess, born in Hanover, Nov. 27, 1833; died in Richmond, Oct. 27, 1897. She was the second daughter of Adolphus Frederick, seventh son of George III, and was a first cousin of the Queen of England, and on the side of her mother, a daughter of the Landgrave of Hesse, was first cousin also of the Queen of Denmark. Her childhood was spent between London and the castle of Rumpenheim. After her father's death in 1850 she lived with her mother at Kew. On June 12, 1866, she married Count Francis Paul of Hohenstein, the only son of Duke Alexander of Wurtemberg and the Countess Hohenstein. Her husband, who was three years younger than she, retired from the Austrian army, in which he had won distinction in the Italian campaign of

1859, and the two resided in Kensington Palace, where their four children were born. He had been created Duke of Teck by the King of Wurtemberg. Princess Victoria Mary, their eldest child, born May 26, 1867, was married in 1893 to Prince George of England, Duke of York, the heir to the throne, having previously been engaged to the Duke of Clarence. Prince Adolphus, the second child, born Aug. 13, 1869, married in 1894 Lady Margaret Grosvenor, daughter of the Duke of Westminster. The two younger children, Prince Francis Joseph and Prince Alexander, were born in 1870 and 1874. Later they lived at White Lodge in Richmond Park, of which the Queen gave them the use. The Duchess of Teck was exceedingly philanthropic, spending in charity a fifth of the annual allowance of £5,000 given her by Parliament.

Themptander, Oskar Robert, a Swedish statesman, born in 1845; died in Stockholm, Jan. 30, 1897. He was appointed Minister of Finance on March 8, 1881, and on May 16, 1884, became Minister of State, and remained at the head of the Government till February, 1888, when his ministry resigned after a victory at the polls of the Protectionist Agrarian party.

Tolain, Henri Louis, a French politician, born in Paris in 1828; died there, May 4, 1897. He was a journeyman carver, and in 1861 was one of the artisan delegates sent to the London exhibition. He was one of the founders of the International in 1864, attended all the congresses of that body, and in 1868 suffered imprisonment for taking part in its deliberations. When, however, the Collectivist theories of Karl Marx were adopted as its programme, he seceded and formed the *Fédération Ouvrière*. He was a candidate for the Corps Législatif in 1864, and in February, 1871, he was elected from Paris to the National Assembly. Attempting to mediate between the Government and the Commune, he was arrested by the latter. In 1875 he became a Senator. He was a vigorous opponent of the monarchist and Boulangist movements. In 1888 he represented France, with Jules Simon and Burdeau, at the labor conference in Berlin called by the young Kaiser Wilhelm.

Tunner, Peter von, an Austrian metallurgist, born in 1808; died June 13, 1897. He was the founder and the first professor in 1840 of the School of Mines in Leoben, Styria. In 1878 he received a medal from the Iron and Steel Institute of Great Britain, in recognition of his important discoveries connected with the metallurgy of steel. He wrote many valuable treatises on the processes in the manufacture of iron and steel.

Twiss, Sir Travers, an English jurist, born in London, March 19, 1809; died there, Jan. 15, 1897. He entered University College, Oxford, at the age of seventeen, was graduated with honors in mathematics and classics, became a fellow of his college and a tutor and public examiner successively in classics and mathematics. Having adopted Niebuhr's views on early Roman history, he published in 1837 an epitome of the historian's work, which he followed up with an edition of Livy with Latin notes. In 1842 he was elected Drummond Professor of Political Economy, and at the end of his term he published "A View of the Progress of Political Economy in Europe since the Sixteenth Century" (1847). In 1846 he published an essay on the Oregon boundary question, which then threatened to lead to a rupture between England and the United States. This was the first of a long series of productions on questions of international law that established his reputation as a high authority on the subject. He published in 1848 a treatise on the relations of the Duchies of Schleswig and Holstein to the Danish Crown and the German Federation.

When Great Britain was wrought up to a high pitch of excitement by the establishment of a Roman Catholic hierarchy in England, he discussed the question in "Letters Apostolic of Pius IX considered with reference to the Law of England and the Law of Europe," in which he combated the papal pretensions both in Great Britain and the British colonies. He held the professorship of International Law at King's College, London, from 1852 to 1855, resigning then to accept the chair of Regius Professor of Civil Law at Oxford, which he held for fifteen years, being succeeded by James Bryce. He had been an advocate of Doctors' Commons since 1840, in which year he was also called to the bar at Lincoln's Inn. In 1849 he was appointed commissary-general at Canterbury, in 1852 vicar-general of the archbishop, in 1858 chancellor of the diocese of London, and in 1862 advocate-general of the Admiralty. After the abolition of Doctors' Commons in 1857, he was made in 1858 a Queen's counsel, with other eminent civilians, and was knighted in the same year. He was a member of a commission that investigated in 1867 the laws of neutrality and of the commission of 1868 that reported on the naturalization and allegiance laws, and in 1869 he served on the commission that dealt with the marriage laws of Great Britain and Ireland and the colonies. He served also on the commission on rubrics. He was one of the arbitrators who settled the boundary between Canada and New Brunswick. In 1884 he drew up at the request of the King of the Belgians a constitution for the Independent State of the Congo. In 1885 he acted as legal adviser of the British Government at the West African Conference in Berlin. He published lectures on international law in 1856. In 1861 he published "The Law of Nations considered as Independent Political Communities." His principal works on the subject are "The Law of Nations in Time of Peace" and "The Law of Nations in Time of War," which he translated into French with the assistance of Prof. Alphonse Rivier, of Brussels. He was one of the founders in 1872 of the Institut de Droit International, and one of the chief promoters of the Association for the Codification of the Law of Nations instituted in 1873.

Vacherot, Étienne, a French philosopher, born in Langres in 1809; died in Paris, July 30, 1897. He was educated at the Paris Normal School, and had been Professor of Philosophy at different colleges in the provinces when Victor Cousin selected him in 1837 as his chief subordinate in the Normal School. In 1839 he took Cousin's place in the lecture room, and became very popular with the students. His history of the school of Alexandria was condemned by the clergy, and to his principal assailant, Abbé Gratry, he replied in such caustic and irreverent terms that he was suspended from his functions. When Louis Napoleon became Emperor he refused to take the oath of allegiance, and was dismissed. He expounded his liberal views in articles for "L'Avenir" and also in his "Métaphysique et Science," and his "Démocratie," though a purely theoretical work, contained an indirect condemnation of the Napoleonic system so severe that he was tried and sentenced to a year's imprisonment, while his counsel, Émile Olivier, then a valiant assailant and afterward the oratorical champion of the empire, was suspended from the Paris bar. In 1868 Vacherot succeeded Cousin in the Academy of Moral Sciences. Olivier on becoming Premier in January, 1870, offered him a place in the Council of Education, but he haughtily replied that, having been deprived of his civil rights, he was ineligible. He was one of the mayors of Paris during the siege, was elected to the Assembly, and was one of three Deputies of Paris who voted in

favor of concluding peace with Germany. He supported the Broglie Cabinet elected from the Republican Constitution. He retired from the Chamber in 1876, and in subsequent years wrote for the "Revue des Deux Mondes," and published some political treatises. His writings were admired alike for the vigor and the elegance of his style. He was disappointed in the republic, and was attracted to monarchistic principles.

Vaughan, Charles John, an English private, born in Leicester in 1816; died in Fenchurch, Oct. 15, 1897. He came of a family that had won high distinction in various professions. His father was a clergyman. He and his brothers were trained at Rugby under Dr. Arnold. He had a brilliant career at Cambridge, was elected a fellow of Trinity in 1839 and immediately after he was ordained in 1841 was presented to St. Martin's, Leicester, one of his father's former incumbencies, where he remained three years. He was a candidate in 1842 for the head mastership of Rugby, rendered vacant by the sudden death of Dr. Arnold, and in 1844 he was chosen head master of Harrow, vacant through the resignation of Dr. Wordsworth. Under his direction the school rapidly recovered from its previously weak and declining condition. In 1860 he became vicar of Doncaster and Chancellor of York. In 1869 Mr. Gladstone appointed him master of the Temple, and in 1879 he became Dean of Lambeth. He resigned the mastership of the Temple in 1894. He was a member of the committee that revised the translation of the New Testament, and edited several of the Epistles, but his sermons, of which many volumes were published, were marked by their devotional spirit, and contained scarce a trace of biblical or ecclesiastical erudition or theological dialectics. He insisted on assuming the Gospel without argument, and presented the spiritual aspects of religion in an inspiring and forcible style.

Wattenbach, Wilhelm, a German historian, born in Hamburg in 1820; died in Frankfurt, Sept. 20, 1897. After studying in various universities he went to Berlin and became a collaborator, and afterward one of the chief editors, of the "Monumenta Germaniæ Historica." While making researches for this work in the Vienna archives and in various old convents he found time to complete a book on the ecclesiastical history of Bohemia and Moravia. This was followed by studies of the sources of mediæval and ancient history. In 1862 he became Professor of History in the University of Heidelberg. Soon after that he published two books on Greek palæography and an introduction to the study of Latin palæography, also a book on the manuscript work of the Middle Ages. He wrote also sketches of travel, describing holiday jaunts in Algiers, Spain, Portugal, Sweden, and the mountains of Saxony. In 1876 he published a popular history of the papacy.

Wirth, Franz, a German publicist, born about 1822; died in Frankfurt-on-the-Main, May 15, 1897. He was one of the German Democrats of 1848, and in later years called himself a Social Democrat, though he was not a thorough upholder of the principles and purposes of the party of that name. He was always an advocate of peace and disarmament, founded a branch of the Peace Society in Frankfurt in 1886, and was a constant contributor to the periodicals devoted to that cause, and was one of the two German members of the International Peace Bureau at Bern.

Wolter, Countess O'Sullivan, known as CHARLOTTE, an Austrian actress, born in Cologne, Mar. 6, 1834; died in Vienna, June 14, 1897. She received her training in Vienna, made her debut at Buda-Pesth in 1857 as Jane Eyre, played for a while

at Brünn, and they for two years at Berlin in the Victoria Theater, where her success in the dramas of Grillparzer attracted the attention of Laube, by whom in 1862 she was engaged for the Court Theater in Vienna, which she helped greatly to maintain in its leading place among the theaters of German lands during thirty-six years that she was connected with it. Her voice, figure, carriage, and features were adapted to the representation of a great variety of heroic parts, and she possessed a rare power of expressing all kinds and degrees of emotion. Her *repertoire* contained a large number of the principal modern dramas, but she was greatest in the classic roles of Phædra, Lady Macbeth, Iphigenia, Cleopatra, Medea, Countess Orsina, Lady Milford, Supplia, Messalina, Antigone, and Maria Stuart. At the beginning of her Vienna career she married Count O'Sullivan de Grass, secretary of the Belgian legation.

Von Edmond Charles, a French artist, born in Paris, March 31, 1841; died there, March 26, 1897. He began his career by making wood engravings and etchings very ably treated for different illustrated publications. Later he devoted himself exclusively to landscape painting, exploring Montmartre before its rural beauties vanished, and afterward painting the banks of the Seine, Marne, and Oise, rendering with great delicacy the transparency of grass and reeds. He made interesting landscapes also of Holland and the south of France. For thirty years he exhibited regularly in the salons of the Palais d'Industry and in the exhibitions of the aquarellists and pastellists.

OHIO, a Central Western State, admitted to the Union in 1803; population according to the last census (1890) 3,666,719, it being the fourth in rank of the States; area, according to the United States Geological Survey, 41,060 square miles, of which 40,760 is land surface and 300 water surface. Capital, Columbus.

Government.—The State officers during 1897 were: Governor, Asa S. Bushnell; Lieutenant Governor, Asahel W. Jones; Secretary of State, Charles Kinney; Auditor of State, Walter D. Guilbert; Treasurer of State, Samuel B. Campbell; Attorney-General, Frank S. Monnett; Judges of the Supreme Court, William T. Spear, Marshall J. Williams, Joseph B. Bradbury, John A. Shauck, Thaddeus A. Marshall, Jacob F. Burkett; Clerk of the Supreme Court, Josiah B. Allen; Commissioner of Common Schools, Oscar T. Corson; Dairy and Food Commissioner, Joseph E. Blackburn; Board of Public Works, Charles E. Groce, Edwin L. Lybarger, Frank A. Huffman—all Republicans.

Finances.—At the opening of the fiscal year ending Nov. 15, 1897, the balances in the treasury aggregated \$525,125.09. The receipts during the year were: General revenue fund, \$4,687,096.71; sinking fund, \$590,381.36; school fund, \$1,743,776.11; university fund, \$239,898.39; total, \$7,266,151.57. The disbursements were: General revenue fund, \$4,433,014.48; sinking fund, \$581,436.62; school fund, \$1,759,687.50; university fund, \$193,618.19; total, \$6,968,757.79. The aggregated balance in the treasury, Nov. 15, 1897, was \$764,498.96. Of this amount the receipts during the year, \$2,444,971.04 were from general taxes, \$1,002,523.02 from taxes on liquor traffic, \$13,524.42 from taxes on cigarette trade, \$11,887.21 from taxes on collateral inheritance, \$529,794.66 from excise taxes, \$267,366.34 from Ohio Penitentiary, and the remainder from miscellaneous sources. The balance to the credit of the general revenue fund, Nov. 15, 1897, was \$435,374.57.

On July 1, 1896, at the maturity of the \$500,000 temporary loan, which was issued in 1894, \$250,000 was paid from the sinking fund revenues, and

the remaining \$250,000 was refunded at 3 per cent. until July 1, 1897, at which time it was paid. This reduced the bonded indebtedness of Ohio to \$1,291,665, which will be discharged at the rate of

ASA S. BUSHNELL, GOVERNOR OF OHIO.

\$250,000 annually. The so-called irreducible debt, which is not a debt, but a trust created by the sale of school lands, for which due account is given annually by interest paid to the school fund, will remain undisturbed.

Local Taxes.—The Auditor, in his annual report, calls attention to the increase in local taxes during the past seven years. For 1890 the taxes levied for county, township, school, and municipal purposes amounted to the sum of \$30,145,325.37. The taxes levied for 1897 for the same purpose amount to \$35,551,534.47. For the same period there is a decrease of \$80,866.14 in the amount levied for State purposes, exclusive of levy for university purposes.

Charities.—The whole number of inmates maintained in the sixteen benevolent and educational institutions of the State for 1897 was 19,772, an increase over the previous year of 1,117. In 1896 the amount expended for current expenses and for repairs and improvements was \$2,226,885.53, and in 1897 the expenditures for the same purposes were \$2,458,869.83. The increase is largely due to the erection of new buildings. The total net current expenses, including salaries, and crediting each institution with the amount of its earnings, were \$1,681,733.62 in 1896; in 1897 they were \$1,767,411.50, an increase in 1897 of \$85,677.88. At the beginning of the year there were 14,384 persons maintained in the State institutions. At the close of the year there were 15,348. The whole number of persons employed Nov. 15, 1897, was 1,989.

Penal Institutions.—The average number of prisoners in the Penitentiary in 1897 was 2,274, an increase of 100 over 1896. The *per capita* earnings of the prisoners in 1897 were \$119.64, and the *per capita* expense \$134.85. The total earnings were \$272,068.26, and the necessary expenses, including salaries of managers, officers, and guards, were \$306,650.22. Near the beginning of the fiscal year

there were about 600 able-bodied prisoners in the idle house; but since April 1, 1897, all who could work have been employed. In September, 1896, the Ohio State Reformatory, which at the close of the fiscal year of 1897 had cost for construction \$1,008,032.20, was opened. Nov. 15, 1897, the number of prisoners in the Reformatory was 349.

Paupers.—The report of the State Board of Charities as to the number of paupers cared for in the county and city infirmaries is made to Sept. 1, 1897. At the beginning of the twelvemonth there were in the several infirmaries 5,409 males and 3,454 females. The total number received during the year with the number remaining in the infirmaries Sept. 1, 1896, was 15,869 persons, of whom 10,000 were males and 5,869 females. The number remaining at the close of the fiscal year was 9,323, of whom 5,743 were males and 3,580 females. Of this number 2,284 males and 1,469 females were unable to read and write.

National Guard.—The strength of the Ohio National Guard, including the 233 men and 19 commissioned officers of the Naval Brigade, on Sept. 30, 1897, was 5,781 enlisted men and 438 commissioned officers.

Legislature.—The constitutional provision for biennial sessions of the Legislature was again observed, there being no adjourned session in 1897.

Supreme Court Decisions.—Two important decisions were made by the Supreme Court nullifying acts of the Legislature. In 1896 an act was passed providing for the registration of land titles, and for simplifying and facilitating the transfer of real estate (Torrens system of land titles). The Supreme Court declared the law invalid, for the reasons, among others, that it contravenes the Constitution in that, although it is a general law, it is not of uniform operation throughout the State, and authorizes, by its "assurance fund," the taking of private property for private purposes without the owner's consent, and impairs the obligation of contracts.

The Legislature had provided by joint resolution for submitting to the people, at the election in 1897, the question whether a convention should be held for the revision of the Constitution of 1851. To prevent the defeat of the proposition by neglect to vote upon it, the joint resolution provided that the affirmative and negative forms of the proposition be printed at the bottom of the regular tickets on the Australian ballot, and that a straight ticket marked by a cross in the circle at the top should be counted as an affirmative vote on the proposition. The resolution also provided for the length of time the convention should sit, and the compensation of the members. The court decided that the proposition must be submitted in the regular way, on separate ballots, an absolute majority of all the votes cast at the election of members of the Legislature being necessary to carry the proposition. The decision was also, in effect, that legislation can not be enacted in the form of a resolution. The proposed amendment was therefore not submitted to the voters at the November election.

The Urbana Lynching.—Early in June a widow of excellent family and widely respected in Urbana was assaulted at her home by a negro and brutally outraged, the crime being of the most revolting character. A negro named Charles, alias "Click," Mitchell, was arrested, identified by his victim, and taken to jail. The excitement became so great that the prisoner was hurried into the courthouse, where he pleaded guilty, and was immediately sentenced to the penitentiary for life, that being the highest penalty in Ohio for this crime. Before he could be taken to Columbus a mob surrounded the jail, which was guarded on the inside by an Urbana company of Ohio National Guards. Shortly before three

o'clock on the morning of June 4 the mob began battering in the door of the jail. The militia inside fired from the windows and the door upon the crowd outside, and two men were killed and ten wounded by the volley. The mob broke and ran, but soon reassembled, and a deputations waited on the sheriff, demanding that he send away the troops, and assuring him that if he were overpowered and the prisoner taken from him he would not be blamed. A military company sent from Springfield by order of Gov. Bushnell arrived on the scene, and some one, assumed to be acting for the sheriff, ordered the Springfield troops to return to the train, which they did. The Urbana company stacked their arms and promised not to fire again. At 7.45 a. m. the mob returned to the jail, broke in the door, secured the keys to Mitchell's cell, put a rope around the negro's neck, and dragged him across the courthouse yard, the mob kicking and beating him all the way. He was then strung up to a tree and left to die. The affair created intense indignation throughout the State, but in the immediate neighborhood the indignation was all against the troops for firing upon the crowd, and against the sheriff for calling out the troops. Gov. Bushnell directed an inquiry into the responsibility for the mismanagement of the troops, and urged upon the local authorities that the lynchers be brought to punishment, but nothing was done. No indictments were brought by the Champaign County grand jury, either against the lynchers of Mitchell or against the soldiers.

Political.—The year was made exceptional in the political history of the State by the fact that eight distinct political parties had full State tickets in the field, and also on account of the prominence given to the question of electing a United States Senator by the Legislature to be elected in November. Hon. John Sherman was called by President McKinley to become Secretary of State, and Gov. Bushnell appointed Marcus A. Hanna to fill the vacant seat in the United States Senate until the new Legislature met in January, 1898, when an election would be held to fill out the remainder of the term ending March 4, 1899, and also for the full term of six years immediately following.

The first to hold its convention was the State Prohibition party, which met at Columbus, April 7, and nominated the following ticket: For Governor, John C. Hollday; Lieutenant Governor, John Danner; Attorney-General, O. J. Rose; Treasurer of State, Samuel Wells; Judge of Supreme Court, E. J. Pinney; Clerk of Supreme Court, H. T. Lutz; Member of Board of Public Works, Madison L. Christian; Commissioner of Public Schools, T. H. Paden. The platform favored the entire suppression, through legal enactments duly enforced in State and nation, of the manufacture, importation, exportation, interstate transportation, and sale of alcoholic liquors for beverage purposes; arraigned the Republican and Democratic parties for maintaining the present Dow tax, which puts the State in complicity with the traffic; and declared that "no citizen should be denied the right of full suffrage on account of sex."

The Ohio State Liberty party, originally Prohibitionists until the split at the Pittsburg convention in 1896, met in convention at Columbus, May 26, and nominated the following ticket: For Governor, John Richardson; Lieutenant Governor, T. M. Hildeman; Treasurer of State, T. A. Rodefer; Supreme Judge, J. S. Wertman; Attorney-General, J. W. Roseborough; Member of Board of Public Works, J. B. Bolander; School Commissioner, Amosabi Walker. The convention resolved that the government ought to suppress intoxicants as a beverage, but sell them for other purposes without profit. Equal suffrage, gold and silver 16 to 1, and legal

tender paper issued by the Government direct and up to the demand, were the principal platform planks.

The Republican State Convention was held at Toledo, June 23. The ticket nominated was as follows: For Governor, Asa W. Bushnell; Lieutenant Governor, A. W. Jones; Supreme Judge, Jacob F. Burkett; Attorney-General, Frank Monnett; State Treasurer, Samuel Campbell; School Commissioner, L. D. Bonebrake; Member of Board of Public Works, C. A. Goddard. The platform, after rejoicing over the victory of 1896 and the election as President of "that splendid son of Ohio, William McKinley," and reaffirming the principles of "the platform upon which that victory was won," declared:

"The Republican party has always been the friend of the downtrodden and oppressed, and has always deeply sympathized with the struggle of any people for independence. We extend our sympathy to the patriots of Cuba in their efforts to achieve freedom from Spanish cruelty and oppression, and hope that the day of their deliverance is near at hand. We commend the course of the President and express our confidence in his speedy and patriotic disposition of the Cuban question in accordance with wise statesmanship and a vigorous foreign policy.

"We believe that the administration in negotiating the treaty for the annexation of Hawaii has acted wisely, and we express the hope that the Senate will ratify the same.

"We denounce the violation of the spirit of the civil-service act by President Cleveland in those orders which extended its operation beyond its purpose and intent, and demand such revocation of orders or modification of the law as will accomplish its manifest purpose.

"Faithfully wedded to the principle of protection, we demand for the wool-growers of Ohio such ample protection of wool as shall speedily increase American flocks sufficiently to supply all American needs.

"We indorse the wise, faithful, and satisfactory administration of Gov. Bushnell, and congratulate the people of this State upon the financial condition of their commonwealth, which demonstrates that the legislative power of the State was economically and honestly exercised by a Republican Legislature.

"The thanks of the people of this State are due to Senators Foraker and Hanna for their splendid efforts during the present session of Congress, and we congratulate the people on their representation in the United States Senate.

"Desiring to continue such representation, and appreciating his services to the party and to the people of the State and nation, and his eminent and proved fitness for the position, we indorse the candidacy of the Hon. Marcus A. Hanna for United States Senator to succeed himself, and pledge the support of the party in the next General Assembly to his election to both the short and the long terms."

The Democratic State Convention met in Columbus, June 30, and nominated the following ticket: For Governor, Horace L. Chapman; Lieutenant Governor, Melville D. Shaw; Supreme Court Judge, J. B. Spriggs; Attorney-General, W. H. Dore; Treasurer of State, James F. Wilson; Member of Board of Public Works, Peter Degnan; School Commissioner, Myron E. Hard. The platform as reported to the convention contained the following:

"The Democrats of Ohio, in convention assembled, reaffirm and indorse the declaration of principles contained in the platform adopted by the Democratic party in the national convention at Chicago in 1896, which platform declares the money question paramount to all others at this time.

"We are opposed to the issuing of interest-bearing bonds of the United States in times of peace, and condemn the trafficking with banking syndicates which, in exchange for bonds and at an enormous profit to themselves, supply the Federal treasury with gold to maintain the policy of gold monometallism."

After adopting this platform as reported by the committee, the convention added the following:

"We hereby declare all trusts and monopolies hostile and dangerous to the people's interest and a standing menace to the perfecting of our free institutions, and we demand the rigorous enforcement of any antitrust laws, and such additional legislation as may be necessary for their immediate and final suppression.

"We demand the immediate recognition of the belligerent rights of the republic of Cuba as an act of justice to an American nation struggling for liberty against foreign oppressors, and we denounce and protest against the action of Senator Hanna in voting to nullify the memorial presented to Congress unanimously by the Legislature of Ohio in favor of Cuban patriots."

The State convention of the People's party met in Columbus, Aug. 11, and nominated the following ticket: For Governor, J. S. Coxey; Lieutenant Governor, Horace Whitecomb; Judge of Supreme Court, C. C. Pomeroy; Attorney-General, C. A. Reeder; Treasurer of State, F. M. Morris; School Commissioner, Silas E. Shook; Board of Public Works, J. A. Sanders.

The platform reaffirmed adherence to the principles of the People's party as enunciated in the Omaha and St. Louis platforms. Regarding State matters it said: "It is high time that the Ohio senatorship be taken out of the market, out of the hands of the political auctioneers, who have heretofore been wont to knock it down to the highest bidder. No millionaire plutocrat nor his henchman, no owner of a public franchise, can be a fit representative of the interests of plain people of the State of Ohio in the United States Senate.

"We denounce the Republican party for passing the fifty-year franchise bill, and we likewise denounce the Democratic party for not having the courage to brand it as an infamous robbery and pledging its repeal."

Resolutions extending sympathy to the striking miners and pledging them moral support, and approving the actions of the Nashville conference, were attached.

The National Democrats (gold) met in Columbus, Sept. 9, and nominated a State ticket: For Governor, Julius Dexter; Lieutenant Governor, A. E. Merrill; Judge of Supreme Court, John H. Clark; Attorney-General, Daniel Wilson; Treasurer of State, Samuel Stevens; School Commissioner, W. H. Johnson; Member of Board of Public Works, H. D. Coffenberry. The platform included these declarations:

"We declare for the maintenance of the gold standard, for the retirement of the greenback, and for the extension of the civil service merit system, wherever possible, in the nation and in this State.

"We demand retrenchment of expense and scope of government, so that there be left the utmost freedom of individual effort consistent with safety and peace. We denounce the recent tariff legislation as encouragement of extravagance and infringement on private rights, an unfair tax on all for the benefit of some of the people and an arbitrary interference by legislation with the natural laws of trade.

"We denounce in the Dingley bill the heavier duties on lumber, wool, and hides, as increasing the cost of clothing and shelter to the people.

"We condemn the proposed annexation of the Hawaiian Islands as introducing into our Union a large Asiatic and tropical population utterly unfitted for American citizenship; as the beginning of a policy of territorial expansion certain to entail upon our country large taxation to sustain strong armies and navies in distant lands and on distant seas; and as constituting a menace to peaceful industry by exposing our country to foreign wars.

"We disapprove the hostile action of the Republican party of Ohio in its attack on civil-service reform, and we express our thanks to President McKinley for his support and extension of the merit system."

A State Negro Protective party was organized in Columbus, Sept. 22, and the following ticket was nominated: For Governor, Samuel J. Lewis; Lieutenant Governor, Jason M. Tilley; Judge of Supreme Court, Graham Deuwell; Attorney-General, Charles F. Anstead; Member Board of Public Works, John McKee; Treasurer of State, B. W. Maxwell; School Commissioner, C. D. Horner. The principal plank in the platform was this:

"We demand an immediate recognition of our rights as citizens, such as have been repeatedly pledged and as often violated, and which are guaranteed by the Constitution and laws of the land. A decent regard for our own feelings and the feelings of those we love and cherish compels us to take immediate political action, that we may show to the world that we are no longer the plaything of politicians or chattels for sale to the highest bidder."

The Socialist-Labor party placed a partial State ticket in the field, as follows: For Governor, William Watkins; Lieutenant Governor, Daniel W. Wallace; Treasurer of State, Edward Larsen; Member Board of Public Works, John T. Jones; School Commissioner, Charles Bonsall.

A convention of Silver Republicans was held in Columbus, May 27, and resolutions were adopted declaring for the immediate remonetization of silver at the present legal ratio of 16 to 1, but no State ticket was put in nomination.

The election in November resulted in the success of the entire Republican State ticket. The vote on Governor was as follows: Asa S. Bushnell (Republican), 429,915; H. L. Chapman (Democrat), 401,750; John C. Holliday (Prohibition), 7,538; J. S. Coxey (People's party), 6,254; Julius Dexter (National Democrat), 1,661; William Watkins (Socialist-Labor), 4,242; S. J. Lewis (Negro Protective), 476; John Richardson (Liberty), 3,106. Bushnell's plurality, 28,165.

The pluralities of the other successful Republican candidates were: Lieutenant Governor, Asahel W. Jones, 27,020; Treasurer of State, Samuel B. Campbell, 26,497; Judge of Supreme Court, Jacob F. Burkett, 25,690; Attorney-General, Frank S. Monnett, 25,999; Member of Board of Public Works, Charles A. Goddard, 25,977; School Commissioner, Lewis D. Bonebrake, 26,544. The Legislature elected was: Senate—Republican 17, Democrats 18, Independent Republican 1; House—Republicans 62, Democrats 47.

OKLAHOMA, a Territory of the United States, organized in 1890. Population, according to the Auditor's census, Feb. 1, 1894, 212,635; according to the Governor's report, June 30, 1896, 275,587.

Government.—The following were the Territorial officers during the year: Governor, William C. Renfrow, Democrat, succeeded in May by Cassius M. Barnes, Republican; Secretary, Thomas J. Lowe, succeeded in July by William M. Jenkins; Treasurer, Martin L. Turner, succeeded by Frank M. Thompson; Attorney-General, C. A. Galbraith, succeeded by Harper S. Cunningham; Auditor and

Superintendent of Education, A. O. Nichols, succeeded by S. N. Hopkins in October; Oil Inspector, M. A. Mowley, succeeded in July by Amos A. Ewing; Adjutant General J. C. Johnson, succeeded by Philip C. Rosenbaum; School Land Commissioner, William Blincoe, succeeded by Charles Wilson; Bank Examiner, F. M. Richardson, succeeded by John M. Pugh; Marshal, C. H. Thompson, appointed in November; Chief Justice of the Supreme Court, Frank Dale; Associate Justices, J. C. Tarsney, J. R. Keaton, A. G. C. Borer, and J. L. McAttee; Clerk, Edgar W. Jones. All the justices are Democrats.

Finances.—The bonded indebtedness is \$48,000, and bears interest at 6 per cent. The warrant indebtedness, June 30, was \$190,938. The total Territorial tax is 4½ mills, divided as follows: General Territorial tax, 3 mills; Normal School tax, ½ mill; university tax, ½ mill; college building bond interest tax, ½ mill; for the care and education of deaf mutes, ½ mill; for the care and education of the blind, ½ mill. The assessed valuation in 1897 was \$31,541,563. The Supreme Court of the Territory decided this year a new case involving the question of the powers of the Board of Equalization, denying its power to raise the aggregate valuation as shown by the assessment rolls of the counties. This reverses the decision made by the same court last year.

Education.—The school population in 1896 was 88,705. There are 1,909 organized school districts, of which 1,500 have comfortable schoolhouses. The receipts for 1896 were \$441,544.55, and the expenditures \$365,288.33.

The Normal School, at Edmond, has about 200 students.

The university, at Norman, had an enrollment of 218 in December.

The Agricultural and Mechanical College, at Stillwater, received this year from the Government \$38,000, including the income of the experiment station, which is a department of the college. There are about 140 students.

Haworth Institute, at Chillicothe, has 500 students, representing all the Indian tribes of the Southwest.

Charities.—The insane are cared for by contract with the Oklahoma Sanitarium Company, near Norman. The number, July 1, was 143. During the year 22 died, and 59 were released. For the care of each patient \$25 a month is paid. The cost of transportation was \$2,987.

The Legislature this year made provision for education of the deaf and dumb.

Convicts.—The Territory had 148 convicts in the Kansas Penitentiary, June 30. The cost for the year was \$16,504.35.

Militia.—The strength of the National Guard is 500 officers and enlisted men, in 12 companies of infantry, and a regimental band.

Products.—There have been raised in Oklahoma this year about 150,000 bales of cotton, about 22,000,000 bushels of wheat, and other products, aggregating a gross sum of \$100,000,000. Of this amount the people consume 60 per cent., leaving \$40,000,000 of field products for export.

Banks.—The October statement of the national banks shows that their combined resources are \$1,063,128.82, and the average reserve is 46.68 per cent. There are 5 national and about 50 Territorial banks. The latter in June had resources amounting to \$2,294,263.64, and an average reserve of about 51 per cent.

Three Territorial bank charters were issued in December. The Stock Exchange Bank of El Reno failed Dec. 14. Dec. 29 the president, cashier, assistant cashier, and one of the directors were ar-

rested on the charge of receiving deposits when the bank was known to be insolvent.

The Oklahoma Bankers' Association was organized in June.

Railroads.—There are about 500 miles of railway. A branch of the "Frisco" from Red Fork to Guthrie is under construction. It will give closer connection with St. Louis, and will open coal fields of great richness. The Kansas, Oklahoma Central, and Southwestern have been chartered.

School Lands.—The commissioner's report for four years ending May 26 shows that the total cash collected is \$336,633.04, and notes on hand amount to \$371,533.08.

Indians.—There are in the Territory 12,631 Indians, under the care of 5 agencies. The Tonkawas, Pawnees, Sac and Fox, Iowas, Pottawatomies, Shawnees, Kickapoos and Cheyennes, and Arapahoes who have taken their land in severalty and had the remainder to throw open to settlement, are making the greatest progress. A large majority of them live on their allotments and have engaged in farming.

High Waters.—Floods in the Cimarron, Cottonwood, and other streams caused great loss of life and property in April.

Decision on Copyright.—In March Judge Dale, in the District Court, rendered a decision without precedent in the United States. It was in a case brought by the Territory against the State Capital Printing Company for printing and selling statutes which the Territory had copyrighted. Judge Dale holds that the Government is not a "person" or "citizen" in any sense, and that no one but persons or citizens are entitled to hold copyrights; that a State government is not an institution organized for profit out of anything arising from its sovereignty; that the laws belong to the people, and any citizen has a proprietary interest in them and can publish them if he sees fit.

Legislative Session.—The Legislature was in session from Jan. 17 to March 12. J. W. Johnson was President of the Council and William Garrison president *pro tem*. J. C. Tousley was Speaker of the House.

The election laws were radically changed, and are described as being in their present form the most intricate in the United States. The anti-fusion provision of the former law is repealed.

A new fee and salary law was made, prescribing salaries and percentages of fees to officials. The original bill made large reductions, but the bill as passed is described as not having materially lowered the compensation of officials, even if it did not raise them; as in some instances a reduction of salary was accompanied by an increase in the percentage of fees to be retained by the official. The fees of witnesses in criminal cases were fixed at \$1 a day and 5 cents a mile.

One of the most important acts was a banking law, creating a banking board, providing for the incorporation of banks, fixing the liability of stockholders and officers, the amount of assets, providing for proceedings in cases of insolvent banks, exempting banks from attachment and execution, and creating the office of bank examiner with power to compel reports. The affairs of every bank are to be examined at least once a year, and the examiner is to be appointed by the banking board.

It was provided that all school property should be insured on the Swiss plan—by Territorial assessment.

An act was passed to establish a normal school at Alva in the western part of the Territory and one establishing a normal school for colored youth at Langston, 20 miles northeast of Guthrie, inhabited exclusively by negroes. The town gives

40 acres of land and the Territory appropriates \$5,000 for the building. The institution will receive a part of the Federal fund for agricultural colleges.

An act for providing separate schools for the white and colored races makes it compulsory on school boards to maintain both for the same number of months in the year, and to divide the school money in proportion to the number of pupils of each race. This law was declared void by Judge Keaton in April on the ground that certain of its provisions were irreconcilable.

The usury law that was repealed in 1895 was reenacted; the only penalty for taking more than 12 per cent. is forfeiture of interest.

An act was passed making a change in the government of cities of the first class.

A long contest over a schoolbook bill resulted in the substitution for the original bill of one providing that no text-books in use in the public schools can be changed within five years; and that the superintendent of instruction shall contract for such books, provided the publishers agree to sell them at the lowest prices at which they are sold anywhere in the United States.

The appropriation bills aggregated \$282,000, which was \$100,000 more than had been appropriated by any preceding Legislature. Some were as follows: Care of the insane for two years, \$61,000, and for their commitment, \$4,600; for care of prisoners two years, \$28,500, and \$5,000 for commitment; for the Agricultural College, \$5,000, and \$1,000 for the regents of that college.

In all, 98 bills were passed. Among those not mentioned above were:

Regulating the practice of pharmacy.

Providing for the burial of honorably discharged Union and Confederate soldiers and sailors.

Requiring cotton sales to be registered at cotton gins.

Prohibiting the practices of Indian medicine men. Creating a board of health, and regulating the practice of medicine.

Remitting penalties due on delinquent taxes for 1896, and providing that no penalty shall attach until the second Monday of March, 1897, after which 2 per cent. shall be added each month.

Raising the standard for teachers' certificates 10 per cent.

Establishing an irrigation law.

Taxing lands granted in aid of public institutions.

Permitting cattle to come into the Territory for feeding without tax.

Providing that any person or company that shall build a water reservoir and maintain it from April 1 to Dec. 1 shall have a reduction of taxes at the rate of \$8 for the first acre so covered, \$4 for the second, and \$1 for each acre additional—the reduction to be for a period not longer than three years.

Providing that all section lines be declared public highways, and prescribing the width. Forest trees may be grown on all roads that are more than 50 feet wide, to within 25 feet of the middle.

Providing for uniformity of marriages, and defining the manner of contracting them. This law makes it necessary to procure licenses; and marriage under the ages of eighteen for males and fifteen for females is prohibited, unless the court on application directs otherwise. Where an Indian has more than one wife he must select one and renounce the others. Marriages between whites and negroes are forbidden.

Providing that taxes must be paid in money, and not in Territorial, town, or other warrants.

Providing for a Territorial live-stock commission, to enforce the quarantine and sanitary laws, inspect cattle, shipping pens, and cars, and register all

brands and marks of cattle slaughtered or shipped out.

It was resolved to memorialize Congress to give free homes to the future State of Indianola, to be formed from the territory of the five tribes, and to recognize the Cuban insurgents.

A bill was passed by the lower house to abolish the militia, declaring it to be the instrument of a corrupt central government, used to protect corporations and oppress the people; but it was defeated in the upper house.

Among important bills that failed was one regulating railroads, two to control insurance, a woman-suffrage measure, a usury act, and one to amend the liquor laws by imposing a tax of \$500 in every county on the business of foreign wholesale brewers.

There were charges of bribery in connection with certain bills. The chairman of the investigating committee said that, while the committee did not have time to get positive proofs of corruption, there were strong evidences of bribery; that a fund of \$2,700 was used to kill one measure, and sums equally large to kill others. The President of the Council, or Senate, resigned March 6, saying that he would not preside over a body so corrupt; but his resignation was not accepted, there being no provision in the organic act for such an emergency. Two Senators resigned at the same time.

OLD CATHOLIC CHURCH.—The Old Catholic International Congress was held in Vienna, Sept. 1 to 3. In the absence of Prof. Von Schulte, Regierungs-Rath Philippi, of Basel, President of the Swiss Old Catholic Synod—who was also President of the first Old Catholic Congress held in Lucerne in 1892—presided. The Dutch Old Catholics were represented by Archbishop Gul, of Utrecht, Prof. Van Thiel, of the Old Catholic Seminary in Holland, and others; Germany and Switzerland by Bishops Weber and Herzog, and many clergymen and laymen; Russia by the Archpriest Janischeff, Prof. Kreesnoshen, and Gen. Kireoff; Servia by Bishop Rutzischich; England and America by Dr. White as the representative of the Archbishop of Canterbury and the Protestant Episcopal Bishops of Springfield and Cairo; and the "Evangelical League" of Germany by Prof. Nippold. The Old Catholics of Italy and France were not represented. A considerable number of Austrian Old Catholics were present, and the Czech element was larger than had been anticipated. Among the points discussed were the principle of independent national churches, the establishment of an international faculty of theology, the creation of a fund for the temporary maintenance of priests who desire to leave the Roman Catholic Church, the dissemination of Old Catholic literature, and especially of the "Revue Internationale," and the spread of Old Catholic principles among the Austrian Slavic populations. The speeches on the significance of Old Catholicism in relation to the various movements toward union, made at the reception of Prof. Nippold, Aug. 31, and of Dr. Weihel on the recent adhesion of Prof. Bunkofer to the Old Catholic cause, were among the notable incidents of the meeting.

ONTARIO, a province of the Dominion of Canada: area, about 222,000 square miles; population in 1891, 2,214,321.

Government.—There was no change in 1897 in the Government. Mr. A. S. Hardy remained Premier, and his predecessor during twenty-five years, Sir Oliver Mowat, returned to Toronto as Lieutenant Governor in succession to Sir George Kirkpatrick, after a short time as Minister of Justice at Ottawa. The Legislature was opened on Feb. 9 by the Administrator, Sir Casimir Gzowski, in a speech

from the throne, of which the following are the essential parts:

"The 1st day of June next will be the one hundredth anniversary of the meeting of the Parliament of Upper Canada in the present capital of the province. During all the intervening years the province has steadily advanced in wealth and population.

"You will regret exceedingly to learn that the inhabitants of some parts of India are suffering from famine and the plague, and that our resources are inadequate to meet the emergency. I confidently rely upon your generous disposition to grant such aid for the relief of our afflicted fellow subjects as the circumstances appear to demand and the means at your disposal will permit.

"Judgment has recently been given by the Supreme Court of Canada in the case submitted between the governments of Canada and the provinces for the determination of their rights respectively in the public fisheries. It affords me much satisfaction to be able to inform you that the rights of the provinces are much greater than has been recognized by the Government of Canada, not only in the fisheries of the inland waters, but also in those of the Great Lakes and rivers. An appeal and a cross-appeal have been made to her Majesty in her Privy Council.

"It will be satisfactory to you to learn that the claims of the Government of Canada against this province for repayment of certain annuities heretofore paid by that Government to Indians under the Robinson treaty, and for additional and increased annuities which it is alleged may hereafter become payable, have upon appeal been disallowed by the Judicial Committee of the Privy Council. Since your last session the same tribunal has also given judgment on appeal in the case submitted to the Supreme Court of Canada respecting the powers of the Parliament of Canada and the provincial legislatures respectively, as to the right to prohibit the manufacture, sale, and importation of intoxicating liquors. A copy of the judgment will be laid before you.

"Increased interest has been manifested during the past year in the new settlements in Algoma, on Rainy river, at Temiscamingue, and at and near Dryden, on Wabigoon lake, and considerable farm land has been taken up by settlers. You will be asked to appropriate a reasonable sum for the purpose of aiding in the colonization of these new settlements.

"There has been no improvement in the condition of the lumber trade. The monetary stringency and business depression which prevailed in the United States during 1895, contrary to general expectation, continued during the past year, and the sawn-lumber trade consequently remained depressed. I am glad to be able to state, however, that there is an increasing demand for our timber and lumber in the English market.

"The past year has been one of growing activity in mining affairs. Furnaces for smelting iron, nickel, and copper ores, and mills for reducing and refining gold ores, and for the treatment of other minerals, have been steadily operated.

"Progress has been made during the past year in consolidating the public laws of the province, and it is hoped the work of consolidation may be completed during the session."

A good deal of important legislation in connection with mines, municipalities, and railways was passed. The India famine fund was voted \$20,000 on motion of the Premier, seconded by the Opposition leader, and a long and loyal address to the Queen was carried unanimously, the members standing and singing the national anthem. The

following railway resolutions were presented by the Provincial Treasurer and passed:

"That there be granted out of the consolidated revenue fund, for the construction of portions of railways and other works hereinafter mentioned, the sums following, that is to say: (1) To the Ontario and Rainy River Railway, for a distance not exceeding 70 miles, a cash subsidy of \$3,000 a mile. (2) To the Montreal and Ottawa Railway, \$34,000; and that the portion of the unearned subsidy of \$100,000, which was granted to the Vaudreuil and Ottawa Railway Company in 1892, and which was, in the year 1893, transferred to the Central Counties Railway Company, which unearned portion amounts to \$66,000, be transferred to the Montreal and Ottawa Railway Company to assist in the construction of 50 miles of the said railway. (3) To the Manitoulin and North Shore Railway, a distance not exceeding 13 miles additional, a cash subsidy of \$3,000 a mile, \$39,000. (4) To the Tilsonburg, Lake Erie and Pacific Railway, for a distance not exceeding 3-262 miles, a cash subsidy of \$2,000 a mile. (5) To the Ottawa and Parry Sound Railway, for a distance not exceeding 10 miles, a cash subsidy of \$2,000 a mile.

The bill relating the Court of Appeal reconstituted the court with five judges, instead of four as heretofore.

The bill respecting Queen's counsel limits the number to be appointed to twenty during any four years.

The act relating to arbitration was entirely recast, and now includes many of the provisions of the imperial act.

The wills act provides that marriage shall not revoke a will, except under special circumstances mentioned in the bill; and the married women's property act provides that the contract of a married woman shall bind her, whether she has separate property or not.

The clause requiring both parties to a proposed marriage to attend before the issuer of marriage licenses, on obtaining a license, was repealed, and the old law was restored. Either may now obtain a marriage license.

The Educational Council for the purpose of conducting examinations prescribed by the Education Department and the annual examination for matriculation at the University of Toronto will hereafter be composed of twelve persons. The senate of the university will nominate six, and the Lieutenant Governor in council the other six.

Street cars and electric-railway cars, except where it shall be necessary for keeping the track clear of snow or ice, or for other acts of necessity or charity, are not to run on Sundays; but this is not to affect any right of the Toronto Street Railway or any other company which has heretofore run cars on Sunday, or which is entitled to run cars upon Sunday by its charter or by any special act.

The license bill which Mr. Harcourt had in charge was one of the controversial subjects of the session, attracting more attention outside than perhaps any other measure that the Assembly had to consider. The measure, after amendment, went through the house. Meanwhile protests poured in from nearly all the temperance societies of the province, and the Premier himself had met a very hostile reception in explaining its provisions to a large delegation on March 11. The objections were to the number of licenses issued, the omission to deal with the selling of liquor in clubs, the hours of closing, and the arrangement for canceling irregular licenses.

Finances.—The public accounts for 1896 were submitted by the Treasurer to the Legislature on Feb. 16, as follow: The receipts for the twelve

months ending Dec. 31, 1896, including a balance of \$87,580.89, amounted to \$3,212,609.51. Added to this amount are \$1,947.92 stationery account excess of distributions over purchase, and \$1,962,506 the amount withdrawn from special deposits, making the total income of the treasury \$5,542,700.26. On the other side of the account are expenditures aggregating \$3,703,379.73, and special deposits amounting to \$1,635,000, leaving a balance of \$204,320.53. The expenditure under treasury warrants aggregated \$30,383.59, made up as follows: Legislation, \$12,126.74; education, \$6,797.12; public institutions, \$9,713.17; public buildings, \$1,746.56. In addition to this there were unauthorized expenditures amounting to \$3,198.73. The consolidated revenue fund amounted to \$3,212,609.51, and the open accounts to \$278,061.94. Added to the Dominion subsidy of \$1,116,872.80 was a special grant of \$80,000. The interest on capital held and debts due by the Dominion to Ontario was \$260,554.79, and the interest on investments \$46,026.11. The Crown Lands Department brought in \$908,246.69, the largest item of revenue being \$812,421.78, from woods and forests; licenses brought in \$286,172.78; law stamps, \$63,566.82; Education Department, \$69,522.54; succession duties, \$165,383.40; casual revenue, \$109,189.43; public institutions, \$146,730.15. The sale of annuities brought in \$177,730.

The estimates for the year ending December 31, 1897, were as follow: Civil government, \$251,585; legislation, \$127,100; administration of justice, \$442,344; education, \$717,927; public institutions' maintenance, \$797,398; immigration, \$10,325; agriculture, \$195,022; hospitals and charities, \$185,948; maintenance and repairs of Government and departmental buildings, \$77,285; public buildings, \$138,177; public works, \$41,886; colonization roads, \$87,340; charges on crown lands, \$189,975; refund account, \$36,504; statute consolidation, \$40,000; miscellaneous expenditure, \$127,250; unforeseen and unprovided, \$50,000; total, \$3,516,068.

Mining.—Since the last meeting of the Legislature the mineral regions of northwestern Ontario had attracted increased attention. The Opposition press had been disposed to be critical with respect to the mining law and the want of a mining policy on the part of the Government. Finally, the Government's policy was submitted to the Legislature in the form of an agreement with the Engleue syndicate, the mining bill, a grant for constructing wagon roads in the mining country, and subventions to a railway which it is claimed will open it up from east to west. Important changes were made in the mining laws a few years ago, but the new discoveries and the changed situation demanded new provisions. The principle of imposing a royalty on mining was then strongly criticised. It was said again and again that this was the cause of the stagnation in mineral production. In the new mining act the desire to see a healthy development of mining did not lead to a neglect of the public interest. It was provided that the Government may withdraw any lands from sale or lease which are reported to be particularly rich in ores. The annual report of the Ontario Bureau of Mines for 1896 gave the following table of production during the year: Gold, \$121,848; nickel, \$357,000; copper, \$130,660; iron, \$353,788; building stone, \$394,000; petroleum, \$1,955,295; tile and brick, \$721,000; natural gas, \$276,710. Gold discoveries and development continued through 1896, and greatly increased in 1897. English money was largely invested in the Rat Portage district and in the new gold regions of Michipicoten, near Sault Ste. Marie. A large tract of land was leased by the Government to the South African Company, and caused much discussion in the press and the Legislature. New

regulations as to locations, size of claims, terms of license, amount of deposit and purchases, etc., were made. The report says:

"Until very recently few companies had been organized in the province to carry on mining operations. Some were working under foreign charters, but of these the number actually engaged in the industry did not exceed half a dozen. In 1894, the first year in which mining corporations were empowered to sell stock at any fixed price above or below par, only five charters were granted under the Ontario joint-stock companies act, and the aggregate of their authorized capital was only \$2,170,000. Under the same act, in 1896, the number formed was 22, with an authorized capital of \$12,775,000; and the charters of 12 of these, representing an aggregate capital of \$9,475,000, were granted during November and December. In the first quarter of the present year the record of 1896 has been far surpassed, 33 mining companies having been organized and chartered, with a total authorized capital of \$22,665,000."

In the Algoma regions 9,701 acres were sold to prospectors for \$19,307, and 12,795 acres leased at \$1 an acre for the first year's rental.

Education.—The following figures illustrate the educational condition at the beginning of 1897: Number of public schools 5,600; number of Roman Catholic separate schools, 334; pupils in public schools, 444,778; pupils in separate schools, 39,773; average attendance in public schools, 247,459; average attendance in Roman Catholic separate schools, 24,000.

Agriculture.—The value of the farm land in Ontario at the end of 1896 was placed at \$557,468,270, compared with \$651,793,025 in 1893. That of farm buildings was \$205,235,429; implements, \$50,780,358; live stock, \$96,857,566. The chattel mortgages against the farmers were \$13,561,716 in amount.

The cheese production was 104,393,985 pounds, and the number of factories 1,147. There were 59 creameries, with a product valued at \$505,271, against \$287,559 in 1891.

The area and produce of the field crops of Ontario for 1897 were: Fall wheat, 950,222 acres, 23,899,051 bushels; spring wheat, 323,305 acres, 4,868,101 bushels; barley, 451,515 acres, 12,021,779 bushels; oats, 2,432,491 acres, 89,318,128 bushels; rye, 187,785 acres, 3,382,005 bushels; peas, 896,735 acres, 13,867,063 bushels; buck wheat, 151,669 acres, 3,464,186 bushels; beans, 50,591 acres, 981,340 bushels; potatoes, 169,333 acres, 16,100,797 bushels; mangel-wurzels, 41,175 acres, 18,103,387 bushels; carrots, 12,025 acres, 4,433,628 bushels; turnips, 149,336 acres, 68,297,148 bushels; corn for husking, 335,030 acres, 24,663,908 bushels; corn for silo and fodder, 299,005 acres, 2,669,822 tons; hay and clover, 2,341,488 acres, 3,811,518 tons. The area devoted to pasture is 2,658,245 acres. The estimated area in orchard and garden is 326,341 acres, while vineyards occupy 11,100 acres. The number of apple trees of bearing age is placed at 6,102,389, while there are 3,435,018 young apple trees planted in orchards. The yield of apples in 1897 is estimated to be 13,343,720 bushels, or an average of 2.19 bushels per tree of bearing age.

The wages of farm laborers, according to returns from farmers in 1897, were as follows: Yearly engagements with board, \$144; without board, \$230; per month, with board, \$14.29; without board \$24.47. Domestic servants averaged \$5.97 a month.

The statistics of live stock on hand July 1, 1897, were as follows: Horses, 613,670; cattle, 2,182,329; sheep, 1,690,350; hogs, 1,284,963; poultry, 8,445,341. The clip of wool in 1897 was 5,139,884 pounds. The number of colonies of bees was 166,811.

Health Statistics.—The report of the Provincial Board of Health gives the following figures of death during successive years and seasons, stating to note that in recent years there has been a marked decline in the contagious diseases. The average percentage under the public health act is the decrease of 46 per cent. in deaths from typhoid fever during the past five years is of especial interest. With a system of public water works in at least 100 places, the former difficulty from polluted water has been removed. All these water works systems are subject to the inspection of the department. The report deals extensively with death rates from tuberculosis, which shows for Ontario a mortality in 1896 of 2,558 persons, or 11 per cent. of the deaths from all causes. In the 13 cities it shows a percentage of 13.3 per cent. of all causes.

OREGON, a Pacific coast State, admitted to the Union Feb. 14, 1859; area, 96,000 square miles. The population was 13,234 in 1850; 52,465 in 1860; 90,923 in 1870; 174,768 in 1880; 313,767 in 1890. By the State census of 1895 it was 392,762. Capital, Salem.

Government.—The following were the State officers during the year: Governor, William P. Lord; Secretary of State and Auditor, Harrison R. Kincaid; Treasurer, Philip Mettscham; Attorney

WILLIAM P. LORD, GOVERNOR OF OREGON.

ney-General, C. M. Idelman; Superintendent of Instruction, George M. Irwin; Adjutant General, R. B. Tuttle—all Republicans; Fish and Game Protector, H. D. McGuire; Dairy and Food Commissioner, H. B. Luce; Railroad Commissioners, I. A. Macrum, J. B. Eddy, and H. B. Compson. The Governor, in August, appointed W. W. Baker to succeed Mr. Luce and A. I. Wagner to succeed Mr. Compson, the Legislature having failed to elect their successors; but his right to do so was disputed, and the commissioners holding over refused to surrender the offices until the courts should decide; the case was not concluded at the end of the year. Chief Justice of the Supreme Court, Frank A. Moore; Associate Justices, Robert S. Ross and Charles E. Wolverton; Clerk, J. J. Murphy—all Republicans.

Finances.—The receipts of the treasury during the biennial period closing Jan. 1, 1898, \$2,553,

\$63,85, including the balance left from the preceding term. The disbursements were \$1,985,529.43, leaving a balance of \$368,034.42, of which \$421,986.93 was to the credit of the general fund. There was a floating debt of less than \$50,000.

The tax levy for the year was fixed at 4 mills. The total valuation of property in the counties was \$151,864,670, of which \$8,687,629 was entitled to exemption, leaving the taxable property \$143,176,971. The court sustained the counties in resisting the action of the board case "Annual Cyclopaedia" for 1896, page 624, so far as the valuation of personal property was concerned. The valuation for the tax of 1898 is: Gross, \$143,539,696; net, \$134,917,104.

In consequence of the failure of the Legislature to pass appropriation bills, the Auditor refused to honor any claims against the treasury for State institutions, salaries of commissioners, and the like, unless ordered by the court. Suits were brought, and the Supreme Court rendered a decision, Aug. 9, requiring the Auditor to draw warrants for the payment of the salaries of State officials and other claims specifically authorized by legislative action. As to other claims against the State, the decision made it the duty of the Secretary to pass upon the claims and allow or disallow them.

State Institutions.—Following were the amounts last appropriated for dependent classes and convicts: Insane, \$314,415; convicts, \$139,816; reforming boys, \$81,248; old soldiers, \$35,076; blind, \$18,330; deaf mutes, \$46,896; nonresident poor, \$8,000; Portland Home, \$5,000; Albany Orphans' Home, \$5,000; Salem Orphans' Home, \$5,000; Portland Baby Home, \$4,000; Refuge Home, \$5,000; Magdalen Home, \$4,000; Boys' and Girls' Aid Society, \$2,500; Patton Home, \$2,000; St. Mary's Home, at Beaverton, \$4,000; free kindergarten, \$1,500; total, \$701,783.

The Asylum for the Insane has more than 1,100 patients. The number of employees is about 140. The cost of taking patients to the institution during the last biennial period was \$28,153.

There were in May 354 convicts in the Penitentiary. The cost for conveying prisoners during the last biennial period was \$18,843. There are now 354 prisoners in the Penitentiary. About 100 are furnished work in the stove foundry, but as quite a large stock of stoves is already on hand, the lessees of the foundry are not pushing that work vigorously. A few others are furnished work at teaming, gardening, or on the farm. The rest are for the most part idle.

Education.—The annual distribution of school money in August, arising from the interest on the irreducible school fund, gave \$1.04 *per capita* to a school population of 129,956.

The State University, at Eugene, had in 1896-'97 more than 500 students. At the commencement in June 85 were graduated. The business and preparatory departments have been abolished and the course in pedagogy, and a chair of Modern Languages was established this year.

The Agricultural College, at Corvallis, had a total enrollment of 317, and graduated a class of 17. The extension of the course of study from three years to four is the proposed cause for the reduction in the number of graduates, which was 51 in 1895 and 48 in 1896.

Railroads.—Oregon is crisscrossed with 51 miles of new track this year. The new line on the Columbia Southern was run Oct. 1. The road is to extend from Biggs station, 100 miles through Sherman, Wasco, and Crook Counties to Boardman, about 120 miles. To Wasco, the present company, is only 10 miles. This new road will open one of the richest sections of the State.

The Coos Bay, Roseburg and Eastern Road is completed and in operation from Marshfield to Myrtle Point, 28 miles, and about 60 miles remain to be built.

The report of the Oregon Railroad and Navigation Company for the ten months ending April 30 shows the net earnings to have been \$1,630,634.87, an increase over the same period of the previous year of \$943,176.76.

The Oregon Short Line became an independent road March 15.

Products.—"The Oregonian" gave, at the close of November, a summary of the reports of products from 22 counties, as follow: Wheat, \$7,466,014; live stock, \$4,300,373; hay, \$2,908,500; gold, \$2,596,586; fish, \$1,867,400; hops, \$1,324,655; lumber, \$1,303,945; oats, \$1,250,850; fruit, \$1,191,620; wool, \$1,086,515; butter, cheese, and eggs, \$1,056,128; potatoes, \$76,800; other products, \$670,650; total, \$27,820,030.

Sugar-beet and flax culture are growing in the State, and promise to become important industries.

The Fish Commissioner's report has the following statements: "The canned products of the Columbia river salmon fishery this year amounted to 552,711 cases, of which 476,924 were packed in the spring and 75,817 in the fall. Of the total pack 409,954 cases were packed on the Oregon side and 144,777 cases on the Washington side of the river, the total value of the canned product aggregating \$2,219,311. In addition there were 5,060,160 pounds of salmon sold fresh and shipped East, the value of which was \$151,804. The salmon fishery of the Columbia river this year gave employment to 4,194 fishermen and 2,277 shoremans and cannery employees. The industry on the coast streams and bays furnished employment to 865 people."

The amount of gold produced in the State during the year was placed later at a much higher figure than appears in the summary above, more than \$4,000,000. There was renewed activity in gold mining, and new districts have been opened in the Cascade mountains.

Public Lands.—The number of acres of vacant public lands in the State is given approximately as 35,892,318, of which 23,682,023 have been surveyed.

A suit was decided in the United States court in September involving the possession of about 100,000 acres adjoining Columbia river on the south. This tract was formerly claimed by both the Northern Pacific Railway Company and the Dalles Military Wagon Road Company, through congressional grants to them respectively. The grant to the Military Wagon Road Company was made last, but the company and the other defendants, its successors in interest, claimed that the grant to the Northern Pacific Company, down the Columbia river, never took effect. The contention of the United States was that the first grant did become effective, and that, by an act of Congress passed in 1890, the land was restored to the public domain, and under this claim allowed much of the land to be entered by settlers at the Dalles Land Office. The decision was granted the Government.

About 1,700 acres, known as Tule lake lands, have been in controversy for some time. They were granted to the State as swamp lands, and were sold to settlers. The tract is designated on maps as Tule lake, and the question was whether it was a lake at the time it was granted or swamp lands as was claimed. The question was referred to Surveyor-General Habersham, who decided that it was not a lake, thus making good the title of the State. It is said that confusion has been caused by many such tracts in eastern Oregon being laid down as lakes because they were at certain seasons overflowed.

Crater Lake.—From a paper by J. S. Diller, of the United States Geological Survey, it is learned that, all things considered, the lake is the most imposing crater lake in the world, yet it has "scarcely been mentioned in scientific publications, and its very existence even appears to be generally unknown to persons interested in such features." The lake, which has very transparent waters, is deeply set in the summit of the Cascade range of southern Oregon. It has an almost circular rim, with an average diameter of 6 miles, and is about 1,000 feet above the general level of the range, or from 6,750 to 8,228 feet above the sea. The precipitous rim is from 520 to 1,980 feet above the lake. It is composed wholly of lava streams and beds of volcanic conglomerate, and in one part fills an ancient valley and is intersected by a series of vertical dikes. The rim is larger than the original crater, and shows many changes from glacial action along with glacial debris, including boulders 10 feet in diameter. There are evidences that the volcano was active during the Glacial period.

Divorce.—A decision rendered by the Supreme Court in November has placed many Oregon people in an embarrassing position. The Oregon law makes the marriage of a divorced person within six months of the time the decree is granted illegal; hence many went into Washington and were married there within the specified time. This decision pronounces such marriages void.

Legislative Session.—The situation in the Legislature this year was peculiar, in that there was no organization of the House which the Senate and Governor could recognize as lawful, and therefore, although the legislators were at the capital fifty-three days, there was virtually no session of the House, and no business was completed. The situation arose from a contest over the speakership, resulting from the canvass of United States Senator Mitchell for reelection. The State Constitution provides that two thirds of each House shall constitute a quorum to do business; but a smaller number may meet, adjourn from day to day, and compel attendance of absent members. A quorum being in attendance, if either house shall fail to effect organization within five days the members of that house shall be entitled to no compensation from the end of the five days until organization is accomplished. No limit is prescribed for the length of the session, but pay is allowed at \$3 a day for forty days only. The members of the Legislature met Jan. 11. The Senate organized with Joseph Simon as president. The House organized temporarily, with E. J. Davis as temporary Speaker, and a Committee on Credentials was appointed, who failed to agree and did not report. A permanent organization could not be effected, because more than one third of the 60 members-elect refused to take the oath of office. Henry L. Benson was the candidate for Speaker of the supporters of Senator Mitchell, and Jonathan Bourne of those opposed. A caucus nominated Benson, but it lacked two votes of the necessary number, and at a joint caucus, Jan. 14, Senator Mitchell was nominated; but this also was short of the required strength, which was 46. On Jan. 21 the Benson or Mitchell party made an organization called "the rump Assembly" with 31 members, with the idea of receiving recognition as a majority, though not the requisite two thirds. They elected a temporary Speaker, who took his place beside Mr. Davis, the temporary Speaker elected at first, making two separate organizations in the same hall. The 31 members were then sworn in, and elected Mr. Benson permanent Speaker. Of those who refused to take the oath, 19 were Populists and 6 Republicans. The Senate was notified that the House was organized and ready

for business; but the President of the Senate refused to allow the same. The House adjourned, asking the Senate to reconvene, but did not agree with him; but no action was taken. Bills were introduced in "the Benson House," but the Secretary of State refused to accept the printing of them. "The Davis House" met at 4 o'clock from day to day.

On Feb. 2 a resolution was offered in the Senate that "the Senate proceed openly, by yeas and nays, of each member present, to name one person for Senator in Congress from Oregon for the first term, commencing March 4, 1897." President Simon addressed the Senate after the resolution was offered, saying: "Under the act of Congress passed in 1890 it is directed that a vote for United States Senator shall be taken on the second Tuesday after the organization of the Legislature. The Senate has already on two occasions placed on record its decision that the House is not legally organized. The chair is therefore constrained to hold that this resolution is not in order." A motion to overrule the chair was debated for two hours, after which the chair was sustained by 16 to 12.

A vote for Senator was taken in "the Benson House" the same day, which stood Mitchell, 29; George H. Williams, 1.

The following resolution was adopted by "the Benson House," Feb. 19 by a vote of 16 to 11:

"Whereas, The following persons claim to have been duly elected to the nineteenth biennial session of the House of Representatives of the Legislative Assembly of the State of Oregon, to wit [naming 27 members],

"Whereas, They and each of them have during the whole of this session of said Legislative Assembly neglected and refused to take the oath and enter upon the duties of said office; and,

"Whereas, Each of said persons so claiming to have been elected were, on the 28th day of January, 1897, duly served with notice to appear at the bar of the House and take the oath of office; and,

"Whereas, Section 2551 of the Laws of Oregon, 2 Hill's Code, provides as follows: 'Every office shall become vacant on the occurring of either of the following events before the expiration of the term of such office: his refusal or neglect to take the oath of office within the time prescribed by law.' Now, therefore, be it

"Resolved, That the office of Representative in each of the following-named Representative districts to which the [said] persons claim to have been elected is vacant."

On March 1 the temporary House decided to adopt drastic measures to bring in absentees. Members of the original House present were sworn in by Chief Justice Moore, and assistant sergeants-at-arms were appointed by temporary Speaker Davis and dispatched to different parts of the State with warrants to serve on absent members. Three or four were arrested, and in return two of the deputy sergeants were arrested on charges of assault and battery, but the cases appear to have been dismissed.

Many bills were introduced in the Senate and passed, but of course none of them became laws.

"The Benson House" adjourned *sine die* Feb. 24 and the Senate March 2, after passing a resolution declaring that it was manifest the House could not secure a quorum.

"The Davis House" adjourned March 5, after unanimously adopting resolutions which declare that "the purported permanent organization of the House called 'the Benson House' was unconstitutional and illegal, and not for the purposes of legislation, but was solely in the interest of the reelection of John H. Mitchell to the United States

Senate, and that all legislation would be subordinated to that end," and that "it was impossible to organize the House constitutionally while the so-called 'Benson House' was in existence," and "the members of the House now in attendance, who have signed this resolution will return to their respective homes, at all times during our term of office awaiting the call of the Governor for a session of the Legislative Assembly, hoping that the members may yet, in a legal and constitutional organization, fulfill the pledges made by their respective political parties to the people of Oregon."

Senator Mitchell's term having expired March 4, Gov. Lord, on March 6, appointed Henry W. Corbett as his successor.

The Governor's biennial message was written, but was not delivered before the Legislature. It was published after the adjournment.

ORIENTAL CHURCHES IN THE UNITED STATES. Besides the members of the Russo-Greek Church in Alaska, the Oriental churches are represented in the United States by immigrants who have come over in late years with considerable rapacity from Slavic, Grecian, and Turkish countries, most of them belonging to the Greek Orthodox Church. The Greek Uniate Church, Gregorian

Armenian, and Maronite churches are also represented among them. Those attached to the Greek Uniate Church are said usually to go over to the Orthodox Church on coming to this country. The episcopal allegiance of the Greek churches in the United States is to the Bishop of Alaska and the Aleutian Islands, under the Holy Synod of Russia, whose residence is at San Francisco. Another episcopal see is in contemplation, to be established in Chicago. Including about 15,000 members—residents of European descent and Indians—in Alaska, the number of communicants of the Russian Church is given by A. A. Stamloni in the "Independent" as approximating 70,000. The addition of 10,000 others, comprising 6 churches, communicants of the Holy Synod of Greece, would bring the total Orthodox membership up to 80,000. The Maronite Church, or Syrian Uniates, and the Gregorian Armenian Church have each 4 or 5 churches and about 10,000 souls in the United States. In the city of New York there are 3 Orthodox churches, 1 Greek Uniate, 1 Maronite, and 1 Gregorian Armenian Church, besides a Syrian Protestant and an Armenian Protestant church. A journal is published in New York as the organ of the Greek Orthodox Church.

P

PARAGUAY, a republic in South America. The legislative power is vested in a Senate of 13 members and a Chamber of 26, elected by the direct vote of male citizens over eighteen years old. The President, elected for four years, is Juan B. Egusquiza, whose term expires on Nov. 25, 1898. Dr. Insfran is the Vice-President. The ministers in 1897 were: Interior, A. M. Martinez; Foreign Affairs and Colonization, J. S. Decoud; Finance, A. Cañete; Justice, Worship, and Public Instruction, R. Mazó; War, E. Aceval.

Area and Population.—The area is estimated at 98,000 square miles. The population is about 432,000. The number of foreigners is estimated at 17,000. Asuncion, the capital, has 45,000 inhabitants.

Finances.—The revenue in 1896 was 5,832,867 pesos, of which 5,080,622 came from customs. The expenditures were 7,109,581 pesos, leaving a deficit of 1,276,714 pesos. For 1897 the expenditures were estimated at 3,505,784 pesos, of which 1,181,844 were for the interior, 44,700 for foreign affairs, 273,144 for finance, 354,000 for justice, education, and worship, 400,620 for war and marine, and 1,251,476 for other expenses. At the end of the year there was a deficit of 856,000 pesos. The internal debt is 5,441,643, and the external debt 34,598,213 pesos.

Commerce.—The imports in 1896 were valued at 2,786,000 pesos in gold, and the exports at 12,292,000 pesos in paper, worth about 15 cents on the dollar. There were 415 steamships and 248 sailing vessels from foreign ports entered at Asuncion in 1896, having an aggregate tonnage of 176,638 tons, and 384 steamships and 226 sailing vessels cleared, tonnage 147,640. The chief imports are textiles, mostly coming from England, wines from Spain, and rice.

Communications.—The length of railroads in operation in 1897 was 175 miles. The telegraph lines have a total length of 3660 miles. There were 46,975 internal and 12,874 foreign messages sent in 1896. The number of pieces of mail matter carried in 1896 was 777,617.

The Army and Navy.—The permanent military force, which discharges also the functions of a po-

lice, consists of a regiment of infantry, one of cavalry, and one of field artillery, numbering in all 82 officers and 1,345 men. There is also a company of fortress artillery. In case of war the National Guard, in which every man is bound to serve, is mobilized. The artillery is armed with 12 Krupp guns, 12 mitrailleuses, and 6 Maxims. In the forts there are 25 cannon of different calibers. The navy consists of a steamer of 440 tons and two river gunboats manned with 13 officers and 90 sailors, and a force of marines numbering 27 officers and 155 men.

Boundary Dispute.—Between the Paraguay river and Santa Cruz de la Sierra is a tract of country claimed both by Bolivia and by Paraguay. In the spring of 1897 the Bolivian Government accepted a proposal of an American company to build a railroad there. The Paraguayan minister to Bolivia, who had neglected to keep his Government informed, was dismissed, and troops were hurried to the frontier to occupy the disputed territory. Congress in July took measures for the organization of the National Guard in order to be able to follow up the determined attitude assumed by the Government. Bolivia also prepared for war by strengthening her military forces, but took no action in the debatable tract pending the report of a special commission sent to investigate and report on the boundary line.

PENNSYLVANIA, a Middle State, one of the original thirteen, ratified the Constitution Dec. 12, 1787; area, 45,215 square miles. The population, according to each decennial census, was 434,373 in 1790; 602,365 in 1800; 810,091 in 1810; 1,047,507 in 1820; 1,348,233 in 1830; 1,724,033 in 1840; 2,311,786 in 1850; 2,906,215 in 1860; 3,521,951 in 1870; 4,282,891 in 1880; and 5,258,014 in 1890. Capital, Harrisburg.

Government.—The State officers for the year were: Governor, Daniel H. Hastings; Lieutenant Governor, Walter Lyon; Secretary of the Commonwealth, Frank Reeder, succeeded by David Martin; Secretary of Internal Affairs, James W. Latta; Treasurer, Benjamin J. Haywood; Auditor, Amos H. Mylin; Attorney-General, Henry C. McCormick; Adjutant-General, Thomas J. Stewart; Superintendent of Public Instruction, Nathan C.

Schaeffer; Insurance Commissioner, James H. Lambert; Commissioner of Banking, R. J. Galkoski; Secretary of Agriculture, Thomas J. Edge; Superintendent of Public Buildings, J. C. Delaney; State

DANIEL H. HASTINGS, GOVERNOR OF PENNSYLVANIA.

Librarian, W. H. Egle; Dairy and Food Commissioner, Levi S. Wells; Forestry Commissioner, J. H. Rothrock; Factory Inspector, James Campbell; State Veterinarian, Leonard Pearson; Economic Zoologist, B. H. Warren; Chief Justice of the Supreme Court, James P. Sterrett; Associate Justices, Henry Green, Henry W. Williams, James T. Mitchell, J. R. McCollum, John Dean, and D. Newlin Fell; Justices of the Superior Court, E. N. Willard, C. E. Rice, J. A. Beaver, J. J. Wickham, H. J. Reeder, George B. Gridley, P. P. Smith. All the above named are Republicans except Justices McCollum and Smith, Democrats.

Finances.—The annual statement of the Treasurer shows the receipts of the general fund for the fiscal year ending Nov. 30 were \$12,475,070.17, and the payments \$12,708,515.84. The total of receipts includes the whole amount received as State personal tax, three-fourths of which is returned to the counties; personal fees, paid by and returned to State officers; fertilizer licenses and fines received from the Department of Agriculture, drawn out and expended by that department; also, amount paid by insurance companies on the Capitol building and contents destroyed by the fire of Feb. 2, and the 1 per cent. of the tax on foreign fire insurance companies distributed among the cities and counties of the State. The aggregate of these items is \$2,155,118.44.

The appropriations made by the last Legislature for all purposes for the two years ending June 1, 1899, were about \$24,200,000. Of the 72 channels into which payments were made during the fiscal year the common schools received the most, \$4,647,603.85 being paid to maintain them; and \$261,814.70 was expended on normal schools, while \$1,226,787.50 was paid to charitable institutions; to hospitals and asylums for the insane, \$587,554.18; penitentiaries, \$105,788.01; and reformatories, \$106,358.59.

The National Grange, too, paid \$17,664.25 and its round numbers \$200,000, for its share in the economic disturbances at Harpers. During 1898 it paid \$387,292.54.

The receipts from various sources for the year were: Tax on capital stock, \$1,636,114.17; on mortgages, loans, \$1,076,242.65; on patents, \$1,476,814.77; on collateral inheritance, \$2,024,854.10; bank stock, \$596,011.29; on corporations, \$1,000,000.00; on premiums, \$577,892.00; on municipal loans, \$123,444.74. Miscellaneous receipts brought in \$541,247.35; wholesale liquor license, \$457,177.29; brewers and distillers license, \$106,169.41; hunters' licenses, \$116,044.90; while \$602,717.23 was realized from bonus on charters.

The sinking-fund receipts were \$642,913, while payments were \$275,371.50.

Education.—The statement regarding public schools by the superintendent for the year ending June 1, 1897, shows that the number of school districts has reached 2,482, the number of schools 26,706, the number of teachers 27,249; that the total enrollment of pupils was 1,100,872; the average monthly cost per pupil was in Philadelphia \$2.26 and for the State outside of Philadelphia \$1.22; and the total expenditure was \$19,618,187.09. Of this amount \$1,115,379.92 was expended for text books and supplies, \$5,988,600.36 for building, and \$15,929,582.73 for maintenance. The State appropriation for the year was \$5,500,000.

The University of Pennsylvania received a gift of \$100,000 in November from Thomas McKean, of Philadelphia, toward the cost of a new law school. The building will be opened next September.

Pardee Hall, the finest building of Lafayette College, at Easton, was badly damaged by fire Dec. 18. The college graduated a class of 53 students in June, 1897.

A residence valued at \$200,000 is to be given by Mr. P. A. B. Widener for a free library in Philadelphia.

Banks.—The most important occurrence of the year in this department was the failure of the Chestnut Street National Bank of Philadelphia, Dec. 23. The Chestnut Street Trust and Saving Fund Company, the officers of which are identical with those of the bank, was closed for business the same day. The failure was said to be due mainly to the loss of money in a large paper mill at Elkton, Md., owned by the president of the bank, W. M. Gingerly, who was also the owner of the Philadelphia Record.

The liabilities of the bank and trust company together were given as about \$3,000,000.

In November J. R. Firestone, former teller of the Dillsburg National Bank, was sentenced to five years in the Penitentiary for embezzlement of about \$13,500 from the bank. The First National Bank of Bethlehem lost nearly \$15,000 through its cashier, discovered in February. E. K. Smith, whose bank in Columbia failed for about \$200,000 in 1896, and who made a long fight to keep out of jail, was surrendered to the sheriff, Feb. 22, and taken to the Eastern Penitentiary.

Building and Loan Associations.—The assets of the domestic associations in 1896 were \$107,008,100.80; receipts and disbursements, \$47,801,750.61. Fifty-two associations were organized in Pennsylvania, with a total of 85,512 shares. The number of foreclosures during the year was 941. The number of foreign building and loan associations in 1896, which reports were received by the Bank Department was 62. The Bank Commissioner for 1896 taken as a whole, the building and loan associations are in a sound financial condition, and a vast majority of them are well managed.

Insurance.—The report of the commissioner for the year ending Nov. 30, 1896, was submitted in March. It shows that Pennsylvania companies had a prosperous year, the premium receipts for 1896 being over \$400,000 more than the preceding year, while the losses were only a little over \$200,000 greater. The losses paid were \$5,268,860.02, while the year before they were \$5,013,557.44. In marine and inland business the ratio of losses paid by Pennsylvania companies to premiums was 82-42 as compared with 110-36 in 1895.

A decision was given in Harrisburg, April 8, that persons under twenty-one years of age can not be legally insured.

Labor Interests.—The Factory Inspector's report in December shows that 3,317 orders were issued. Of that number 3,044 have been complied with. There were 940 accidents reported, 94 fewer than last year. Fifty of that number were fatal, 27 less than last year. A majority occurred in the iron and steel works in the handling of products where machinery could not be used.

Thirty bakers were prosecuted under the law.

There are 419,047 persons employed in the places under the jurisdiction of the department, and of this number 402,495 are subject to the inspection laws. There are 21,164 persons employed between the ages of thirteen and sixteen years. There are 9,661 persons subject to the sweat-shop laws and 6,891 subject to the bake-shop laws.

The strikes and lockouts in 1896 numbered 68, exclusive of one general strike among house painters that included 200 shops. Twenty-four of these strikes were ordered by labor organizations. Twelve were successful, 45 unsuccessful, and 11 partially so. The total number of days lost on account of the strikes was 325,854.

The great strike began early in July. The order of the national executive board of the United Mine Workers was obeyed by 10,000 to 15,000 men in the Pittsburgh district, July 6, and the strike soon became general. The strikers marched on the mines where men were still working, and camped in the neighborhood trying to induce them to strike, but not using violence. A meeting of operators at Pittsburgh, July 27, where 89 coal companies' mines were represented, adopted the following among other resolutions:

"We favor the speedy adjustment of this strike and all questions and controversies connected therewith by conciliation, employed in a joint conference of miners and their employers, and, failing an adjudication, by a tribunal of arbitrators composed of three United States judges or three other gentlemen of national repute and in whom the entire country can repose confidence.

"We are ready and willing to advance the wages of the miners, but find ourselves unable to do this to the full extent demanded by them, viz., 25 per cent above the prices that were paid prior to the strike and now being paid by one of the largest coal companies in western Pennsylvania, which company presents the chief obstacle to the settlement of the present conflict."

Seven strikers were arrested, Aug. 5, at Middletown, for an attack upon nonunion men. The marching men in the Pittsburgh district paid no attention to the sheriff's proclamation warning them to refrain from assembling and marching; the court was applied to for an injunction to restrain them from interfering with miners still at work, and one was granted Aug. 12. The strikers disregarded the order of the court, and on an attempt of the deputy sheriffs to enforce it, Aug. 13, a lively scuffle occurred, during which one man was accidentally hurt, though no weapons were drawn and no blows were struck intentionally.

Sept. 6, 20 deputies from Washington, Pa., reached Finleyville, where they were met by a large crowd of strikers and their friends. Each deputy was armed with a rifle and a revolver, but in spite of this the strikers, headed by 100 Polish women, closed in on them, and the deputies received rough treatment. They were gradually forced back, and finally retreated to Gastonville, followed by about 200 men and women. At Gastonville the deputies took refuge in the office of the company, where they were kept all night, during which the building was bombarded with stones and bricks and an occasional shot was fired.

At seven o'clock in the morning the trouble reached a climax when the deputies sallied out from their quarters. Headed by the women, the strikers rushed on the deputies with stones and clubs and pick handles, and blows fell thick and fast. One big woman wrested a rifle from a deputy's hands and struck him on the head with it, inflicting serious injury. By this time 1,000 men, women, and children had joined the crowd. The deputies slowly made their way to Orangeville, never firing a shot, and took refuge in a vacant house, closely followed by the mob, which surrounded the building and threatened to burn it. Finally, one of the strikers approached the house with a flag of truce, and a conference was held. The deputies were ordered to leave town, and after a short parley decided to do so.

The crisis of the trouble was reached Sept. 10, when a band of deputy sheriffs fired into a mob of miners at Lattimer, killing or mortally wounding 24 and injuring about 40 others. Sheriff Martin, who was in command of the deputies, had ordered the marching strikers to turn back, and read the proclamation to them. A fight ensued, and the deputies were ordered to fire. Troops of the National Guard were sent to the scene of trouble.

Sept. 16, between 15,000 and 18,000 coal miners in the Pittsburgh district returned to work, in accordance with the action of a convention, authorizing the men to resume work in all mines complying with the provisions of the 65-cent scale adopted at Columbus.

There were outbreaks during the few days following, some of them by mobs of women, but no serious injuries were reported. At Hazleton 300 men were forced by the women to quit work; at Lattimer they made a raid upon men returning to work, but were checked by the militia. A breaker at Beaver Meadow was burned, Sept. 21, with a loss of about \$50,000.

The sheriff and his deputies who shot the strikers at Lattimer were arrested, and were held for trial. They entered bail in the sum of \$6,000 each, \$5,000 for murder and \$1,000 for feloniously wounding. On trial, they were acquitted.

The estimated cost of the strike for the Pittsburgh district alone was \$5,000,000 to \$7,000,000, of which \$2,250,000 was in wages lost by voluntary cessation of work.

Warrants were drawn on the State treasury for \$115,000 for the payment of expenses incident to the calling out of troops.

Memorials.—An equestrian statue of Washington, erected by the Pennsylvania Society of the Cincinnati in Philadelphia, was unveiled May 15. The Governor proclaimed a public holiday in accordance with a resolution of the Legislature, and the members attended in a body.

A statue of Stephen Girard on the west plaza of the City Hall in Philadelphia was unveiled May 20. The funds were contributed by alumni of Girard College and citizens of Philadelphia, and the date of the unveiling was the one hundred and twenty-seventh anniversary of the birth of Stephen Girard.

and the semicentennial of the completion of the college and its opening.

The monuments, tablets, and markings erected at Chickamauga, Lookout Mountain, Orchard Knob, and Missionary Ridge, to commemorate the services of the Pennsylvania State troops, were dedicated Nov. 15, under the auspices of the Chickamauga and Chattanooga National Military Park Commission and the Pennsylvania Commission.

Political.—The only State officers to be elected in November were the Treasurer and the Auditor. The Republicans held a convention in Harrisburg, Aug. 26, and nominated James S. Beacom for Treasurer and Levi G. McCauley for Auditor.

The Democratic convention met in Reading, Aug. 31. At a meeting of the State committee the evening before a resolution was adopted declaring William F. Harry's seat on the National Democratic Committee to be vacant. This action was in consequence of Mr. Harry's course in not supporting Mr. Bryan in the presidential canvass. The convention ratified the action and the selection of James M. Guiley to fill the place on the national committee. The resolutions reaffirmed the Chicago platform and demanded a complete investigation of the books and accounts of the State Treasurer. M. E. Brown was nominated for Treasurer and Walter E. Ritter for Auditor.

The Prohibition party nominated Rev. Silas C. Swallow, D. D., for Treasurer, and W. W. Lathrop for Auditor. Its platform "pledged the party to the destruction of the legalized liquor traffic, declared for suffrage without distinction of sex, arraigned the State administration for lavish expenditures, and opposed granting money for sectarian purposes."

The Socialist, Labor, and Liberty parties put out tickets also.

Following was the official vote as given out Nov. 14: Treasurer—Beacom, 372,448; Brown, 242,731; Swallow, 118,969; Thomas, 5,152; Steelsmith, 623; Thompson, 15,135; scattering, 81.

Auditor General—McCauley, 412,652; Ritter, 268,341; Lathrop, 58,876; Barnes, 5,048; Hogan, 842; scattering, 89.

Secretary of the Commonwealth.—The Secretary, Frank Reeder, resigned in September, at the request of the Governor. The principal reason the resignation was called for was said to be the fact that the Secretary was one of the signers to a bond indemnifying the State Treasurer for disbursements made by him to extra employees borne on the roll of the Legislature which were not authorized by law, while the appropriation bill was awaiting the action of the Governor, thus virtually guaranteeing his approval. The Deputy Attorney-General, J. P. Elkin, also was requested to resign, apparently for the same reason.

The Capitol.—The State Capitol, at Harrisburg, finished in 1821, was destroyed by fire Feb. 2. The property loss was estimated at \$1,500,000.

The Legislature was in session, and in order to provide a place for its meetings Grace Methodist Episcopal Church was rented and fitted up. The Legislature appointed a committee to investigate and report on the origin of the fire; the conclusion was that it was accidental. It was charged by the Rev. S. C. Swallow, D. D., afterward candidate for State Treasurer on the Prohibition ticket, that there was evidence to show that the fire was not accidental. He made other charges of dishonesty in regard to official transactions. His articles, published in his paper, the "Pennsylvania Methodist," created a sensation. He was summoned to appear before the legislative committee and give his authority, but refused and was declared in contempt. Suits for criminal libel were brought against him in

March. J. C. Delaney, Superintendent of Public Buildings, was the prosecutor in one, and W. F. Stewart, Secretary of the State Employees' School Commission, against whom the charges had been made charges, in the other. The suit of Mr. Stewart resulted in the verdict, which has since been celebrated, "Not guilty, but must pay the costs." That of Mr. Delaney resulted in conviction, with a fine of \$500, and appeal was taken by Dr. Swallow.

The Legislature made an appropriation of \$1,000,000 for a new Capitol, and commissioners were appointed.

A design by Henry Ives Cobb was accepted. The specifications say it is impossible to construct a proper legislative building with a high dome and all the requirements set forth in the programme for the appropriation of \$550,000, but it is possible to build two legislative chambers and sufficient offices and committee rooms, to answer the present needs of the State government.

Legislative Session.—The session of the Legislature began Jan. 5 and ended July 1. It was the longest in the history of the State except that of 1883, which, with the special session that immediately followed the regular one, extended into December. J. M. McCallum was president *pro tempore* of the Senate, and H. K. Boyer was Speaker of the House.

The contest for the Republican nomination for the succession to the seat of United States Senator Cameron was settled in caucus, Jan. 5, by the choice of Bones Penrose, who received 133 of the 211 votes cast, John Wanamaker receiving 75, and Senator Cameron, J. B. Robinson, and C. E. Rice, each one. Mr. Penrose was elected, Jan. 18, by a vote of 42 in the Senate and 168 in the House. Chauncey F. Black, the Democratic candidate, received in both houses 39 votes.

Charges of bribery in connection with the senatorial contest were made, resulting in suits for bribery and criminal libel.

A law for taxing alien labor was one of the more important measures of the session. Employers are to keep account of all employees over twenty-one who are aliens; they are to deduct the tax of 3 cents a day from the wages of each for every day he works until he is naturalized. Quarterly reports are required from employers. After July 1, when the law went into effect, courts in Pittsburgh and Philadelphia declared it unconstitutional. It has not yet been pronounced upon by the highest court.

The condition of the treasury and the prospect of a deficit of more than \$3,000,000 on Nov. 30 made it necessary that more revenue be provided for, or reductions made in expenses. Later the Auditor found reason to believe that the deficit would be between \$4,000,000 and \$5,000,000. The first bill passed for increasing revenue was the direct inheritance tax of 2 per cent. on estates over \$5,000, which is expected to bring in about \$1,000,000 annually. It has been attacked in the courts. A tax on bank stock and a 4-mill tax on matured stock of building and loan associations were laid. Other measures for increasing revenue were one increasing the bonus for charters from $\frac{1}{2}$ to $\frac{3}{4}$ of 1 per cent., and requiring them to be paid in advance, which will bring about \$300,000 additional, another taxing the bonds of certain corporations 4 mills, and others requiring a uniform license of \$1,000 for brewers, besides the 5 mills they pay on capital stock, and raising the retail liquor licenses. It was also provided that 2 per cent. interest must be paid by banks on State deposits, except that \$100,000 may be deposited in three active banks, in which the Treasurer shall receive $\frac{1}{2}$ per cent. interest on daily balances. This law goes into effect in May, 1898.

An amendment to the election laws provides that no candidate's name shall appear more than once on the official ballot. The payment of the occupation or poll tax of an elector by any one other than himself is prohibited, and also the assessment of political contributions from officers of the State or of counties or cities, and any demand for such contributions.

A school law that was enacted is to give the country districts a larger share of the \$5,500,000 fund at the expense of the more populous districts. The school age is raised from thirteen to sixteen, but the law exempts children between fourteen and sixteen years that are regularly employed.

A new libel act provides that "in any civil action for libel the plea of justification shall be accepted as adequate when it is pleaded by the defendant that the publication is substantially true in every material respect and is proper for public information, and if such a plea shall be established to the satisfaction of the court and jury there shall be no recovery. In no civil action for libel shall damages be awarded beyond just restitution for injury actually sustained."

A road bill that passed provides for an assessment for road purposes: the act goes into effect after \$500,000 shall have been appropriated by the State to be distributed in proportion to the number of miles of public roads in each township; no township is to receive more State money than it raises by local taxation.

A division of forestry was created in the Department of Agriculture, with a commissioner of forestry to serve for four years.

Another act provides that the owner of land having on it forest or timber trees of not less than 50 trees to the acre, each tree to measure at least 8 inches in diameter 6 feet above the ground, with no portion of the land absolutely cleared of the trees, shall be entitled to receive annually during the period that the trees are maintained in sound condition a sum equal to 80 per cent. of all taxes annually assessed and paid upon the land.

Another act provides that the Forest Commissioner may bid in for the State any lands offered for sale for taxes which he thinks are desirable for forest reservations.

Still another act provides for taking by the State under the right of eminent domain and paying for the three forest reservations as follows: One of not less than 40,000 acres upon waters that flow mainly into Delaware river, one of not less than 40,000 acres upon waters that flow mainly into Susquehanna river, and one of not less than 40,000 acres upon waters that flow mainly into Ohio river.

The following bills also became laws:

Prohibiting and punishing the circulation or sending of anonymous letters containing libelous or defamatory matter.

Prohibiting adulteration of drugs and fixing penalties for it.

Permitting boroughs to make appropriations for public libraries.

Providing for recording of legal instruments made by married women.

The Governor vetoed the appropriation bills till after the adjournment, disallowed some, and cut down others. Among those signed were: For new buildings of the insane hospital in Harrisburg, \$167,000; for the school for training deaf children in speech before they are of school age, \$36,547.43; for the hospital for injured persons of the anthracite-coal region, \$70,000; Pennsylvania State College, \$87,332.50; University of Pennsylvania, \$200,000; Lehigh University, \$150,000; school among Cornplanter Indians, \$400; nautical schoolship, \$24,020; Philadelphia Polyclinic and College

for Graduates in Medicine, \$25,000; museums and School of Industrial Arts, \$40,000; for investigation of the diseases of domestic animals, \$15,000; Board of Health and its emergency fund, \$62,000; transportation of old soldiers to and from Chattanooga battlefield, \$20,000; Executive Committee Chickamauga and Chattanooga Battlefield Commission, \$5,000; copying rolls of volunteers of the civil war, \$2,400.

Other enactments were:

To protect employees of corporations in their right to belong to labor organizations.

Prohibiting the wearing of insignia of labor organizations by nonmembers.

Creating a State bureau of mining in connection with the Department of Internal Affairs.

Authorizing the transfer of wholesale or retail liquor licenses from one person to another and from one place to another.

Providing for the weighing of coal as it comes from the miners and before screening.

To protect the lives and limbs of miners from the dangers resulting from incompetent miners in the anthracite regions.

Providing that any person who shall willfully and maliciously damage or destroy any American flag or flagstaff which now or hereafter may be erected on any private or public building or place, or on any public or private highway or any public or private grounds, or use the flag for advertising any business or trade, shall be guilty of a felony, and upon conviction shall pay a fine not exceeding \$500 or suffer imprisonment not exceeding six months, or both.

Prohibiting importation of cattle into the State unless accompanied by a certificate showing that they have been subjected to the tuberculin test and are free from disease.

Regulating the employment and providing for the health and safety of persons where clothing, cigarettes, cigars, and certain other articles are made.

Requiring the branding of cheese.

Resolutions were passed expressing sympathy with Cuba and requesting the Pennsylvania Congressmen to vote for bills increasing the salaries of railway postal clerks and making the Vicksburg battlefield a national park.

The Legislature attended the dedication of the Grant monument in New York in April. There was some trouble over the bill for the expenses, which amounted to \$7,500. It was cut to \$3,000, and then vetoed by the Governor. The greater part of the bill was for catering on board a boat which the committee leased for the day for \$500. The charge for the wines and liquors furnished was \$3,026.60, and for cigars \$450.

A commission appointed by the Legislature of 1895 to ascertain the best methods of utilizing convict labor so as not to interfere with legitimate industries submitted its report, in which it was suggested that convicts might be employed to furnish supplies for the charitable institutions and in work on buildings for them, and recommended that machine labor be dispensed with in the prisons. The commission was continued at its own request. An appropriation of \$5,000 was made for its expenses.

The standing committees on public buildings of the Senate and House were instructed to act as a joint committee to inquire into the cause of the fire that destroyed the State Capitol building; the progress of the fire at the time the fire alarm was given; and the delay of the fire department to respond, as well as the delay in securing water and cause of the insufficient supply. More in reference to this matter may be found under the head "The Capitol."

Committees were appointed to investigate the

condition of the miners, one for the anthracite region and one for the bituminous. At a hearing in May miners who testified denounced the company stores as the greatest injustice with which they had to contend. About \$24,000 was the amount of the bills for these two committees.

The bill for expenses incurred in the Heller-Lambach senatorial contest in 1895, amounting to \$32,000, was disallowed that year. It was presented to this Legislature, itemized and footing up \$30,643.

An investigation of the Eastern Penitentiary was made in April by Judge J. G. Gordon. He reported that some of the inmate prisoners had been treated most brutally. A committee of the Legislature was sent to investigate the penitentiaries. Its report censured Judge Gordon and declared "that no just foundation whatever has been shown for the charges against the Eastern Penitentiary, its system of confinement, its management, officers, discipline, dietary, or the judicious humanity of its general administrations."

The expenses of this committee amounted to \$14,976.20. The bills of all or most of the investigating committees were criticised as excessive.

PERSIA, an absolute monarchy in Asia. The Shah in Shah, or Emperor, is Muzaffereddin, born March 25, 1833, who succeeded his father, Nasr-eddin, assassinated on May 1, 1896. The Valiah, or heir presumptive, is Mohammed Ali Mirza, born June 21, 1872.

Area and Population.—The area of Persia is estimated at 628,000 square miles and the population at 9,000,000. Teheran, the capital, has a population of about 230,000.

Commerce.—The principal article of import is cotton goods, in addition to which glass, paper, iron, copper, sugar, and tea are imported. The chief exports are silk, tobacco, skins, rugs, opium, gums, wool, dates, cereals, rice, cotton goods, pearl shells, arms, and drugs. The imports amount to about \$26,400,000, and the exports to \$15,000,000.

Frontier Disorders.—Armenians of Persia have been instigators and leaders of the insurrectionary uprisings in Van and Zeitun. The rebels against the Turkish Government received their arms from Persia, and when suppressed by the Turkish soldiery they took refuge in Persian territory. In August, 1897, the Vali of Van heard that Armenian agitators were again active, and sent out a company of soldiers, which surrounded the village of Perak and captured a number of prisoners after a sharp conflict with the revolutionaries, who began firing on the troops in the hope of breaking through the cordon. In the neighborhood of Haidish a raid was met by a strong force of Turkish troops. After transporting their wounded over the Persian frontier the Armenians raised a band of 500 horsemen with the object of attacking the village of Bash Kouleh. However, the Kaimekan received ample reinforcements and promptly checked the irruption. The Turkish authorities complained that the Persian local officials neglected to take the necessary measures against the marauders, and even lent their aid to the invaders. In repelling the raids the Kurdish irregulars crossed the border themselves on several occasions, sacked 9 Persian villages, and massacred over 300 Mohammedans and Christians, including women and children. After a full inquiry the Persian Government, which found that there had been no neglect of duty on the part of its officials, demanded satisfaction from the Ottoman Government, asserting that the violations of the frontier had taken place with the cognizance of the Turkish military authorities. The result of the inquiry showed that the bulk of the marauders were Turkish subjects, and that less than 300 came from Persia, crossing the frontier in disguise and in

small parties proceeding from different points. The Persian authorities rescued 250 refugees from the frontier to the interior and arrested 29 ringleaders, of whom 26 were hanged to the Turkish and Russian authorities, being of their nationalities.

PERU, a republic in South America. The legislative power is vested in a Congress, consisting of a Senate of 48 members and a House of Representatives containing 108. The President for the term ending Sept. 10, 1899, is Nicolas de Piérola. The Vice-Presidents are G. E. Billinghurst and A. Sotomayor y Vascones. The Cabinet in the beginning of 1897 consisted of the following members: President and Minister of Justice and Worship, Dr. Manuel P. Olachien; Minister of Foreign Affairs, E. de la Riva Agüero; Minister of Finance and Commerce, S. Rey; Minister of Public Works, M. I. Cuadros; Minister of War and Marine, Col. J. Barra; Minister of the Interior, Lorenzo Arrieta.

Area and Population.—The area of Peru is 463,747 square miles, and the population is estimated at 2,800,000, including 350,000 uncivilized Indians. Lima, the capital, had 103,956 inhabitants in 1891. About 57 per cent. of the population are of pure Indian extraction, 23 per cent. of mixed race, and the other 20 per cent. are chiefly descendants of Spanish settlers, but include also 18,000 Europeans and 50,000 Chinese and other Asians.

Finances.—The budget for 1897 made the total receipts 10,721,523 soles, of which 6,272,570 came from customs, 2,518,561 from taxes, 1,163,690 from the salt monopoly, 263,167 from posts and telegraphs, and 473,545 from various sources. The expenditures were calculated at 11,298,243 soles, 576,720 more than the receipts. The amounts under the different heads were 364,371 soles for the legislative power, 2,573,273 for the executive, 477,532 for foreign affairs, 1,154,211 for justice and education, 3,252,170 for finance and commerce, 3,052,788 for war and marine, 217,654 for public works, and 216,244 for debts anterior to March 20, 1895. The internal debt amounts to 26,006,450 soles, on which the interest has been reduced to 1 per cent. The Government, to secure a release from the English railroad loans of 1870 and 1872, amounting to £31,500,000, not including arrears of interest since 1876, transferred by the Graces-Bonoughmore arrangement of 1890 all its railroads, mines, lands, and guano deposits to the bondholders for sixty-six years.

The customhouse duties in 1896 showed an increase of 40 per cent. over the average collections for the previous five years. The old paper money, notes, and coins, no longer a medium of trade, have been exchanged for internal bonds at the rate of 1 sol of internal debt for 15 soles of paper money, 1 then being reckoned at 8 soles of notes. The internal bonds themselves were selling in 1897 for 8 per cent. of their nominal value. Early in 1897 the Government closed the mints to the free coinage of silver preparatory to introducing the gold standard. A law placing the currency on a gold basis was introduced in Congress and was passed in the face of strenuous opposition. The owners of silver mines feared that it would ruin their industry. Discoveries of gold deposits in southwestern Peru at Sandia and Carabaya attracted hundreds of miners from California, who expected to find placers or washings in the rivers. On May 10 the Government ceased all coinage of silver, and decreed that Peruvian sols or other silver coins when brought in from abroad must be delivered at the mint to be melted into bars and returned to their owners as bullion. Silver coin sent from place to place in Peru must be accompanied by a receipt showing that it has not been imported and that the Govern-

ment has authorized the transportation. This law was intended to check the rapid depreciation of the Peruvian silver currency.

The Army and Navy.—The permanent army consists of 6 battalions of infantry, numbering 290 officers and 1,796 men, 2 regiments of cavalry, numbering 80 officers and 542 men, and 2 brigades of artillery, numbering 33 officers and 416 men, besides which there is a gendarmerie and civil guard numbering 3,150 men. The active army is raised by conscription, and the peace effective must not exceed 2,749 men, the annual contingent being 1,381. Those who are not drawn are inscribed in the National Guard. The troops are armed with Mannlicher rifles and Krupp cannon. The National Guard numbers 3,510 officers and 70,583 men, making with the war effective of the regular army the total of 6,540 officers and 82,883 men.

The naval force consists of a cruiser of 1,700 tons, two screw steamers, a training ship, and 6 river steamers.

Commerce.—The chief exports are sugar, silver and silver ore, cotton, and wool. The trade with different countries in 1895 was as follows, values being given in sols of the silver value of 93 cents:

COUNTRIES.	Imports.	Exports.
Great Britain.....	4,115,000	6,660,000
Germany.....	1,800,000	768,000
United States.....	862,000	1,014,000
France.....	1,029,000	373,000
Belgium.....	412,000	
Italy.....	298,000	34,000
Chile.....	1,480,000	3,583,000
Colombia.....		840,000
Brazil.....	485,000	369,000
Other countries.....	1,323,000	1,163,000
Total.....	11,744,000	14,759,000

The imports in 1896 amounted to 17,505,148 sols, and the exports to 25,473,662 sols.

Navigation.—There were 1,485 vessels, of 604,257 tons, entered, and 1,489, of 602,180 tons, cleared at the port of Callao in 1896.

The merchant marine in 1895 consisted of 4 steamships, of 1,808 tons, and 37 sailing vessels, of 17,122 tons.

Communications.—The railroads built by the state had in 1895 a total length of 804 miles and those built by companies a length of 124 miles.

The number of letters that passed through the post office in 1894 was 4,218,450 in the internal and 1,567,983 in the international service. The receipts were 973,068 francs, and expenses 1,633,657 francs.

The telegraph lines had in 1895 a total length of 1,472 miles, with 1,625 miles of wire.

Political Affairs.—An Indian revolt in the department of Ayacucho having been put down and tranquillity restored also in the Amazonian districts, Peru enjoyed peace and quiet in 1897. There was a continued revival of trade and production. The Tacana and Añacu question, still in abeyance, caused some anxiety. Bolivia, not content with urging her claim to coveted territory, made inroads into districts claimed by Peru. This difficulty was settled early in May by an agreement to refer it to the arbitration of Spain. An envoy was sent to the United States to negotiate a settlement of the claim against the Peruvian Government of Victor H. McCord, a railroad superintendent, who was twice imprisoned and once condemned by court-martial to be shot because a railroad train full of troops was delivered by the engineer into the hands of the revolutionists in 1885, and who claimed an indemnity of \$200,000 for the outrage.

Capt. H. M. Jones, the British minister, was recalled on complaint of the Peruvian Government, in consequence of the strong terms he had used in

discussing certain British claims. Congress was opened on Aug. 12. The Government proposed to collect customs duties in English sovereigns, reckoning 10 sols to the pound sterling. The Peruvian Corporation, which administers the railroads and mines for the bondholders, was in constant strife with the Government, and until these vexatious relations were arranged there was no prospect of attracting foreign capital. The Chamber appointed a commission to inquire into the failure of this company to fulfill its obligations. The Peruvian Corporation, organized in 1890, assumed the whole of Peru's national debt, capitalized at over £40,000,000, in return for the control of the railroads and mines and the guano deposits that had not passed into the hands of Chili. Owing to decreased railroad receipts and the practical failure of the guano deposits, the corporation was unable in 1896 to pay the interest agreed upon, and made a compromise with its own bondholders. The Peruvian Government undertook to pay to the corporation an annual subsidy of £80,000 from the customs receipts with the understanding that the corporation should complete the railroads, constructing a certain mileage every year. As this obligation remained unfulfilled, the Government stopped the annuity. In October the Congress sanctioned a measure authorizing a settlement of the differences arising from the fact that Peru had not paid the promised annuity and that the corporation had not built the projected 160 kilometres of railroad. The bill to adopt the gold standard was passed on Oct. 7 by a majority of 1 vote after a long and animated debate. Soon after this the Cabinet terminated a crisis that began before the assembling of Congress by resigning in a body, in consequence of an effort made in the Chamber to pass a vote of censure. President Pierola asked them to reconsider their decision, but finally accepted their resignations on Nov. 2. A new Cabinet was constituted on Nov. 26 under the presidency of Señor Romana, in which E. de la Riva Agüero remained Minister of Foreign Affairs and I. Rey Minister of Finance. Col. J. R. de la Puente, who had succeeded Col. Ibarra as Minister of War, gave place to Señor Rosaglie, Señor Puente became Minister of Public Works, and Señor Lavalle Minister of Justice. A law dealing with the registration of civil marriages, the outcome of oft-repeated complaints of foreigners, was passed on Nov. 12 by the Chamber of Deputies, and a month later by the Senate. Missionaries and others had interested the British and United States governments in efforts to remove the hardships of Protestants in Peru and some other South American countries, where only marriages that are celebrated according to the rites of the Catholic Church are recognized as legal. Congress had before passed a similar bill and President Pierola had vetoed it. He considered that civil marriage should apply only to non-Catholic foreigners, but he promulgated this act after some hesitation. The President of the Cabinet resigned in consequence.

PHILIPPINE ISLANDS. a colony of Spain in the East Indies. The islands have an area of 114,326 square miles, with a population in 1897 of 5,985,124, consisting of 3,029,423 males and 2,955,701 females, not including about 1,000,000 natives living under their own government. The Chinese number about 100,000. Manila, the capital, has 154,062 inhabitants. The budget for 1895 showed a total revenue of £2,715,980 sterling, of which £1,331,890 came from direct taxes, £913,000 from indirect taxes, £222,570 from monopolies, £174,600 from the lottery, £39,100 from national property, and £34,820 from various sources. The total expenditures were fixed at £2,656,026, of which £272,100 were for general expenses, £337,422 for justice, £1,299,047 for

war and marine, £444,024 for finance, £13,030 for foreign relations, and £125,750 for public works. The total value of imports in 1894 was \$28,529,777; of exports, \$33,149,984. The protective tariff that has been in operation since 1891 has diverted much of the trade formerly done by English and other foreign merchants to Spanish houses. Manchester cotton goods have been supplanted by those made in Barcelona. The iron goods and hardware are now furnished by German and Swiss houses. An increased scale of export duties put in force in 1896 injured the trade in hemp, sugar, and tobacco. The principal exports were manilla hemp for \$14,517,000, sugar for \$10,975,000, tobacco for \$3,159,000, coconuts for \$356,000, and coal for \$356,000. The value of the sugar exported in 1896 was \$8,000,000; of the hemp, \$7,500,000; of the tobacco and cigars, \$3,250,000. On Aug. 21, 1897, a decree went into effect imposing an extraordinary customs duty of 6 per cent. *ad valorem* on all merchandise imported into the Philippine Islands without regard to the country of origin. The arrivals at the ports were 330 vessels, of 397,335 tons, and the departures 271, of 358,333 tons. There is a railroad, 119 miles long, from Manila to Dagupan, partly built. The post office in 1894 carried 4,684,606 letters and postal cards in the internal and 2,544,581 in the external service. The telegraphs, with 1,592 miles of line and 1,806 of wire, transmitted 157,573 dispatches in 1894. Education in the Philippines is compulsory. An extraordinary number pursue the higher branches of learning. The students in the high schools learn Latin, French, English, and Greek, while they are as averse to the study of Spanish as the common people, a large proportion of whom are unable to speak the official language. The study of the law is followed by a great many young men as a training in political philosophy with no view to professional practice.

The troops regularly maintained in the Philippines in 1897 consisted of 7 regiments of infantry, 1 regiment of fortress artillery, 1 regiment of mountain artillery, 1 regiment of engineers, 1 company of artificers, 3 tercios of civic guards, 1 veterinary section, 1 company of carabineers, 1 brigade of train, and 1 sanitary brigade, numbering in all 672 officers and 19,560 men, with 419 horses. The troops sent from Spain between Sept. 4, 1896, and April 29, 1897, for the suppression of the insurrection consisted of 15 battalions of rifles, 3 battalions of marine infantry, 1 squadron of cavalry, and 1 battery of horse artillery, having a total strength of 9 generals, 116 staff officers, 881 regimental officers, and 27,768 men. The naval force consists of 5 cruisers, 2 large gunboats, 15 smaller ones, 5 sloop gunboats, and 3 transports.

The Insurrection.—The revolution that broke out in August, 1896, was the outcome of a conspiracy that had been seven years in preparation in the Catipunan, the inner circle which the natives had created for their political purposes in the lodges of Masonry into which the Spaniards had initiated them. A revolutionary manifesto that was surreptitiously printed by native compositors employed in the office of the chief Ultramontane newspaper of Manila was shown to a parish priest, Padre Gil, and by him to the authorities, who made a sudden raid on the revolutionists, and found among them the most respected and intelligent of the mestizo caste and of the native population, including many friends of Gov.-Gen. Blanco. There was said to have been a plot to massacre all the Spaniards, officials and priests, merchants and planters. All the leaders of the revolution, including the two Roxas, millionaire planters, the physician Rizal, and the artist Luna, were caught before the date fixed for the consummation of the plot. Among the prison-

ers were 7 native priests. The Spaniards and natives rose in insurrection, but the Spaniards were now prepared, while they were outnumbered, outnumbered and without a definite plan of organization. They were united, however, in the determination to rid their country of the tyrannical and oppressive Spanish rule. The conspirators were anxious to keep their secrets and mature their plans during years of years by the aid of the mystic ceremonies of the Catipunan, which appealed to the imagination and superstitious nature of the Malays, easily frightened by the mysterious and occult. These mysterious rites were invented by Dr. Rizal, a Chinese half-breed, like most of the leaders, and a man of remarkable intelligence and energy and the idol of the natives. He was a doctor of laws as well as of medicine, had won distinction in German, French, and Spanish universities and was an author of note, whose books on political and social subjects made his reputation in Spain, but in the Philippine Islands led to his internment in a distant island, from which, nevertheless, he managed to keep in constant communication with the other revolutionary leaders. It was he who revived the savage practice of blood brotherhood to bind the members of the Catipunan together. The mark of the Catipunan was made on the left forearm with a curious knife engraved with some of the numerous symbols of the society, many of which were borrowed from Freemasonry. Of the prisoners in the fortress of Manila some were shot almost daily to strike terror into the hearts of the insurgent's, on some mornings only two or three, on others a dozen at a time. Before long, Blanco left the death sentence was passed on 59 prisoners. The rebel tactics were restricted at first to stealthily attacking outposts and retiring when the Spanish fire became too hot into the swamps and wooded hill country, whither the Spanish troops dared not follow, knowing nothing of the topography of the island, while the Tagaloes were acquainted with every path through the mangrove swamps, the dense sugar plantations, or the almost impenetrable forests, and could make their way everywhere without impediment, finding food at their hand in the rich banana and coconut groves or in the cane or rice fields. Already in October, 1896, the insurgents in the field numbered 50,000. When the Spaniards assumed a vigorous offensive after the arrival of Gen. Polavieja in December, 1896, the insurgents gave way at first, as they were not well provided with arms and ammunition. In every engagement, however, they inflicted severe losses on the Spaniards, being cool and expert marksmen who made every shot tell. The Spaniards lost heavily also through the desertion of native troops, who went over to the enemy with their arms. Before the new year the revolutionists received a large supply of firearms and cartridges, probably from China, where merchants had stocks on hand that were sent out during the war between Japan and China in the hope that the Chinese Government would purchase them. Before the arrival of these arms the natives had endeavored to manufacture crude weapons for themselves from church bells stolen from convents and from iron irrigation pipes, which were wound with telegraph wire to serve as cannons, the smaller piping, cut into short lengths and mounted on rough stocks, doing as substitutes for muskets. The Spaniards expected to crush the rebellion speedily when the natives had no arms but these and their arrows and spears and whatever old Remingtons were carried over to their side by deserting native soldiers. The insurgents had little ammunition at first and proceeded to make coarse gunpowder for their selves out of ingredients found in abundance. Matchsticks and cartridges out of the tin cans in which kerosene is imported. They were formidable fighters at close

quarters with the national cutting weapon called the *bolo*, which is heavier than the machete, and the Spaniards found that they could not always keep them away even with repeating rifles. The sudden accession of a large quantity of modern arms and ammunition suddenly altered the situation. The rebellion now reached alarming proportions, scarcely inferior in its extent and in the earnestness and military prowess of its adherents to the Cuban war. As the whole population of the islands was hostile to Spain the rebel leaders had an unlimited supply of men who in marksmanship and mobility were superior to the Spaniards. When the Spanish troops met the rebels now in any numbers they suffered a far higher proportion of casualties from bullet wounds and a still greater percentage of deaths. On Jan. 1, 1897, an important engagement, which had for its object the routing and destruction of the rebel force in that province, was fought at Cacarón, a village situated in the center of Bulacan. On Jan. 11 an order was issued by the Governor General authorizing the formation of volunteer corps among the loyal inhabitants who were anxious to shed their blood for their country and assist by their personal service in the restoration of order. Another proclamation of the same date offered a free pardon to those of the insurgent party who had not taken part in overt hostilities and a remission of the death penalty to insurgents who surrendered with their arms or gave information as to stores of arms, etc. This offer remained in force till Jan. 23, and a large number of persons availed themselves of it.

The Spaniards failed in their plan of surrounding the rebels, who numbered 4,000, led by the former schoolmaster Ensebro, who had taken the title of Gen. Dimaluga, but Gen. Rios won the battle, killing 1,100, and captured the strong intrenchments with a loss of 25 killed and 69 wounded. The main body of the rebels, their organized, drilled, and seasoned army, which had inflicted a terrible blow on the royal troops at Noveleta in November, 1896, was stationed in the province of Cavite in well-fortified posts. The rebels made desperate efforts to establish communications between Cavite and the northern provinces, especially Bulacan, through the province of Manila; Capt.-Gen. Polivieja, on the other hand, took extraordinary measures to prevent the separate bodies from joining forces, and therefore concentrated the main strength of the Spanish army in Bulacan and the northern part of Manila. Emilio Aguinaldo, the generalissimo of the rebel forces, advanced into Manila with about 8,000 with the object of carrying the rebellion into sections that had not yet risen and of effecting a junction with Gen. Dimaluga, if possible. A force of 4,000 insurgents was surprised and routed at Agony and Almansas. Before the middle of January the Spaniards had cleared Manila province of the bands that threatened the capital itself when the troops were withdrawn to the north. Gen. Aguinaldo retired into Cavite again, and when a body of 6,000 rebels tried to cross the isthmus of Noveleta it was repulsed with heavy loss. Gen. Polivieja made preparations for an attack on the rebel positions in Cavite. Gen. Polivieja's plan was to advance on the towns held by the insurgents, both from the north and from the south, in such manner that the two forces would join in the main attack and cut off retreat in either direction, while the fleet operated along the northern coast. When the Spanish troops advanced from the north into Cavite they encountered a stout resistance. The losses ran into the hundreds and the engagements were on a scale that was in marked contrast to the guerrilla skirmishing in Cuba. The first intrenchments were taken after heavy fighting in which 400 insurgents were killed and the troops lost 26 killed and 60 wounded. Gen.

Lachambre in February occupied Santo Domingo, and advanced on Silang with four Krupp batteries. The rebels intrenched on the banks of the river Zapote were driven out with severe losses with the aid of gunboats. Gen. Barraquer attacked the important fortified position of Pamplona, held by 3,000 rebels, who defended themselves with great courage, wavering under flank attacks at the end of three hours, but rallying once more and fighting obstinately until they were finally driven out at the point of the bayonet, losing 400, while the Spanish losses were 20 killed and 47 wounded. Gen. Jamarillo, after taking the fortified posts of Bunyungun and Tranquero, continued his march toward the Sungay mountains, but was opposed at every stage by rebels behind intrenchments that it had taken many thousands of men months to build, some of which were defended until nearly every man was killed. On Feb. 25 Gen. Lachambre captured the town of Perez dos Marinas after eight hours of hard fighting, with a loss of 90 men, while the rebels suffered enormously. They numbered about 5,000, of whom only 1,500 had firearms, and could not possibly hold the town against the Spanish force of 9,000 men and artillery. A part of them barricaded themselves in the convent after the Spaniards entered the town, and continued the battle until the walls were battered down by artillery. The rebels left 400 dead, but carried away a great many killed and wounded; the Spanish loss was 140 men, including 11 officers. Gen. Lachambre's column then united with the forces directly commanded by Gen. Polivieja to attack the town of Imus, the headquarters of the insurgents. Transportation in this rugged country was so difficult that the troops were often short of rations.

The carabineers, who are all Indians, conspired with the bargemen employed in the river traffic and a large part of the population in the suburbs of Fondo, Binondo, Trozo, and Santa Cruz to rise in the night while the troops were absent fighting the rebels in Cavite and Bulacan, set fire to the city in all directions, kill as many Spaniards as they could, and, if possible, get inside the walls of Manila and capture the citadel. Before the plot was fully matured some of the carabineers, on Feb. 26, threatened to denounce the plot to the authorities, and their comrades, seeing that they were about to be betrayed, fired on their denouncers, and, joined by some of the bargemen, rushed upon the barracks, killed the Spanish officers, got possession of a large quantity of firearms and ammunition, and escaped into the suburb of Fondo, calling on their brother conspirators to join them. Only a few hundreds had the courage to respond to this premature summons and show themselves as rebels in broad daylight. The rebels, seeing themselves deserted by their party, made for the open country, firing on the few Europeans who were in the streets and killing two officers. The civic guards and volunteers pursued them, but they would have escaped without loss had not a detachment of troops encountered them on the road and attacked them vigorously, killing 216 and taking 98 prisoners, all of whom were shot by sentence of a court-martial. After this the rebels appeared frequently in the vicinity of Manila, and, though often defeated, they returned boldly to attack the Spanish. On March 4 the troops under Lieut.-Col. Jimenez in dispersing one band killed 200. There were large numbers of rebels hidden in the city, but a search of all the houses brought to light no incriminating documents or concealed stores of arms. Meanwhile the campaign in Cavite came to a standstill. The Spanish forces were not strong enough to protect the capital and guard lines of communication and at the same time carry on offensive operations.

Gen. Lachambre withdrew his troops that were operating against Salitran in order to protect a convoy that was attacked by a large force of rebels, who killed 300 Spaniards. The rebels attacked all convoys of ammunition and stores. Gen. Jaramillo was not yet able to advance into Cavite from the south. The rebels flooded the country in front of the Spanish columns, rendering it almost impossible to move artillery and difficult for infantry to advance. The troops in Cavite suffered severely from dysentery and fever. The rebels received additional supplies of firearms, and the rebellion became more formidable from day to day. Gen. Polivieja applied for 20 more battalions to be sent immediately before the rainy season. The Government thought that the troops could not be spared, and decided to recall the Captain General, whose health had become much impaired and who wanted to be relieved if he could not have the forces that he needed to crush the rebellion and occupy the principal points throughout the island, so as to prevent the rebels, when defeated at Cavite, from fortifying other towns. Gen. Primo de Rivera, the Captain General of Madrid, was appointed to succeed Gen. Polivieja, and meantime additional forces were sent out, with which Gen. Polivieja resumed the offensive, having now a total strength of 25,000 men. Gen. Olaguer captured by assault an entrenched position of the insurgents at Montalban, killing 300. The advance on Ibus was continued, and the place was occupied after a battle in which the insurgents lost more than 1,600 killed and wounded, while the Spanish losses were only 37 killed and 24 wounded. A large number of insurgents surrendered to the Spanish, but these were principally noncombatants who could perform no services for the rebels in the field. Cavite Viejo, the other principal stronghold of the rebels, was previously surrounded, and the strongly entrenched towns of Noveleta, Laetan, and Rosario were stormed and taken. Bonducan was attacked, and Malabong was bombarded and set on fire. The Spanish losses in these engagements were very heavy, and they were not able to enter any of the towns until after the retreating rebels had set fire to them. The Spanish victories were won in the closing days of March. The whole Spanish fleet, comprising the cruisers "Reina Cristina," "Don Juan de Austria," "Isla de Luzon," "Isla de la Cuba," and "Maria de Molina," with a number of gunboats and steamers of light draught capable of manœuvring in the adjacent swamps, assembled to bombard Cavite Vieja. As a result of the shelling of this place, which was totally burned, 1,630 rebels surrendered. The rebels, after being driven out of these positions, erected fortifications in other favorable places and took possession of other districts. They burned several churches and killed monks in the province of Nueva Ecija. Those who had surrendered were the citizens of the burned towns and rebels who desired to return to their homes and who could be replaced by more efficient men. Aguinaldo, Bonifacio, Llanera, and other leaders were still at the head of large forces. Although weakened they were still able to take the offensive. Gen. Lachambre had to repel a spirited attack on Noveleta. At the beginning of May the Spaniards assaulted Naic, suffering a loss of 20 killed and 80 wounded. Ternate was captured with a Spanish loss of 25 killed and 226 wounded, the insurgents losing 57 killed. The rebels remained entrenched in the hills surrounding Ibus and harassed the Spanish troops by picking off sentinels and making constant night attacks. The plan of extending the occupation resulted in failure. In Pampanga the towns revolted against the severity of Col. Zerkale, who was made governor of the central district.

To carry on the war the Government issued a forced paper currency, which was not willingly accepted by the merchants or the people. In June a loan of \$8,000,000 was contracted in Europe at 6 per cent. to meet the expenses of the campaign, the Philippine customs receipts being pledged for the service of the debt. All large operations ceased during the rainy season. Nevertheless the Government announced in the beginning of July that the islands were entirely pacified, and Marshal Rivera revoked the order for the confiscation of the property of rebels. When hostilities were resumed in August Aguinaldo had a force of about 4,000 men, Llanera 3,000, Ponciano Rigal 3,000, and other chiefs had smaller bands. The rebels were trained and directed by about 500 Spanish deserters, who introduced military discipline into their ranks. They were greatly encouraged by the winning of several battles and by desertions from the Spanish army. At Balakanan, on Aug. 21, a Spanish force defending a church was routed, leaving its arms and ammunition behind. In this battle a whole battalion went over to the rebels, who attracted the soldiers by feeding them well and treating them more humanely than the Spanish officers. Mamerto Natividad, who collected a large force of natives and deserters after his father had been shot without trial as a suspect, won a series of victories in the vicinity of San Rafael. In the first battle he ambushed a Spanish regiment in a forest and put it to flight, killing and wounding 400 men. Instead of being confined to the southern district of Cavite, the rebellion spread to all parts of the island. Rebel bands overran at will the whole of this province and also the provinces of Bataan, Zambales, Manila, Bulacan, Nueva Ecija, Pampanga, La Laguna, Batangas, and Tarlac. The rebels had not only partly regained their strength, but had improved their methods of fighting. Gen. Aguinaldo advised his followers in a proclamation not to accept battle, however strongly intrenched they might believe themselves to be, but always to flee before the soldiers in order to tire them out and subject them to exposure that would result in their filling the Spanish hospitals. In this way the war could be prolonged until the resources of the Spanish Government became exhausted. Disease had already reduced the Spanish army to a fraction of its nominal strength, and unlucky battles at Puray, Alaga, and other places had depressed the spirits of the troops. The rebels meanwhile had received a fresh supply of arms and ammunition from outside, but they were no longer able to meet the Spaniards in large bodies. The terrible losses that they sustained in fighting against the troops trained and armed in the European fashion and aided by field guns and mitrailleuses disheartened them so that they were unwilling to meet the troops in open battle when they were sure to lose and to be shot down without quarter after the fight was lost. The Government at Madrid, alarmed at the growing strength of the rebellion, directed Gen. Primo Rivera to take energetic measures for its suppression at once. The Governor General thereupon tendered his resignation, but it was not accepted. Premier Sagasta announced that there would be no compromise with the rebels; that they must either surrender at discretion or be exterminated. Re-enforcements were sent out to carry out this vigorous policy. The unexpected energy displayed by the Spanish Government discomfited the rebel leaders, who hoped that Spain would not be disposed to make fresh sacrifices while the Cuban revolution was still taxing her military resources. Toward the end of November Aguinaldo entered into negotiations with the Spanish commander. With other leaders he went to Manila to

learn the terms on which their surrender would be accepted. The first conference led to no final result. Operations were, however, suspended, and in the middle of December, after an order had been published fixing Dec. 28 as the final date before which all the insurgents must make their submission, 58 emissaries of the rebel leaders presented themselves before Gen. Primo Rivera and solicited pardon for their principals and for the men who had taken part in the rebellion, who were prepared to surrender on condition that their lives should be spared. The Governor-General announced as his conditions that the rebels should submit to the Spanish Government, surrender all arms and ammunition, sign a formal document acknowledging Spain's complete right of sovereignty, admit the rebels' inability to resist further in the face of the superiority of the Spanish arms, and promise solemnly not to revolt again. The envoys stipulated that Aguinaldo and Llanera should be conveyed safely to Hong-Kong before the surrender of the arms. This condition having been accepted, Aguinaldo ordered his people to assemble on Dec. 25 and lay down their arms.

PHYSICS. PROGRESS OF, IN 1897. Constitution of Matter, etc. Matter and Ether.—Lodge (London Royal Society, March 4) gives an account of a long series of experiments conducted by himself and Davies in continuation of those reported in a previous paper (see "Annual Cyclopædia," 1896, page 616) to detect a possible drag exerted by moving matter on the ether. In addition to the methods therein described he employed one in which the rotating mass of iron was strongly magnetized and another in which the steel disks were separated by an insulated disk and electrified; but in neither of these ways could he sensibly affect the velocity of light. He accordingly concludes that there is no observable viscous connection between the ether and matter—that is, that whatever motion moving matter may confer on ether must be irrotational. Michelson ("American Journal of Science," June) concludes, from experiments in which a beam of light was caused to travel around a rectangle in an east-and-west plane, that either the ether is absolutely at rest everywhere, or that the earth drags it along up to many thousand miles from the surface, or that the length of all bodies is altered by motion through the ether.

Gravitation.—Richarz and Krüger-Menzel ("Sitzungsberichte" of the Berlin Academy, November, 1896) report on the second series of their experiments for the determination of the constant of gravitation and the earth's mean density, which has been carried on since the termination of the first series in 1893. The double balance was used, as in that series, but instead of weighing two equal metal spheres a single cube of lead weighing 100,000 kilogrammes, was supported under the upper and above the lower scale pans. The value finally deduced for the constant of gravitation was $G = (6.685 \pm 0.01140) \times 10^{-8}$. Using this value, the mean density of the earth was found to be $\Delta = (5.505 \pm 0.009) \frac{\text{gr.}}{\text{cm.}^3}$. This value falls between that of Poynting (5.4934) and that of Boys (5.5270).

Boltzmann ("Wiedemann's 'Annalen,' February) asserts that the conception of the atom can not be finally superseded by the differential equation applied to a continuum, since this is in itself ultimately based on the conception of discrete structure. The atom, he thinks, has also the advantage of greater immediate clearness and picturesqueness over the equation, whether it really exists or not.

Acoustics. Audibility.—Barns ("American Journal of Science," March), by experiments with a Michelson refractometer and a mirror attached to a telephone diaphragm, proves that the excursions of the diaphragm corresponding to sounds of faint but distinct audibility are small compared with the wave length of sodium light, probably less than 10^{-6} centimetres.

Intensity and Pitch.—Broca (Paris Academy of Sciences, June 28) finds that if the intensity of a sound decreases the pitch of the note goes up, even when the period of vibration remains the same. The effects do not exceed one fifth of a tone.

Mechanics. Action at a Distance.—Drude (Wiedemann's "Annalen," September) defines action at a distance as a relation between two bodies, such that the energy of the system depends not only on their velocities but on their mutual position. He regards such dependence as perfectly logical.

The Boomerang.—The flight of the boomerang has been studied by Walker (London Royal Society, April 8), who regards it as a case of steady motion, of which the circumstances gradually vary. In the more complicated as well as the simpler paths, everything depends on the changes in direction and inclination of the plane of the boomerang. The author explains these changes theoretically, working out five cases, in which the various "rounding" and "twisting" effects agree with experimental facts.

The Pendulum.—Lippmann (Paris Academy of Sciences, Jan. 18) compares the times of oscillation of two pendulums of nearly equal period by photographing them twice with sparks from a jar discharge at a known time interval and then making micrometrical measurements on the negative. The accuracy of the method is claimed to be much higher than that of coincidences.

Liquids. Hydrodynamics.—Natanson ("Bulletin of the Cracow Academy of Sciences") has worked out a kinetic theory of the equations of vortex motion of fluids, taking account of the molecular property to which the name "constraint of perturbations" has been applied. Natanson's theory shows how the equations of Helmholtz and Nanson can be verified by supposing the so-called "forces of constraint" to satisfy the equations of angular momentum.

Capillarity.—Vincent (London Physical Society, Feb. 26) has photographed ripples on mercury by sudden electric illumination. Such ripples are invisible to the naked eye because of their high frequency. The photographs show well the phenomena of interference and diffraction, and the method promises to be of service in demonstrating the laws of acoustics and optics.

Appleyard (London Physical Society, May 14) has succeeded in forming mercury films by sending an electric current through two masses of mercury separated by a permeable partition. The film forms on the side next the positive pole and remains on the diaphragm after its removal from the apparatus. The author suggests that the effect is a secondary one due to electrolysis aided by electric osmosis.

Osmotic Pressure.—Larmor (Cambridge Philosophical Society, Jan. 25) has summed up the positions now maintained by various authorities on this subject. The theory of osmotic pressure can, he thinks, be placed on a basis independent of the law of solubility of gases in the general manner already laid down by Prof. J. Willard Gibbs. According to this each molecule of the dissolved substance forms for itself a *nidus* in the solvent—that is, it sensibly influences the molecules around it up to a certain minute distance. Provided the solution is so dilute that each such complex is most of the time out of range of the influence of the other com-

plexes, then thermodynamic principles necessitate the osmotic laws.

Solution.—Van der Waals (Amsterdam Royal Academy of Sciences, Jan. 30) concludes, from a theoretical inquiry into the extent to which the complexity of the molecules of a solvent may influence the magnitude of the decrease of vapor tension by dissolved salts, that such decrease is determined solely by the magnitude of the solvent's molecules when it is in the state of vapor. Tait (Edinburgh Royal Society, Feb. 15) has attempted, on the hypothesis that the compressibility of an aqueous salt solution is inversely proportional to its internal pressure, to find the effective volume of the dissolved salts as compared with its volume in the solid form. The same experimental data have been used to find the nature of the changes in the ratio $(D-1):S$, D being the density of the solution and S the mass of salt in unit mass of water. This ratio diminishes slowly with increase of S in all cases examined except with common salt, where it increases slowly. Its value ranges widely, being 1 for magnesium sulphate and only 0.5 for ammonium sulphate.

Supersaturation.—Nicol (Edinburgh Royal Society, May 3) maintains that there is really no such thing as a supersaturated solution, such solutions being saturated or nonsaturated solutions of the anhydrous salt—that is, the salt in which there is no distinction between the water of crystallization and the solvent water. Whenever, in his view, two allotropic forms of the dissolved or fused substances can exist under the conditions of experiment, then supersaturation, or superfusion, is also possible. Allotropy is thus the cause of supersaturation, the word "allotropy" being used in a wider signification, in which it includes different crystalline or amorphous forms brought about by the presence or absence of foreign molecules.

Crystallization.—Tammann ("Zeitschrift für physikalische Chemie") finds that the rate of propagation of crystallization increases with the super-cooling until this amounts to about 20° , when it remains constant till the super-cooling is so great that the heat evolved by the solidification is insufficient to melt the solid that is formed. The rate of crystallization diminishes rapidly from this point downward. Miers ("Science Progress," January) describes a class of substances capable of assuming forms called by Dr. Lehmann, the discoverer, "liquid crystals." Azoxyphenol and azoxyanisole are typical of the class. When crystals of the former are warmed on a microscope slide they liquefy at 134° , while retaining the outline of the crystal and other properties of it, such as double refraction and polarization. At 165° it passes into a third modification that is liquid but not doubly refractive. This may contain small floating spherical drops of the birefringent liquid.

Vapor Pressure.—Smits (Amsterdam Royal Academy of Sciences, Jan. 2) has made with the micro-manometer (a U-shaped tube widened in the upper part and containing two fluids, the position of whose plane of separation is read with a cathetometer) a determination of the difference between the vapor pressure of pure water at 0°C , and that of very dilute solutions. The instrument could detect differences of pressure as small as $\frac{1}{1000}$ millimetre of mercury. He finds the coefficient i in Van't Hoff's formula to be constant for sugar solutions, but in some other cases to diminish with decreasing concentration. Julius (*ibid.*), experimenting with water and a salt solution, believes that he has disproved the view of Willner and Grotrian that a vapor can be compressed above what is commonly called maximum tension, even though a certain quantity of the liquid be present.

Condensation.—Atken (Edinburgh Royal Society, May 3), in experiments to test the theory that "ions," as well as dust, produce cloudy condensation, finds, by burning hydrogen in filtered air, that if both hydrogen and air are pure and dust free the ions produce no condensation. If certain impurities, however, be present—such as ammonia, peroxide of hydrogen, or nitric, nitrous, or sulphurous acids—clouds are formed in saturated dust-free air. (See also *Phosphorescence*, under "Light," below.)

Gases, Kinetic Theory.—Bryan ("American Journal of Mathematics," XIX, page 3) concludes that even the theory of probability does not furnish a complete proof of the Boltzmann-Maxwell law of the distribution of molecular velocities in a gas, although the law represents accurately the state of a perfect gas and approximately that of an ordinary gas. S. J. Corrigan, in a book on "The Constitution and Functions of Gases, the Nature of Radiance, and the Law of Radiation" (St. Paul, 1895), attempts to formulate a dynamical theory of gases that differs radically from the one that is generally received. In this theory the molecule is supposed to be at rest, but made up of atoms revolving in orbits about its center. The pressure of a gas is assumed to be proportional to its mass and to the angular velocity of the atom, and a change of pressure alters the diameter of the atomic orbit. This theory accounts satisfactorily for many of the properties of gases, and leads to a law of radiation of the form of Dulong and Petit's law.

Solution.—Richard (Paris Academy of Sciences) has devised an apparatus to ascertain whether the amount of gas dissolved in sea water is independent of pressure at great depths. The result of two satisfactory experiments at 1,000 and 2,700 metres is to confirm previous experience that it is independent.

Densities.—Leduc (Paris Academy of Sciences, Oct. 18) has redetermined the densities of some easily liquefiable gases, with the following results:

Carbon dioxide	1.526	Chlorine	2.491
Nitrous oxide	1.591	Ammonia	0.2671
Hydrogen sulphide	1.196		

Expansion.—Ramsay (British Association), from experiments on the refractivity of mixtures of gases, finds that an expansion takes place on mixing hydrogen and helium, and a contraction on mixing nitrogen and oxygen. Morley and Miller (American Association) have determined, by improved methods, the coefficients of expansion of four gases, as follow:

Carbon dioxide	0.000122	Air	0.000119
Nitrogen	0.000118	Oxygen	0.000120

Liquefaction.—Hampton ("Nature," March 25) reports that he has been able to liquefy air by self-intensive refrigeration—that is, without auxiliary cooling of the compressed air by carbonic acid or other agents before or after it reached the apparatus—in less than half an hour. He uses a glass receiver protected by a Crookes vacuum and also by a glass attachment so fitted that the vacuum vessel can be readily removed and replaced without interfering with the action.

Heat, Thermometry.—Watson (London Physical Society, May 14) has devised an instrument for comparing thermometers with a standard, in which a large closed vessel, communicating with the instrument proper, diminishes errors from chance alteration of pressure. The joints are of India rubber, jacketed with glycerin. Kohlrausch (Wiedemann's "Annalen," March) describes a thermometer for very low temperatures in which petroleum ether is the liquid used. It is very viscous, but sufficiently liquid at the temperature of boil-

ing liquid air (-190°C), and shows a contraction of volume by as much as 25 per cent. from the ordinary temperature to the lowest used. Murray (Edinburgh Royal Society, March 15) has devised a new form of constant-volume air thermometer, which shows total pressure directly and may be graduated in temperature degrees. The total pressure of the air in the bulb, and hence its temperature, is measured directly by the height of a column of mercury, the atmospheric pressure being eliminated by adjusting an auxiliary mercury reservoir. Holborn ("Zeitschrift des Vereines deutscher Ingenieure") shows that Le Chatelier's thermoelement may be applied to the continuous measurement of furnace temperatures, thus possessing advantages over common pyrometers.

Conductivity.—Straneo ("Atti dei Lincei," VI, page 16) has determined the thermal conductivity of ice by a new method, and finds that it varies according to the direction. In homogeneous, amorphous ice the values for the vertical and horizontal directions were practically equal (0.312 and 0.308), but homogeneous nonamorphous ice gave 0.328 and 0.301.

Cooling.—Stanton (London Royal Society, May 13) finds that the heat transmitted from the walls of a heated metal pipe to colder water flowing through it is independent of the pressure, proportional to range of temperature between pipe and water, approximately proportionately to the velocity of flow, and proportional to a function of the viscosity. Brush (American Association), in an investigation of the transmission of radiant heat by gases at varying pressures, finds that Dulong and Petit's "sixth law," that the cooling power of a fluid diminishes in geometrical progression when its tension diminishes in geometrical progression, is only approximately true with a large balloon, and at pressures from a few millimetres upward; that there is no suggestion of it where a small balloon is used; and at small pressures it does not obtain with either large or small balloons; he found that in a small balloon the cooling effect of the last millimetre of air is nearly ten times as great as that of all the rest, up to atmospheric pressure, combined.

Emission and Absorption.—Bowman (Amsterdam Royal Academy of Sciences, March 27), in measurements of the emission and absorption of glass and quartz at different temperatures, made with a modified radio-micrometer, finds for plates one millimetre thick that both the emission and absorption curves of glass reach a maximum at $4.6\ \mu$, shifting but little with temperature. The quotient of emission by absorption yields a curve whose maximum is further toward the lesser wave lengths. The emission and absorption of quartz correspond, both exhibiting the same downward bends.

Convection.—Dixon (Manchester Philosophical Society, Jan. 26) has devised a very sensitive motor that is driven by convection currents. It begins to work on exposure to ordinary daylight, or even to moonlight. Its speed is affected by barometric and hygrometric conditions, and it is hence capable of indicating the same. It can also be adapted to act as a calorimeter. The motor is worked by radiant heat that passes through a glass cover; the glass is not heated, but the inner surfaces of the instrument are, and air is caused to expand on the motor surfaces and condense on the glass. The resulting difference of temperature sets up convection currents that drive the motor.

Specific Heat.—Watts ("American Journal of Science," October) notes that, in determining specific heat by the method of mixtures, the calorimeter should be small and the surface of the solid large, while the initial temperature of the latter should be high. He describes a new form of calo-

rimeter in which the body is conveyed in a small sheet-copper car along a track laid in an inclined tube that serves as a heating chamber. This prevents loss of heat and permits experimentation on small fragments. Callendar and Barnes (British Association) have devised a new method of obtaining the specific heat of a liquid. An electric current is passed through a fine tube through which the liquid is flowing until the temperature difference between the ends becomes steady. The specific heat is then deduced from this difference and from the liquid's rate of flow. Ewing and Dunkerley (*ibid.*) measure the specific heat of saturated steam by passing it through a porous plug and thus superheating it. Berthelot (Paris Academy of Sciences, Jan. 18) shows, in a *résumé* of results obtained for the specific heats of the elementary gases, that these fall into four groups, comprising respectively the monatomic gases (helium, argon, and mercury), diatomic gases other than halogens, the halogens, and tetratomic gases, such as phosphorus and arsenic.

Radiant Heat.—Rubens and Nichols (Wiedemann's "Annalen," March) have obtained heat rays of hitherto unrecorded length by filtering out infra-red rays by three successive reflections from fluor-spar or rock salt, the source being a heated layer of the same substance. The fluorite reflections gave waves of $24.5\ \mu$, which are 30 times as long as the lowest visible red rays. Reckoning by octaves, these rays are midway between the shortest ultra-violet waves and the shortest observed electric waves (6 millimetres). Reflections from rock salt gave waves of $50\ \mu$.

Light. *Theory.*—Korteweg (Amsterdam Royal Academy of Sciences, May 29) shows that under certain conditions some of the oscillations possible in a mechanism of several degrees of freedom are of abnormal magnitude, and he suggests that these may play an important part in the vibrations of light.

Absorption.—Agafonoff, of St. Petersburg ("Archives des Sciences Physiques et Naturelles," IV, page 2), has investigated the absorption of ultra-violet light by crystals, and finds that among 100 substances only 2—tourmaline and hemimellitic acid—exhibit differences of absorption according to direction of polarization of the light. The thickness of the section used seems to have little influence on the limit of wave length at which absorption begins. Organic substances absorb powerfully, in comparison with inorganic, and this suggests that ultra-violet light is more absorbed by complex than by simple molecules.

Reflection.—Lamb (Manchester Literary and Philosophical Society, Nov. 30) has examined mathematically the selective total reflection that takes place at the boundary of a medium having a periodic discontinuity of structure. He finds that relatively short waves may be transmitted freely, unless the wave length happens to fall within certain narrowly defined intervals. Edser and Stansfield ("Nature," Sept. 23) find by using a modified refractometer that the retardation in phase of light on reflection from thick silver is three quarters of a wave length.

Refraction.—Ramsay and Travers (London Royal Society, Dec. 9) have measured by Rayleigh's interference method the refractivities of various gases, taking that of air as unity, with the following results:

Hydrogen	0.4733	Argon	0.9596
Oxygen	0.9243	Carbon dioxide	1.5316
Nitrogen	1.0163		

The refractivity of air, calculated from those of its constituents, did not agree with experiment, and the same result was obtained with other gaseous

mixtures. The authors conclude that gases are not indifferent to one another's presence, but modify one another's properties in the same manner as do liquids, though to a different extent. Auguste and Louis Lumière (Paris Academy of Sciences, June 21) have applied photography to the measurement of indices of refraction by coating the plate whose index is to be measured with a sensitive emulsion and then faintly illuminating it through a minute hole. The diameter of the halo resulting from reflection at the back of the plate determines the index.

Polarization.—Guve and Aston (Paris Academy of Sciences, Nov. 22) find that amyl alcohol undergoes a sudden increase in specific rotatory power near its boiling point. This appears due to the breaking up of complex into single molecules in vaporization. (For other discoveries in polarization see the section immediately following.)

Magneto-optics.—Zeeman (Berlin Physical Society) has shown that the period of the light emitted by a flame is altered when the flame is in a magnetic field. When an asbestos filament soaked in salt is introduced into an oxyhydrogen flame between the poles of an electro-magnet, the D lines, as examined with a Rowland grating, widen whenever the circuit is closed. The widening in this case might be attributed to the effect of the magnetic field on the density of the sodium vapor in the flame, but a variation in the experiment in which the heated vapor was inclosed in a rotating tube made it probable that there was an actual alteration of the period of the light. Dr. Zeeman explains this result on the theory of Prof. Lorentz that in all bodies there are small electrically charged molecular elements, and that all electrical processes are due to the equilibrium or motion of these. The forces acting directly on the elements in the magnetic field suffice, according to Zeeman, to account for the phenomenon. If this application of Lorentz's theory be correct, the light from the edges of the widened lines should appear circularly polarized when the eye looks along the lines of force and plane polarized if one looks at right angles to those lines. This he has found experimentally to be the case. The theory also allows the ratio of the charge of an element to its mass to be deduced from the

magnitude of the effect. This ratio, $\frac{e}{m}$, is of the

order of magnitude 10^7 , according to a rough measurement— e being expressed in electro-magnetic units. Egoroff and Georgiewsky (Paris Academy of Sciences, April 5 and May 2) have carried Zeeman's experiment still further by proving without a spectroscope the partial rectilinear polarization of rays from certain flames and sparks. They also find that the relative quantity of equatorial radiations emitted by a sodium flame and polarized rectilinearly varies with the intensity of the magnetic field according to a particular curve, and (with a field of given intensity) with the temperature of the flame. Lorentz (Amsterdam Royal Academy of Sciences, Sept. 25) explains this partial polarization by taking into account the absorption of the rays of one part of the flame by the adjacent part, which absorption is modified when the periods of vibration are changed by the Zeeman effect.

Dunstan, Rice, and Kraus ("American Journal of Science," June) find that Zeeman's phenomenon may easily be observed with Michelson's interferometer, the most intense field being in the ratio of 1 to 1.7. Lodge, Michelson, and Runge, in a discussion (British Association) on the dark space between the two lines into which the original single band is sometimes split in the Zeeman effect, agreed that this space is a true part of the phenomenon

and not due merely to absorption. The effect thus may be a true doubling as well as a widening. Cornu (Paris Academy of Sciences, Oct. 18) has shown experimentally that the formation of doublets and triplets in a spectrum by the action of magnetic force is subject to the laws of Fresnel and Ampère. It differs essentially from the Faraday effect, in that the latter is produced in luminous waves that have attained a steady state, causing alteration in the velocity of propagation, while in Zeeman's effect the magnetic action is directly on the source of the waves and affects their vibration period. All the effects above described have been successfully photographed by Preston ("Nature," Dec. 23).

Electro-optics.—Righi (Bologna Academy) finds, from measurements of the orientation of a disk of selenite in a uniform electric field, that Maxwell was correct in his theory that the three optical axes coincide with the directions of the three principal dielectric constants.

Spectroscopy (see also **Magneto-optics** above, and **Spark**, under "Electricity," below).—Berthelot (Paris Academy of Sciences, March 15) describes a new apparatus for the application of spectrum analysis to the recognition of gases. The gas is contained at ordinary atmospheric pressure over mercury in a short glass tube carrying one of the platinum electrodes, the other being fused into a smaller glass tube capable of vertical adjustment. Humphreys (British Association) has caused the lines in the spectra of metals to shift toward the red by increased pressure. The result is of the same order as the change of specific inductive capacity in the air, produced by the pressure.

Fluorescence.—Burke (London Royal Society, June 17) finds that certain substances, notably uranium glass, absorb such rays as they themselves give out while fluorescing, differently, according as they are or are not in the state of fluorescence.

Phosphorescence.—Newall (Cambridge Philosophical Society, April 26) has investigated the luminosity that attends the compression of various gases. In the case of oxygen he concludes that the phosphorescence is due to energy evolved by conversion of ozone to oxygen. It seems certain, however, that the presence of impurities is important, if not essential, but the part that they play is not clear. Wilson (Cambridge [England] Philosophical Society, Oct. 25) finds that radiation from uranium salts introduces condensation nuclei in moist, dust-free air in the same way as Röntgen rays.

Infra-Red Rays (see also **Radiant Heat**, under "Heat," above).—Nichols (Wiedemann's "Annalen," March) has investigated the behavior of quartz toward infra-red rays, using a modified Crookes radiometer in which one vane is screened and the other exposed to the rays reflected or transmitted by quartz. He finds that only 29 per cent. of light of wave length 7.4μ is reflected by quartz, but for light of 8.45μ quartz reflects like burnished silver—75 per cent. The transmission curve is very irregular, and beyond 8.1μ no light is transmitted. Becquerel ("Journal de Physique," October) finds that the phenomena attributed by Gustav Le Bon to so-called "dark light" (see "Annual Cyclopaedia," 1896, page 641) may be due to the action of ordinary and infra-red rays. Elsonite is transparent to these rays and they can extinguish the phosphorescence of zinc sulphide and act on a slightly fogged photographic film exactly in the manner observed by Le Bon. When red glass replaces the elsonite the same phenomena are observed.

Electricity. The Medium.—Tait (Edinburgh Royal Society, Jan. 18), in a paper on the physical properties of the electro-magnetic medium, develops the consequences of the hypothesis that the

connection between the electric and magnetic vectors in Maxwell's equations may be due to the fact that they are not directly disturbances in the ether, but concomitants or results of the disturbance, just as the condensations and rarefactions of the air that affect the ear drum are concomitants of the displacements of the air.

Sources.—Trowbridge ("American Journal of Science," September), by examining the characteristic flame of the discharge of a large number of Planté cells, finds that it is oscillatory, and he concludes that a cell may be regarded as a leaky condenser, and that its discharge is always essentially oscillatory. Liebenow and Strasser ("Zeitschrift für Elektrochemie," Feb. 20) have investigated the Jacques carbon cell ("Annual Cyclopaedia," 1896, page 643) and find that a cell of carbon and iron dipping into fused caustic potash has at first a very small negative electro-motive force, which rises suddenly, when the iron assumes a passive condition, to about one volt. The current is very inconstant and the iron is rapidly polarized, although this can be remedied to some extent by passing a current of air through the fused electrolyte.

Conduction.—Müller (Wiedemann's "Annalen," January) has made a new measurement of the conductivity of air, taking into account the residual mercury vapor and the specific heat of the glass employed and investigating all sources of error. His result is 0.000056 in C. G. S. units. Price (London Physical Society) has investigated the properties of a proposed form of submarine cable made of two concentric conductors interrupted alternately at different points throughout its length. He finds theoretically that the speed of such a cable can not exceed that of the ordinary type, but it appears from experiment that the definition of signals is better, and that the clearness of definition increases within certain limits, the greater the number of subdivisions. Baly (London Physical Society, Jan. 22) criticises the theory that conduction in gases is electrolytic, bringing up against it the following facts: (1) The sign of the change on the supposed gaseous ion is variable; (2) a gas has initial resistance; (3) Ohm's law does not hold; (4) the supposed gaseous electrolyte is permanent; (5) every mixture of gases must also be an electrolyte; and (6) the potential gradient in a vacuum tube, when the current passes, is uneven. Criticism of the author's views was distinctly unfavorable (see "Nature," Jan. 28).

Resistance (see also above).—Trowbridge ("Proceedings of the American Academy," April) finds that Ohm's law does not hold good for electrical discharges in air and rarefied gases. A 6-inch discharge encounters no more resistance than one only 2 inches long, and probably the resistance met by a flash of lightning a mile long is no greater. The author believes that electrical oscillations are of the nature of voltaic arcs and that the discharges in Crookes tubes are arcs, and he is "forced to the conclusion that under high electrical stress the ether breaks down and becomes a good conductor."

Dickson ("Philosophical Magazine," December) examines the relation between the electric resistance of a metallic wire and its temperature, with a view to regulating the platinum thermometer, and deduces the formula $(R + a)^2 = p(t + b)$, where a , p , and b are constants. This he considers more representative of fact than previous formulas and as simple as any. Swyngedouw (Paris Academy of Sciences, March 15) regards spark resistance as depending on length, section, and temperature, and on the nature of the luminous conductor that constitutes the spark. The consequences of this view differ from those of Thomson, who regards the resistance as constant, and lead to the result that a

condenser discharge that is oscillatory when the capacity is large becomes continuous when the capacity is small enough. Bossi ("Nuovo Cimento," Vol. IV) finds that in salt solutions where the effect of electrolysis is to produce greater concentration at the positive pole, the resistance increases when the liquid moves opposite to the current and decreases when it moves with the current, the increase in the first case being greater than the decrease in the second. Where the concentration is greater at the negative pole the effect is reversed, and when there is no difference of concentration the resistance is unaffected by the motion of the liquid. Erskine (Wiedemann's "Annalen," November) finds that the electric resistance of an electrolyte for rapid oscillations is directly proportional to the thickness required to produce a given amount of damping.

Dissipation.—Oberbeck (Wiedemann's "Annalen," February) finds that a thin wire, electrically charged, loses its charge more readily in air when hot than cold. The difference between a positive and a negative charge is also more marked at high temperatures, the latter being more rapidly dissipated. Wesendonck (Wiedemann's "Annalen," February) finds that the quantity of negative electricity discharged from a point into hydrogen is greater than the quantity of positive electricity discharged at the same potential; but the initial discharge potentials are not necessarily different.

The Spark (see also under *Resistance* above).—Schuster (British Association) has measured the velocity with which metallic particles are projected from the electrodes in a spark discharge, as determined by the spectroscope. He photographed the spark spectrum on a film fixed to the rim of a rapidly revolving wheel and moving with a linear speed of 80 metres a second at right angles to the spectroscope slit. The metallic lines appear inclined on account of the finite velocity of the luminous molecules, while the air lines remain straight. With two zinc poles the velocity was found gradually to diminish from 2,000 metres per second to 400 as the distance from the pole increased. With one zinc and one bismuth pole the bismuth in some cases had a smaller speed. Warburg (Wiedemann's "Annalen," November) has studied what he calls the "retardation"—the period elapsing between the establishment of the necessary difference of potential and the corresponding discharge. It varies from a few minutes to a fraction of a second and is due to a nonluminous partial discharge.

Electric Waves and Oscillation.—Bose (British Association) has succeeded in obtaining electric waves six millimetres in length. In a lecture at the Royal Institution he has shown that numerous crystals polarize the waves. Drude (Wiedemann's "Annalen," January) finds that electric waves are not totally reflected by a bridge laid across a wire system, but undergo a displacement of phase and a diminution of amplitude, depending on the ratio of the length of the bridge to that of the wave. By noting the number of nodes along the wire the absorptive power for electric waves may be measured. Mazzotto ("Atti dei Lincei," VI, page 4) finds that the principal indices of refraction of electric waves in woods are proportional to the square root of the dielectric constant in the same directions as Maxwell's theory requires. Pocklington (Cambridge Philosophical Society, Oct. 25) finds by mathematical treatment that with accurate tuning the magnitude of an induced current is independent of the thickness of the wire, and that the thinner the wire the more sensitive it is to accuracy of tuning. In the case of a helical wire, when the reciprocal of its radius can be neglected, there are two possible velocities of propagation, one measured along

the wire equal to that of light; the other a greater velocity.

"Wireless Telegraphy."—Marconi ("Nature," June 17) has experimented on a new plan of electric signaling through space, utilizing Hertzian waves of very high frequency, and hence employing conductors of very moderate length. He employs as a transmitter Prof. Righi's form of Hertz's radiator, and as a receiver a modification of Lodge's "coherer." With his apparatus signals have been sent nine miles. Weather has no influence and hills do not act as obstructions.

Cathode Rays.—J. J. Thomson (Cambridge [England] Philosophical Society, Feb. 8) has experimented on the electric charges carried by these rays and on their deflection in a uniform magnetic field. The result seems to show conclusively that there is a flow of negative electricity along the rays, but that there must be something else besides a stream of negatively electrified particles. He found that the magnetic deflection of the rays in various gases is the same, provided that the mean potential difference between the cathode and the anode is the same. Certain of the rays are not deflected by a magnet; these have little if any power of producing phosphorescence. The path of the rays for the first part of their course is approximately circular. Thompson (London Royal Society, June 17) finds that the size of the cathodic shadow depends on the electric state of the object that casts it, and that objects protected by a nonconducting layer of glass do not, at moderately low exhaustions, when made cathodic, repel or deflect cathode rays. He finds also that the rays can not be concentrated by reflection; that when they strike on an internal metal target, the latter emits other rays that resemble them in certain respects, but that can not generate Röntgen rays; and that metal screens sift out the rays, those most readily stopped being the ones most easily deflected by a magnet. Thompson and Skinner (Cambridge [England] Philosophical Society, Nov. 22) find that aluminum is rapidly evaporated from the cathode by an electric discharge in a highly exhausted vacuum tube in which mercury vapor replaces air. The metal is deposited on the glass in a bright layer which when dissolved off by acid leaves a gelatinous residue of silica. Other similar chemical effects are recorded by the same observers. Deslandres (Paris Academy of Sciences, June 8) finds that an electrified body interposed in the path of a cathode ray causes an enlargement of the shadow, the cathode bundle being divided up into several distinct and unequally deviated bundles. These, which he calls "simple cathode rays," correspond with simple electric oscillations. Bernstein (Wiedemann's "Annalen," November) asserts that the apparent repulsion between two parallel cathode beams arises from some action of the metallic cathode on the origin of the other beam and not to mutual action of projected particles. The paths remain straight when others proceed parallel from opposite ends of the tube. S. P. Thompson (British Association) distinguishes four kinds of cathode rays: (1) The ordinary kind; (2) those produced when the former fall on a surface and by producing X rays lose their power to excite X rays; (3) those that arise when ordinary cathode rays pass through a negatively charged metallic spiral or sieve (nondeflectable by a magnet); and (4) those that appear at the opening of a Holtz's funnel tube. These last produce no fluorescence and are magnetically nondeflectable. Tollenaar (Amsterdam Royal Academy of Sciences, Sept. 23) asserts that all the phenomena of two cathodes can be explained simply by supposing the rays to consist of negatively charged particles emitted with great velocity. Previously (*ibid.*, Jan. 2) he had

found that by using as cathodes two square aluminum plates whose distance can be varied, the phosphorescence figures on the walls of the globular screen consisted of a zone of very intense green, bordered on either side by two rings. By changing the intensity of the current toward one cathode one ring obeyed the rules of deflection figures given by Goldstein, but the other behaved quite differently. With a triangular or square plate and a metal globe remarkable shadows were obtained. McClelland (London Royal Society, April 3) concludes that Lenard rays are simply a secondary propagation of cathode rays, produced by the rapid pulsations of negatively charged particles up to the aluminum screen, and that, like the cathode rays, they are streams of charged particles. Röntgen ("Atti del Lincei," VI, page 3) has conducted experiments to ascertain whether Röntgen rays exist in the cathodic pencil that produces them, and concludes that in deflectable cathode rays either are non-existent or not transformable into Röntgen rays. His experiments also indicate that metals of greatest atomic weight emit the most intense rays.

Röntgen Rays. Their Nature.—(See article on RÖNTGEN RAYS in "Annual Cyclopaedia," 1896, and *Cathode Rays*, just above.) Thompson, in his inaugural presidential address before the newly formed Röntgen Society (Nov. 5), gave a review of recent progress with respect to Röntgen radiation ("Nature," Nov. 11). He said that the nonhomogeneity of the rays was now generally admitted. Precht, of Heidelberg, in a recent thesis, reported in "Nature," March 4, confirms the view that cathode rays and Röntgen rays are highly complex. He considers that part of such radiation is not a wave motion, but may be electric in nature. From interference phenomena the wave-lengths of Röntgen rays were found to range from 370×10^{-6} to 880×10^{-6} millimetres. Some waves were four times as great as those obtained by Violle by diffraction through a slit. Voormer and Ort, of the Hague ("Nature," Aug. 5), regard Röntgen rays as discharged cathode rays. The strongest proof for this theory, they say, is Lafay's experiment in which Röntgen rays that have passed through a negatively charged leaf of silver can again be deflected by a magnet in the same direction as the cathode rays in the tube, and, when the leaf is positively charged, in the opposite direction. Imbert and Bertin-Sans find that after prolonged use a Crookes tube emits rays that appear to differ from ordinary X rays in being able to traverse, without appreciable absorption, bodies relatively opaque to the latter.

Their Production.—Trowbridge, in a paper on "The Energy Conditions necessary to produce the Röntgen Rays" ("Proceedings of the American Academy," April), says that the discharge in a Crookes tube when on the point of emitting the rays most intensely is oscillatory, and that each discharge encounters a resistance of less than five ohms. Swinton ("Nature," Jan. 7) notes that Röntgen-ray tubes should be excited during exhaustion with a coil of the same dimensions as the one that they are ultimately destined to be worked with. Voller and Walter (Wiedemann's "Annalen," May) find that as exhaustion is increased less heat is developed in a discharge tube, the production of heat giving way before that of Röntgen rays.

Properties.—Battelli ("Nuovo Cimento," Vol. IV) and Villard ("Bulletin de la Société Française de Physique," 1895) have investigated the reflection of cathode and Röntgen rays. Both find that cathode rays are not regularly reflected, but that when they impinge on a thin metallic lamina rays having all their properties emerge from the opposite face, generally normally to it. Wind (*ibid.*) concludes that

X-shadow figures obtained by Fomm and others are not ordinary diffraction images, but secondary ones. Analogous phenomena can be shown with ordinary light, and this fact, the author believes, goes far toward proving the X rays to be undulatory. Haga (Amsterdam Royal Academy of Sciences, April 21) describes a new method of determining the wave length of Röntgen rays, the result of experiments by Tiddens, of Gröningen, founded on the fact that a perfectly identical deflection image is produced by rays of very different wave lengths, by varying the distance between source, diffracting slit, and screen in a definite manner. Benoist ("Bulletin de la Société Française de Physique," 1894) finds that for ordinary rays the specific absorbing power for the rays (defined as the absorption of a layer of unit surface density) increases with the density, but that results vary with the quality of the rays. He assumes that at the limit, as rays of higher and higher frequency are produced, the specific absorbing powers of all substances are equal. Swinton (London Royal Society) has investigated some properties of Röntgen rays by means of the luminescence they produce on a carbon surface. He has thus demonstrated the hollowness of the convergent and divergent cones of rays in a focus tube, has shown that the rays cross at the focus with no rotation, and has proved that the cathode rays, to produce Röntgen rays, must fall on solid matter. Hemptinne (Paris Academy of Sciences, Sept. 6) finds that while electric vibrations cause gases to become luminous at a low pressure, the Röntgen rays, used at the same time, raise the pressure at which luminosity occurs.

Effects.—Perrin (Paris Academy of Sciences, March 1) finds that the effect produced on a charged conductor by the Röntgen rays consists of two parts, one depending on the nature of the gas and the other on the metal. Villari ("Atti dei Lincei," VI, page 1) has investigated the relation between the dissociation produced in gases by Röntgen rays, in virtue of which such gases discharge electrified bodies, and the molecular association in which oxygen is transformed into ozone by the electric spark. He finds that an ozonator through which passes a current of air first traversed by Röntgen rays deprives that air of its power of discharging an electroscope. Hemptinne ("Zeitschrift für physikalische Chemie," December, 1896) has attempted to detect some action of Röntgen rays on chemical processes. He could detect no effect at all on the conductivity of aqueous solutions of electrolytes, the hydrolysis of ethereal salts by acids, and the combination of chlorine with hydrogen and carbon monoxide, and only minute traces of change on solutions, such as that of silver nitrate in alcohol, that are decomposed by light. Perrin (Société Française de Physique, Dec. 4, 1896), in investigations on the dissociation of neutral electricity in gases by Röntgen rays, finds that at constant pressure the quantity of dissociated electricity per unit volume is proportional to the pressure, and hence to the density. At constant pressure it is independent of the temperature. The quantity dissociated per unit mass varies as the absolute temperature. Child (American Association) finds that electricity can be continuously discharged by X rays even when the charged body is covered with a solid insulator, as paraffin. Villari ("Nature," May 27) finds that the discharge of a conductor in air, provoked by Röntgen rays, seems to take place by convection, as if by an electric dance of the particles in air, roused by radiation. This discharge lessens when the exposed surface is diminished, as by covering it with paraffin. The paraffin, under the action of the rays, does not gain in conductivity. India rubber and insulating liquids behave almost

as paraffin. The conductive power of gases under the influence of the rays increases with their density. Guggenheimer (Paris Academy of Sciences, Feb. 15) shows that the Röntgen rays influence the explosive distance of the electric spark, the increase of this distance depending on the intensity of the rays that fall on the spark gap when the sparking distance and potential difference are constant. If the potential and the intensity of the rays are kept constant, the increase of explosive distance depends on the distance of the spark gap from the emissive wall of the tube.

Radiography by Impact.—De Heen ("Bulletin of the Belgian Academy") has obtained a photographic impression of lycopodium powder that is allowed to fall on a sensitive plate, by means of the electricity developed by the impact of the powder with the plate. With an uncovered plate a feeble but distinct impression was obtained after an hour and a half, but with a covered plate the impression was more powerful. Where the covering was broken, dark ramifications extend into the covered portion, apparently following the directions in which electricity was propagated along the surface of the plate. Anson ("Nature," Jan. 21) has secured very perfect images of the invisible electric discharge. He says: "This discharge, or possibly, more strictly speaking, the electrified streams of air driven off by it, appears to act upon the plate exactly as light does. It is thus possible to secure impressions of such discharges by simple electrification and subsequent development."

Discharge Rays.—Hoffmann (Wiedemann's "Annalen," February) describes a kind of rays called by him "discharge rays," which are contained in the spark discharge in air, hydrogen, and nitrogen, at ordinary or low pressures. They have no photographic action, but impart luminescence to solid solutions of magnesium sulphate in gypsum when heated to a temperature below incandescence. They are intercepted by mica, quartz, fluorspar, and other solids (unless produced at low pressures), proceed in straight lines, are not deflected in a magnetic field, and are not reflected by solids. They differ from ultra-violet light in their power of penetrating air and not fluorspar.

Radiant Properties of Uranium.—Becquerel (Paris Academy of Sciences, March 1), in researches on his "uranic rays" ("Annual Cyclopaedia," 1896, page 641), finds that uranium has the property of discharging electrified bodies at a distance, the time of discharge being the same for positive and negative charges. For potentials below 15 volts the velocity of discharge is proportional to the potential. For potentials between 1,500 and 2,000 this velocity is constant. Lord Kelvin and others (Edinburgh Royal Society, March 1 and 9) obtain similar results. They find that two polished metallic surfaces connected to the sheath and the insulated electrode of an electrometer give a deflection from the metallic zero of about the same amount when the air between them is influenced by the uranium rays, as when the metals are connected by a drop of water. Kelvin, Beattie, and De Smolan (*ibid.*, April 4) find that the electric leakage induced by metallic uranium is not proportional to the electromotive force, and is not perceptibly increased when the uranium is heated or when sunlight falls on it. The rate of leakage is greater in oxygen than in air, and less in hydrogen. In carbonic acid it is less for low and greater for higher pressures. In air at pressures from 760 to 23 millimetres the leakage is very nearly proportional to the atmospheric pressure. Lead 2 millimetres thick is not transparent to the influence of the uranium, but glass 3 millimetres thick does not stop it entirely. Mica is quite transparent, and copper and zinc partially

so. Kelvin (*ibid.*, June 7) also finds that the effective conductivity induced in air by uranium being greatest in its immediate neighborhood, electricity of the same kind as that of the uranium will be deposited in the air near it, and the opposite kind near the inclosing metal surface. Hence, if dimensions and shapes are such that for small voltage the electricity near the uranium preponderates, the excess must come to a maximum and then diminish with greater and greater potential difference, while with still higher potential difference the outer charge may exceed, and so the electricity drawn off may be of opposite sign to that found at first. These results correspond with those found experimentally by Dr. J. C. Beattie (*ibid.*). Becquerel (Paris Academy of Sciences, April 12) finds that the loss of electricity due to uranium appears to be effected solely by the gas in contact with the metal. Le Bon (*ibid.*, April 26) claims to have established that the action of uranium is only a particular case of a general law that all substances under the action of light emit rays that discharge electrified bodies.

Other Effects in Gases.—Villari (Paris Academy of Sciences, March 15) finds that gases that have acquired the property of discharging electrified bodies, either by having been sparked or traversed by Röntgen rays, lose this power when subjected to the silent discharge of an ozone apparatus. This power of neutralization persists in the ozonizer for a time after it has been disconnected from the coil, owing to accumulated charges on the glass. The same experimenter (Naples Royal Academy) has studied the property of cooling heated bodies, acquired by gases after being traversed by electric sparks, by observing the action of different gases on a red-hot platinum spiral. In some cases the apparent cooling produced a fall of resistance of 10 per cent. in the wire. The effect increases with the energy of the sparks, and at first with the temperature of the spiral, but after this exceeds a certain limit the refrigerating power decreases. Townsend (Cambridge [England] Philosophical Society, Feb. 8) finds that gases given off during certain chemical reactions have sometimes a large electrostatic charge, which they retain in a striking manner, even when bubbling through a liquid or shaken up with sulphuric acid. These gases condense a cloud when they get into a moist atmosphere, the weight of the cloud being proportional to the electric charge, but heavier when the charge is negative.

Thermoelectricity.—Burnie (London Physical Society, Feb. 26) finds that when a V-tube containing solid metal in one branch, and the same metal, molten, in the other, is connected to a galvanometer by copper wires, the slope of the curves that co-ordinate temperature and electro-motive force depends on the rate of cooling or heating of the metal, particularly with bismuth. The effect is attributed to variation of crystalline structure, and is particularly marked just at the melting point.

Photo-electricity.—Schmidt (Wiedemann's "Annalen," November) finds that flourespar, though it acquires a positive charge in some parts under the influence of light and a negative charge in other parts, dissipates only negative charges under the action of light. Even selenium shows no signs of dissipating a positive charge. Elster and Geitel (*ibid.*), in experiments on the relation between the photo-voltaic current and the cathodic absorption of light when the angle of incidence and direction of polarization of the incident light are varied, find that the current, so far as it depends on these factors, is determined by the amount of light absorbed at the cathode. Their results confirm the accepted theory of metallic reflection.

Dielectrics.—Atlogg (at January) finds that as the specific inductive capacities of all substances increase with fall of temperature, the high dielectric constant of water may be approached by cooling other dielectrics to low temperatures. Hopkinson and Wilson (London Royal Society, Jan. 21) find that for long periods residual charge diminishes with rise of temperature in the case of glass, but for short times it increases, both for glass and for ice. The capacity of glass for ordinary durations of time ($\frac{1}{100}$ to $\frac{1}{10}$ second) increases much with rise of temperature, but for very short times ($\frac{1}{10^6}$ second)

it does not increase sensibly. This is due to residual charge. Conductivity has been observed in glass at fairly high temperatures and after brief electrification; after $\frac{1}{100000}$ -second electrification it is much greater than after electrification for $\frac{1}{10000}$ second, but for longer times it is sensibly constant. Thus continuity has been established between conduction in dielectrics that exhibit residual charge and that in ordinary electrolytes.

Condenser.—Pollak (Paris Academy of Sciences, June) constructs a condenser of very high capacity by passing first an alternating current and then a direct current between aluminum poles in an alkaline solution. The plates become coated with a thin deposit of nonconducting oxide, which acts as the dielectric.

The Arc.—Wilson and Fitzgerald ("Astrophysical Journal," February), in an investigation of the change of temperature of the arc as dependent on pressure, conclude, although some observations showed that the temperature was lowered with pressure, and although none showed an appreciable increase, that they can not affirm, on present evidence, that pressure either raises or lowers arc temperature. Blondel (Paris Academy of Sciences, July 19), by experiments in which the passage of a current between carbon poles was broken for only $\frac{1}{100}$ second, during which the back electro-motive force of the poles was opposed to a single cell, eliminated the effect of the cooling of the carbons, and concludes that the arc behaves like an ordinary resistance, presenting no counter electro-motive force comparable to the potential difference of the carbons. Foley (American Association) finds that the electric arc has concentric layers of different color, the outer one being strongest in yellow. The upper carbon, whether positive or negative, is covered deeply with the yellow flame. Inside is a blue area, stronger at the positive carbon, and here, within the blue, a violet region is found.

Coherence.—Appleyard (London Physical Society, March 26) has devised some new experiments on coherence in liquid conductors. When mercury and paraffin oil are shaken together until the mercury divides into small spheroids, coherence of the latter can be visibly effected by a current, a spark, or a Hertz oscillator, the resistance falling from several megohms to a fraction of an ohm. When an emulsion of water and paraffin oil is formed the suspended globules of water are similarly precipitated by electrification, producing an artificial thundershower.

Nature of a Current.—Lord Armstrong, in a work entitled "Electric Movement in Air and Water" (London, 1897), concludes that an electric current consists of two streams, a negative one in the form of a core flowing in one direction, surrounded by positive electricity flowing in the opposite direction, and he suggests instead of "negative" and "positive" the terms "inward" and "outward" as more appropriate.

Hall Effect.—Van Everdingen (Amsterdam Royal Academy of Sciences, April 21) finds that the ratio of the resistances of bismuth in different directions

is modified in the magnetic field, the modification being sufficient to account for the dyssymmetry of the Hall effect.

Various Phenomena of Electrification.—Searle (London Physical Society, June 25), in a paper on the steady motion of an electrified ellipsoid, deduces that when a charged sphere or ellipsoid moves with the velocity of light the charge on any surface is in equilibrium. It would seem impossible to make a charged body move at a greater speed than this, the energy becoming infinite at this velocity. Nichols and Clarke ("Physical Review," March-April) find from measurements of the change of surface-tension in liquids, due to electrification, that as the potential increases the surface-tension falls off slowly at first, and then more and more rapidly, till at about 10,000 volts it is reduced one-half. No difference was detected between the action of positive and negative charges. Kelvin and McLean (Edinburgh Royal Society, April 5) have investigated the electrical properties of fumes from flames and burning charcoal, and find that with a flame the fumes are negative, while those from glowing coals are positive. Kelvin and McLean (*ibid.*, July 5), in experiments on leakage from electrified metal plates placed above and below uninsulated flames, find that the amount of discharge under a flame is greater when the body ends in a flame than when it ends in a point. Swan (London Royal Society, June 17) finds that by electrification stress is produced in a viscid mixture of resin and oil, so that on passing a spark near it a star-shaped figure forms on the surface. This is affected by the sign of the electrification, the form and size of the terminals and their distance from the dielectric, the character of the spark, and the density of the atmosphere. As the density diminishes the figures become more diffuse, and they almost disappear at 85 millimetres.

Devices for Electrical Measurement.—Moler and Bedell (American Association) have devised two forms of apparatus to determine the frequency of an alternating current. The first consists of a small synchronous motor brought to speed by a geared crank and containing an electric speed-counter; the other is a monochord of adjustable pitch mounted between the poles of a permanent magnet and traversed by the current, whose frequency is determined by its vibration. Pérot and Fabry (Paris Academy of Sciences) have designed an absolute electrometer for measuring electro-motive forces of about one volt, consisting of an attracted disk electrometer in which the necessary sensitiveness is obtained by greatly reducing the distance between the plates, this distance being measured by an interferential method. Rowland ("American Journal of Science," December) describes 24 methods of measuring inductance, capacity, and resistance by means of alternating currents. Some of these depend on a new principle, two currents being adjusted to a phase-difference of 90° by passing one through the fixed coil of an electro-dynamometer and the other through the suspended coil. Inductances can be compared to within $\frac{1}{100}$ of 1 per cent., thus solving the problem of standard inductances.

Magnetism. *Magnetization.*—Fromme (Wiedemann's "Annalen," May) finds that concussion exerts upon magnetization a well-defined effect, independent of that produced by deformation and of the magnetic history. It probably produces groupings of the molecular magnets, reducing the magnetic movement and lowering the susceptibility. Holborn (Berlin "Sitzungsberichte," June) experiments on the coefficient of magnetization of different kinds of iron and steel, finds that in a feeble field of force this coefficient is a linear function of the temperature. Wilde (London Royal Society, May

13), by a new method of determining limits of magnetization, finds that this limit in iron is beyond 422 pounds to the square inch. Folgheraiter has attempted to determine from the present magnetization of ancient Etruscan vases the magnetic constants at the time of their manufacture. In a recent paper ("Atti dei Lincei") he argues that no modification in their magnetization can have taken place in the centuries that have elapsed since they were baked, since the fragments of vases long broken are found to be as regularly magnetized when fitted together as if the vase had been preserved entire. The only element wanting to exact determination of the magnetic elements in the ancient Etruscan period is knowledge of the orientation of the vases in the kiln, and this Dr. Folgheraiter hopes to obtain by the discovery of potteries of that epoch with vases *in situ*. The same observer ("Nature," April 15) finds from observations on the magnetism of buildings on the Roman Campagna that these structures frequently exhibit singular points and zones similar to those observed in rocks. The zones, since they include numerous adjacent stones and the mortar between them, must have been formed since the erection of the buildings, and Dr. Folgheraiter regards them as due to lightning discharges.

Change of Volume.—Klingenberg, in an inaugural dissertation at Rostock University, has made an attempt to co-ordinate the magnetic phenomena of iron, nickel, and cobalt in terms of the shape and orientation of the molecular magnets, whose rotation he believes to be the most essential feature in these phenomena. Knott (Edinburgh Royal Society, June 7) finds that iron and steel tubes dilate longitudinally in a longitudinal magnetic field, positively in moderate fields, negatively in higher ones. Nickel behaves more simply, the cubical dilatation being always positive and increasing steadily with the field. Later (July 19) he reports that in a nickel tube magnetization produces a small diminution of volume and a comparatively large apparent diminution of volume, as indicated by its outer dimensions when plugged at both ends.

PHYSIOLOGY. In its review of the advance of physiology during the reign of Queen Victoria, the "Lancet" mentions the importance of the cell as the physiological unit as having been fully established, though the estimated value of its component parts—cell wall, protoplasm, and nucleus—has of late years undergone modification, while each has been shown to possess a structure far more complex than was believed to exist by the originators of the cell theory, or even by Virchow. Much service has been derived from improvements in the microscope, whereby observers have been enabled to comprehend the structure of the different organs of the body, and thus to gain some insight into the mechanism by which the various functions of secretion, sensation, and motion are effected. The inquiry has only been begun, and we are still very far from comprehending the mode in which this mechanism acts; but the little knowledge that has been gained has swept away much that was inaccurate and even absurd in the opinions and practice of our predecessors, and has helped to establish better, because more rational, methods of treatment of disease. Experimental physiology has been pursued with great energy during the last few decades, and with very instructive and satisfactory results. Immense advances have been made in many branches by the combined labors of numerous painstaking and accurate observers in different countries. In respect to the blood, our knowledge has been rendered far more exact of late years in regard to the form, size, and number of the corpuscles; to the relative proportion of the colored and uncolored bodies, to the

spontaneous movements of the latter, and to their ability to traverse the walls of the vessels; to the origin of the colored corpuscles and the effects of reagents upon them, to their chemical composition, and to the nature, quality, and exchange of gases during their passage through the capillaries of the lungs and of the tissues; while our knowledge of such points as the crystallization of the hæmoglobin and the phenomena of spectrum analysis is altogether of recent date. Likewise striking are the accessions to our former knowledge of the phenomena that can be demonstrated in the nerve-muscular apparatus. The form and speed of the nerve of contraction in muscle, the rapidity with which the impulse causing sensation and motion are propagated in nerve, the functions of the several columns of the spinal cord, the long-denied reaction of the brain cortex to stimulation, have been rendered probable or actually demonstrated by the converging and mutually supporting lines of careful dissection, microscopical examination, experimental and pathological inquiry, and embryological research, while pathological anatomy has now and again afforded additional evidence when proof from other sources was wanting. Of late years the physiological chemist has been persistently engaged in the investigation of the changes undergone by the proximate principles of food—as starch, sugar, fat, and proteids—both in the alimentary canal and in their passage through the economy. Great progress has been made in the discovery of the primary changes that occur, but many of the more recalcitrant changes in the blood and in the tissues still await explanation. In several Continental universities departments or laboratories have been instituted where physiological chemistry can be taught and pursued, and where problems hitherto regarded as insoluble are persistently attacked.

Respiration.—Studies of the muscles of respiration have hitherto borne chiefly upon the intercostal muscles. In the observations recorded by Dr. Rudolph Fick, all the costal muscles were left intact. The author first examined the auxiliary muscles of respiration in the neck, and proved that they were inactive in normal quiet respiration, and came into action only in isolated extraordinary, deep, sighing respirations, the result of their action being to elevate the thorax. Next the auxiliary muscles of respiration and the diaphragm were paralyzed by severing their nerves in the neck, and the action of the abdominal muscles was eliminated by dividing them. It was then found that the respirations continued in normal rhythmic manner, the difference between inspiration and expiration (apparently active) measured through a tracheal cannula being 66 millimetres of water. These experiments, taken in connection with certain geometrical deductions from the results of observations of the intercostal muscles, proved that normal quiet inspiration is the effect of the contraction of the internal intercostal and intercartilaginous muscles, and that expiration is effected by the internal intercostal muscles. The same results have been reached by Bergsial and Bergmann in Sweden.

It is shown by the researches of MM. A. Chauveau and J. Tissot that when the weight sustained by a muscle and the amount by which it shortens increase together, the respiratory exchanges that represent the energy spent—that is, the oxygen absorbed and the carbon-dioxide exhaled—increase as the product of the shortening by the weight.

The physiological effects of high altitudes have been studied by Prof. Piero Giacomini more especially with reference to their influence on the exchange of material, and particularly on the elimination of

nitrogen. The author considers that as the altitude of 6,000 metres (19,685 feet) is approached an increasing risk accrues of reaching the limit beyond which the physiological functions can not be completed, but below that altitude the diminished pressure is never a direct and sufficient cause of the disorders that are observed, and its only effect is to aggravate those due to fatigue, impaired digestion, and other causes.

Dr. Alexander Wilson in 1863 suggested that certain cases he had observed of death from *asphyxia* form in which the prominent symptom was vigorous respiration persisting after the pulse had become imperceptible suggested that the fatal results were due to anæmia of the respiratory center produced by "failure of the circulation," from either vasomotor paralysis or cardiac syncope, and not by primary paralysis of the respiratory center. The evidence of later cases, together with the light thrown on the subject by a comparison of the symptoms with those of death from other well-recognized causes and the effect of treatment, now lead him to conclude that the death is due to vasomotor paralysis or that the fatal changes are initiated by the fall in blood pressure. The symptoms preceding death vary according to the degree of anæmia that has been reached at the time when the vital centers begin to be affected by the depletion of blood consequent upon the vasomotor paralysis. Conclusions reached by Dr. Leonard Hill on this subject from experimental evidence agree substantially with those of the author.

Previous experiments by G. T. Kemp had shown that when enough air or oxygen is mixed with nitrous oxide to keep an animal alive anaesthesia can be maintained for a considerable length of time without risk of life to the subject. When nitrous oxide is replaced by oxygen the anaesthesia passes off. This shows that nitrous oxide possesses specific anaesthetizing properties not possessed by nitrogen. A more thorough knowledge of the condition of the system during nitrous-oxide anaesthesia has been obtained by drawing blood for analysis while the animal was connected with a kymograph and breathing N_2O + air or N_2O + pure oxygen. The analysis of the blood gases shows that even when the animal was so deeply anesthetized as to endure stimulation of a sensory nerve without pain the blood contained enough oxygen to support life. The carbonic acid in the blood was greatly diminished. The average amount of nitrous oxide in the blood during anaesthesia was 28 volumes per cent. A study of the respiratory exchange indicates that the metabolism was lowered and that the system adapted itself to the small amount of oxygen present in the inspired air.

Circulation.—In experiments on the dog W. T. Porter has found that any part of the ventricle will contract rhythmically when cut away from the ventricle and fed with warmed, defibrinated blood. Hence, he infers, the cause of the rhythmic contraction of the ventricle lies within the ventricle itself, and is not seated in a single isolated co-ordination center; but the co-ordination mechanism, whatever it may be, is present in all parts of the ventricle. The integrity of the whole ventricle is not essential to the co-ordinated contraction of the whole of it. Assuming the correctness of the general belief in the absence of nerve cells from the apical half of the ventricle, the rhythmic co-ordinated contraction of the ventricle is not dependent on nerve cells. A thin piece of the beating ventricle in the living animal may be partly severed from the apical portion in such a way that the isolated piece remains attached to the remainder of the ventricle only by its nutrient vessels, all muscular connections being cut. The heart and the isolated pieces

continue to contract. On slowing the heart by vagus excitation the rhythmical contractions of the isolated piece may be watched without difficulty. The rhythm, then, differs from that of the remainder of the heart. It follows that the rhythmic contractions of the isolated mammalian apex are not due to changes in the blood during its defibrination.

In other experiments Mr. Porter found that recovery of the dog's heart, or any part of it, from strong fibrillation, is secured by feeding the part with defibrinated dog's blood through the coronary artery. When an isolated part of a dog's or cat's ventricle, this author observed, is fed through the coronary artery, the flow from the veins appeared greater during systole than during diastole. In an extirpated heart supplied with blood at a constant pressure through the coronary arteries a pulse synchronous with the systole was observed in the superficial auricular veins before and after their connection with the coronary sinus was severed. A similar but much less marked pulse could be demonstrated in the coronary arteries. When a vein on the surface of a ventricle *in situ* in the living animal was incised and the heart slowed by vagus excitation the flow from the cut vein was much increased during ventricular systole. These observations are interpreted as showing that the contraction of the cardiac muscle compresses the veins, and to a less extent the arteries, in the substance of the heart. The systole must therefore facilitate the circulation through the heart muscle. The minimum manometer failed to show a negative pressure in the coronary arteries. The ventricle acts on the coronary circulation as a force pump, and not to any noticeable extent as a suction pump.

In an experiment by F. H. Pratt in which the auricles of the cat's heart were tied off from the ventricles, both coronary arteries were ligated, and the ventricle was fed, the ventricle began to contract rhythmically, slowly at first, but gradually attaining the normal rate. The blood within the ventricle and in the veins became venous, and if contractions were to be sustained had to be periodically renewed. If a vein was opened a small but steady outflow of blood occurred. Increasing the load beyond that furnished by a blood column of 4 or 5 inches lowered the force of contraction. Contractile activity could be kept up by this method for some time. These experiments were interpreted as indicating plainly a nutritive phenomenon: the blood becomes reduced, and must be removed in order to sustain contraction. Proof is adduced that the contractions are not due to mere mechanical stimulus. A genuine circulation is shown to exist between the ventricular cavity and the coronary veins through the vessels of Thebesius. It is added that the possibility of a nutrition from the ventricles direct may serve to explain some cases in which thrombosis or other stoppage of the coronary arteries has failed to destroy the normal activity of the heart.

The changes of the pulse at different hours of the day and the influence of muscular and of mental work upon the capillary circulation have been studied by A. Binet and J. Courtier. Experiments concerning the first problem are described as having been made upon three subjects. They gave more marked indications in summer than in winter, even when the temperature was the same. The effects of a meal appeared to be represented in the capillary pulse by an increase of the pulsation or an accentuation of the diastolism. For the individual, the diagram of the pulse may be influenced for the moment or for a period of time by the state of health, physical exercise, mental labor, the emotions, or overwork; but through all these accidental

variations, taking the pulse hour by hour after the meal, the direction, the order of changes in the form of the pulsation, persists. An experiment is cited to show that the form of the pulse (tracing) indicates a general state of the organism rather than the local condition of the hand.

Local, fatiguing muscular exercise produces a weakening of the diastolism, a blunting of the pulsation, a tendency to a displacement of the diastolism toward the point of it. A general, moderate muscular exercise, walking, for instance, depresses and accentuates the diastolism, and intensifies the pulsation. General, excessively fatiguing muscular exercise provokes a weakening of the diastolism, without displacement toward the point of the pulsation. An energetic, brief mental effort is found to produce excitation of the functions. Vasoconstriction, acceleration of the heart, and respiration are followed by a very slight slowing of these functions; and in some subjects, weakening of the diastolism. Mental labor lasting several hours while the body is relatively still produces slowing of the heart and a diminution of the peripheric capillary circulation. Asking if any relation can be established between the effects of mental and those of physical labor on the capillary circulation, the authors remark that mental labor may be regarded as an excitation of the nervous system, in which point it resembles physical labor, and produces acceleration of respiration and of the heart, as muscular labor does. It is therefore possible, in view of the physical effects, to compare a mental calculation to the act of grasping a dynamometer. Further, the capillary circulation is often modified in the same way by physical exercise and mental work. A passing effect similar to that of walking in lessening the pulse and accentuating the diastolism occurs at the beginning of a mental work. Further, a fatiguing physical effort weakens the diastolism; and so a mental work with some subjects may bring on a weakening of the capillary pulsation. On the other hand, the differences between physical and mental work are numerous. The excitation of the heart is much more considerable and the acceleration of respiration is much greater under the influence of physical effort. The amplitude of respiration is augmented during muscular exercise, while it becomes more superficial during mental work. We should, moreover, recollect that prolonged mental work brings on an attenuation of the peripheric capillary circulation. Physical and mental effort constitute excitations of the nervous system; but the excitation of mental work is much inferior in degree to that of physical work, and it seems to be of another quality, as is shown by two effects which are special to mental work: the contraction of the thoracic cage and the attenuation of the peripheric capillary circulation.

From experiments upon the influence of emotion on the heart's respiration and capillary circulation, Messrs. A. Binet and J. Courtier find that with the majority of persons every emotion produces a vasoconstriction, an acceleration of the heart and respiration, and an increase in the amplitude of the thoracic cage—effects which are more marked as the emotion is more intense. In some very rare cases a painful sensation and a sad emotion have produced a very slight slowing of the heart. The possibility is suggested by the observation of one subject that the form of the capillary pulse (tracing) changes with the quality of the emotions. From this it may be possible some time to make a classification of the emotions according to their effect on the form of the pulse.

From a series of investigations of that subject, Prof. H. Kronecker and Dr. A. Marti conclude, with respect to the relation of cutaneous excitation and the formation of red blood corpuscles, that feeble

irritations of the skin promote the formation of red blood corpuscles, but modify the formation of hæmoglobin in different ways; that strong irritations determine a diminution of the number of red corpuscles, and, in a minor degree, of the hæmoglobin contained in the blood; that darkness diminishes the number of blood cells. After about a fortnight a minimum is reached, which is followed by a limited increase; and that continual exposure to intense light (even at night with electric light) induces the formation of red blood corpuscles, and also, in a lesser degree, of hæmoglobin.

Experiments made by MM. A. Binet and N. Vaschide with Mosso's sphygmomanometer upon the influence of physical and mental work and the emotions on the pressure of the blood yield results indicating that strong fatiguing or enervating sensorial excitations produce on the average an augmentation of from 10 to 15 millimetres in the pressure; very intense mental work, a little higher augmentation, of 20 millimetres; an animated conversation raises the pressure by 20; a strong spontaneous emotion, whether pleasant or unpleasant, by 30; and a considerable expenditure of muscular force, without suspension of respiration, also raises the pressure by 30 millimetres; showing that all trials we can conceive—mental and physical effort, and emotional experience—however differently they may be felt in the consciousness, are expressed physiologically under an equivalent form.

Of new morphological elements observed in the blood, Dr. H. F. Möller describes minute spherical or rod-shaped bodies which present lively molecular movement. He has also observed exceeding fine dustlike particles which are not soluble in acetic acid or ether, and are not blackened by osmic acid. Pigment particles and colorless flakes have been described by Dr. Litschenberger. The reducing substance in the blood has been isolated by Dr. Von Henriques, and found to be jecorin sugar.

Mr. W. F. Lloyd, in a paper quoted by "Nature" from the "British Medical Journal," describes experiments made to determine the specific heat of human blood, which he found to be 0.710. Having determined this value, the amount of heat required to raise the temperature of a certain quantity of blood can be easily calculated. Suppose that the temperature of a patient whose weight is 65 kilogrammes is 37° C., and twelve hours after this the temperature has gone up 3° C. The weight of the patient's blood would be $\frac{1}{4}$ of 65, or 16.25 kilogrammes, and the amount of heat required to raise the temperature of 16.25 kilogrammes 3° C. will be $16.25 \times 0.710 \times 3 = 34.81875$ heat units, the mechanical equivalent of which is 4,515,600 grammes metres. This amount of work represents the chemical energy that must be required to raise the temperature of the blood of the patient 3° C. in twelve hours, so that in every second the chemical changes going on are represented by the amount of energy required to lift 104.5 grammes a metre high against the force of gravity. From this it will be seen that the amount of energy going on in the tissues of a patient whose temperature is rising must be very considerable, and about 13 times greater than these figures, which apply only to the blood. The author suggests that the difficult problem with regard to the number of atoms in the molecule of protoplasm may be accurately solved by an accurate determination of the specific heat of living protoplasm.

Dr. Nathan Raw records a considerable number of cases, in addition to several reported upon in 1893, in which transfusion of normal saline solution has been employed at the Dundee Royal Infirmary, in some with wonderful effect and in others with well-marked temporary improvement; and he believes that there can be no doubt that we have in

this process one of the most simple yet efficacious remedies in all cases of shock from hæmorrhage. In several cases a rigor set in a half hour or hour after the operation, and lasted about five minutes, with a high temperature, but it had no serious effect. Dr. Raw suggests its employment in acute specific diseases due to micro-organisms.

In all of a series of experiments by MM. A. Binet and N. Vaschide upon the influence of the different psychic processes on the blood pressure in man, the blood pressure was increased. This effect was produced by pain, a strong mental effort, conversation, and a fatiguing muscular effort.

Experiments reported by M. Eschov, a Russian physiologist, indicate that blood-letting has important effects on the chemical composition and the properties of the blood. After drawing large quantities of blood—amounting to one fourth the weight of the body—from rabbits, Guinea pigs, and pigeons, the author found that the fluid acquired a marked bactericidal power, especially as against the microbe of cholera. The effect takes place gradually, reaching its full force in twenty-four hours, after which it declines. Not only does the blood fail to propagate the microbe, but it becomes at the same time refractory against inoculation.

Digestion.—Dr. A. S. Gillespie has found that the contents of the alimentary canal in the dog and the calf are acid throughout, and that this condition is due to acids formed in part by micro-organisms acting on the constituents of the food, in part to hydrochloric acid in combination with proteids and proteid derivatives, and in part to acid salts. The experiments indicate the existence of two classes of bacteria—those which occasion an acid reaction and are usually unable to liquefy gelatin, and those which lead to an acid reaction and are capable of liquefying gelatin. These two classes are antagonistic. If the acid forms predominate the putrefactive changes are few; if the alkaline forms, the disposition to putrefaction is greater.

Investigations are recorded by Dr. Vaughan Harley of the question whether, after the removal of the pancreas, fat continues to be broken up in the alimentary canal. For this purpose animals were fed on milk, and seven hours later the contents of the stomach, small intestines, and large intestines were separately analyzed with regard to the quantity of neutral fat, free fat acids, and fat acids as soaps. So far as the stomach is concerned, the quantity of fat acids was increased in the animals in which the pancreas had been removed. The increase seemed to be due to the longer retention of the fat in the stomach rather than to its splitting up, for after the pancreas was removed, the motility of the stomach was much diminished. Soaps were formed in both the normal and the pathological dogs, so that in both cases the stomach is capable of splitting up neutral fat with free fatty acids and glycerin, and these substances are capable of forming an alkaline matter with which they can form soaps even in the acid stomach contents. The power of the free fatty acids for forming soaps is, however, extremely limited in the stomach. In normal dogs the principal fat-splitting action really begins not in the stomach, but after the fat has left the pylorus. The normal dogs contained 72.22 per cent. of the total fat as free fat acids, while when the pancreas had been entirely removed 61.62 per cent. of the total fat was thus present. It appears, therefore, that even where no pancreatic secretion has reached the intestines, a very considerable quantity of neutral fat is split up into free fat acids in the small intestine, although the quantity then formed is not so great as when the pancreatic secretion has been able to share in the work. The formation of soap is also carried on as in the normal dogs. In the

contents of the large intestine the normal dogs and those in which the pancreas had been previously removed showed, for all practical purposes, an equal breaking up of the neutral fat.

In a Croonian lecture in 1896 Dr. P. W. Latham, of Cambridge, assumed that the action of the liver on the amide bodies, glycocyl, taurine, leucin, tyrosin, etc., is one of dehydration similar to that by which glycogen is produced by the dehydration of glucose. Again, in accordance with Pflüger's view, ammonium cyanate is the type of living and urea of dead nitrogen, the conversion of the former into the latter being an image of the essential change which takes place when a living proteid dies. Further, in many of the cyanogen compounds condensation of three molecules takes place, forming compounds much more stable than those consisting of one molecule only, such as is exemplified in cyanuric acid, which results from the condensation of three molecules of cyanic acid. Dead albumin may be built up on the evidence furnished on the lines here suggested. The change from the dead to living albumin may be similarly supposed to take place as from urea into ammonium cyanate. The author adduces evidence explanatory of the change which takes place as the living proteid dies. His latest conclusions are that the living proteid consists of a series of cyan-alcohols with one thio-alcohol united to a benzene nucleus; that when a proteid dies it gives off carbonic and lactic acids, the thio-alcohol by oxidation being converted into a sulphonate which combines with ammonia, and by the conversion of CNOH into $\text{NH} \equiv \text{CO}$ the cyano-alcohols are changed into a series of amide bodies; that by condensation of the lower cyan-alcohol and the separation of CONH the higher cyan-alcohols are formed; and that urea is formed by the separation of carbonic anhydride ($\text{CO} \equiv \text{NH}$), which either combines with ammonia to form urea or is hydrated to form carbonic acid and ammonia.

The function of glycogen in the formation of tissue is dealt with by Dr. Charles Creighton in a work recording his microscopic researches on the subject. The author finds that glycogen is present and may be abundant in the liver of animals in hibernation, which is against the rule of starving animals; and that it is present in some peculiar way in the muscular and pulmonary tissues, and is found in granules in fat cells. "Any attempted interpretation of these facts can not but be hazardous, while so many other relevant facts remain to be determined exactly; but it seems probable, as Vort has conjectured for the hepatic glycogen, that the store of fat is utilized by being converted into glycogen. As to the hibernating gland, its function appears in some way correlated to the wasting of the fat store during the winter, the gland substance becoming physiologically most active in correspondence with the wasting of the animal's fat in general."

The digestive actions of pepsin and pancreatin upon fibrin in the presence of oroline yellow, saffolin, magenta, and methyl orange were separately studied by H. A. Weber. Of the coloring substances, only oroline yellow retarded the action of the pepsin; but saffolin, magenta, and methyl orange interfered very seriously with the fermenting action of pancreatin. The use of such colors in articles of food and drink is therefore objectionable.

The action of the common coloring matters, flavoring extracts, and preservatives on the digestive ferments has been studied by Frank D. Symons. Among his most interesting results are the determinations that peptic digestion is greatly retarded by picric acid, tropæolin 000, and metanil yellow, less so by salicylic acid and oil of wintergreen, and

that pancreatic digestion is retarded by Bismarck brown, cinnamon, and formal. The action of essence of peppermint on both the peptic and pancreatic ferments was practically nil; and the three coloring matters—chrysoidine, safranin, and methylene blue had no apparent effect.

Secretion.—The internal secretions, products of what are called the ductless or vascular glands, were the subjects of papers read by R. H. Chittenden and W. H. Howell before the fourth triennial meeting of the Congress of American Physicians. It has long been recognized that these glands possess no excretory ducts, and that therefore whatever secretion they may produce probably enters the blood directly or through the lymph. These secretions exist in several glands, and their functions have been the subject of much study, upon which satisfactory information has only recently been gained, and their functional activity is now recognized as a necessary element for the welfare of the body. Their removal or the impairment of their function may produce even more disturbance of physiological equilibrium than a corresponding disarrangement of glands formerly considered of greater physiological value. Whatever power they possess appears to be the elaboration of definite products which are distributed through the body by the blood and lymph. In the case of the thyroid gland and tissue it is found that its complete removal is followed by serious disturbances of nutrition that are immediately or ultimately fatal. Moreover, in these cases the reintroduction of thyroid material into the body results in an amelioration or even entire removal of the symptoms of malnutrition. Among the effects of the administration of thyroid gland and thyroid extracts to normal individuals and to those in whom the thyroid glands are diseased Prof. Chittenden mentions a very noticeable effect upon the metabolism of the body, leading to a marked loss of body weight, an increased excretion of water, nitrogen, carbonic acid, and sodium chloride. The fact of quantitative changes in the proteid metabolism renders it probable that there are also qualitative changes, and that the presence or absence of the thyroid gland or its equivalent from the body may modify the *line* of metabolism. But upon this point we know very little. The experiments show that the thyroid is concerned in hæmatosis and that there is apparently a connection between the thyroid gland and phosphoric-acid metabolism. Evidence is also afforded that it plays some important part in the katabolic processes of the body. Some uncertainty still prevails respecting the chemical and physiological character of the protective products manufactured by thyroidal tissue. The epithelial cells of the gland appear to manufacture a colloid secretion which finds its way to the blood through the lymph, presumably carrying with it the active principles. This matter gives the general proteid reactions, is very soluble in dilute alkaline fluids, is readily dissolved by gastric digestion, and is regarded by Prof. Chittenden as the active constituent of the gland. It has the remarkable property of holding a certain amount of iodine in combination, and yields on decomposition a peculiar nonproteid substance, carrying with it most of the iodine and endowed with marked physiological action. This substance—thyroidin or iodothyron—is especially characterized chemically by its great resistance to ordinary decomposing agents. It is fairly well established that iodothyron possesses all the peculiarities associated with thyroid therapy. The physiological activity of the thyroid gland was ascribed by Fränkel to another substance which he called thyreo-antitoxin, a crystalline body of neutral reaction obtained from the proteid-free extracts; but Prof. Chittenden finds

that it possesses with certainty more of the properties of the gland. The amount of iodine in thyroids is very variable, and the law of its relations does not appear to be as yet accurately determined.

While Prof. Chittenden's paper is confined mostly to the thyroid secretions Mr. Howell treats also of the secretions of the suprarenal bodies, the studies upon which have been as interesting, although not so complete, as those upon the thyroid and the hypophysis cerebri. Extracts of the medulla of the suprarenal bodies injected into the veins of a living animal cause a pronounced slowing of the heart beat and a large rise of blood pressure. These effects, as a rule, usually pass off in a very short time, indicating that the active substance is either quickly destroyed in the tissues or is neutralized in some unknown way. The substance producing these reactions having been found under normal conditions in venous blood flowing from the gland, it is concluded that it is a normal product of the metabolism of its medullary cells, and is discharged or secreted directly into the blood. Further experiments are relied upon to furnish more definite information as to the extent to which the muscular and the nervous tissues are affected by this substance. The hypothesis that these glands secrete a stimulating substance that augments the tone of the muscular system is not, however, the only one that has been offered to explain their physiology. Another one supposes that, like the thyroids, they produce an antitoxic secretion capable of neutralizing or destroying certain poisonous products of body metabolism. The hypophysis cerebri is commonly described as consisting of two parts, the anterior and the posterior lobe, the histology and embryology of which indicate that they are entirely different in origin and structure. The anterior lobe is a glandular structure, not strictly ductless, according to Haller, because it possesses an imperfectly developed system of ducts that opens between the dura mater and the pia mater, but evidently a secreting structure; and the fact that its secretion is discharged between the meningeal membranes suggests some special connection with the physiology of the brain. It exhibits pathological changes in many of the cases of acromegalia, and extracts of it have therefore been used therapeutically in cases of that disease, and apparently favorable results have been claimed therefrom, but not yet satisfactorily demonstrated. The experiments made upon this lobe by physiologists have likewise been meager and inconclusive. The posterior or infundibular lobe is very small in all animals, and has the appearance of being a rudimentary organ; but observations presented by Mr. Howell indicate that it affects the heart rate and blood pressure, and may have some important physiological activity, different from that of the glandular lobe, and possibly independent of it.

The observations of S. Vincent on the comparative physiology of the suprarenal bodies indicate that suprarenals of some sort are possibly present in most if not all vertebrate animals. Experiments of the intravenous injection of the medullary substance of the adrenals of fish give evidence of contractions of the arterioles throughout the body. The author believes that the effect of the active principle upon the arterioles is due to a direct action upon the muscular tissue of the blood vessels, and is not connected with its action on the central nervous system.

The effects of the injection of human sweat are found by M. S. Arloing to be to produce hypoglobulin in the blood, to reduce the force and frequency of the action of the heart, to render the respiration feeble, shallow, and hurried, to cause vomiting, intestinal pain, and diarrhoea, and to ex-

ercise a very distinct depressing influence on nervous action.

In his studies of the secretory activity of the skin, Mr. Barratt has found that the proportion of carbonic-acid gas eliminated as compared with watery vapor is as 1 to 200 for the upper limb, but that it varies to some extent with the temperature and the degree of fullness of the part.

Besides observing the withdrawal of iodine from the circulation and the formation of iodolaurin by the thyroid gland, M. E. Cyon remarks that the thyroid is an organ which, being situated on the carotid arteries just before their entry into the skull, protects the brain from the sudden afflux of blood, acting like a secondary current.

A summary of the results realized from treatment with thyroid extract up to that time is given in the "American Journal of Medical Sciences" for July, 1897, by Dr. Francis P. Minnick, who represents that the myxedematous symptoms in cretinism are readily removed by it; that bodily growth and bodily development held in abeyance are resumed in a degree inversely proportioned to the age, and if the treatment is begun early in the disease the child will probably grow into a healthy adult. In a type of idiot somewhat a cretin some improvement, physical and mental, has been observed. Some benefit follows the treatment in goitre—especially in the periplastic form. Large collections of colloid and cysts are not affected. But complete disappearance of the goitre has rarely been observed. In exophthalmic goitre an aggravation of the symptoms usually results. In obesity a loss of weight at the rate of from two to eleven pounds a week is produced in some cases. After a time a limit is reached, beyond which further loss does not occur. As a rule, discontinuance of treatment is followed by relapse. In diseases of the skin the expectations entertained have not been fulfilled.

Studies of the suprarenal bodies by Dr. Arthur Biedl were directed particularly to the vasomotor nerves and the secretory nerves of these organs. Reasons are given in his paper for supposing that certain vasodilator fibers run in the splanchnic nerves to the adrenals. The author has observed that in dogs the splanchnics, after traversing the diaphragm, give off on each side, before they enter into the formation of the solar plexus, a single large branch to the adrenals, and these nerves, he believes, contain the chief vasodilator fibers, since, if divided, the stimulation of the splanchnics in the thorax is without influence, while stimulation of the distal extremities of the divided nerves is followed by active hyperemia. From a critical review of the researches of previous investigators he considers the facts established in regard to the vasodilator nerves distributed to the abdominal viscera to be that these nerves leave the spinal cord chiefly by the anterior roots of the lower dorsal nerves and, running in the rami communicantes, enter the sympathetic in the dorsal region, and are distributed with the branches of the splanchnic nerves to the large and small intestines, the liver, kidneys, pancreas, and adrenals. He has satisfied himself that there are ganglia on the vessels distributed to the adrenals, and that although their presence has not been anatomically demonstrated, vasoconstrictor nerves exist. The two sets of nerves, vasodilators and vasoconstrictors, run in the same trunks, their relative proportion varying to a considerable extent. The secretory nerves of the adrenals, to which Dr. Biedl devoted much time and attention, belong to the class of organs which have an internal secretion, discharging the materials they elaborate into the blood. Some investigators have been led to the belief that the granules known to exist in the blood of mammals proceed

from the adrenals; others have shown that the venous blood of these organs resembles arterial blood in color; and another observer has demonstrated that the peculiar extract of the adrenals is not a post-mortem product, but is contained in the venous blood returning from these organs during life. Dr. Biedl found that after stimulation of the suprarenal branch or of the splanchnic nerve in the thorax, the number of bright granules or little masses of protoplasm was diminished, while the number of the leucocytes of the blood was reduced. In regard to the active extract, the author believes that besides containing vasodilators, the splanchnic nerves are associated with the secretory nerves of the adrenals, which run in the same trunks, and that stimulation of these nerves leads to some, though not material, increase in the quantity of the active extract produced.

Muscular System.—The observations of Dr. Bethe on the oscillations of *tonus* in various forms of muscle indicate that in muscular organs in which the tissue has not undergone a high degree of degeneration the sarcoplasm must be regarded as the really irritable and contractile substance conferring upon it the automatic and rhythmic properties. In the skeletal muscles the sarcoplasm is represented by the singly refracting substance which alone possesses the power of transmitting excitation, while the double refracting and more highly differentiated substance, though it can contract swiftly and vigorously on the application of a stimulus, is yet destitute of automaticity and rhythmic power.

The alterations of shape and volume occurring after muscular exertion in the hearts of persons who are suffering from nervous affections have been studied by Mdle. Pokrychkin and M. Capitan, who find that in normal subjects moderate exercise does not cause any perceptible change in the shape, volume, or position of the heart; but in subjects whose nervous systems have undergone deterioration in consequence of hysteria, neurasthenia, or any reflex trouble having its point of departure in a particular part of the organism, the heart grows hyper-excitable and changes in shape or position the moment it is called upon to do a little extra work. This alteration may present itself in three typical ways: The whole cardiac area may be uniformly enlarged, or the increase may be partial and irregular; the heart may become retracted and diminished in volume; or, finally, the organ may be dislocated laterally, with or without changes of shape and volume, the displacement being directed toward the mesial line or, more frequently, toward the axilla.

Because the respiratory movements are liable to constant modification in the physiological acts of talking, etc., and in all emotional expression and in sneezing and coughing and the like, Dr. Harry Campbell pronounces these acts more far-reaching in their effects than would appear, and hence worthy of careful study; and they further affect the body by involving the expenditure of a considerable amount of muscular energy, and by inducing definite psychic phenomena which themselves have their physical accompaniments. Seeing how far-reaching these acts are, and remembering how large a part they play in normal life, we may safely conclude that they influence the functions of the body beneficially, and that an undue interference with them is injurious. The instincts to shout and sing, laugh and cry, are especially noticeable in the savage and in the child; and if they are unduly repressed in the child he is sure to suffer. Crying should certainly be restrained within limits, but there can be no doubt that it is primarily physiological, favoring the proper expansion of the lungs,

accelerating the circulation, deadening the effects of pain, and relieving nerve tension. Rosbach thinks it not improbable that many evils that manifest themselves in later life may originate in the practice of mothers stopping their infants from screaming by soothing them or otherwise. The shouting of young people at play is manifestly physiological. The amount of talking done by barristers and others enables them to dispense largely with exercise as ordinarily understood. Singing is a most important exercise from a medical point of view, and the good average health enjoyed by professional singers is in a large measure attributable to the mere exercise of their calling. Both talking and singing are good in heart disease, and singing in defective chest development. Laughing is especially beneficial as a physical exercise, although it may be disadvantageous in heart disease. In crying the flow of tears lessens blood pressure within the cranium, the discharge of nerve energy relieves nerve tension, and the sobbing movements of respiration and the contraction of the muscle system are beneficial. The importance of the dynamic effects of unrestrained crying is shown by the exhaustion it entails. Sighing and yawning are accompanied by deep inspirations, and come as a relief to shallow breathing and muscular stagnation, accelerating the aëration of the blood and the flow of lymph.

Nervous System.—The results of a number of studies of the physiology of the occipital lobe—in which the center of vision is located—are summarized by J. Souri. The lesion of an occipital lobe gives rise to the symptom called homonymous lateral hemianopsia—that is to say, abolishes the functions of the right halves of both retinas, so that the patient in consequence of the confusion of the light rays in the eye can no longer perceive what is on the left of the visual field. Complete cortical blindness results from a total destruction of both occipital lobes, a condition which has been found realized in patients, and may be produced artificially in animals. With this blindness goes loss of orientation and of recollection of places. A patient observed by Sachs had become incapable of orienting himself in the bedroom where he had lived a long time, and could not find the table three steps from his bed. Persons who become blind through lesions of the retina and the optic nerve have, on the other hand, a remarkable faculty of orienting themselves in places familiar to them. Some pathologists have considered themselves authorized to locate the sense of orientation in the occipital lobe. M. Souri doubts whether a sense of orientation exists in man and animals, but thinks that the phenomenon proceeds from the co-ordination of many recollections, that visual recollections play an important part in the co-ordination, and that when they are abolished troubles which sufficiently explain the observed facts result in the ordinary work of orientation.

Seeking to account for the qualitative differences of the sensations, Bechterev admits that the structure of the cerebral cortex varies but little from one region to another. Such differences as there are in the form of the cells, and the number of the protoplasmic prolongations are not marked enough to permit us to explain the unlikeness between tactile, visual, auditive, and other sensations. The peripheral terminations of the different sensorial nerves, on the contrary, present very considerable differences, as may be well illustrated by comparing the structure of the retina with that of the organ of Corti and with the various corpuscles seated in the skin. These "organs of the senses" serve to transform the external excitation into a physiological excitation of the nerve. The author affirms

that this physiological excitation is different for each sensorial organ, and that this difference is competent to account for the qualitative differences of the sensations. A sensorial nerve "becomes accustomed" always to conduct a particular kind of physiological excitation, and when this nerve is excited by any cause whatever it always gives rise to the same excitation and provokes the same sensation. Authors disagree with respect to the structure of different parts of the cerebral cortex: some, like Flechsig, hold that each part has a different structure, so that an accomplished histologist to whom a section of the cortex is presented is able to tell at once to what region it belongs; while others, like Källiker, Bechterew, etc., affirm that the differences of structure are secondary and very slight.

Dr. Risien Russell, investigating the origin and destination of certain afferent and efferent tracts in the medulla oblongata, has become satisfied, using the degeneration method, that while paths derived from the spinal cord can be traced directly to the cerebellum, no direct path can be traced from the cerebellum to the spinal cord. There is, however, an indirect path which was formerly regarded as a sensory tract passing from the medulla oblongata to the cerebellum, but which is in reality a path from the cerebellum to the special group of nerve cells in the medulla called Deiter's nucleus; from this another tract of fibers originates which can be traced throughout the whole length of the spinal cord, and which becomes connected with the anterior cornu of the same side, and to a less extent with that of the opposite side.

Researches have been prosecuted by Signor L. M. Patrizi for the verification in the vascular domain of the general law of reflexes; for the less vague determination than those usually made of the latent period of the vascular reactions in the three regions of the arm, leg, and brain while awake and during sleep; and for the measure of the influence of the quality of the excitation on the duration and intensity of the vascular movement. The results of more than a thousand experiments are given in the author's paper. The duration (latent period) is estimated from the number of pulsations interposed between the beginning of the excitation and the beginning of the rise or descent of the curve as related to the abscissa. It is almost impossible always to determine at what phase of a pulsation the volumetric change occurs; but with the technical resources provided by the author the beginning of the excitation could be fixed on the course of a sphygmograph. The seat of the excitation appeared to remain not without influence on the velocity of reflexion. The latent time of the local reflex was for the arm 2.45'; and the figures of the irradiate reflexes (symmetrical or crossed) are more than half a second superior to this. All the irradiate vascular reflexes are slower than the localized reflex; but there was no good ground for assuming different durations for the different irradiate reflexes. A constantly and notably shorter duration was established in the reflexes of the arm than of the leg. There are few data on the latent excitation of the vascular reflexes of the brain in a waking state, because of the innumerable influences which in this state complicate the investigation. Some observations nevertheless permit the author to conclude that the vascular reaction of the brain (when it is active, of course) is no more prompt than that of the arm, and this notwithstanding the distallic is shorter in the cephalic region. Pertinently to this, the author remarks upon the slowness of the contraction of the vessels proper of the brain, in view of the importance this fact may acquire in the discussion of the new doc-

trine of the emotions. Certain observations have been made expressly to demonstrate the inhibition imposed by psychic activity upon the vascular reflexes, and the conclusion is reached that these reflexes behave just like the reflexes of the striated muscles. The results of the studies of the cerebral movements during sleep are, according to the author, very favorable to the hypothesis of the active character of many of these movements. The duration of the vasomotor reflexes of the brain in sleep is very long, and that of the arm is twice the duration in the waking condition; but that of the leg continues nearly invariable. Signor Patrizi concludes that the depth of sleep diminishes progressively from the brain to the extremity of the nervous axis. He, however, suggests, without adopting them, other hypotheses. Reflexes to excitation of the special senses are of longer duration than those provoked by mere sensitive excitation. Gustatory and visual reflexes are more rapid than those of other sensorial excitations. From this fact the author believes that different types of vasomotors—visual and gustatory vasomotors, for instance—might be established.

The influence of reagents on the electrical excitability of isolated nerve has been studied by A. D. Waller, who, severing the nerve from its connections with the muscle, put one end of it in connection with the galvanometer and exposed the other end to the electric current. At each electric excitation of the nerve a change was produced which was marked by a deviation of the needle of the galvanometer, equal excitations producing equal deviations. Various gases were introduced into the humid chamber containing the section of nerve, in order to ascertain whether they exerted any influence on its electrical excitability, particularly alcohol, ether, chloroform, and carbonic acid. These substances, when introduced in suitable proportions, exhibited two phases in their action. They were at first excitant, increasing the deviations of the galvanometer at each electrical excitation, and afterward exhibited a depressing effect, diminishing or even preventing for a longer or shorter period the movements of the needle. The nerve, when this took place, ceased to respond to the electrical excitation and seemed dead; but on affrating the humid chamber the nerve gradually resumed its excitability. Chloroform produced a very brief exultant effect and a considerable depression; with ether the depression was less marked and was less toxic, in the sense that the nerve was able to recover its properties, which was not always the case when it was exposed to the vapors of chloroform, from which the author draws an argument in favor of the use of ether rather than of chloroform in surgical anesthesia. In his opinion the fatal accidents produced by chloroform are not owing to its impurity, but to its toxic properties. When it was suggested to the author, as an objection to his conclusions, that the nerve experimented upon might have been so modified by the reagents so as no longer to react as living matter, he replied that he supposed the functional alteration probably depended upon some visible or invisible physico-chemical alteration.

A research on the influence of the cerebral cortex on the larynx has been described by Dr. Risien Russell, the object of which was to show to what extent and in what degree the various laryngeal movements are represented in the cerebral cortex. The result, broadly stated, has been to differentiate centers, stimulation of which causes abduction of the vocal cords.

From his investigation into the segmental representations of movements in the lumbar region of the mammalian spinal cord Dr. Page May draws

the conclusions that any reflex center derives its chief afferent impulse from a nerve root entering the cord, as a rule, about two segments higher; that the fibers of the postero-external column are arranged in a definite order from within outward, the innermost representing the most distal part of the tail; and that stimulation of anterior roots in the dog produces extension, of the posterior roots flexion of the limb as a resultant movement.

The application of bile or of a solution of biliary salts by M. C. Delezenne to the brain of certain animals (cat, dog, rabbit, rat, and guinea pig) caused cerebral phenomena which varied with the animals, but were generally characterized by convulsions and loss of consciousness, accompanied by salivation.

For the investigation of the composition of the cerebrospinal fluid, Dr. E. Nawratski, of Daldorf, used the fluid drawn from the subarachnoid space of a calf. It was limpid, of slightly saline taste, feebly alkaline, became opalescent on boiling, and contained no flocculi or coagula; but under the microscope isolated red and white corpuscles were frequently visible. The result of the author's tests was, contrary to the results obtained by Hoppe Seyler and Ransom, the determination of a substance present in health, which in all its properties agrees with grape sugar. The percentage amount is smaller than that in blood, and varies in different classes of the animal kingdom from one tenth part to two tenth parts per cent. Pyrocatechin is entirely absent.

Special Senses.—In a study of the perception of the direction and distance of sound, Dr. Albert A. Gray, of Glasgow, considered how far the difference of phase with which a sound affects the two ears simultaneously may aid in judging its direction in the light of his own experiments and of the discoveries of Prof. Sylvanus P. Thompson. The author's experiments upon the tympanic membrane showed that pressure of the chain of ossicles of one ear inward caused the opposite ear to hear a sound more loudly. This peculiar fact was shown to be due, in all probability, to a reflex starting from the labyrinth of the first ear, and passing to the *tensor tympani* or *stapedius* or (more probably) both these muscles of the opposite ear near which the sound was produced. Thus the muscular systems of the two ears are in connection with one another. As a positive phase of the sound wave will relax the *tensor tympani* and render the *stapedius* tense, and the negative phase will produce the reverse effect, it is evident that by means of the muscular sense we may be able to estimate the phase of a sound wave in each ear, and by comparing them both be able to localize roughly the direction of a sound.

The conclusions drawn by Dr. James Kerr Love from his studies of the transmission of deafness are that congenital deafness is hereditary in the direct line, or it may be the expression of a tendency which has been seen only in the collateral branches of a family. The anatomical lesions on which deafness depends are not one, but many. The intermarriage of the deaf, therefore, only perpetuates, without accentuating, the tendency. In Great Britain the tendency to have deaf progeny is about the same whether one or both parents were congenitally deaf. Adventitious or acquired deafness, ending in mutism, is usually not hereditary. The hearing brothers and sisters of a congenitally deaf-mute are as liable when they marry to have deaf progeny as the deaf themselves. Consanguinity of the parents emphasizes family defects in the children, and many cases of congenital deafness arise in this way.

Describing in the Royal Society his investigation of the sensitiveness of the retina to light and color,

Capt. W. de W. Abney treated first of the extinction of the sensation of light in the retina. With an apparatus which he described he found that the smaller the spot of illuminated surface the less reduction in intensity of the light is required, and that the amount of reduction of the light falling on the spot which produces just no sensation of light is connected with the size of the spot by a simple formula, $I = X^m$, where I is the intensity and X the diameter of the spot. Further, he found that it is the smallest diameter that governs the necessary reduction in intensity, and not the area of the illuminated surface. The extinction of light at other parts of the retina obeys the same law. Since a large and small area having the same actual illumination appear to be of different brightness, an investigation was made of the relative luminosities of the two, and it was found that they were connected by a very simple law. The reduction of the intensity of a colored ray to extinguish all color was next measured with areas of different dimensions, and it was shown that again the intensity of the reduced light was connected with the size of the spot by a simple expression similar to that of the extinction of all light; but the exponential coefficient differed, indicating that light and color are not connected in the manner which might be expected. The author found that all color fields are of the same form, the extent depending solely upon the illumination and the areas of the surface image that falls on the retina; and that there is a connection between the intensity of the color and the extent of the field which can be expressed by a formula, as can also the connection between the size of the spot of illuminated surface and the extent of field. Curves of illumination were found for equal color fields, and curves of extent of field for every color in the prismatic spectrum. Examining into the relative sensitiveness to light of different points in the retina, the author found that there are "iso-lumes," or fields of equal sensitiveness, which appear to be of the same form as the color fields. The author admitted that there are difficulties in reconciling these results with either the Young or the Helmholtz theory of color vision, and suggested a modification in the accepted theory of light and color which may explain the connection between the two.

A. Charpentier has undertaken to show that the optic nerve may be the seat of vibrations—a phenomenon which should be distinguished from the phenomena studied by Young, Shedford, and Bidwell, in which a luminous sensation, once produced, reappears once or twice after an interval of about one fifth of a second. This is simply a case of recurrent images, while the retinal oscillations now in question are rhythmical and have an average frequency of 36 per second. These oscillations are propagated both radially and in a circular direction simultaneously. Experiments proving and illustrating the phenomena are cited in the author's paper.

Miscellaneous.—The best method of giving instruction in anatomy was discussed at the annual meeting of the British Medical Association in Montreal, when it was generally agreed that dissection is of the highest practical importance, and that familiarity with topographical anatomy could hardly be pushed too far; but that the advantages to be derived from lectures and various accessory means of instruction ought not to be neglected. It was pointed out that a well-thought-out scheme of lectures should supply the learner with facts derived from comparative anatomy and from histology which should enable him to gain a clearer conception than can be obtained from text-books of the structure, use, and fitness of the several parts and

organs of the body, and, so far as is known, the reasons for the existing conditions. A good course of instruction should also include the exhibition of accurate diagrams and lantern slides, carefully made models, dissected and frozen sections, and the mapping out upon the skin of the disposition of the parts in different regions by means of colored pencils.

In an elaborate study of the function of lecithin in plants, M. Jules Stoklasa finds that phosphorus performs its principal physiological work in vegetation under the form of that substance. All the lecithin in the seed appears to be localized in the embryo, while the albumen (endosperm) contains only a very small quantity. The lecithin contained in the embryo is of service at the very beginning of life, in the formation of chlorophyll under the influence of solar radiation. During the growth of the plant the phosphoric acid assimilated by the root passes into an organic form, chiefly lecithin and nuclein. The production of lecithin in the organism takes place in the leaves, which contain about 40 per cent. of phosphoric acid under the form of this substance. The author has further discovered that chlorophyll is lecithin in which the fatty acids are substituted for chlorophyllanic acid, and calls the compound chlorolecithin. It contains 337 per cent. of phosphorus. Lecithin, moreover, has an important place in the plant organism during fecundation. An interesting study was made of the flower, from which it resulted that this substance is removed as soon as the condition of florescence begins from the leaves to the flower. But lecithin continues to develop in the leaves till the seed is formed. It accumulates in the corolla and migrates into the stamens. We should therefore regard the corolla as a reservoir of lecithin for the stamens, in which it fulfills an important physiological function. In the stamens the anthers and pollen appear to be richest in lecithin, the pollen grains containing as much as 8 per cent. of it. This is a new proof of the chemical analogy between the vegetable and animal cells. After fecundation the lecithin is localized in the fruit, where a certain quantity is seated in the embryo, and another part assists in the formation of other substances containing phosphorus in an organic form. After the formation of the fruit the lecithin disappears with the chlorophyll, while xanthophyll takes their place, and is recognized in the yellow color of the leaves. In perennial plants the lecithin is largely localized in the root. Under the influence of solar radiation it assists in the formation of chlorophyll in the leaves. The extraordinary importance of phosphorus in the vital processes of the vegetable organism is made apparent by this study.

Seeds exposed by H. T. Brown and F. Escombe in liquid air for several hours at from -180 to -190°C ., but protected by glass globes from direct contact, were found when thawed slowly to have preserved their vitality, and under appropriate conditions germinated easily and well, producing healthy plants. Experiments by Koch showed that the vitality of seeds might be preserved for a long time when they were kept in Geissler's vacuum tubes; and Giglioli has found that seeds were still active after exposure for sixteen years to pure nitrogen, chlorine, hydrogen, arseniuretted hydrogen, and nitrous-oxide gases, and after immersion for the same length of time in strong alcohol and in an alcoholic solution of bichloride of mercury. The question naturally arises, in view of such experiments, if life can be rendered latent for so long a time, where is the limit—or is there any?

In experiments on the action of light on various kinds of yeasts W. Lehmann found that exposure to the electric light (11,500-candle power) exerted

a distinctly retarding action on the multiplication of the cells. The sun's rays were, however, much more detrimental to their vitality, for after several hours' direct and uninterrupted insolation in the months of May and June the rise in temperature being prevented by immersion in water of the agar dishes containing them, the yeast cells were destroyed. On the other hand, yeast cells kept in the dark during the same period of time, or only exposed intermittently to feeble sunshine, exhibited distinct multiplication. A microscopic examination also revealed a distinct morphological difference between the cells kept in the dark and those which had been insolated. Whereas the former presented a perfectly normal appearance, the latter looked shrunken and exhibited irregular contours, and the plasma was drawn together in heaps, chiefly in the direction of the poles of the cells.

Researches by numerous experimenters on vegetable and animal structures have demonstrated that direct communication is established between the protoplasm of neighboring cells by means of numerous threads, sometimes scattered and sometimes collected into groups. Thus, while each cell represents from some points of view an isolated microcosm having its own special organization and functions, every cell stands in direct continuity with others which it influences and by which it is influenced. Such communicating protoplasmic threads have not, however, been observed to exist in all cells.

M. Ollier has called attention in the French Academy of Sciences to the fact that osseous regeneration in man after surgical operations, for the study of which only the most limited facilities have been heretofore afforded, can now be observed by means of the Röntgen rays, by which the form and dimensions of the osseous masses in the new formation can be readily demonstrated. The exact knowledge afforded in this way of the position of diseased bone renders unnecessary the immediate amputation of the limb, since the whole of the diseased portions can be removed with precision.

From his studies of scurvy, Prof. A. E. Wright, of the British Army Medical School, Netley, has reached the conclusion that that disease is really a condition of acid intoxication. This view seems to be supported by the experiments of explorers and others who have had to contend with scurvy. Only three methods are definitely known to exert an influence in warding off and ameliorating the scorbutic condition. Each of them consists essentially in the administration of an alkaline food stuff (blood, fresh vegetables, and lime juice all come under this denomination). Each of these methods may therefore be regarded as one calculated to ward off and ameliorate a condition of acid intoxication. Fresh vegetables and lime juice are, however, very slow in their action, and Dr. Wright shows that much better remedial agents are found in alkaline salts.

The question has been raised whether life is possible without bacteria. In experiments by MM. Nuttall and Thierfelder at Berlin young Guinea pigs placed in a sterilized chamber supplied with sterilized air, and fed exclusively on sterilized milk, were in perfect health as long as they lived; and when they were killed no trace of bacteria could be found in their alimentary canals.

The results of observations by M. Loukinow on the effects of inanition on cells go to show that while the cells of various organs are diversely affected, the nutrition and multiplication of the nuclei remain comparatively unchanged, indicating that their autonomy is to a large extent retained.

The production of acid in culture media, which has long been regarded as a characteristic feature in the growth of diphtheria bacilli, has been inves-

tigated and quantitatively estimated by Dr. Max Neisser. During the first nine hours no increase was observed, but at the end of the first day a considerable number of bacilli was discovered, and a much larger number on the second day, after which no further rise was recorded. When grown in serum and then plate cultivated in agar dishes, 1,500,000 of diphtheria bacilli after six hours became 60,000,000; after nine hours, 500,000,000; and after twenty-four hours, 1,100,000,000. The growth in serum between the sixth and ninth hour after inoculation is therefore particularly prolific. The multiplication in both is much slower, only about 120,000,000 of the bacilli being found after twenty-four hours.

The experiments of Hesse, who found that cholera bacilli undergo deterioration in raw milk, and of Caro, who found that anthrax bacilli flourish in it, have been repeated and confirmed by Prof. Schottelius. He further extended his investigations to the behavior of diphtheria bacilli, which prove to find an exceptionally satisfactory material for growth and multiplication in fresh milk. Their growth, however, is not so abundant in sterilized milk, and is less strongly marked than in the ordinary broth used for cultivation purposes. The paper of Prof. Schottelius concludes with a warning against the danger attending the consumption of milk unsterilized.

From observations made in Australia on the temperature of reptiles, monotremes, and marsupials, M. A. Sutherland finds that the lowest vertebrata in heat-producing faculty resemble reptiles—to which they are analogous in several other points of organization. The temperature of platypus, for example, in cold air may fall to 24° C., and of the echidna to 22° C., while the temperature of echidna exposed to a hot sun rose to 36.6° C.—the temperature varying, like that of a reptile, with the temperature of the air. The temperature of marsupials is much more uniform, but may still vary several degrees with that of the external medium. In the higher vertebrata the temperature is nearly constant.

With an ergometer (a dynamometer made to write on a kymograph), exhibited by J. McKeen Cattell at the meeting of the American Physiological Society, the maximum pressure of the thumb and forefinger or the movement of a single finger could be registered and a series of movements showing fatigue could be recorded. The curves gave the actual amount of work done, their height being proportional to the pressure. The instrument is proved to have advantages over Mosso's ergograph, and is used in the psychological laboratory of Columbia University to study fatigue and the effects of sensations and emotions on movements.

M. le Professeur Bouchard is impressed with the necessity, in researches on nutrition, of determining the superficial dimensions of the body, which exercise considerable influence on the chemical reactions of which the organism is the seat. The active parts are efficient in proportion to the surface. Thus, in the normal man 1 kilogramme of flesh contains 160 grammes of albumen, in the obese man 1 kilogramme of flesh contains only 70 grammes of albumen. Methods for measuring the surface of the human body are indicated in the author's notes.

Recent experiments indicate that the antitoxins are more versatile as to the toxins on which they are capable of acting than has been supposed. Antivenomous serum has been found by Dr. Calmette to be protective against the poison of scorpions, and Roux and Calmette have shown that rabbits vaccinated against rabies become capable of resisting the action of the venom of the cobra. Animals vaccinated against tetanus and anthrax,

besides these poisons, have been found in some cases capable of counteracting the effects of cobra venom. Calmette has also shown that antidiphtheria, antitetanus, anti-anthrax and anticholera serums are effective against the vegetable toxin of abrine. A distinct though slight corrective action has been found by Dr. Memmo to be possessed by antidiphtheria serum against tetanus. The experiments of Dr. Marriotti Bianchi on the action of normal serums from different sources on different bacterial toxins point in a similar direction. In his memoir Bianchi dwells especially on the evidence of the production of normal serums in some cases of protection against toxins.

PORTUGAL, a monarchy in southwestern Europe. The throne is hereditary in the family of Saxe-Coburg-Braganza. The legislative power is vested in the Cortes, consisting of a Chamber of Peers, containing 52 hereditary, 13 spiritual, and 90 life peers, and a Chamber of Deputies, containing 120 members, elected for three years by the direct vote of all citizens possessing an elementary education or an income of 500 milreis. The reigning King is Carlos I, born Sept. 28, 1863. The ministry at the beginning of 1897 consisted of the following members: President of the Council and Minister of Finance, E. R. Hintze-Ribeiro; Minister of Foreign Affairs, Luiz Pinto de Soveral; Minister of the Interior, J. F. Franco Pinto Castello Branco; Minister of Justice and Worship, A. d'Azevedo Castello Branco; Minister of War, Col. L. A. Pimentel Pinto; Minister of Marine and Colonies, Jacinto Candido da Silva; Minister of Public Works, Industry, and Commerce, Campos Henriques.

Area and Population.—Portugal has an area of 34,038 square miles. The population in 1890 was 4,660,095, consisting of 2,251,303 males and 2,408,792 females, on the continent and 389,634, consisting of 179,036 males and 210,598 females, on the islands. The number of marriages in 1896 was 30,580; of births, 143,908; of deaths, 110,332. The number of emigrants was 27,980.

Finances.—The revenue for 1895 was 43,905,093 milreis, and the expenditure 41,264,947 milreis. For 1898 the receipts are estimated at 55,105,878 milreis, of which 12,427,700 are derived from direct taxes on land, industry, houses, incomes, etc., 2,755,000 from registration, 2,231,500 from stamps, 300,000 from lotteries, 25,137,150 from indirect taxes, 1,086,000 from surtaxes, 4,813,418 from railroads, telegraphs, posts, etc., 2,830,000 from extraordinary sources, and 3,525,110 are *recettes d'ordre*. The expenditure is estimated at 55,034,844 milreis, of which 525,000 are for the civil list and appanages, 97,244 for the Cortes, 7,198,377 for interest and amortization of various debts, 1,646,780 for other expenses connected with the debt, 17,833,538 for the consolidated and terminable public debt, 500,000 for loss by exchange, 3,737,052 for the Ministry of Finance, 2,598,065 for the Ministry of the Interior, 1,034,258 for the Ministry of Justice and Worship, 5,854,320 for the Ministry of War, 4,027,331 for the Ministry of Marine and the Colonies, 379,912 for the Ministry of Foreign Affairs, 5,779,056 for the Ministry of Public Works, Commerce, and Industry, 58,920 for the savings bank, and 3,764,991 for extraordinary expenses. The capital of the consolidated 3-per-cent. debt on Oct. 30, 1895, was 527,072,362 milreis, and of the amortizable debt, bearing 4½ and 4 per cent. interest, 136,919,990 milreis, making a total of 663,992,352 milreis. The floating debt on May 31, 1897, was 36,826,421 milreis.

The Army and Navy.—Obligatory military service was introduced by the law of Sept. 27, 1895. It begins at the age of twenty and lasts three years

with the colors, five in the first reserve, and four in the second, to which are assigned also the conscripts not incorporated in the active army and those who are under size. The contingent for 1898 is 17,245 men, including 745 for the municipal guard, 1,000 for the fiscal guard, and 745 for the navy. The strength of the permanent army in 1894 was as follows: Staff, 219 officers; 72 battalions and 36 cadres, 1,256 officers and 16,798 men; 30 squadrons and 10 cadres, 283 officers and 3,952 men; 32 field batteries and 10 cadres and 16 companies of fortress artillery and 8 cadres, 285 officers and 1,860 and 1,599 men respectively; 8 companies of engineers, 4 cadres, and 1 torpedo company, 122 officers and 710 men; noncombatants, 398 officers and 739 men; total, 25,658 officers and men, with 3,985 horses. The municipal guard numbered 79 officers and 2,176 men; the fiscal guard, 116 officers and 4,791 men. The army on a war footing numbers about 4,000 officers and 150,000 men, of whom 120,000 have received military instruction. The infantry have the Kropatschek repeating rifle, the artillery 264 guns of different calibers, only a part breech-loaders.

The navy consists of an armored corvette, a cruiser of 1,893 tons, 5 corvettes, 15 gunboats, a torpedo destroyer, and 10 torpedo boats, including a submarine boat. The cruiser "Adamastor" was built in 1896, and the "Rainha Amelia," of 1,750 tons, is building. There is also the "Dom Carlos," of 4,100 tons, on the stocks, and 10 deck-protected cruisers are contemplated in the new naval programme, and 3 more armored vessels, of which one, a cruiser of 3,500 tons, has been begun.

Commerce.—The value of the imports of merchandise in 1896 was 39,530,262 milreis, and of the exports 26,142,683 milreis. The imports of precious metals were 1,284,931 milreis; exports, 3,737,192 milreis. The imports of cereals were 4,353,000 milreis; of animals, 2,472,000 milreis; of codfish, 2,270,000 milreis; of raw cotton, 2,105,000 milreis; of sugar, 1,917,000 milreis; of iron, 1,873,000 milreis; of cotton goods, 1,747,000 milreis; of coal, 1,743,000 milreis; of hides and skins, 1,154,000 milreis; of wool, 1,121,000 milreis; of rice, 791,000 milreis; of various textile fabrics, 720,000 milreis; of coffee, 684,000 milreis; of chemicals, 600,000 milreis; of oil seeds, 557,000 milreis; of machinery, 548,000 milreis; of petroleum, 515,000 milreis; of tobacco, 511,000 milreis; of barrel staves, 493,000 milreis; of timber, 479,000 milreis. The exports of wine were 10,983,000 milreis; of cork, 3,650,000 milreis; of animals, 2,519,000 milreis; of fish, 1,414,000 milreis; of copper, 1,092,000 milreis; of cotton goods, 1,085,000 milreis; of fruits, 887,000 milreis; of olive oil, 391,000 milreis.

Navigation.—There were 1,477 sailing vessels, of 305,000 tons, and 4,286 steamers, of 6,953,000 tons, entered from distant ports in 1896, and 1,428 sailing vessels, of 298,000 tons, and 4,275 steamers, of 6,974,000 tons, cleared. In the coasting trade 3,343 sailing vessels, of 205,000 tons, and 1,017 steamers, of 3,511,000 tons, were entered, and 3,511 sailing vessels, of 194,000 tons, and 1,023 steamers, of 1,070,000 tons, cleared.

The merchant navy in 1895 consisted of 51 steamers, of 41,161 tons, and 207 sailing vessels, of 47,724 tons.

Communications.—The post office in 1895 forwarded 20,492,000 internal, 7,043,000 foreign, and 549,000 transit letters, 6,357,000 internal, 305,000 foreign, and 12,000 transit postal cards, 25,500,000 internal, 4,052,000 foreign, and 312,000 transit newspapers and circulars, and 253,000 internal and 9,000 foreign money letters, of the value of 30,442,000 and 3,730,000 francs respectively.

The state telegraph lines have a length of 4,500

miles, with 9,577 miles of wire. The number of dispatches in 1894 was 1,226,414; receipts, 2,100,146 francs.

The length of railroads in 1896 was 1,524 miles. The Government owns 921 miles and grants subventions to the companies owning the rest.

Political Affairs.—The session of the Cortes in 1897 was opened on Jan. 3. An incident that had recently occurred at Laureço Marques, where the German consul, Count Pfeil, had been attacked by the populace because he and his Mohammedan servants had given offense by not uncovering their heads during a religious procession, was closed by an apology to Germany. The financial situation in Portugal was depicted in the royal speech as improving, although the high premium on gold had checked imports and so diminished the custom-house receipts. A revision of the tariff duties was projected. While professing to regard the financial and economic conditions as improving, the Cabinet of Senhor Hintze Ribeiro found itself unable to deal with the situation, and consequently resigned on Feb. 5. A new Cabinet was formed on Feb. 7 as follows: Premier and Minister of the Interior, José Luciano de Castro; Minister of Justice, Francisco da Veiga Beirao; Minister of Finance, Frederico Ressaio Garcia; Minister of Marine, Henrique de Barros Gomes; Minister of Foreign Affairs, Mathias de Carvalho Vasconcellos; Minister of War, Francisco Maria da Cunha; Minister of Public Works, Augusto José da Cunha. The Cortes were immediately dissolved, and new elections were ordered to be held on April 25, so that the new Cortes could come together on June 10.

The revised budget for 1898 presented to the Cortes on June 30 showed a deficit of 2,698 contos of reis instead of the surplus of 111 contos given in the budget presented by the preceding minister six months before. The receipts were set down as 52,865, and the expenditures as 55,563 contos. The deficit was due to the premium on gold, which the late Minister of Finance had calculated at 30 per cent, but which was now reckoned at 50 per cent. The minister proposed to cover the deficit by four internal loans which would have the effect of converting it into a surplus of 132 contos. The holders of external debt were to receive the same additional interest in 1897 as in 1895. The minister had a plan for converting the external debt without appreciably increasing the actual burdens of the state. The withdrawal of the bonds of the present debt from foreign markets was deemed necessary in order to raise the credit of the country. In order to prevent the premium on gold from mounting still higher, the minister proposed to provide by a financial operation for necessary payments in gold abroad and for the liquidation of the debt due to the Bank of Portugal, thus enabling this establishment to reduce its paper circulation and to increase its metallic reserve. The Government did not intend to increase the existing duties or to impose any new ones. The proposals for putting the finances on a sounder basis, besides the conversion of the external debt and the reorganization of the Bank of Portugal, included the leasing of the state railroads and the establishment of a monopoly of the manufacture of beet-root sugar. A company was formed for the purpose of taking over the Minho and Douro and the Southern Railroads under a seventy-five years' lease. Measures were brought in granting Government support to companies for the cultivation of waste lands, for the extension of the wine exports by the selection of types of wines and the preservation of the standard, and for extending the cultivation of wheat so as to make Portugal independent of foreign supplies.

The Progressist ministry submitted a project for

the reform of the House of Peers. A drastic press bill, inflicting severe penalties for disrespectful language toward the Portuguese royal family or toward sovereigns or chiefs of foreign states, and empowering the ministers to prohibit the introduction of foreign newspapers into Portugal, failed to pass. Of twelve ministerial measures only three were adopted before the closure of the Cortes on Sept. 3. These dealt with the reform of the Bank of Portugal, pensions and retiring allowances, and contracts for public works. The House of Peers had not yet sanctioned a measure extending the privileges of the Tobacco Company. After the Cortes reassembled in November Senhor de Carvalho resigned, in consequence of which Senhor Barros Gomez became Minister of Foreign Affairs and Senhor Diaz Costa Minister of Marine.

In 1888, after recognizing Portugal's rights to the island of Macao at the entrance of the Gulf of Canton by a treaty signed in the previous year, the Chinese Government erected a guardhouse on the dependent island of Dom Joao and stationed a garrison there. In 1896 Portugal as a warning stationed a battalion there, and in April, 1897, a Portuguese plenipotentiary had a conference with the Viceroy of Canton, which resulted in an agreement to remove both garrisons and return to the *status quo* existing before 1888. A treaty of commerce between Portugal and Japan was signed at Lisbon on Aug. 30. Several other commercial treaties were under discussion.

PRESBYTERIANS. I. Presbyterian Church in the United States of America (Northern).—

The following is the summary of the statistics of this Church as reported to the General Assembly in May: Number of synods, 32; of presbyteries, 229; of ministers, 7,129; of candidates, 1,433; of local evangelists, 157; of licentiates, 477; of churches, 7,631; of communicants, 960,911; of members of Sabbath schools, 1,024,462; of elders, 27,874; of deacons, 9,551; of churches organized during the year, 162; of members added on examination, 57,011; of baptisms, 21,596 of adults and 32,956 of infants. Amount of contributions: For home missions, \$1,042,768; for foreign missions, \$681,459; for education, \$100,231; for Sabbath-school work, \$121,808; for church erection, \$124,873; for the Relief fund, \$85,429; for the freedmen, \$105,498; for synodical aid, \$71,515; for aid for colleges, \$109,272; for the Anniversary Reunion fund, \$57,391; for the General Assembly, etc., \$187,660; congregational, \$9,980,958; miscellaneous, \$729,151. The year's increase in communicants was 17,195.

The contributions for ministerial relief had been \$160,856, being \$11,000 less than in 1896. The debt of the board was \$20,911. The permanent fund amounted to \$1,551,783. Eight hundred and thirty-five families had been under the care of the board, being a larger number than in any previous year. Among the persons receiving aid were 95 honorably retired veterans, each more than seventy years of age, who had served the Presbyterian Church as pastor, stated supply, or missionary in the aggregate more than thirty years.

The Board of Education had received \$78,657, including \$2,225 from the Anniversary Reunion fund. Nine hundred and eleven candidates had been under its care. The board had tried to make effective, through recommendations to the several educational committees and to teachers in the institutions where candidates were pursuing their studies, the admonition given by the General Assembly of 1896 to presbyteries to exercise all due care and watchfulness in the recommending of candidates.

The Board of Aid for Colleges and Academies had received \$95,751. By reducing administrative

expenses nearly 22 per cent. and by means of generous gifts made near the close of the year, it had been able to pay all appropriations voted.

The income of the Board of Church Erection had been \$115,737. The appropriations and gifts had been distributed among 25 synods, 104 presbyteries, and 31 States or Territories. The largest sum had been assigned to Indian Territory and Iowa; then, successively, Minnesota, Indiana, Missouri, and Washington, etc.

The total receipts of the Board of Publication and Sabbath-School Work had been \$113,811. The falling off in contributions from churches, Sabbath schools, and individuals was \$1,429, or less than the amount anticipated, and the total reduction was \$5,356. The business department showed profits of \$26,367, two thirds of which, or \$17,578, had been passed over to the Sunday-school and missionary department. The missionary department had distributed 163 free libraries, containing 14,057 volumes. The missionaries had organized 938 new Sabbath schools, and 3,894 Sabbath schools had been visited and otherwise aided, most of them being such as had been organized by the missionaries.

The Board of Freedmen's Relief had expended \$182,292, an increase of not quite \$10,000 over the previous year. It returned 175 ministers, 5 less than in 1896; 321 churches and missions, an increase of 7; 1,800 members added on examination, or 174 less than the previous year; 18,068 communicants, a decrease of 693; 315 Sunday schools, with 79,021 pupils, a decrease of 603; and 67 day schools, with 204 teachers and 9,442 pupils.

The receipts of the Board of Home Missions had steadily fallen off since 1893, and were for the past year, exclusive of what was received from the Memorial fund, \$730,000. A reduction of 10 per cent. had been made during the year in expenditures. The board returned 1,416 missionaries, 308 missionary teachers, 87,035 members, 106,368 in congregations, 8,522 added on profession of faith, 4,010 baptisms of adults and 4,637 of infants, 271 Sunday schools organized, 2,180 Sunday schools in all, with more than 129,800 members, 53 churches organized and 16 churches become self-sustaining, 81 church edifices built during the year, and 1,617 church edifices in all, valued at \$3,176,917.

The receipts of the Woman's Executive Committee of Home Missions had been \$333,899. Of the 29 synods, 19 had made advance. The debt of \$105,000 with which the year opened had been reduced to \$9,649. The buildings and equipment of the committee were valued at \$742,000. The receipts for freedmen's work had been \$41,746, somewhat less than in 1896. The negro people had contributed \$70,017 for support of Presbyterian churches and schools.

The Board of Foreign Missions had received \$869,057, of which \$299,115 had been contributed through the woman's societies, \$28,369 through the Sabbath schools, and \$25,679 through the Young People's Societies. Its expenditures had been \$930,061.

General Assembly.—The General Assembly met at Winona Park, Ind., May 20. The Rev. Sheldon Jackson, D. D., was chosen moderator, and the Hon. John Wanamaker vice-moderator. The committee of eleven appointed by the previous General Assembly to examine into the subject of the "Presbyterian Building" erected in the city of New York by the Boards of Home and Foreign Missions for the accommodation of their business and for purposes of rental, reported concerning their proceedings and the conclusions they had reached. The report embodied a resolution of the General Assembly of 1894, from which it appeared that these

boards were already in possession of buildings for their offices which had been presented to the Church, and that the donors of those buildings felt aggrieved at the proposed removal from them; but the General Assembly had given its approval to the contemplated step without any complaint being made. The General Assembly of 1894 could see no adequate reason for reversing the approval of the previous Assembly and the practically unanimous judgment of the two boards concerned, and therefore approved the records of those boards relating to this subject. The matter had come up again in subsequent Assemblies, and the Assembly of 1896 (see "Annual Cyclopædia" for 1896) had appointed a committee of eleven persons to consider the subject in all its bearings. After relating the proceedings of its meetings and its examination of the buildings and the conditions, the committee gave their conclusions that "whether the property on Twentieth Street and Fifth Avenue (the 'Presbyterian Building'), as well as that at Fifth Avenue and Twelfth Street (the old building or Lenox Mansion), should be sold or not, are questions which under existing conditions may be properly and safely left to the determination of the two boards. The application of the money derived from the Stuart estate toward the erection of the new building was not an illegal use of such money. The committee advise urgent appeals to all the churches of our denomination to make not only the ordinary but increased contributions for home and foreign missionary operations, in the full confidence that under no circumstances will money given for current work be applied to the account of the new building, but that the debt thereon must be provided for by other contributions for that purpose." The Assembly resolved, on the recommendation of the committee, that the disposition of the two properties in question be left to the Boards of Home and Foreign Missions as agents of the churches; expressed its appreciation of the services and the liberality of the members of the boards and of others "in the conduct of these enterprises"; and approved the action of the committee. The Assembly further resolved that "when any board receives a legacy, the use of which is not indicated in the will of the testator, the funds shall either be used for current work or shall be invested in accordance with the laws provided for the care of trust funds in the State where the board is located; but if not so used, they shall be held until the General Assembly approves of some different use of the funds which the board may propose to make."

The special committee appointed by the previous General Assembly to confer with the Board of Home Missions respecting reductions in its expenses reported expressing the opinion that material reductions could and ought to be made in the department of administration; that division of responsibility between two or more secretaries was undesirable, and there should be but one, who should be held strictly accountable to the board, with such subordinates as might be necessary; and that increased responsibility should be put upon the treasurer by making him a member of the Executive Committee. The increase of the debt of the board was accounted for in the report as the result of financial stringency following upon large and liberal extensions of its work, to which was added the transfer of the Indian work from the Foreign to the Home Board, involving an additional outlay of \$20,000 annually, and the surrender of the appropriations of the United States Government to the Indian schools, whereby a loss of \$32,000 was annually incurred, which the Home Board was expected to supply. Upon the recommendation of the committee the Assembly resolved "that the Board of Home Mis-

sions be directed so to organize its methods of administration that the executive work shall be placed in charge of one secretary, with whatever assistants may be necessary, and that he be accountable to the board for its faithful and efficient management; that the board be directed to make at the beginning of each fiscal year an estimate of the probable income for the ensuing year, by taking the average amount received from legacies, church offerings, and other sources for a period of preceding years, and that the sum thus obtained shall be considered the available amount for the work of the board during the ensuing year; that the policy of the board shall be to avoid debt. When debt has been unavoidably incurred, then allowance shall be made for the payment of the debt, as far as possible, out of the estimated receipts; that the proposed consolidation of the treasurieships in the cities of New York and Philadelphia is inexpedient; and that this committee be enlarged by the addition of four new members, and continued, with instructions to consider the best methods of promoting harmony between the Board of Home Missions and presbyteries and synods desiring to support and control their own work, and to report upon the subject at the next General Assembly." The Committee on Theological Seminaries recommended the reaffirmation of the decision of the last Assembly concerning its control over them, and reported concerning the responses of the institutions to the Assembly's action, that the directors of Lane Seminary had replied that in the case of that institution the decision was impracticable; they had no legal or moral right to consent to the alteration of its charter. The trustees of Auburn Seminary replied that the control of the institution by the presbyteries, which had been effective for the past seventy-six years amply safeguarded its teaching and property. The reply of the Board of Directors of the McCormick Seminary reiterated its loyalty to the institutions of the Church. Its charter and constitution secured the object sought by the Assembly. Its property and teaching are fully safeguarded, and it might be hazardous both to the seminary and the Assembly to make the requested changes. The directors of the German Theological Seminary, Newark, N. J., declined to make the changes sought. The Assembly declared that it accepted as sincere the repeated, positive, and explicit declarations of these seminaries that they are loyal to the Church and that their teachings and properties are in their judgment fully safeguarded to the General Assembly; but, the resolution continued, "if at any time in the future these seminaries should find that the changes could be made in their respective charters as the General Assembly has desired, it would be gratifying to the whole Church to have such changes made." The Assembly affirmed as applicable to all schools the deliverance of the General Assembly of 1896 concerning students who receive aid from the presbyteries, viz., that the presbyteries inspect their education during the course of their theological studies, choosing for them such schools, seminaries, and teachers as they may judge most proper and advantageous, so as eventually to bring them into the ministry well furnished for their work. The several synods were recommended to consider, and if it be deemed advisable and practicable, "to prepare, adopt, and set forth for use in each respective State and Territory such form of charter of the Presbyterian Church, and such provisions to be inserted in wills and in deeds of lands to Presbyterian churches as will safeguard and secure the property of our churches to this denomination, and be in accordance with the form of government of the Presbyterian Church." The Assembly declared itself ready for a union

movement with the Southern Presbyterian Church "as soon as the Lord in his providence shall open the way." Satisfaction was expressed at the action of various press and editorial associations expressing sympathy with the woman's movement for promoting purity in literature and art, and pledging themselves to the exclusion of impure matter from their journals. A committee was appointed on synodical sustentation, to report to the next General Assembly. It was decided to celebrate the two hundred and fiftieth anniversary of the adoption of the Westminster Standards on the second Thursday of the next Assembly, and the synods were also urged to celebrate. A resolution was adopted appropriate to the birthday of Queen Victoria of England and the sixtieth anniversary of her reign, sending the Assembly's "most cordial Christian greetings to both the illustrious Queen and the subjects of her gentle, generous, and righteous rule of the destinies of the empire, on which the sun never sets." The Assembly reaffirmed its deep interest in all legislation by which the cause of temperance and morality are wisely furthered, and commended the efforts of Christian men in the State and Federal legislatures to safeguard social purity and prevent the maintenance of liquor saloons in any Government building. It also recognized the personal duty of total abstinence and the advocacy of temperance, advised the synods to take measures to promote those objects, and appointed the third Sunday in October of each year, or some other convenient day, to be observed in the churches as Temperance Day.

II. Presbyterian Church in the United States (Southern).—The summary of the statistics of this Church, as reported to the General Assembly in May, 1897, gives the following footings: Number of synods, 13; of presbyteries, 77; of ministers, 1,393; of candidates, 378; of licentiates, 90; of churches, 2,816; of communicants, 211,694; of baptized non-communicants, 37,386; of ruling elders, 8,719; of deacons, 7,279; of teachers in Sunday schools, 19,397; of pupils in the same, 143,498; of churches organized during the year, 60; of members added on examination, 10,592; of baptisms, 4,246 of adults and 5,050 of infants. Amounts of contributions: For the Assembly's home missions, \$24,022; local evangelistic, \$99,249; for the Invalid fund, \$12,572; for foreign missions, \$122,024; for education, \$51,212; for publication, \$7,322; for colored evangelization, \$9,276; for the Bible cause, \$5,391; presbyterial, \$15,435; for pastors' salaries, \$797,475; congregational, \$564,108; miscellaneous, \$124,714.

The increase in the number of communicants (1,155) shown in the tables is very small as compared with the number of additions on examination. The editor of the "Christian Observer," apprehending error, has gone over some of the presbyterial reports in detail, and has found that mistakes in adding up the communicants in a few of them have made the total smaller than it should be by about 3,000.

The treasurer's report of the Executive Committee on Publication showed that the assets of the publishing house amounted to \$108,246. The receipts from churches during the year had been \$63,793, and the total receipts \$39,124. The year closed with a balance in the treasury of \$3,175. Eighteen new works had been published during the year, and large editions of other works issued. Series of topics of study for the use of the Westminster League of Young People's Societies and a supplemental course of study for Sunday schools had been published, the latter developing more fully the denominational doctrines and principles

of government; five colporteurs had visited 5,158 families and distributed books and tracts to the amount of \$3,291, the expense of their operations being \$2,371; and \$6,896 had been applied to benevolent work.

The Executive Committee of Home Missions returned the entire sum of which they had had control during the year as having been \$50,541, or \$917 less than the amount in the previous year. Of this sum, \$9,560 had been used for the expenses of administration, and \$42,046 paid out for the support of the several branches of the work, leaving a balance of \$3,035. Two ministers and 1 church building had been aided in New Mexico, 2 ministers supported and a Bible training school assisted among the Mexicans in Texas, 98 ministers and teachers had received appropriations in Arkansas, Florida, Texas, and the Indian Territory, and 8 church buildings had been aided. The work among the Mexicans in Texas had increased in five years from 1 church of 50 members to 6 churches with 300 members, more than 40 of whom had been received during the year, and with 3 young men in training for the ministry. The condition of the work among the Indians—especially of the school work—was regarded as encouraging. Thirty-seven infirm ministers had been aided out of the Invalid fund.

The Executive Committee of Foreign Missions reported that its receipts for the year from all sources had been \$143,742, or \$1,782 more than those of the previous year, and its disbursements \$154,406, or \$13,173 more than those of the previous year and \$10,664 more than the present year's receipts. A balance in the treasury of \$10,223 was returned on April 1, 1897. In ten years the missionary force had been increased from 54 to 150, and the annual receipts from \$84,000 to \$143,000. The average cost of the work per missionary for ten years had been about \$1,250 a year. This included traveling expenses, rents, medicines, books, tracts, and other appliances used in the work. For the past three years the limit of expense had been kept by various economies at about \$1,000. Eleven new missionaries had been sent out during the year—viz., 5 to China, 1 to Japan, 3 to northern Brazil, 2 to the Congo Free State—and 3 ladies had been added by marriage to the missionary force in China and Japan. Three missionaries had died and 3 had returned to the United States on account of ill health.

The missions were established at 36 stations, with 36 churches, and returned 150 missionaries from the United States, 58 of whom were ordained ministers, 36 native preachers, 98 other native helpers, and 3,156 communicant members—viz., 281 in China, 834 in southern Brazil, 550 in northern Brazil, 678 in Mexico, 720 in Japan, and 93 in the Congo, with no report of members from Korea but 10 additions during the year mentioned; 76 Sabbath schools, with 1,215 pupils; 25 day schools, with 726 pupils; 38,219 persons given medical aid; and native contributions amounting to \$4,760.

General Assembly.—The General Assembly met in Charlotte, N. C., May 20. The Rev. George T. Goethius, of Rome, Ga., was chosen moderator. An overture concerning women speaking in the churches was the subject of debate for the greater part of one of the earlier days of the session. It involved two questions—whether the pulpits of the Church might be occupied by women to lecture or make addresses to mixed audiences of men and women; and whether ministers might read from their pulpits notices of such lectures and addresses to be made in other churches. The Assembly replied, referring the presbytery sending up the overture "to the clear deliverance of former Assemblies which settle the principles involved in its overture,

and should govern our Church sessions in their proceedings," inserting the dates of the various deliverances referred to, and citing verbally the deliverance of 1832, viz.: meetings of "pious women by themselves for conversation and prayer, whenever they can conveniently be held, we entirely approve. But let not the inspired prohibition of the great apostle of the gentiles as found in his Epistles to the Corinthians and to Timothy be violated. To teach and exhort or to lead in prayer in public and promiscuous assemblies is clearly forbidden to women in the holy oracles." A letter was presented from representatives of the Prohibition party in North Carolina, asking the Assembly to make a declaration concerning the prohibition of the manufacture and sale of intoxicating liquors, to which the Assembly respectfully replied that "alike by uniform practice and constitution we are forbidden to intermeddle with political parties or questions, and that the constant and scriptural attitude of our beloved Church on temperance and intemperance is shown in past deliverances as recorded in Alexander's Digest, . . . and is too well known to require restatement." This action was afterward qualified by the adoption of a resolution explaining that the Assembly "is not to be considered as intending to commit the Church as to the political theory of prohibition, either *pro* or *con*." The report of the standing Committee on Colored Evangelization referred to embarrassments it had had to meet in the prosecution of its duties, notwithstanding which faithful and efficient work had been done with the means at command. Under its auspices colored people had "been wisely educated and sent out into the field as good teachers of the Word of God." On account of straitness of resources it had been necessary to close the academic department of Stillman Institute, but the committee suggested that the Assembly direct it to be opened so soon as the way should be clear. The report of the labors of the evangelist who had been sent out among the colored people showed good work done. A full correspondence with the colored ministers of the Church showed that 33 out of 55 of them were desirous of a separate church organization, 6 were opposed to it, 3 were doubtful, and 11 had not been heard from. It was understood to be the intention of the independent presbyteries to call a meeting at an early day for the purpose of organizing a colored Presbyterian church. The committee therefore recommended that should these presbyteries call a meeting for the organization of such a church, the Executive Committee of Colored Evangelization be directed to confer with them in fixing the time and place for it; and that the Assembly authorize any of its presbyteries, or ministers and churches on consent of their presbyteries, to withdraw on their own motion from its jurisdiction and join the new Church. These recommendations were adopted, and a committee was appointed to represent the Church fraternally on the consummation of the contemplated measure. The Assembly reiterated its settled principle not to assume the whole support of any student candidate for the ministry, but only to give such aid as would assist him in the prosecution of his studies and prevent his discontinuing them. Presbyteries recommending candidates and the Executive Committee of Education were advised to guide themselves in the light of this rule. The ladies' societies and Sabbath schools were invited to contribute to this cause. To two questions brought before it on overtures from presbyteries, the Assembly answered that one elder, when there is "only one in the church, constitutes its session and is competent to do the work of the session"; and "that a church without officers is entitled to be enrolled." Officers and

members were advised "to abstain from assisting in any way the desecration of the Sabbath day by offering news or reports for either Sunday or Monday papers." The Home and Training School at Fredericksburg, Va., reported that the expenditures on its behalf during the past year had exceeded its income, and it appeared that the institution was suffering on account of objections to its connection with Fredericksburg College. The Assembly directed that the connection between the two institutions be severed; that the college property be disposed of so as to relieve the Assembly from all responsibility for the ownership, conduct, and support of the institution; and that as soon as the Board of Trustees should ascertain the exact amount of indebtedness resting upon the Home and Training School or incurred in the conduct of it, they be authorized to make a direct appeal to the churches to liquidate this indebtedness; and a day was appointed for taking a collection for the school. The report of the Committee of Foreign Correspondence expressed the belief that organic union with the Reformed Church in America was devoutly to be desired, if it could be effected on terms agreed upon by both bodies, which would insure an efficiency greater than that now existing in the two churches apart. A committee was appointed to prepare a plan for the establishment, "at some convenient center, in a salubrious climate, and where living is cheap," of a summer school for Bible study. The "report on the narrative" represented that "there had been a marked growth in grace; a reverent fidelity on the part of the people in laboring in church, in Sabbath school, and in mission work"; and a deepening in the "spiritual life of the people as evidenced in their contributions. Almost every local narrative emphasized a decrease in intemperance and worldly amusements. Anxiety was expressed with regard to the attitude of the people toward Sabbath observance. "It is an unquestioned fact that some of our members do not observe the Sabbath as they ought; the day is being more and more secularized"; and the suggestion was offered that the time had come for special preaching on the subject.

The two hundred and fiftieth anniversary of the Westminster Assembly and the adoption of the catechism was celebrated by special services held in the Assembly from time to time during its meetings, at which addresses were delivered, on "The Social and Political Conditions of Great Britain at the Time of the Westminster Assembly," by the Rev. H. A. White, D. D.; "The Religious Situation of Britain at the Time," by the Rev. Robert Price, D. D.; "The Place of Meeting of the Assembly; Its Proceedings and its Personnel," by the Rev. T. D. Witherspoon, D. D.; "The Doctrine and Contents of the Confession: Its Fundamental and Regulative Principles, together with the Nature and Necessity of Religious Creeds," by the Rev. R. L. Dabney, D. D.; "The Nature, Value, and Utility of the Catechisms," by the Rev. G. B. Strickler, D. D.; "The Influence exerted by the Westminster Symbols upon the Individual, the Family, and Society," by the Rev. J. F. Cannon, D. D.; "Polity and Worship—emphasizing their Relation to Doctrine," by the Rev. Eugene Daniel, D. D.; "The Churches that hold the Westminster Symbols, and the Reformed Churches generally," by the Rev. J. D. Tadlock, D. D.; "The Westminster Symbols in their Relation to and Influence upon the Missionary Character and Activities of the Church," by the Rev. Moses D. Hoge, D. D.; "The Westminster Symbols considered in Relation to Current Popular Theology and the Needs of the Future," by the Rev. Samuel L. Smith, D. D.; and "The Influence of the Westminster System of Doctrine, Worship, and Polity on Civil

Liberty and Responsible Government," by the Hon. W. M. Cox.

Colored Presbyterian Church.—A convention for the organization of a colored Presbyterian church was held in Birmingham, Ala., in the latter days of November. Three independent presbyteries and two presbyteries still under the jurisdiction of the Southern General Assembly were represented by delegates. A fourth independent presbytery had appointed a delegate, but he was not present. The convention expressed its sense by resolution, "that a separate, self-supporting, self-governing Presbyterian church for the colored people should be organized at the earliest day consistent with stability and efficiency," and the conviction "that the desired day is at hand." All the colored presbyteries were invited to send commissioners to a meeting to be held in New Orleans on the third Tuesday of May, 1898, for the purpose of perfecting the organization. The convention gave as considerations moving it to this action that the General Assembly (Southern) had given its assurance that its financial help and hearty co-operation would be accorded to the movement, an assurance that was received in all good faith and thankfulness; and "that to place as far as possible the control of all business necessary to the life and growth of the organization in the hands of colored men will conduce largely to the growth of Presbyterianism among our race."

III. United Presbyterian Church in North America.—The following is the summary of the statistics of this Church as they were reported to the General Assembly in May: Number of synods, 12; of presbyteries, 65; of ministers, 892, or 17 more than in 1896; of licentiates, 89; of students in theology, 101; of ministers ordained, 31; of ruling elders, 3,763; of congregations, 950; of pastoral charges, 801; of congregations organized, 13; of mission stations, 311; of new mission stations during the year, 15; of houses of worship erected, 18, at a total cost of \$128,206, and an average cost of \$7,123; of parsonages, 311; of parsonages erected during the year, 14; of members in America, 111,618; of members in the whole Church, 123,541, showing an increase of 2,156 in America and of 2,688 in the whole Church; of members received on profession, 6,917 in America and 7,811 in the whole Church; of baptisms, 3,455 of infants and 1,483 of adults in America, and 4,242 of infants and 1,789 of adults in the whole Church; of Sabbath schools, 1,148, with 11,882 officers and teachers and 111,361 pupils; of Young People's Societies, 990, with 40,528 members. Amount of contributions (in America): For salaries of ministers, \$588,525; for congregational purposes, \$422,242; for the boards, \$240,245; for general purposes, \$125,113; total for America, \$1,377,125; total for the whole Church, \$1,394,138; included in this amount are \$85,568 contributed through the Sabbath schools and \$40,528 through the Young People's Societies.

The total receipts for the Board of Home Missions for the year were \$77,227, and the expenditures (ordinary outlay for the work) \$74,616. While the receipts were larger than in any previous year except 1892, and the debt had been reduced to \$10,401, the debt still remained at so high a figure as to cause serious embarrassment, and nothing had been done to replace the exhausted reserve fund. Two hundred and six stations had been aided during the year, and returned 14,670 communicants and 18,482 pupils in Sabbath schools. Twenty-eight stations had been in the special care of the board. An agreement had been entered into with the Board of Home Missions of the Associate Reformed Synod of the South to join in the support of the mission of that Church in Louisville, Ky. A mission to the

Warm Springs Indians had been supported entirely by the Woman's Board.

The receipts of the Board of Ministerial Relief were \$28,327, and the payments \$23,758, of which \$11,195 were to beneficiaries and \$12,250 on account of investments. The endowment fund amounted to \$104,350. Seventy persons were aided. The total receipts from presbyteries had been only \$4,077.

The fourteenth annual meeting of the Women's General Missionary Society was held at Indianola, Iowa, May 11. The financial reports showed a decrease of \$166 in the contributions for the foreign department and of \$19 in those for ministerial relief, an increase of \$446 in those for the home department, of \$105 in those for the Church Extension and Parsonage fund, and of \$227 in those for the freedmen's department. The amount of contributions for the foreign department was \$23,491, of which more than \$5,000 were for the endowment of beds in the Good Samaritan Hospital, at Jhelum, India; the expenditures in the same department had been \$27,899. In the freedmen's department an agricultural experiment made a year before had yielded an income equivalent to 10 per cent. interest. The expenditure in the home department had been \$7,693. The Woman's Board of Missions has been given by the General Assembly the work of the entire support of unmarried woman missionaries in foreign fields, the support of woman medical missionaries and their work in Egypt and India, the work among the Warm Springs Indians, the support of woman industrial teachers and their work among the freedmen, the agricultural and industrial work in Alabama, the parsonage and part of the Church extension work; and it aids in erecting buildings for training schools and teachers' houses among the freedmen. Twenty-nine single women were supported in Egypt and India, 18 home-mission workers in various parts of the United States, and 17 teachers in the freedmen's missions.

General Assembly.—The thirty-fifth General Assembly met in Rock Island, Ill., May 20. The Rev. Thomas H. Hanna, D. D., was chosen moderator. The committees on union with the Holland Christian Reformed Church and with the Associate Reformed Synod of the South reported that no progress had been made in the negotiations during the year, but that it was expedient to continue the committees. The plan of co-operation with the Associate Reformed Synod adopted in 1896 had worked so well that it was judged to be better that the direct negotiations for union be held in abeyance. The Committee on Federation of the Churches reported that no meeting had been held during the year, and that, because of the failure of some of the churches to adopt the basis of confederation, the movement was practically ended. The Committee on a Union Metrical Version of the Psalms reported that a meeting of representatives of several churches had been held, and the principles on which the work shall be conducted had been agreed upon. In the matter of seminary control but little progress had been made in the efforts to complete the arrangement instituted in the previous year for the control of the foreign-mission seminaries by the Assembly. The report represented that some funds were held by the Foreign Mission Board for the seminary in Egypt, that in India title to property can be taken by a registering body, and that in Egypt title can now be taken by the Foreign Mission Board. The Assembly decided that all funds for these seminaries be held by the Foreign Mission Board and be invested in the United States; that title to property for the seminaries or other institutions be taken in the forms suggested in the report; and that the Foreign Mission Board complete the regu-

lations for the proper exercise of the Assembly's power over those seminaries, and report each year concerning them. The report on Young People's work showed that in the nine years since the organization of the committee the Young People had been established as a permanent agency in congregational and denominational activity, and that there had been no diminution in interest, but rather increase, as manifested in the local conventions. So far as reports had been received there were 624 Christian Union and Christian Endeavor Societies, with 27,808 members, a gain of 1,511, and their contributions amounted to \$33,200, \$7,371 of which were paid to the board. About one seventh of the members were tithe payers. Of the Juniors 240 societies were reported, with 8,709 members, a gain of 1,933, and \$3,846 of contributions; also 125 Junior Missionary Societies, with 3,736 members and \$2,617 of contributions. Complete co-operation with the young people of the Associate Reformed Synod of the South had been established, and invitations had been sent to the organizations of the two Reformed Presbyterian Churches to come into co-operation in an effort to bring all the psalm-singing Presbyterian churches into closer relations. The result of the conferences with representatives of the Young People's Society of Christian Endeavor concerning a closer affiliation of the Young People's Christian Union of this Church with it was the conclusion on the part of the committee having the subject in charge that the relations of the two bodies were as close as they could be without giving up the denominational society. The committee had therefore no proposition to make on the subject. The report on theological seminaries set forth that while the course of studies provided by the General Assembly of 1874 provided a broad and thorough outline of instruction, it did not answer the changed conditions of religious thought; and while the instructors had gone beyond the requirements of the course, and practically had kept up with the demands of advanced thought, the committee recommended that more emphasis be placed on sociology, systematic study of the Bible, and Christian missions. With this view it was advised that the faculties revise the course and present a joint report to the General Assembly. The report also embodied a recommendation that the presbyteries be urged to exercise careful scrutiny in receiving students of theology in respect to their literary attainments as well as to their personal character and the evidence of their having received a divine call. A committee was appointed to call the attention of the presbyteries to the action of the General Assembly on this subject, and to suggest suitable measures for adoption by them. The plan of co-operation among Presbyterian and Reformed churches in home-mission work, already described in the "Annual Cyclopædia," was adopted. The Board of Education was directed to report to the next General Assembly a comprehensive educational policy for the whole Church. The Assembly also ordered that aid be refused to students who marry in immediate prospect of the study of theology or while prosecuting their studies. The Board of Church Extension was instructed to enforce the rule that congregations receiving aid shall not solicit assistance outside of their own community without the consent of the board. A standing order was made for the issue of an annual thanksgiving proclamation supplementary to that of the President of the United States, in which the President's proclamation shall be referred to distinctly and deferentially, the Lord Jesus Christ shall be explicitly mentioned and recognized, and spiritual blessings received shall be detailed in appropriate terms. A

resolution was adopted declaring it advisable that corporations and individuals should avoid applying the title "United Presbyterian" to enterprises over which the Church has no control, and which are of a secular and business character. A series of resolutions on reform reiterated the tenor of former declarations of the Assembly on temperance and Sabbath observance. The third Sunday in September, 1897, was designated for preaching commemorative sermons and other exercises appropriate to the two hundred and fiftieth anniversary of the adoption of the Shorter Catechism and the Confession of Faith.

IV. Associate Reformed Synod of the South.

—The Associate Reformed Synod of the South met at Belfast, Tenn., Oct. 21. The Rev. J. L. Young was chosen moderator. The Committee on Union with the United Presbyterian Church reported that nothing had been done in the direction of organic union, but that co-operation was practiced in home missions and Young People's work. This co-operation was approved of. A purposed gift by Mr. Joseph Wylie of \$15,000 to Erskine College was announced. This is in addition to a previous gift of \$25,000 to the same institution. The synod decided not to establish an orphanage.

This synod has 9 presbyteries, with congregations in every Southern State except Louisiana, making 130 in all, which are served by 96 ordained ministers, 16 of whom "are not actively engaged in the work of preaching." These congregations return 10,824 members, or 447 more than in 1896. Two new congregations were organized and 8 new churches were built during the year, and a general tendency is noticed toward more complete and commodious buildings than heretofore. Contributions are made in most of the congregations for building churches for city missions. The theological seminary at Due West, S. C., had the most prosperous year in its history, with 14 young men taking the full course. A new boys' college home has been completed at Erskine College, Due West, S. C., and a gift of \$15,000 has been received for building a similar home for girls. The foreign mission in Mexico employs 3 American missionaries, 3 American women, 4 native missionaries, and 3 licentiates. Its last year was one of trying financial experiences. Twenty-nine churches receiving aid from the Board of Home Missions return 1,463 members, or one eighth of the whole membership of the Church. A scheme of co-operation in home-mission work with the United Presbyterian Church has been carried into successful and satisfactory operation.

V. Reformed Presbyterian Church Synod.

Fuller and more correct statistical reports were made at the annual meeting of this body than in any previous year. They show 13 presbyteries, including 1 in Syria; 116 congregations, an increase of 1; 115 ministers, with an increase of 2 in the number of pastors; 30 unsettled ministers, including some who were employed in Church work as professors, etc.; 17 licentiates, 5 of whom were in Syria; 16 students in theology; and 9,830 members, or 125 less than in 1895. The contributions for all purposes were \$163,280, or about \$17 per member. An excellent account was given of the success of the missionary work among the freedmen at Selma, Ala., and among the Indians near Fort Sill, Oklahoma.

The Synod met at Beaver Falls, Pa., May 26. The feature of the proceedings that excited most interest was the discussion of the case of the Rev. Dr. MacAllister, pastor of a church in Pittsburg and editor of the "Christian Statesman," a newspaper advocate of the principles of the National Reform Association, who was called to account for senti-

ments embodied in some articles he had published in favor of Church union. He had taken positions in these articles which his critics regarded as implying willingness to give up, for the sake of union, some of the distinctive principles of the Church. Upon his expression of a willingness, in compliance with a request of the Synod, to stop the publication of such views the case was dropped. Dr. MacAllister declared that he would discontinue the publication of the "Christian Statesman" as a weekly paper until the Synod rescinded its action.

VI. Cumberland Presbyterian Church.—The General Assembly met at Englewood, Chicago, Ill., May 20. The Rev. H. S. Williams, of Memphis, Tenn., was chosen moderator. The Educational Society reported that it had aided 140 of the 225 probationers in school. It had contributed \$1,200 to the support of the theological seminary, the attendance on which had been the largest in the history of the institution; and special contributions of \$437 had been made by individuals. A contribution by the Ladies' Educational Society of Nashville, Tenn., was acknowledged. A course of study recommended by the General Assembly of two years preceding had been approved by nearly all the presbyteries, and about 100 probationers were studying under it. Assistance to the Cumberland Presbyterian Church (Colored) in its educational work was favored so far as it could be afforded through the regular channels. The receipts of the Board of Missions had been \$81,419, as follows: For foreign missions, including certain special offerings and receipts of the Woman's Board, \$26,629; for home missions, including offerings for Denver, Pittsburg, etc., \$12,645; for church erection, \$3,224; and contributed to synodical missions, \$19,480. The attendance at the theological seminary had been the largest in its history; its endowment amounted to \$63,129. The Permanent Committee on Systematic Benevolence reported progress in organization and in the founding of tithes, and suggested the formation of a Cumberland Presbyterian tithe-payers' circle. The Committee on Sunday-School Work had aided synodical Sunday schools and missions in eight synods. Its receipts, \$2,878, had been larger than for many years. It recommended the adoption of a specified standard and grade of studies for the Sunday schools of the Church. The Board of Publication gave the valuation of the assets of the publishing house as \$212,616. The net profits of the business had been \$649. The Committee on Christian Endeavor Work reported concerning organization, development, and education in the Christian Endeavor Societies. The aggregate contributions of these societies were returned at \$2,345. The contributions to the Ministerial Relief fund amounted to \$10,726. One hundred and four families had received aid, and 18 new names had been added to the list of beneficiaries. The Endowment fund of the Thornton Home had risen to \$17,527. A committee was appointed to co-operate with colored Cumberland Presbyterians in the location of a school for colored people; and the Educational Society was authorized, under certain restrictions, to pay \$400 annually for the support of a teacher in it. The Assembly decided to abandon the "plan of co-operation" with other Presbyterian bodies. Objection was especially made in the discussion of this subject to the article providing that members of one Presbyterian Church should be allowed and encouraged to join other Presbyterian churches when out of reach of congregations of their own Church, and that Presbyterian churches should avoid competition in home-mission fields. A report was adopted emphasizing the authority of the presbyteries in the matter of contracts between ministers and their congregations, and

recommending that every presbytery appoint a permanent committee on pastorates and supplies; that the session of every vacant church consult such committee in filling the vacancy; and that no minister assume charge of any congregation without the knowledge and consent of such committee. The presbyteries were instructed to group all their congregations which are unable to employ a pastor the whole of his time, each group to be governed in employing pastors by the rules applying to congregations. Sunday schools were decided to be under the control of the Church sessions. Authorization was given for the removal, by the proper officers, of inefficient clerks of congregations, presbyteries, and synods. The importance of infant baptism was urged. The Assembly abandoned its intention of placing a Cumberland Presbyterian exhibit in the Tennessee Centennial Exhibition, because of the permission of the sale of intoxicating liquors on the exhibition grounds, and made provision for the transfer of the articles contributed for the exhibit, with the consent of the donors, to an historical society for the denomination.

VII. Presbyterian Alliance.—The Western Section of the Alliance of Reformed Churches holding the Presbyterian System met in Reading, Pa., Oct. 28. Representatives were present from most of the 16 Presbyterian and Reformed organizations included in the Alliance. Committees reported on home missions, Sabbath schools, *desiderata* of Presbyterian history, and work on the European Continent, and the reports were acted upon. Papers were read and discussions had on the subjects of "The Duty of the Alliance to the English-Speaking People of Europe" and "The Duty of the Alliance to the Evangelical Parties in the Reformed Churches on the Continent." At a public evening meeting addresses were delivered on "Religious Work in Canada" and "The Dutch Reformed Church and Aggressiveness." A plan for co-operation in home-mission work had failed to receive the approval of all the churches in the Alliance, the General Assembly of the United Presbyterian Church having disagreed to one of the sections, and the General Assembly of the Cumberland Presbyterian Church having rejected two. As a measure toward removing these objections, the Committee on Home Missions was instructed to prepare explanatory clauses.

VIII. Presbyterian Church in Canada.—The following is a summary of the statistics of this Church presented to the General Assembly in June: Number of churches or stations, 2,412; of sittings, 546,506; of families, 102,213; of single persons, 27,884; of communicants, 196,404; of additions during the year on profession, 12,075; of baptisms, 10,519 of infants and 1,318 of adults; of elders, 6,907; of other office bearers, 10,790; of officers and teachers in Sabbath schools and Bible classes, 18,078; of pupils in the same, 156,104; of Christian Endeavor Societies and Young People's organizations, 1,042, with 35,803 members.

The financial reports made to the General Assembly showed an increase of more than \$30,000 in the year for stipends, an increase in 8 of the 11 schemes of the Church, and a decrease of about \$4,000 in the other 3 funds, giving a total increase of about \$8,000. Since the union in 1873 the total sums raised by the Church amounted to more than \$3,500,000. The Dominion census of 1897, just published, showed 190,000 more Presbyterians than appeared in the Church reports.

Aid had been given under the Church and Manse Building fund for Manitoba and the Northwest Territories in the erection or extension of 14 churches and 12 manses, in the shape of \$3,800 in loans and \$440 in grants. Owing to the state of the fund

the Board of Management could not make grants except out of interest, and even these only under exceptional circumstances. Summs amounting to \$3,897 had been received for the purposes of the fund from friends in Great Britain.

The Board of French Evangelism employed during 1896, for the whole or part of the year, 26 pastors and ordained missionaries, 17 evangelists, colporteurs, and students, and 20 teachers. Thirty-seven mission fields and 93 mission stations were occupied, with a Sabbath attendance of 2,415; 928 families under care, 1,079 church members, and 900 pupils in Sabbath schools and Bible classes; and 153 members were added to the Church. Twenty-five mission schools returned 800 pupils. The amount contributed by converts for salaries and other expenses was \$5,918; amount paid as school fees, \$1,602; making a total of \$7,520. The schools at Point-aux-Trembles had since their foundation given a Christian education to about 5,000 pupils, a large proportion of whom had become true converts—some of them missionaries, pastors, and teachers, and others lawyers, doctors, artisans, and agriculturists.

The General Assembly met at Winnipeg June 14. The Rev. William Moore, D. D., of Ottawa, was chosen moderator. The business transacted chiefly concerned the condition and management of the "schemes" and institutions of the Church. Although a large majority of the presbyteries had voted in favor of a remit sent down proposing to change the ratio of representation to the Assembly from 1 in 4 to 1 in 6, the Assembly declined to make the change. A resolution was unanimously adopted, "that while fully recognizing the fact that the duty of imparting detailed and adequate instructions on the doctrines of the Christian religion devolves primarily and mainly on the parent and the Church, yet the Church regards it as of exceeding importance that all instructions given in our public schools should be in harmony with revealed truth, and that the Bible should have the place in our educational system which its incomparable excellencies and its divine authority claim for it. In order to assist in giving effect to its convictions on a matter so vital, the General Assembly appoints a committee on public education, whose duty it shall be to act in the name of the Church in any of the provinces of the Dominion in relation to the subject of religious instruction in the public schools, and also to co-operate with any synodical committee of our Church or any committee representing any other branch of the Church, whose views on this question may be in substantial accord with those of the General Assembly." Another resolution declared that "the General Assembly is painfully aware of the extent to which the Lord's Day is desecrated in nearly all Christian countries, and of the persistent efforts made in our own land to encroach upon the Sabbath in the interests of business and pleasure. Unless the Lord's people shall recognize the danger, and unite in defending the Lord's Day from the assaults made upon it in so many forms and from so many quarters, we may before long find that Canada has lost its place as a land distinguished for keeping the Sabbath and reverencing the sanctuary. The General Assembly therefore earnestly and affectionately exhorts all those whom it represents to use faithfully the Lord's Day for the holy ends of its appointment, to refrain from all encroachments on its rest except when 'necessity and mercy' justify, and by all proper action strenuously to bear their part in defending the priceless inheritance of the sacred weekly rest."

IX. Church of Scotland.—The statistical reports made to the General Assembly indicated a considerable increase in membership and income.

The whole number of communicants on the parish rolls at the end of 1896 was 101,408, showing an increase during the year of 6,647. The number of elders had increased from 6,494 in 1895 to 9,774. The voluntary contribution, as compared with 1895, was £44,239 more than those of the previous year. Adding seat rents, the total revenue was £466,128, having increased £45,215. A report was made showing that the total amount spent in building, repairing, and maintaining ecclesiastical structures from 1886 to 1895 was £516,095, of which £267,367 were raised by assessment on heritors and the rest was voluntarily contributed. The amount spent in church building was £233,246, of which £51,618 were raised by assessment and £181,628 by voluntary effort. The report of the Endowment fund, this being its jubilee year, represented that during the fifty years £1,465,000 had been gathered and 492 parishes had been created. Six thousand pounds had been subscribed toward a proposed jubilee thank offering of £14,000. The year's expenditure for home missions had been £10,431, and 80 mission churches had been sustained and 237 workers supported.

The report on foreign missions was characterized as the most favorable the committee had been able to make for many years. The income for the work had been £37,000, an increase of nearly £7,000. Twelve new missionaries and a number of mission buildings were needed in various parts of India, Africa, and China. A special committee appointed to investigate charges of ritualistic observances at the Blantyre mission, Africa, reported that they had found them much exaggerated. In the mission to the Highlands and islands new mission churches had been or were being built at five places. The revenue of the scheme, £2,584, showed an increase of £91.

The General Assembly met in Edinburgh, May 20. The Rev. William Mair, D. D., was chosen moderator. The report of the Committee on Church Reform recommended that the Assembly appoint a board to elaborate and carry out a scheme of institutes for pastoral training. The great increase of population in many parishes rendered it necessary to develop home-mission work. The Rev. Alexander Robinson, of Kilmarnock, who was suspended for a year by the General Assembly of 1896 for publishing unsound doctrinal views in his book "The Saviour in the Newer Light," appeared to answer the question whether he still held those views, or would disavow them, and read a paper explaining his theological opinions. He could not, he said, disown his book. He subscribed to the Confession of Faith as a general expression, and his book was in origin and purpose a devotional study, which included certain modern movements of thought as the legitimate development of the Confession. He acknowledged that it contained serious errors in expression and taste; but "find such fault as you may," he said, "with the execution of the work; to its ideals and its aims I must remain faithful." In answer to a direct question by the moderator, Mr. Robinson declined to repudiate the teaching of his book. The Assembly directed that the suspension of Mr. Robinson be continued till the next meeting of the Dunoon presbytery; that in the event of his tendering his resignation it be accepted, suspension following *sine die*; if not tendered, the presbytery should pronounce sentence of deposition.

X. Free Church of Scotland.—The total membership of this Church was returned to the General Assembly as being 287,689, showing an increase during the year of 4,158.

The statement of the general trustees to the General Assembly showed that the total sum invested was £978,790.

The Finance Committee reported to the General

Assembly that the income of the Church for the past year had been £2673,883, an increase over the preceding year of £23,559, and the largest sum recorded in the history of the body. The addition of other revenues, of which the Finance Committee did not take cognizance in their accounts, would bring the total income for Church purposes up to £728,000. It was represented in presenting the report that the revenue for Church purposes of the three great Presbyterian bodies of Scotland during the past year had been upward of a million and a half pounds sterling, each Church recording a gradual increase.

The income of the Sustentation fund had been £172,441, a decrease of £188 as compared with the previous year. The fund was not regarded as growing proportionately with the growth of the Church.

The mission to the Jews returned about 800 Jewish children in the school.

The General College fund stood at £1,594, with a credit balance of \$130. One hundred and ninety-four regular and 61 honorary students were returned.

The year's receipts for the home-mission and Church-extension schemes had been £9,000. During fifteen years 319 out of 1,094 congregations had received grants. The membership of the Church had increased 14.3 per cent. during that period, and the population 11.6 per cent.

The collections of the year for foreign missions amounted to £137,014.

The General Assembly met in Edinburgh, May 29. The Rev. Hugh MacMillan, D. D., was chosen moderator, and made an address reviewing the progress of the past sixty years, in which were included some observations on the influence of the scientific method on morals, theological study, and religious belief and thought. It was regarded as having been, on the whole, of great and manifest advantage. The proposed joint hymn book, having been approved by the United Presbyterian Church and the Irish Presbyterian Church, was authorized to be published. The report on religion and morals described the moral standard among the people as high. A motion respecting Church union was adopted providing for the appointment of a joint committee of the Free and United Presbyterian Churches, whose functions should be to consider from time to time the existing arrangements for supplying ordinances throughout the country; to advise regarding the erection of new preaching stations, and to take advantage of opportunities for uniting weak charges in districts where one congregation would be sufficient; to confer regarding the practical questions bearing on incorporating union, reserving in any solution reached, liberty for members of the united Church to strive for the support of the protest of 1843.

The position of the Church as favoring disestablishment was reiterated in a resolution which was adopted by a large majority. The replies of the presbyteries to the questions sent out by the Committee on Temperance were interpreted as giving reason to believe that the cause was progressing. The custom of providing drink at funerals and baptisms was doing out, and grocers' licenses were vigorously condemned. A deliverance was adopted declining to agree to any option of public management as a method for controlling the liquor traffic. The report on Sabbath observance represented that the position of affairs was on the whole unchanged.

XI. United Presbyterian Church of Scotland.—The total membership of this Church was returned to the Synod in May as 194,463, showing an increase during the year of 2,582, with 143,610 young people under religious instruction. Every

branch of income from congregational sources was represented as showing a noteworthy increase during 1896, the total income being £358,236, and the whole amount of increase £14,396. The missionary and benevolent contributions—amounting to £83,029—exceeded those for 1895 by £2,393. The total income of the Church from all sources was £406,420.

The meeting of the Synod, in Edinburgh, May 3, was attended with unusual interest, on account of its marking the jubilee of the formation of the Church by the union of the secession and the relief churches, which took place in 1847. The retiring moderator referred to the fact in his opening address, and spoke of the prosperity which had attended all the agencies of the Church since that time. The Rev. John Hutchison, D. D., was chosen moderator. The report of the Committee on the Joint Hymnal, after relating the steps that had been taken by the Synod and by the General Assembly of the Free Church in 1896, mentioned "with deep regret" the withdrawal of the Established Church from co-operation in the matter. The alterations proposed by the Presbyterian Church in Ireland had been accepted by the joint committee. The report of the Committee on Union with the Free Church had little in the way of advance to record. Regret was expressed that the Free Church had not gone so far in the desired direction as had been hoped. The work of the joint committee of both churches had lain more in the way of consideration and the acquiring of information regarding the most efficient modes of co-operation in regard to the supply of ordinances and extension arrangements. Principal Rainy, the Convener of the Free Church Committee, had indicated the belief of his committee that their report to the forthcoming Assembly would be framed in such a manner as to lead to the reappointment of a joint committee of the two churches with power to enter into conference on all questions bearing on incorporating union. In response to overtures concerning marriage with a deceased wife's sister, the Synod decided to remit the matter to the presbyteries for their opinion. In the interim, till the next meeting of the Synod, sessions should have discretion to grant church membership to persons who have contracted such marriages. A resolution in favor of disestablishment and disendowment—on which subjects one of the speakers declared the Church was absolutely unanimous—was passed.

XII. Presbyterian Church in Ireland.—The reports presented to the General Assembly of this Church in June showed that it included 655 ministers and missionaries, 51 retired ministers, 42 assistants, 567 congregations, and 106,000 communicants. The total income of the Church amounted to £256,216, showing an increase of £9,000 over the previous year. Of this sum £41,000 were contributed for building and renovation. The income of the Sustentation fund, £37,342, exceeded that of the previous year by £812.

The General Assembly met in Belfast, June 7. The retiring moderator, the Rev. Dr. Williamson, delivered an address reviewing the evangelical work of the Church for the year. The Rev. Dr. Leitch was appointed moderator and delivered an address on university education in Ireland. He urged that the establishment of a Roman Catholic university for Ireland should be opposed by Presbyterians; if the Government granted it their next object should be a united Protestant university in Dublin; and if the Episcopalians should refuse to unite in this course, the establishment of a Presbyterian university should be demanded of the Government.

Besides Ulster, where this Church has its greatest

strength, the Presbyterians have considerable organizations in other parts of Ireland, including the presbytery of Dublin, with more than 25 congregations, and the presbyteries of Cork and Cernaught, with 10 or 12 congregations each. Previous to the disestablishment of the Episcopal Church in Ireland each minister of the General Assembly received from the Government an annual sum amounting to about £30, called *Regium Pécunium*. This having been discontinued in connection with the disestablishment, the ministers are supported by their congregations, with the aid, in case the congregations are not able to afford a full support, of grants from the Sustentation fund. The contributions to this fund in 1895 were about £26,000.

XIII. Presbyterian Church in England.—The statistics presented at the annual meeting of the Synod of this Church, in April, showed that the whole number of members in the 305 congregations was 70,639, an increase over the previous year of 1,007; of teachers in Sunday schools 5,216, and of pupils 51,058, besides 2,316 teachers and 28,975 children in the mission schools. During the past twenty years the number of sittings provided in the places of worship had been increased by 26,561, and the number of communicants by 19,626. The revenue of the Church during the past year had been nearly £30,000 in excess of that of the previous year, the increase being partly due to the special gifts to Church extension. The church property was valued at £1,781,032. It was hoped that the new college in course of erection at Cambridge, expected to cost about £30,000, would be completed in time to be occupied for the session of 1898-'99.

The prominent feature of the meeting of the Synod, which began April 26, was the celebration of the jubilee of the mission in China. In view of this fact the Synod met in Sunderland, where it had met fifty years before, and where William Burns had offered himself to be the pioneer missionary to China, and in the same church. The Rev. H. L. Mackenzie, the senior missionary of the Church, who had labored in China for thirty-seven years, was chosen moderator. The moderator in his opening address reviewed the history of the missionary work in China, saying that thousands of the people had been converted; four theological colleges, boarding schools for boys and girls at the chief centers, and elementary schools at the out stations were in operation; the medical missionaries had accomplished a benevolent, far-reaching work; and other missionaries had done much in translating the Bible into the vernacular languages of Amoy and Swatow, besides taking some share in its translation into the classical language. Progress was reported by the Board of Home Missions in the effort to raise a church-building fund of £50,000. Objection being made during the discussion of the report to a rule laid down by the board denying a grant to any church in which the plans provided for the pulpit being placed on one side, it was contended that side pulpits were a first step toward sacerdotalism, and a motion to cancel the restriction was lost by a large majority. A petition was presented asking for an inquiry into the orthodoxy of the Rev. John Watson, D. D., pastor of the Sefton Park Church, Liverpool, who is known to readers of his books as Ian Maclaren. The Business Committee reported concerning it that, after considering the petition, they had decided not to transmit it to the Synod. It was irregular in not having come through the presbytery, and instead of presenting specific allegations on the part of the petitioners, it asked the Church, in dealing with writings open to their examination, to proceed upon statements alleged to have been made in various

quarters outside. A motion rejecting the petition was carried by a very large majority. The synod afterward appointed Dr. Watson (1898), as the place for holding its meeting in 1898. The declaration of interest in the Church of Christ in China was reiterated; congregations were urged to associate themselves with the movement, and a committee to act in cooperation with the Chinese, working from the railway companies and the factories, reaching to religious assemblies was named. The issue was directed of a circular to the ministers of the 25 denominational day schools, urging them to form a presbyterial association for the purpose of the voluntary schools act. In discussing the subject of the oversight of Presbyterian soldiers and sailors, complaint was made that Presbyterian chaplains were brought from Scotland to look after troops in England, simply because such chaplains belonged to the Established Church. The Synod decided to ask the War Office to appoint the Wesleyan chaplain at Hong Kong to be the officiating minister to the Presbyterian soldiers and sailors at that station.

The mission in China recorded 5,000 communicants in the native church. It had 39 missionaries, 10 of them medical, and besides missionaries' wives 20 lady missionaries laboring among the women of the country. The native pastors and evangelists outnumbered the European staff by 2 to 1. Besides the theological college, there were 10 hospitals, in which 30,000 persons who sought bodily healing had been brought since the hospitals were established within reach of the Gospel. A native Church was being built up and was becoming self-governing, self-supporting, and self-propagating. Some of the church members were the third generation of Christians. Three of their native ministers were grandsons of the first converts of William Burns, the pioneer missionary of the Church.

XIV. Welsh Calvinistic Methodist Church.—The statistical reports of this church, made to the General Assembly in May, showed considerable increase in the more important items. The number of preaching stations was 1,536; of churches, 1,200; and of communicants, 150,442 (increase 3,145). Seventeen new Sunday schools had been established, and the number of members of Sunday schools had increased 4,466. The total amount of all the contributions was £228,416, showing an increase of £5,169.

The receipts for the foreign missions had been £10,790, an increase for the year of £2,882. The missions included 281 preaching stations, 2,926 communicants, 9,762 adherents, and 10,540 pupils in Sunday schools. One thousand and eighty persons had been received into the churches during the year. Three new missionaries are to be sent into the field.

The General Assembly met at Rhyl, May 25. The Rev. J. Morgan Jones was moderator. On the subject of the incorporation of the Assembly, it was found that the objects aimed at could be effected by so altering the constitutional deed as to arm the body with the powers of a quarterly association. The committee on the subject was authorized to formulate the proposal in order that it might be submitted to the consideration of the quarterly associations. Upon the presentation of a report upon the number of Welshmen living in other countries than Wales, and the need of personal oversight for those residing in America, Patagonia, and South Africa, a deputation was appointed to visit the Welsh colonies in South Africa and arrange for the maintenance of a minister or ministers among them. Another committee was appointed to carry out the arrangements necessary for the establishment of a South African mission.

Resolutions were adopted protesting against certain provisions of the voluntary schools act, advising legal opposition to it till it was eliminated from the statute books, and recommending every effort to secure undenominational education.

PRINCE EDWARD ISLAND, in the Gulf of St. Lawrence, a province in the Dominion of Canada; area, 2,133 square miles; population in 1891, 109,088.

Government.—The only important event in this province in 1897 was a local election. The election took place in April, and the Liberal Government of the Hon. Frederick Peters was sustained, but by a decreased majority. It was charged by the Opposition that in six years the provincial debt had been increased from \$52,000 to \$400,000, and the Conservatives, in a manifesto issued by their leader, the Hon. Daniel Gordon, promised reduction in expenditure, reform of the jury system, and legal administration and in the management of public works, together with equalization of taxation. Shortly after his return to office, Mr. Peters resigned in order to go to British Columbia. A new Government was organized Oct. 27, with the Hon. Alexander Bannerman Warburton as Premier, H. C. McDonald as Commissioner of Public Works, J. R. McLean as Commissioner of Crown Lands, Angus McMillan as Provincial Treasurer, and Messrs. J. W. Richards, Benjamin Rogers, Peter McNutt, and A. McLaughlin as ministers without portfolio or salary.

Finances.—The financial statement of the province for 1897 was as follows: Ordinary expenditure, \$270,477.23; expenditure on capital account, \$17,154.04; total, \$287,631.27. Receipts, \$273,495.92; deficit, \$14,135.35. Thus while there was a difference of a little more than \$3,000 in favor of the province between the receipts and what is termed ordinary expenditure, the charges on capital account made a difference the other way of \$14,000. The debt of the province was a little more than \$392,000, and the interest charge in 1896 exceeded \$15,000. While the estimates last year amounted to \$287,631.27, the estimates for this year amount to \$306,301. The island Legislature decided to lend its assistance to cold storage, and the following resolution was adopted:

Resolved, That it is advisable that a bill be passed authorizing the Government to promote the introduction in the province of a first class cold-storage system by some private company, by granting aid thereto in the form of an annual grant or bonus, or guarantee of a certain rate of interest or profit, or in such other manner as may be deemed advisable; such assistance not to exceed \$800 in any one year, and not to be given for more than three years.

It was also decided to issue debentures to cover the cost of a new building for the Prince of Wales College and Normal School.

Education.—The annual report of the Chief Superintendent of Education was a volume of about 170 pages. It shows the number of school districts to be 466 in 1897, against 463 in 1896. Three hundred and twenty-four male and 245 female teachers were employed, an increase of 22 males, and a decrease of 12 females. There were 22,128 pupils enrolled, a decrease of 112. The percentage of population attending school was given as 24. The total amount expended by the Government in 1896 was \$124,084.32, an increase over 1895 of \$2,303.15. The average paid by the Government for each pupil enrolled was \$5.60, and by the district \$1.57. The average salaries paid were as follow: First-class male teachers, \$440; female teachers, \$232. First-class teachers receiving second-class pass, male, \$254; female, \$221.50. Second-class male teachers,

\$249.82; female, \$198. Third-class male teachers, \$197.36; female, \$150. These averages only vary a few cents from those of 1895.

Fruit Culture.—The Fruit Growers' Association of Prince Edward Island met in April, and Lieut.-Gov. Howland presided. A paper on fruit culture, by the Rev. A. E. Burke, of Alberton, was read. Another on the same subject was read by Henry Burke, of Southport. A discussion followed, after which these resolutions were carried unanimously:

Resolved, That in the opinion of this association the encouragement of fruit culture by local government aid would be a wise stroke of policy, and that the establishment of an experimental fruit station in connection with the stock farm, under the supervision of a competent man, would prove a great factor in the development of the fruit-growing industry, and one which would meet with the universal approval of the people of this province.

Resolved, That this association desires to place itself on record as being strongly in favor of the cold-storage movement in this province, and that a continuous chain which will practically bring the tables of Great Britain and the fruit gardens of Prince Edward Island together would be a great boon to the horticulturist, and the application of a mighty lever to what is destined to become one of Prince Edward Island's greatest industries."

PROTESTANT EPISCOPAL CHURCH IN THE UNITED STATES.

The healthy activity and sound growth of the Church is shown by a summary of statistics for 1897, giving: The number of dioceses, 58; missionary jurisdictions in the United States, 21; missionary jurisdictions in foreign lands, 7; clergy (bishops 84, priests and deacons 4,692), 4,776; parishes and missions, 6,332; candidates for holy orders, 571; ordinations—deacons, 172; ordinations—priests, 195; baptisms, 65,093; confirmations, 46,099; communicants, 664,083; marriages, 17,541; burials, 33,234; Sunday-school teachers, 47,648; Sunday-school scholars, 433,600; total of contributions, \$12,696,813.06. The trust funds of the Domestic and Foreign Missionary Society amount to \$1,015,621.18, from which an income of \$42,470.42 is derived.

The gross receipts for missions for the fiscal year (including those for specials and miscellaneous purposes) amounted to \$770,813. The contributions were \$358,024.93; the amount received from legacies for designated uses was \$176,777.60; making the amount at the disposal of the board \$534,802.53, of which \$53,000 was invested to protect outstanding liabilities and \$13,133.86 was left for future appropriation. Legacies amounting to \$4,600 were permanently invested. The number of parishes and missions contributing was 3,447, or 258 fewer than during the last fiscal year. It was, however, larger than in any previous year excepting 1895 and 1896.

The expenditure for domestic-mission work (including \$46,509.16 for Indian missions and \$54,750.86 for colored missions) was \$249,524.32; specials amounted to \$50,426.64; legacy expenses (one half), \$162.29; contributions returned (one half), \$269.40; one half of cost of administration and collections, \$13,700.45; printing "Spirit of Missions," reports, etc., \$10,476.69; legacies for investment, \$3,500; paid to an annuitant (one half), \$150; returned to Standing Committee on Trust Funds amount withdrawn from temporary investment for domestic missions, \$19,000; loan returned (one half), \$12,500; transfers, \$382.05; paid for episcopal endowment of diocese of Dallas, \$11,000; making the total expenditure for domestic missions \$371,091.84, and leaving for domestic missions and specials at the close of the fiscal year a

balance of \$36,854.32. The salary of the bishops and the stipends of the missionaries in 19 missionary jurisdictions were paid, and, in addition, assistance was given to 41 dioceses. The whole number of missionaries, clerical and lay, male and female, receiving salaries or stipends was 1,007, and the amount appropriated for the work was \$268,023.

The gross receipts for foreign missions (including a balance from 1896 of \$31,238.72) were \$313,249.63. The expenditures were: On account of mission work, \$184,305.45; specials, \$32,879.00; legacy expenses (one half), \$162.28; contributions returned (one half), \$269.40; one half of cost of administration and collection, \$13,700.44; printing "Spirit of Missions," reports, etc., \$10,476.69; legacies for investment, \$1,000; paid to an annuitant, \$150; returned to Standing Committee on Trust Funds, \$32,180.48; loan returned (one half), \$12,500; transfers, \$367.45; balance for foreign missions and specials at close of fiscal year, \$23,248.86.

The totals of statistics of the result of Church work among colored people vary but little from those reported last year. There are 116 stations ministered to by 65 colored clergymen. More than 60 white clergymen are engaged in the work. The church and school buildings number 146, the estimated value of which is about \$460,000. There are about 7,500 communicants. In the year 1,183 were baptized and 882 confirmed. There are 5,645 Sunday-school pupils and 4,381 parish pupils.

The mission to the Indians and Eskimos in Alaska reports about 100 communicants and about 1,400 enrolled baptized natives. Other Indian mission work has been carried on with gratifying results.

The condition of the Mexican Church is encouraging. It has 7 priests, 4 deacons, 3 candidates for orders, 3 other readers, 27 congregations, 10 day schools, 10 teachers, and about 300 scholars. Two priests of the American Church also are working for the Mexican Church. In the foreign field there has been steady progress.

Statistics of the West African mission for the year show that the clergy numbered 15, the mission stations 73, baptisms 210, confirmations 90, communicants 1,297, and total of contributions \$1,688.07. The ten-year rebellion of the Half-Cavalla tribe against the Government of Liberia was this year ended, and on the restoration of peace the principal Church station at Cavalla was reopened, the king and the chiefs of the tribes expressing their joy at having the work resumed among them. A grant of 500 acres of land for a girl's graded Church school was made by the Legislature of Liberia.

The conditions of the missionary work of the Church in China have been profoundly affected by the radical changes in the material prosperity of the country since the close of the China-Japan War. There is an increased demand for foreign education, and in the newly established Government colleges at Tientsin, over which an American presides, students are being secured from the Christian schools by order of Li-Hung-Chang, because "there he would find the best material." This attitude of the Government, recognizing the scholarship and intellectual power of men from Christian countries and placing them at the head of, or as teachers in their own Government schools and colleges, marks a wonderful change that is full of promise and responsibility.

A three-days conference of the English and American bishops in China and the Bishop of Korea was held in Shanghai in April.

The Church Training School for Women, organized in Shanghai in 1896, has passed out of the stage of experiment, and may be said to have solved

the question of the training of women for the China mission.

The Wen-di translation of the New Testament by Bishop Schereschewsky was this year put to press, to be followed soon by the Old Testament in Wen-di. A corrected version of his translation of the Old Testament in mandarin also will be issued, and provision has been made for printing a Shanghai, a mandarin, and a Wen-di version of the prayer book.

From the mission in Japan material progress is reported. Four churches were consecrated during the year, and proof of the increasing influence of Christianity in Japan is found in the fact that a comparatively large number of Christians are being gathered in from the upper classes. One minister, two deputy ministers, the chief judge of the Supreme Court of Justice, the president and many members of the House of Deputies are Christians, and many other men of social standing and influence are favorable to Christianity. There are signs everywhere throughout Japan of the decay of the great religions which for centuries have dominated the Japanese mind. Of the half dozen so-called great papers of Japan, two are avowedly under the guidance of Christian principles, viz., the "Nation" ("Kokumin Shimbun") and the "Daily News" ("Mainichi Shimbun"). Whatever religious influence these journals may exert they are stalwart champions of Christian ethics, and discuss all moral questions from that point of view.

The Bishop of Hayti reports encouraging growth in his jurisdiction, although he declares that at least four fifths of the population of the island, in spite of the Christian baptism which was administered to them in infancy, still openly keep up the superstitions and idolatrous practices of heathenism transferred from Africa by their enslaved ancestors.

The 10 missions or chaplaincies in Europe are in a flourishing condition.

The summary of the work accomplished in the year by the Woman's Auxiliary and its junior department in 59 dioceses and 17 missionary districts shows contributions: For domestic missions, \$26,004.64; for foreign missions, \$44,174.50; for diocesan missions, \$50,807.79; and bibles valued at \$184,898.27. Of this total of \$374,514.63, the junior department gave money and boxes to the amount of \$42,533.36.

The receipts of the American Church Missionary Society amounted to \$34,787.15; the disbursements to \$31,805.12. Reports from the 22 clergymen and 2 teachers aided by its stipends in domestic-mission work show 183 infant and 84 adult baptisms, 156 confirmations, and 198 communicants added to last year's number, which was 1,647. By the congregations in Brazil under the charge of this society contributions were made amounting to \$2,394 in gold, the largest contribution toward self-support made from any foreign-mission field in our Church. Owing to the war in Cuba all mission work, except at one chapel in Havana, has been suspended. The ever-increasing congregation of exiles at West Tampa is included in Southern Florida.

The Church Society for Promoting Christianity among the Jews this year expended \$10,367.32. Steady but slow advance is reported. Adults as well as children attend the Church school and receive instruction in the Christian religion, but "the fear of persecution, ostracism, and loss of employment, all of which await every convert to Christianity, undoubtedly deters these from taking further steps."

The American Church Building Fund Commission reports that during the year donations to the amount of \$3,647.83 were made to 23 churches, and loans amounting to \$34,700 to 23 churches. The

contributions to the Permanent Building fund were \$11,339.69; interest on loans and investments amounted to \$9,784.63, and the loans returned to \$24,094.95. The total paid out was \$43,801.47, and the balance on hand at the end of the year was \$17,671.43. The fund now amounts to \$298,617.02. The loans made since October, 1887, aggregate \$393,471.92, of which sum \$194,937.10 is still outstanding.

On Feb. 2 the Ven. James Dow Morrison, D. D., LL. D., was consecrated bishop, having previously been elected first bishop of the missionary jurisdiction of Duluth. Oct. 28 the Rev. Chauncey Bunce Brewster, D. D., who had been elected Bishop Coadjutor of the Diocese of Connecticut, was consecrated bishop; and Nov. 3, the Rev. Robert Atkinson Gilson, D. D., who had been elected Bishop

Coadjutor of the Diocese of Virginia, was consecrated bishop.

The Rev. David H. Greer, D. D., rector of St. Bartholomew's Church, New York, in June was elected Bishop Coadjutor of Rhode Island. The Rev. Dr. Greer declined the election, and in October the Rev. William Nielson McViekar, D. D., rector of Holy Trinity Church, Philadelphia, was elected to the office. In November the Rt. Rev. Ethelbert Talbot, D. D., LL. D., Missionary Bishop of Wyoming and Idaho, was elected Bishop of Central Pennsylvania, in succession to the Rt. Rev. Nelson Somerville Rulison, D. D., deceased.

The missionary district of Northern Texas became the independent diocese of Dallas, and the missionary district of Duluth made distinct progress toward the same action.

Q

QUEBEC, a province of the Dominion of Canada; area, 228,900 square miles; population in 1891, 1,488,335.

Government.—Political feeling in this province ran high in 1896-'97, owing to the Dominion elections, when Mr. Taillon resigned his office as Premier to accept office under Sir Charles Tupper, and was succeeded by Mr. J. F. Flynn, a member of his ministry, who appeared to the province in the following year and was defeated. But when the Legislature was opened in Quebec, Nov. 17, 1896, by Lieut.-Gov. J. A. Chapleau, Mr. Taillon was still at the head of affairs. The speech from the throne contained the following significant passages:

"My Government will submit to you a bill respecting the establishment of a special fund for the more effectual diffusion of instruction in poor municipalities and among the working classes, for improving the condition of teachers, and, generally, for the purpose of giving a further and an energetic impulse to primary education. You will also be called to legislate upon a reorganization of the public departments.

"In virtue of various acts of the Legislature, land subsidies, subsequently converted into money subsidies, were granted to certain railway companies, and represent an aggregate amount of over \$3,000,000, payable when these lands shall have been allotted, sold, and paid; that is to say, after very heavy expense will have been incurred for surveys and administration. My Government, having been requested to carry this legislation into effect, proposed to the railway companies interested who might be willing to accept the same to commute their rights for amounts smaller than those mentioned in the statutes, but payable immediately, or as they become due. The principle of this arrangement has been accepted by the companies, and you will be called upon to consider a bill to allow the effecting of such commutation.

"Emigration agents are making strenuous efforts to induce our hardy and industrious population to leave the province in order to settle in countries as far distant as Brazil. To arrest this regrettable movement, and to further promote the settlement of our wild lands, my Government will submit a measure to make a homestead of every lot hereafter conceded by the Crown, on certain conditions, and to make such conditions easier than in the past.

"The constant increase of the population, and, consequently, of the unavoidable expenses for the administration of justice, the care of the insane, the providing of means of communication, and the development of public instruction and agriculture

render more and more imperative the readjustment of the Federal subsidies payable under section 118 of the British North America act.

"I placed myself in communication with the Federal authorities in reference to the delimitation of the northern boundaries of the Province of Quebec, and I am happy to say that by an order of his Excellency the Governor General in Council, dated the 8th day of July last, the rightfulness of our claim was admitted, and the territory claimed by my Government, or its equivalent, was acknowledged as forming part of the Province of Quebec."

The Legislature was prorogued on Jan. 9, 1897. Among the bills passed were these:

To incorporate the Asbestos and Dabville Railway Company.

To amend the law respecting dentists.

To repeal the law imposing duties on transfers of property.

To reorganize the departments.

Respecting elementary schools.

To amend the law respecting probate of wills.

Respecting the public debt and its conversion.

To amend the Quebec election act of 1895.

To incorporate the North Shore Power Company.

To incorporate the town of Montreal West.

To incorporate the Municipal Association of Montreal.

To incorporate the St. Hyacinthe City and Grandby Railway Company.

To erect the Quebec Insane Asylum and its dependencies into a separate municipality.

To incorporate the Canada Stone Chinaware Company.

To incorporate the Coaticook Electric Light and Power Company.

To abolish the continuation of community creating legal usufruct in certain cases, and, for that purpose, to amend articles 1323 to 1337 inclusively of the civil code.

To prohibit indecent posters in public streets and places.

To amend the game laws.

To amend the law respecting fisheries.

To amend the act 59 Victoria, chap. xxxiv, respecting benevolent and mutual benefit associations and mutual insurance companies.

To amend the law respecting asylums for the insane.

To amend the law respecting the protection of settlers and the creation of homesteads.

To amend the license law.

To encourage technical education.

Respecting a grant to the Ursulines de Roberval.

Elections.—Early in the year great preparations were made for the provincial elections. The leading issue was economy, which the Flynn Government claimed they had practiced, while the Liberal Opposition, led by Mr. F. G. Marchand, made charges of the grossest extravagance. One of their arrangements was the guaranteeing of the bonds of the Atlantic and Superior Railway for \$8,270,000 on terms which were strongly denounced. The Administrator, Sir Alexander Lacoste (in the absence of Lieut.-Gov. Chapleau) disallowed the measure, and this increased the difficulties of the Government. The Opposition took high ground upon the improvement of the provincial system of education and the general question of electoral freedom from clerical domination. Incidentally, the ever-present Manitoba school problem complicated matters as between Protestants and Catholics. The elections were held in May, and the Flynn ministry was beaten by about 25 majority in the new Legislature.

The following new Liberal Government was formed May 26, 1897: G. G. Marchand, Premier and Treasurer; Horace Archambault, Attorney-General; H. T. Duffy, Commissioner of Public Works; S. N. Parent, Commissioner of Crown Lands; F. G. M. Dechene, Commissioner of Agriculture; A. Turgeon, Commissioner of Mines and Fisheries; J. E. Robidoux, Provincial Secretary; George W. Stephens, J. Shehyn, and J. J. Guerin, ministers without portfolio.

Finances.—The budget speech of Mr. A. W. Atwater, Provincial Treasurer, was delivered in December, 1896. His statement may be summarized briefly:

"For the fiscal year just closed our ordinary receipts have exceeded our ordinary expenditure by \$280,688. Let me deal first with the accounts of the fiscal year and the receipts and expenditure connected therewith which are before you in the shape of the public accounts. Mr. Taillon, in his budget speech delivered on Dec. 21, 1894, estimated the net receipts at \$4,255,499.42. We find the actual receipts to have been \$4,331,196.17, or an excess of actual over estimated receipts of \$75,696.75. Mr. Taillon estimated the expenditure for 1895-'96 at \$4,222,110.97. In this estimate he included the amount to be repaid upon the railway guarantee deposits of \$268,235.62. His estimated expenditure then, without this item, would have been \$3,953,875.35. The actual expenditure, exclusive of the return railway guarantee deposits,

was \$4,099,707, including extraordinary expenditure on public works and buildings being \$145,831.65 more than the estimate. This, however, included the \$59,518.40 paid out of treasury by the collectors of provincial revenue and surpluses, which amount appears in the statement of receipts. The actual excess, therefore, of expenditure over the estimates is \$80,313.25. The principal increases have been in respect of agriculture, immigration, and colonization, extraordinary expenditure in connection with public buildings, and miscellaneous services."

Important arrangements were made during the session for the conversion and consolidation of the public debt and the reduction of interest from 4 and 5 per cent. to 3 and 3½ per cent. The liabilities of the province on June 30, 1897, were \$37,344,310, with assets valued at \$11,832,632.

The estimates for the coming year were as follows: Public debt, \$1,524,631.53; legislation, \$195,678.96; civil government, \$256,572; administration of justice, \$575,330; public instruction, \$380,200; agriculture, etc., \$288,800; public works and buildings, \$183,521.79; charities, including lunatic asylums, \$339,375.55; miscellaneous services, \$267,700; railways, \$560,240; repayment of railways, \$287,663.99; Aylmer Courthouse fund, \$1,574.

The following are details of the principal amounts voted: Legislative Council, Speaker's salary, \$3,000; members' indemnity and mileage, \$19,865; salaries and contingent expenses, etc., \$12,811.50; Legislative Assembly, Speaker's salary, \$3,000; members' indemnity and mileage, \$61,600; salaries and contingent expenses, etc., \$51,002.45; printing and binding for the Legislature, \$25,400; library of the Legislature, purchase of books, \$2,000; salaries, contingent expenses, etc., \$5,800; expenses of elections, \$2,500; clerk of the Crown in Chancery, salary, \$200; Queen's printer—printing, binding, and distributing the laws, \$3,500; civil government salaries, \$205,572; contingencies, \$51,000; administration of justice, \$478,450; judge of the Sessions of the Peace, Quebec, police magistrates, Montreal, their salaries, those of their officers and contingencies, including salaries of high constable and his deputy, etc., Montreal, \$22,940; reformatory and industrial schools, \$65,000; inspection of public offices, \$9,000.

One of the features of the session was a loan of \$500,000, by legislative enactment, to the Sisters of St. Jean de Dieu for the rebuilding of the Long Pointe Asylum, which had been destroyed by fire.

R

RAILWAY SERVICE IN THE UNITED STATES. Because of the wide area of the United States, the diverse natural resources of the country, and the extent to which the territorial division of labor and localization of special forms of industry have been fostered by the prevalence of unrestricted domestic trade, facilities for cheap, rapid, and safe transportation are of the utmost importance in the economic organization. Though there are within the United States lakes vast enough to float the commerce of the world, and mighty rivers unequaled elsewhere within the domain of civilization, these natural water-ways are but auxiliaries to the general system of transportation, which, partly on account of the topography of the country and the normal trend of commercial shipment, is mainly overland. The early contest for supremacy between canals and railways demonstrated the comparative inadequacy of the former for any service other than

that of feeders for the more efficient system. The railways speedily gained and have successfully maintained a paramount position in the natural transportation system, though they are still unable to compete with either natural or artificial water-ways in the movement of commodities that are shipped in large quantities, the bulk and weight of which are great in proportion to value, and in the movement of which rapid service is not required.

Construction and Mileage.—During the seven decades that comprehend the period of steam-railway transportation there have been constructed throughout the world about 430,000 miles of railway, which are capitalized at nearly \$25,000,000,000. Though the United States occupies approximately but 6 per cent. of the land surface of the earth, and contains an even smaller proportion of its total population, it is traversed by 42 per cent. of this mileage, represented by 30 per cent. of the capital.

^a This is 77 miles in excess of the true mileage in 1880, but being the figure assigned by States in the tenth census, it is adopted for this table.

^b Including Oklahoma.

^c No report of population in 1880.

^d Including South Dakota.

^e Included with Indian Territory.

^f Included with North Dakota.

The aggregate length of the railways of the United States on Dec. 31, 1896, was 183,601.05 miles, six times as great as in any other country, and exceeded the length of the lines serving the whole of Europe by nearly 30,000 miles.

It is not sufficient to measure the transportation facilities of a nation in miles; the true criterion is their relation to the demand for the movement of persons and property. Exact determination of the extent of this demand is practically impossible, but approximately accurate conclusions can be reached by comparing mileage with population and area. So measured, the people of the United States are served by a greater length of railways in proportion to their number than those of any other country except British North America, the Orange Free State, and some of the provinces of Australasia. For every 10,000 inhabitants the United States has 26.16 miles of railway; Great Britain and Ireland, 5.34; Germany, 5.50; France, 6.48; Russia, including Finland, 2.20; Spain, 4.27; Brazil, 5.13; Argentina, 19.15; British North America, 31.90; and Australasia, 32.45.

The proportion of railway mileage to area is exceeded only in the most densely populated countries

of Europe. With 6.08 miles of railway for every 100 square miles of land area, the United States is surpassed by Great Britain and Ireland with 17.21; by Belgium with 30.25; by the Netherlands and Luxemburg with 14.02; by Germany with 13.54; by Switzerland with 13.52; by France with 11.99; by Italy with 8.21; by Denmark with 9.26; and by Austria-Hungary, including Bosnia, with 7.14. The average for the whole of Europe is but 4.03 miles; for Brazil, 0.23; for Argentina, 0.78; for British North America, 0.46; and for Australasia, 0.44.

The number of passengers carried by the railways of the United States is exceeded in but one country, England; it is twice as great as in France, and 52 per cent. more than in the German Empire. The freight tonnage annually carried by the railways in this country is greater than the totals for Great Britain and Ireland, France, and Germany combined; and the average distance carried is much longer.

American ingenuity has provided railway facilities at a lower average cost per mile than in any other country in which due regard is paid to the requirements of speed and safety. The average capitalization of the railways of the United States

is about \$63,000 a mile, and this includes such costly special construction as the sunken tracks of the New York Central and Hudson River Railroad in New York city; the tunnel that carries the trains of the Baltimore and Ohio Railroad underneath the city of Baltimore, and that which pierces the Hoosac mountain for the Fitchburg Railroad; the elaborate block-signal systems of the Pennsylvania Railroad and other companies; the triumphs of engineering skill required to carry the Denver and Rio Grande Railroad and other Pacific lines over the Rocky mountains; the numerous expensive bridges crossing the Mississippi, the Missouri, the Ohio, and other rivers; and many other extraordinary expenditures rendered essential by the development of the standards by which the adequacy of a modern transportation system is measured. Yet, in spite of the high standards established in order to meet American demands, the average capitalization per mile in this country is but 27 per cent, as high as in England, less than half that of France and Belgium, and not more than two thirds that of Germany, Austria-Hungary, Italy, and Switzerland. The difference is partly due to a difference in land damages. The quality of service in Denmark, Norway, Sweden, and Serbia—the only European countries having a lower average capitalization than the United States—is not high enough to invalidate the conclusion. Railway capital in the United States averages \$156.23 *per capita* and \$3,901 per square mile of land surface. For Great Britain and Ireland these figures are \$194.49 and \$40,111, respectively; for France, \$84.45 and \$15,635; for Germany, \$53.34 and \$13,131. The following table shows the number of miles of railroad in the United States in relation to population and area at each census year, with the increase during each decade:

YEARS.	Length, miles.	Increase, miles.	per cent.	Miles per 10,000 of population.	Miles per 100 square miles of land area.
1880.....	40			0.03	
1890.....	2,755	2,715	6,825	1.61	0.13
1900.....	8,571	5,816	211	3.71	0.29
1910.....	29,920	20,348	237	9.30	0.97
1920.....	49,168	19,248	70	12.75	1.66
1930.....	87,724	38,556	78	17.49	2.95
1940.....	163,562	75,838	88	25.12	5.51

More than half the present railway mileage of the United States has been constructed since 1880. Of this increase, 56 per cent. is in the States and Territories west of the Mississippi, where it is equal to 184 per cent. of the mileage of 1880; 19½ per cent. is east of the Mississippi and south of the Ohio and the Potomac, where the increase is 113 per cent. of what was in that section previously; and 25 per cent. is in the region east of the Mississippi and north of the Ohio and the Potomac, where the mileage constructed since 1880 is 53 per cent. of what then existed in that section. The evident conclusion is that in some of the older portions of the country the railway system is now practically completed; and this is confirmed by noticing in the table (given on the preceding page) the very small percentages of increase in all the New England States except Maine. In contrast with the plan of Federal and State aid in vogue during the early development of the railway system, the efforts of some of the State governments in the East are now directed toward preventing construction of unnecessary lines. The figures for 1880 in the table are from the reports of the tenth census; those for 1895 are from the report of the statistician to the Interstate Commerce Commission for June 30 of that year.

The following table shows the railway mileage of the country on June 30 of each year from 1880 to 1896 and at the end of the calendar year 1896, together with the annual increase. The figures given for "operated mileage" include a duplication of physical mileage to the extent of 3,000 to 3,000 miles, owing to the use of the same tracks by two or more companies. Both physical and operated mileage are shown for those years for which such complete data are available, the figures being from official sources with the exception of those for 1896, which are estimated.

YEARS.	Physical mileage.	Operated mileage.	Annual increase.
1880.....	47,403 00	49,702 00	8,300 00
1891.....	97,409 00	97,409 00	50,006 00
1892.....	106,980 70	106,980 70	9,571 70
1893.....	119,734 54	119,734 54	12,753 84
1894.....	124,300 00	124,300 00	4,565 46
1895.....	127,000 00	127,000 00	2,700 00
1896.....	132,300 00	132,300 00	5,300 00
1897.....	145,400 00	145,400 00	13,100 00
1898.....	149,501 72	154,730 00	5,228 28
1899.....	157,754 00	160,000 00	2,246 00
1900.....	163,207 00	166,841 64	3,634 64
1901.....	169,402 74	172,221 00	5,378 26
1902.....	171,502 50	175,500 00	3,997 50
1903.....	176,461 07	180,500 00	4,938 93
1904.....	178,700 50	182,000 00	1,499 50
1905.....	180,657 07	184,944 44	2,887 37
1906.....	182,500 00	187,000 00	4,500 00
1906 (Dec. 31).....	183,001 00	188,000 00	5,000 00

This table shows two periods of heavy railway construction since 1880, culminating in 1892 and 1897, each followed by a gradual falling off in the amount of new line built. The annual increase in operated mileage can not be taken to represent exactly the amount of new construction, but if both figures could be given they would be not far apart. Using round numbers, therefore, it may be said that the amount of new line constructed in a year has fluctuated between 12,000 miles in 1886-'87 and 2,000 miles since 1893. The average annual increase in operated mileage for the sixteen years has been 6,077.57 miles; but since 1890 the average increase has been only 3,200.35 miles in operated mileage, or 3,167.10 physical miles. It should be understood that the mileage figures in all these tables represent miles of line, not miles of track. The inclusion of second, third, and fourth tracks, yard tracks, and sidings would swell the present total to about 240,000 miles.

Employees.—The operation of this railway system gives direct employment to nearly 800,000 men, or 1 in every 30 persons in the entire country engaged in gainful occupations; and approximately \$500,000,000 a year is expended in wages and salaries. The number of employees of every grade increased from 418,957 in 1880 to 783,034 in 1895. This was an increase of 87 per cent., which is less than the increase in mileage during the same time, the number of employees per 100 miles of line having fallen from 477 to 441.

Equipment.—The equipment of the railways on June 30, 1895, embraced more than 35,000 locomotives, 33,000 passenger cars, and 1,196,000 freight cars of various kinds. The increase in equipment has kept pace with the increase in mileage, and in some particulars has outstripped it.

The increase in the number of locomotives and passenger cars has been almost exactly in proportion to the increase in mileage, the former remaining at 20 for each 100 miles of line, and the latter showing a slight increase from 18 to 19 per 100 miles. The freight cars, however, have increased

much more rapidly than the mileage, and the same is true of the cars assigned to the use of the companies themselves; so that the total number of cars per 100 miles of line has increased from 594 to 715. The number of freight cars in use is probably even greater than the figures in this table indicate, owing to the increased use of private cars, which are not reported.

EQUIPMENT.	NUMBER		PER 100 MILES OF LINE.	
	1880.	1895.	1880.	1895.
Locomotives:				
Passenger	5,088	9,969	6	6
Freight	9,942	20,012	11	11
Switching and unclassified	2,361	6,698	3	3
Total	17,391	35,669	20	20
Cars:				
Passenger service	16,176	33,112	18	19
Freight service	499,442	1,196,119	567	673
Companies' service	8,276	41,330	9	23
Total	523,894	1,270,561	594	715

Values.—The railways of the country are capitalized at about \$11,000,000,000, a sum fourteen times as large as the national debt, and more than four times as large as the aggregate indebtedness of our National, State, and local governments. The capitalization has increased more rapidly than mileage since 1880, the increase being chiefly in bonds, as shown below:

CAPITALIZATION.	AMOUNT.		PER MILE OF LINE.	
	1880.	1895.	1880.	1895.
Common stock	\$2,309,134,322	\$4,201,697,351
Preferred stock	304,471,942	759,561,305
Total stock	\$2,613,606,264	\$4,961,258,656	29,794	28,602
Funded debt	2,390,915,402	5,385,495,573	27,255	31,048
Other forms of indebtedness	421,200,894	616,830,156	4,901	3,556
Total	\$5,425,722,560	\$10,963,584,385	61,850	63,206

There has been a diminution of \$1,192 a mile in the relative amount of railway stock, and a relative diminution also in the floating debt of the railroads, but these are more than counterbalanced by the increase of \$3,793 a mile in the bonded indebtedness. This tendency is to some extent explained by the number of reorganizations in which new bonds of higher par value, but entitled to a lower rate and aggregate of interest, have been exchanged for those formerly outstanding. There have been also numerous instances of railway consolidations brought about by purchase of stock in one company by an issue of bonds in another, and of construction of branch lines wholly upon the proceeds of bonds issued by the parent company.

Service and Earnings.—The increase in the public service performed by the railways has greatly exceeded the increase in mileage, and in 1895 the service performed was equivalent to carrying more than 12,000,000,000 passengers and 85,000,000,000 tons of freight a distance of one mile. While the mileage has increased 106 per cent., there has been an increase of 112 per cent. in the volume of the passenger business, and of 163 per cent. in the freight traffic. This is shown in the following table, in which the volume of traffic is expressed in passenger miles and ton miles:

The income of the railways has increased much less than the mileage. The following table shows the earnings from each kind of traffic in the two years under comparison:

CLASS OF TRAFFIC.	1880.	1895.	Increase per cent.
Passengers	\$144,101,709	\$252,246,180	75.0
Mails	10,472,813	30,969,746	195.7
Express	8,828,259	24,284,508	175.1
Freight	416,145,758	729,963,462	75.4
Unclassified and other	902,055	37,877,566
Total	\$580,450,594	\$1,075,371,462	85.3
Earnings per mile of line	6.612	6.050	

From the fact that gross earnings from transportation increased 85 per cent. while the amount of business increased 112 per cent. in the case of passenger traffic and 163 per cent. in the case of freight, it is obvious that there must have been during this period a marked reduction of charges. This conclusion is emphasized by observing that the earnings from freight and passenger traffic increased only 75 per cent., the largest percentages of increase being in the receipts from the Government and the express companies, for transportation of the mails and goods sent by express. The rate of increase in freight earnings is less than half as much, and in passenger earnings only two thirds as much, as in the volume of the corresponding traffic. Both freight and passenger rates have fallen,

but the decline has been much less marked in the latter case, probably owing to the expense connected with increased speed and otherwise improved accommodations for travel. The average rate per passenger mile in 1880 was 2.51 cents; in 1895, 2.04 cents. The average rate per ton mile in 1880 was 1.286 cent; in 1895, 0.839 cent. The downward tendency in rates on both classes of traffic has been broken by but few and slight temporary augmentations of the average charges. There was an increase in the average passenger rate for 1895 over that for 1894, which is fully explained, not by any actual increase in regular passenger charges, but by a diminished proportion of reduced-rate tickets, the enormous excursion business occasioned by the Columbian Exposition at Chicago being almost wholly included in the official year immediately preceding. Notwithstanding this increase (more than half a mill), the average passenger receipts per mile were less in 1895 than in any previous year except 1894.

The passenger rates in 1895 were a little more than four fifths, and the freight rates a little less than two thirds of the corresponding charges fifteen years before. The yearly saving to the public from the reduced rates, on the basis of the business done in 1895, is \$53,673,821 in passenger fares and

AMOUNT OF TRAFFIC.	1880.	1895.	Increase per cent.
Passengers carried one mile	5,740,112,502	12,888,446,271	112
Tons of freight carried one mile	32,348,846,693	85,227,515,891	163

\$365,822,392 in freight bills, or nearly \$420,000,000 altogether.

The efficient cause of the reduction in rates has doubtless been competition—not between the railroads to any important extent, but with water routes and between shippers and markets, the latter having produced increasing pressure upon the railroads for concessions. The reduction in freight rates has been general; it has not been confined to any particular class of traffic or section of the country. A few examples will serve to illustrate the general tendency. The most important single rate is that on grain and flour from Chicago to New York, which is the basis of all charges on grain and flour shipped from the West to the East. This rate fell from 35 cents per 100 pounds in 1880 to 15 cents in 1896. The charge on packed meats from Cincinnati to New York, another rate of great importance, fell between 1880 and 1895 from an average of 33.41 cents to 26 cents per 100 pounds. The rates on cotton, the great staple product of the South, have diminished in like manner. The cotton rate to New York from Memphis fell from 74 cents in 1880 to 50½ cents in 1895; and the rate from New Orleans, which is affected by the competition of the water routes, was 55 cents in the former year and 44 cents in the latter. These are not extreme instances, but are typical reductions affecting some of the most important articles shipped.

It must not be supposed that the amount saved to the public by the decline in rates represents a net loss to the railroads. The lowering of rates has helped materially to bring about the enormous increase in traffic, which in turn has made possible a relative saving in the expense of conducting the business. The increase in the volume of traffic has not been accompanied by a correspondingly great increase in operating expenses, several causes having combined to produce greater economy of operation. There was between 1880 and 1895 an increase of about 5 per cent. in the density of passenger traffic, and 30 per cent. in that of freight traffic. The average efficiency of one employee shows a much more striking increase, being represented by 13,701 passenger miles and 77,213 ton miles in 1880, and by 15,526 passenger miles and 108,565 ton miles in 1895. The efficiency obtained in the use of the equipment shows on the whole no decided change, the increase in the work done by each locomotive

being about offset by a diminution in the amount of traffic to a car. In the case of passenger cars this diminution is easily explained by the increased and often unnecessary frequency of trains between the same points, due to rivalry of competing roads, and by the increased use of sleeping and parlor cars. These causes have resulted also in a diminution of 3 in the average number of passengers to a train. The average freight-train load, on the other hand, has increased 47 per cent., but the average efficiency obtained in the use of freight cars has diminished almost as much as that of passenger cars. It is impossible, under present conditions, for the railways to use their cars economically while moving the crops. As New England has almost ceased to grow wheat, and as this and other bulky products have been shipped in larger and larger quantities from the West, it has become necessary to return from the Atlantic seaboard every year an increasing number of empty cars. A less important and less inevitable waste arises from the occasional practice of granting, as a special concession to certain shippers, the privilege of keeping cars for a specified time for storage. Finally, examining the efficiency of capital in the railway business, it is seen to have increased nearly one-third in the movement of freight, and somewhat less than one twentieth in the case of passenger traffic. Stating the results in different words, as the traffic has increased a greater amount of work has been accomplished by each mile of track, each employee, each locomotive, each freight train, and each dollar of capital, while the reverse is true of passenger trains and both passenger and freight cars. The net result is that the expense of operation as a whole has increased much less rapidly than the volume of traffic. The operating expenses rose during the period under consideration from \$339,516,302 to \$725,720,415, an increase of 114 per cent. This is a little more than the rate of increase in the passenger traffic, but much less than the rate of increase in freight traffic. It is evident that the railway business as a whole is, in the language of the economists, subject to the law of increasing return, an increase in the amount of work done being accompanied by a less than proportional increase in cost.

On the other hand, operating expenses have increased more rapidly than gross earnings. They were 58.5 of the earnings from transportation in

ITEMS.	AMOUNTS.		PER MILE OF LINE.

1880, and had risen by 1895 to 67.5 per cent. Accordingly, a smaller proportion of the receipts is available for the payment of interest and dividends, and the result is a marked diminution in the return to the capital invested, for the capital itself has increased more rapidly than the earnings. The statement on page 707 is a condensed income account showing the amount and disposition of railway earnings in 1880 and 1895. It is worthy of note that the amounts received and disbursed by the railroads in a year exceed the aggregate receipts of National, State, and local governments, and equal 15 per cent. of the country's total annual production of wealth.

Computed with mileage, the income both from operation and from other sources has diminished, while operating expenses, taxes, and fixed charges have increased, notwithstanding a diminution in accrued interest. The result is a very decided falling off in dividends from \$804 per mile of line in 1880 to \$472, or (including other payments from net income) \$484, in 1895. In other words, while the mileage more than doubled, the aggregate sum paid in dividends increased only 50.9 per cent. In declaring dividends to the amount of \$85,287,543 in 1895, the railway companies used \$29,845,241 more than was available for that purpose from the revenue of the year, and a net deficit of that amount was therefore created, to be met, if at all, either out of the accumulated surplus of former years or by the creation of current liabilities. The average rate of interest accruing on railway bonds in 1895 was 4.69 per cent., but there is no official statement showing how much of the accrued interest was actually paid. The average rate of dividends was 1.72 per cent., but \$3,475,640,203 of the stock, or 70.66 per cent. of the whole, paid no dividends whatever. On the dividend-paying stock the average rate of interest was 5.74 per cent. Treating the accrued interest as having been all paid, the total return to capital may be stated at \$196,992,652 in 1880 and \$337,800,463 in 1895, a gain since 1880 of only 71.5 per cent., although the capital had more than doubled. It is evident that, on the whole, the return to capital invested in railways is by no means exorbitant. Unofficial reports show that the year 1896 brought no very important changes in the distribution of dividends.

Bankruptcy.—During the period from 1880 to 1896 inclusive 412 railroads, operating about 90,000 miles of line and \$5,000,000,000 of capital, were placed in the hands of receivers, and 506 roads, with 73,000 miles of line and a capitalization of nearly \$4,500,000,000, were sold under foreclosure. In studying these totals, however, some allowance should be made for duplication, some roads having been placed with receivers more than once. On June 30, 1895, about 38,000 miles of railway, or more than one fifth of the entire mileage of the country, were in the hands of receivers, and hence at least nominally controlled by the courts.

Discrimination. The most characteristic feature of the last decade in railway transportation is the attempt to prevent unjust discriminations by means of an act of Congress and a commission appointed for its enforcement. The interstate commerce law, like most important legislation, consists of a series of compromises. This explains why it attempts to apply three separate remedies, each of which had been loudly advocated by a considerable body of adherents as a complete cure for the evils of unregulated transportation. These remedies are: 1. A summary process for hearing and adjudicating complaints and enforcing relief. 2. Publicity of railway methods and accounts. 3. Perpetual competition among railways. Though the law has been in force ten years, and has been several times

amended, these fundamental principles are unaltered. The first has been deprived of all practical effect by the refusal of the United States courts to consider the conclusions of the commission as final as to either facts or law. The others have been enforced with reasonable continuity, but have by no means produced the effect desired. Unjust discriminations between individuals, classes of traffic, and communities continue to exist, while the unrestrained competition imposed by the law has assisted in producing the present unfortunate financial condition of numerous important railways. Public opinion has gradually passed to the side of the railways, and there may be said to be a strong balance of sentiment in favor of permitting pooling arrangements under strict Federal supervision. In the meantime railway officials and attorneys are striving to find some way to secure the maintenance of fair charges, elimination of the unjust discriminations always produced by active competition, and an equitable division of traffic without violating the statute. The Joint Traffic Association, which has just completed the first year of its existence, and the more recently organized Southwestern Traffic Association and Western Freight Association are expressions of this desire. These associations are all organized on a similar plan, and, among other things, involve the delegation of rate-making powers to boards consisting of representatives of each interested road, the concentration of agencies, and the gradual abolition of separate solicitation for traffic. Though the one first organized has had remarkable success, it is yet too early to decide whether the divergent interests of the separate railway corporations are made sufficiently harmonious to give to these associations the cohesive qualities essential to permanent success.

On March 22, 1897, the Supreme Court of the United States rendered a decision by which all such associations as those described seem to be declared illegal under the anti-trust law.

REFORMED CHURCH IN AMERICA. The statistical reports of this church, presented to the General Synod in June, give the following footings: Number of churches, 634; of ministers, 654, with 7 candidates; of families, 58,371; of communicants, 107,960; of baptized noncommunicants, 45,188; of baptisms during the year, 6,283 of infants and 1,315 of adults; of members received on confession, 5,585; of Sunday schools, 915, with a total enrollment of 120,808 names; number of catechumens, 27,800. Amount of contributions for denominational benevolent objects, \$204,889; for other objects, \$100,754; of contributions for congregational purposes, \$1,038,321. These figures show an increase of 5 churches, 2 ministers, 666 families, and 3,256 communicants; a decrease of \$23,458 in contributions for denominational benevolent objects and of \$11,259 in those for other objects, and an increase of \$32,818 in contributions for congregational purposes.

The report of the Board of Education to the General Synod showed that 114 students had been aided, 26 new names had been enrolled, and 13 students had entered the ministry during the year.

The Board of Publication reported that it had a business account of \$16,000. The contributions had amounted to \$1,388, the smallest amount received during the last fifteen years. The Synod directed the board to discriminate between its purely business affairs and its benevolent work, and to report separately concerning them.

The total receipts of the Board of Home Missions had been \$72,217; of which \$40,414 were in contributions from the churches, Sunday schools, and individuals, to home missions and the Church Building fund; \$10,262 from legacies, and upward of

\$20,000 contributed through the Woman's Executive Committee. Eighty-six churches, with 68 missionaries, had been assisted in the East, and 131 churches, with 84 missionaries, in the West. The assisted churches in the East were situated frequently in new centers of population, where, if on the outskirts of large cities, they soon became self-supporting. The mission churches returned in the aggregate 9,059 families; 13,539 members, 1,016 of whom had been received during the year on confession of faith; 17,934 members of Sunday schools; 6 new churches organized, 2 churches disbanded, and 5 become self-supporting. The low state of the treasury had prevented the board's responding to an appeal made to the previous General Synod for help among the colored people of the South. The General Synod advised the board to make further inquiry into the expediency of instituting missions among the colored people of South Carolina and the District of Columbia, and to proceed as they might judge best in the matter; also to ascertain the financial system existing in the churches receiving aid, with an ultimate view to promoting self-support; and to introduce, so far as might be practicable, the principle of local or classical support of new missionary enterprises.

The total receipts of the Board of Foreign Missions had been \$111,112, and the expenditures had exceeded this sum by \$8,000. The growth of the missions during the forty years since they were established on an independent foundation (they having till 1857 been associated with the American Board) is reviewed in the report, which says: "The 2 missions of 1857 have increased to 5, while in every element of work and fruit the increase has been many times as great. The 6 stations have become 23, nearly four times as many; the 2 outstations have increased more than a hundredfold, till they number 236; for 17 missionaries, men and women, there are 78, with 6 others under appointment; 33 ordained native ministers, where there were none forty years ago, and 247 other native helpers where there were only 22. More than six times as many churches (47) number nearly twenty times as many communicants (5,306). Nineteen boarding schools for boys and girls gather nearly 1,000 scholars, and 4 theological schools or classes have 79 students, where there were none of either class in 1857. For the 6 day schools there are 159, and into them are gathered 5,859 scholars, for the 87 of forty years ago. During the forty years 143 missionaries have gone to the different fields (55 men and 88 women, married and unmarried)—16 men and 22 women to China, the same number to India, 17 men and 33 women to the two missions in Japan, and 6 men and 1 woman to Arabia." In China one effect of the massacres of 1895 had been to call more public attention to the Christian "doctrine." Valuable evangelistic work on extended tours was rendered by the women of the Amoy mission. Substantial progress was making in the evangelistic work in the Arcot mission, India. The mission in Japan had celebrated the quarter centennial of the organization of its first church. The Arabian mission in its work among the Moslems found opportunity also among the slaves taken by the British from the traders. The General Synod asked the board to consider the advisability of appointing an agent who can devote his time to presenting the cause of foreign missions among the churches.

The General Synod met in its ninety-first regular session at Asbury Park, N. J., June 2. The Rev. Charles W. Fritz, D. D., was chosen president. A communication was received from the General Synod of the Reformed Church of the Netherlands, asking for an interchange of delegates, who, besides

conveying the greetings of the churches, should have seats as members having full powers of discussion. The proposition was accepted, and the Synod of 1898 is expected to appoint delegates to the General Synod of the Netherlands, which will meet in the summer of that year. It was also resolved that a delegate be appointed to convey by letter the fraternal greeting of the Church to the Reformed Church of South Africa, with a proposition for regular correspondence. A report was made that the plan of co-operation in home missions of Presbyterian and Reformed churches had been adopted by the General Assemblies of the Northern, Southern, and Cumberland Presbyterian churches, the General Synods of the Reformed churches in America and in the United States, and the General Assembly of the Presbyterian Church in Canada. The Committee on the Amsterdam Correspondence (see "Annual Cyclopædia" for 1895, *REFORMED CHURCHES*) reported that, having obtained subscriptions seemingly sufficient to warrant the step, they had appointed an agent to go to Holland and secure copies of such papers as might seem important. They would, further, endeavor to obtain additional funds to provide for translating and editing the material collected, with the expectation that it would then be published without further expense to the Church. The correspondence in question is regarded as of great importance, in that it embraces a history of the Reformed Dutch Church in the United States as well as of the older churches, down to and beyond 1771. The work of the committee was approved, and the Rev. E. T. Corwin, its agent, was designated official historiographer of the General Synod, to gather, arrange, and edit, without expense to it, historical material, "such as this of the Amsterdam Correspondence," and also such as would probably be included in the digest heretofore authorized, and in a new edition of the manual. The term "baptized noncommunicants," as it appears in the statistical tables, was defined to mean all those whose names appear on the roll of baptized members of the Church who have not been received into full communion. The Synod reaffirmed its belief that the observance of the Fourth Commandment is of perpetual binding obligation on all men; advised all members to promote it, and ministers to be diligent in defending it; and commended the American Sabbath Union and the Woman's National Sabbath Alliance.

REFORMED EPISCOPAL CHURCH. This Church has, according to the latest collected statistics, 87 ministers, 93 churches, and 8,863 communicants.

The fifteenth General Council met in the city of New York, June 9. Bishop Samuel Fallows was chosen presiding bishop. A woman, presenting her credentials as a delegate, the question of admitting her was referred to the Committee on Constitution and Canons, who decided that she was ineligible. The treasurer of the body reported that his receipts had been \$19,226, and that a balance of \$2,600 remained on deposit. The receipts of the Special Church Extension Trust had been \$20,900, and its disbursements \$26,000, spent chiefly in aid to churches. The bishops, rendering account of their several jurisdictions, reported that 1,494 members had been confirmed. The work of Bishop P. F. Stevens was among the freedmen of South Carolina and other States of the South, and included 17 ministers, 16 congregations, 24 missions, 1,295 communicants, and 2,000 adherents. In this jurisdiction 249 confirmations were returned. The secretary of the Publication Society reported that a new prayer book, containing the Bishop's Psalter, had been published. The introduction of a resolution restricting the use of vestments in the services of

the Church gave rise to an earnest debate, at the close of which the resolution was adopted "that no official dress other than the black academic gown shall be used by the ministers of the Church in any of the services of the Church; provided, that in any church in which the surplice is now used it may continue to be used, so long as that church shall so elect; and provided, also, that any bishop who now uses the bishop's robes may continue to use them within the limits of his jurisdiction so long as he shall so elect." Upon the announcement of the vote on this resolution Bishop Cheney read a letter of protest against it, characterizing the vote as a fatal blow at Christian liberty, and offered his resignation from the boards and committees of the church of which he was a member. He was followed in this act by four other members of committees. Proposed changes in the constitution and canons and in the prayer book were laid over till the General Council of 1900.

The Annual Synod of the Reformed Episcopal Church in England met in Liscard, May 31. Bishop Eldridge was unanimously elected presiding bishop. The bishops' report on the state of the churches was "in every way satisfactory and encouraging," and showed that the year had been one of decided progress. A committee was appointed to arrange the working of a prayer and workers' union. At a public meeting held during the sessions of the council, Bishop Eldridge made an address explaining and vindicating the purposes and methods of the Church.

REVENUE-CUTTER SERVICE, UNITED STATES. This service was organized in 1790 by President Washington, at the suggestion of Alexander Hamilton, first Secretary of the Treasury, with a view to replenishing the exhausted finances of the republic by stimulating and protecting its commercial interests. The officers chosen by the President to form this new corps were selected from the old Continental navy, their fighting qualities being the best recommendation for their appointment, and a little fleet consisting of 10 vessels was fitted out and placed under the control of the Treasury Department. For six years the Revenue Marine, as the service was originally termed, constituted the sole naval force of the United States, while the expense of their maintenance, as well as their original cost of building and equipping, was charged against the revenue derived from imposts and tonnage. Very primitive ideas were held in those early days regarding naval requirements, to judge from the compensation that was considered sufficient for the officers and seamen to whom were assigned such important duties. The salary of a captain was \$30 a month, besides his subsistence; to the first, second, and third mate was paid \$20, \$16, and \$14 respectively; to the mariners, \$8, besides the rations allowed to a soldier in the army. But in 1793 the compensation of a captain was increased to \$40 a month, and that of his subordinates proportionately.

Established upon a military basis, the Revenue-cutter Service has performed an active part in every war undertaken by the United States. In 1797, when hostilities with France began, several large vessels were added to the service, to act as a coast defense, and the little fleet of the Treasury Department, then numbering 20 vessels, proved itself a valuable auxiliary to the infant navy. Sixteen of the 22 prizes taken from the French were captured by revenue cutters, whose roll of officers held the names of Barney, Truxton, Nicholson, and Stephen Decatur, and in whose ranks were found the historic "Constitution" and "Constellation," afterward transferred to the naval establishment. In 1794, the Revenue-cutter Service distinguished itself again by aiding in the enforcement of the law

prohibiting the slave trade. Several vessels were captured by the vigilant cutters in southern waters, and an aggregate of 487 negroes intended to be sold into bondage were thus liberated.

In 1799, by act of Congress, the Revenue Marine was declared to be a part of the available naval force in time of need, a distinguishing pennon was bestowed upon each cutter, and the term "lieutenant" was substituted for that of "mate" among her subofficers. To-day, when visited by the Secretary of the Treasury or by the President of the United States, each cutter displays in addition to the national ensign a president's flag or a secretary's flag.

The next good work performed by the service was the suppression of piracy in the Gulf. A relentless warfare was waged against the freebooters by the cutters, which boldly attacked pirate vessels of far superior size and force and compelled them to strike their colors, pursuing them even into their bayous of rendezvous until their harboring along the southern coast was completely broken up. During the War of 1812 the revenue cutters bore a prominent part. Only one week after the declaration of hostilities the cutter "Jefferson" seized the British schooner "Patriot," with a valuable cargo, the first prize taken from the enemy. This important capture was followed by 12 others and the taking of 900 British prisoners by the cutters while performing the dangerous duty of coast guard. The gallantry and fearless character of the officers of the service called forth words of admiration even from the enemy on several occasions. While co-operating with the navy throughout the Seminole war, the prompt and efficient conduct of the Revenue Marine drew forth from the commanding naval officer the strongest eulogies. From 3 to 5 of the cutters were constantly on the coast of Florida, rendering assistance to the inhabitants, to the army, and to the navy as long as the Indians were hostile, and 7 cutters gained for themselves a high reputation during the struggle with Mexico.

Since the discipline upon a revenue cutter is the same as that maintained upon a war ship, the service is always ready for a call to arms. As in every former emergency, it was the revenue cutters that responded first to the summons of the endangered Union. At the cry for aid from Fort Sumter, it was the cutter "Harriet Lane" that steamed first to the rescue of the garrison. At every post of danger, at every point requiring support, either offensive or defensive, during the four years' struggle, the ubiquitous cutter was found. All the older officers at present in the service saw active duty in the civil war. The "Harriet Lane" shared in the attack on Newport News and Hatteras Inlet, and the cutter "Miami" in that on Sewall's Point, while the "Naugatuck" was with the ironclads laying siege to Fort Darling with Rogers. Several other cutters served in connection with the Potomac flotilla, and were instrumental in preventing the transportation of supplies from North to South. The "Forward" arrived at Annapolis as soon as Gen. Butler reached that point himself, and furnished him with a valuable auxiliary. It was the "Nemaha" that received Gen. Sherman on board after his famous march to the sea, and had the honor of conveying him to the fleet of gunboats below Savannah. The cutter "Hercules" suffered the loss of her commander, Capt. Thomas N. Dungan, who was killed in action near the Virginia shore.

Even in time of peace the officers of the Revenue-cutter Service are exposed to the perils of war, as each commander is directed, in case of failure on the part of any vessel arriving in a port of the United States on being hailed to come to and submit to proper inspection, to fire first across her

bow as a warning, and, in case of persistent refusal to allow an examination, to compel obedience by means of shot and shell. Each cutter, therefore, carries great guns and a full complement of small arms for the use of the crew if forced by stress of circumstances to resort to harsh methods in executing and securing respect for those laws which the Secretary of the Treasury is bound under his oath of office to enforce.

Another duty that has fallen to the lot of revenue vessels was the natural outgrowth of their cruising always in close proximity to the coast. They were witness to many shipwrecks, and, from instincts of humanity, rendered all the assistance in their power

partment resulted in the birth of the Life-saving Service as an independent branch in 1878, and Mr. Kimball, in recognition of his exceptional fitness for the post, was appointed its general superintendent, which office he served until 1882. That the continuation of the Revenue-cutter Service with this branch of the public service has not ceased, for 12 of its officers are detailed to attend and supervise the crews at life-saving stations, and to inspect the condition of the buildings and equipment. A glance at the annual reports shows an average of 200 persons saved from drowning each year by the Revenue-cutter Service, irrespective of the Life-saving Service, while the record for 1895 registers an

THE "FORWARD"

to the sufferers. Under the law of 1837, requiring the President to assign public vessels to service on the coast during the winter months for the relief of storm-driven vessels, ships of war were at first designated, but could not perform the work, owing to their size and draught, and were soon replaced by the revenue cutters. These little vessels have since performed the perilous task every year in a most creditable manner, and its accomplishment demands superior knowledge of coast waters, skill, and discretion. During seventy years of winter cruising for the relief of distressed navigation, only one wreck of a cutter has occurred, that of the "Gallatin," which stranded on the New England coast in a blinding snowstorm. From this requirement of guarding the coast line with a view to preventing disasters and the fatal consequences of unavoidable wrecks, was evolved that grandly benevolent institution the Life-saving Service, which owes its present perfect system to the unremitting, zealous efforts of Sumner I. Kimball, chief of the Revenue Marine from 1871 to 1878, who detailed some of his most efficient officers to set in order the affairs of the incipient life-saving districts. While a branch of the Revenue Marine, the Life-saving Service grew to such size and prominence that the attention of the navy was covetously attracted. But the struggles on the floor of the House of Representatives for and against its transfer to the Navy De-

aggregate of 122 vessels in actual distress assisted, their cargoes being valued at \$1,081,592, a sum \$150,000 in excess of the entire appropriation for the maintenance of the Revenue-cutter Service. When vessels of the service are in commission on the Great Lakes the officers are specially charged with the duty of aiding vessels in difficulty or disaster, and never, no matter how severe the weather, has a signal of distress been exhibited in vain within sight of the service.

The Revenue-cutter Service has developed with the growth of the nation. Its multifarious duties, as formulated in the volume of regulations recently published, cover every class of maritime necessity. The list is as follows:

1. Protection of the customs revenue.
2. Assistance of vessels in distress.
3. Enforcement of the laws pertaining to the quarantine.
4. Enforcement of the neutrality laws.
5. Enforcement of the navigation and other laws governing merchant vessels.
6. Protection of merchant vessels from piratical attacks and the suppression of piracy.
7. Protection of the seal fisheries and sea-otter hunting grounds in Alaska.
8. Protection of wrecked property.
9. Protection of the timber reserves of the United States against depredations.

10. Suppression of illegal traffic in firearms, ammunition, and spirits in Alaska.

11. Suppression of the slave trade.

12. Suppression of mutinies on board merchant vessels.

13. Superintendence of the construction of life-saving stations.

14. Inspection and drilling of crews of life-saving stations.

15. Assisting the Commissioner of Fish and Fisheries.

16. Enforcement of the provisions of law in regard to the anchorage of vessels in the ports of New York and Chicago.

17. Co-operation with the navy when directed by the President.

18. Establishment and maintenance of a refuge station at or near Point Barrow, Alaska. (The refuge station at Point Barrow was discontinued in 1896.)

In fulfilling these requirements the time of the cutters is fully occupied. The "Manhattan" is engaged in enforcing the regulations governing the anchorage of vessels in New York harbor and bay, for although most vessels, on being notified that they are outside of the prescribed limits, comply with instructions at once, some are refractory, and the patrol steamer is obliged to use force in moving them from channel ways to proper anchorage. The Chinese exclusion act intrusts co-operatively to the cutters stationed on the Pacific coast the prevention of unlawful landing of Chinese subjects and smuggling of opium in large quantities. A larger patrol force than at present exists is needed on the Great Lakes, where the annually increasing commerce puts forth its vast demands. The disturbed condition of affairs in Cuba has rendered necessary the assigning of several vessels to duty on the coast of Florida to maintain neutrality, and, in connection with the Marine-hospital Service, to prevent the importation of contagious diseases.

For fulfilling the regulations respecting extinguishing fires, a terrible opportunity was given by the Chicago catastrophe in 1871. The cutter "Johnson" is still remembered with gratitude by the inhabitants, to whom she brought relief when they were driven from their homes, shivering with cold and in a starving condition. As the cutter, after several hazardous attempts to draw near the burning city, was forced to turn aside from the channel obstructed by debris, she steamed into the first basin below the lighthouse and gave her attention to the sufferers huddled together on the shore and taking refuge in shanties rudely constructed from dry-goods boxes. During the three days that the vessel remained near Chicago, her provisions were liberally bestowed, officers and men uniting in the task of cooking and distributing the food.

The duty of cutters employed in Bering Sea is dealing with important international issues which require the utmost prudence and judgment. Ever since the acquisition of Alaska revenue cutters have been furthering the interests of the United States in its waters. Ten days after the ratification of the treaty for the purchase of the Territory, May 28, 1867, the cutter "Albatross" was ordered to that region. She carried several scientific men from the Smithsonian Institution and the United States Coast Survey, who brought back the first information concerning the new Territory. But the duty of exploration was soon superseded by the commission to enforce the regulations of the *modus vivendi* with Great Britain, which treaty limited the quota of seals to be taken on the Pribilof Islands during each year to 7,500. The ruthless slaughter of these creatures by speculators had aroused both nations to a recognition that something must be done to prevent the

extinction of the herd. The award of the Tribunal of Arbitration held in Paris, Feb. 29, 1892, prohibited the hunting and killing of seals at any time within 60 miles of the Pribilof Islands, the great seal resort of the world, or during the months of May, June, and July in other Alaskan waters. By

CAPTAIN CHARLES F. SHOEMAKER.

various legislative acts Congress has given effect to this award; and each year since a proclamation is issued by the President warning all vessels entering these waters against violating any of the regulations for the protection of fur-bearing animals. An officer of the navy was placed in command of a joint fleet composed of naval vessels and revenue cutters and dispatched to patrol Bering Sea. In 1895 much apprehension was felt lest the area of the award might not be thoroughly covered, because this patrol duty was committed entirely to the charge of five cutters, Capt. C. L. Hooper, R. C. S., being in command. The area covered by the vigilant little fleet extends over 60 degrees of longitude and 25 degrees of latitude, making an aggregate of 77,461 miles of cruising. The last annual report of operations shows a total of 94 vessels boarded and examined, 54 of which were engaged in the fur-seal trade. To ascertain whether they were complying with the conditions of their license, 31,000 seal skins were actually counted and carefully scrutinized. Four vessels, three of which were British and one American, were seized for violation of the treaty.

Incidental to the commission of patrolling Bering Sea and standing guard beside the Pribilof Islands, the ubiquitous cutters carry supplies to the various mission stations, afford relief to the whaling fleet, give medical attendance to American and native settlers on the coast, suppress the illicit sale of liquor and firearms to the Eskimo, and are ever on the watch to rescue distressed seamen whose vessels have been crushed by ice or driven on the inhospitable shores of the Arctic Ocean. Each year the cutters have returned from Point Barrow bringing back to civilization 40 to 60 persons who would otherwise have perished on the barren coast of northwestern Alaska. During the past five years the cutter "Bear," which originally formed one of the Greely relief

fleet, and is particularly adapted by construction to navigate among the ice floes, has been placed at the disposal of the Secretary of the Interior to further his project of introducing domestic reindeer into the Territory. The "Bear" has made several trips to Siberia, bringing back an average of 150 deer each year and landing them at Teller Reindeer Station, Port Clarence. Occasionally a cutter is used in the interest of the Department of Justice to arrest criminals and secure witnesses in Alaska who could not otherwise be readily reached, owing to the remote locality. Indeed, it is noteworthy that whenever special service of an arduous character is required upon the sea the nation turns to its first and oldest maritime organization.

The service is peculiarly situated. The power that is exercised by the President in regard to directing revenue vessels to co-operate with the navy in time of war is a power he can exert over no other branch of a civil establishment. The Revenue-cutter Service, from its connection with the Treasury Department, is in reality a civil institution, but originating and continuing upon a military basis. Its officers, like those of the navy, are commissioned for life, appointed by the President, and confirmed by the Senate; but, unlike the navy, the highest rank attainable in this corps is that of captain, and the highest compensation only \$2,500 a year. While the duties of the officers subject them to the dangers of war as well as of infectious disease, there is no pension list for the corps. Amid the calls of their profession the men's lives may be sacrificed and themselves incapacitated for further service; but the present law reads that only when an officer of the Revenue-cutter Service becomes disabled or loses his life in the line of duty while co-operating with the navy is his name entitled to be placed on the pension list. With this exception, his widow and orphans are left unprotected. Nor is there any retired list for the superannuated. The names of men eighty years of age who had served in the Mexican War were to be found upon the active list until the last Congress appointed a commission to examine into this state of affairs and made provision for placing these aged officers on a roll denominated "permanent waiting orders," with half pay. Under the operation of this legislation 39 aged and infirm officers were removed, opening vacancies for promotion of younger men, physically and mentally qualified to perform whatever duty might be assigned to them. But only partial relief is afforded to the necessities of the situation by this enactment, as its beneficiaries are only those who were found disqualified by old age and broken health at the date of the passage of the act.

The Revenue-cutter Service numbers 850 seamen and 222 officers. Capt. Charles F. Shoemaker, R. C. S., chief of the bureau, served on guard duty in the port of New York during the civil war, and for thirteen years was inspector of life-saving stations, where he won a high reputation for executive ability. It is his constant aim to secure the best equipped men to take charge of the cutters, and he superintends in person the boards that examine candidates for the Revenue Marine Corps. The Revenue-cutter Service holds open a chance for merit alone. Any young man between the ages of eighteen and twenty-five may enlist, provided he is able to pass the required physical and mental examinations. To promote efficiency in the corps, the cadet system is in force, by which those entering the service are trained in their several duties. During this preparatory period of two years the compensation of the cadets is \$500 a year, and the cutter "Chase," stationed at Baltimore, affords them schooling facilities, her officers acting as instructors in the art of navigation, military drill, etc., a college professor

being also employed to instruct the studies of the young men. At the end of the second year the "Chase" goes upon a cruise to give the cadets experience in practical seamanship. At the end of the two years of instruction a competitive examination is held, and promotion is based upon the merit of the contesting papers. All political and personal influence being ignored, the cadet system affords the advantages of the cadet system of the army, and is economical, since whenever a valuable officer of the grade of third lieutenant, the passage is not open until the following regular spring examinations, and this regulation entails a saving that more than equals the extra expense of the system.

Economy is strictly enjoined upon all executive officers of the service, and it is forbidden to use the cutters for any purpose beyond their legitimate business. "Duty is the watchword of the corps." All pleasure parties are at the private expense of the individuals participating. In fact the multifarious requirements of the Revenue-cutter Service furnish unremitting employment for the comparatively small force of vessels. There are only 25 cutters, most of them old and well worn. Three new ones are being built, the "Golden Gate," the "Daniel Manning," and the "Walter Q. Gresham," and two new ones have been ordered for the Great Lakes. The triple-expansion engines in these cutters exhibit the latest improvements in marine machinery.

The introduction of steam as a motive power for the vessels, in 1861, revolutionized their whole management, and a corps of engineers was added to the Revenue Marine. Appointments to this corps are conducted in a manner similar to the rules of the cadet system. Any young man between the ages of

CAPTAIN JOHN W. COLLINS.

twenty-one and twenty-eight can enter this service, provided he can pass satisfactorily the prescribed academic examination and the physical test of the marine-hospital surgeon, and can also furnish evidence that he has had practical experience in the management of machinery. His salary during the probationary period of six months is \$1,000 a year,

after which he is eligible for promotion to the grade of second assistant engineer, with a compensation of \$1,200. Many colleges in the United States obtain a bulletin of the vacancies in this corps prior to commencement day, and post it conspicuously to stimulate the exertions of the students. The chief engineers of the Revenue-cutter Service, who receive a compensation of \$1,800 a year, are appointed by the President and confirmed by the Senate, but the lower grades are filled by examinations always. The new office of engineer in chief has recently been created by act of Congress, upon the recommendation of Secretary Carlisle, who proposed the name of John W. Collins (one of the twenty-six chief engineers) to hold this responsible post, on account of his exceptional fitness. Mr. Collins's connection with the service began during the civil war, and as he is acquainted with its every grade by personal experience, he has proved himself very energetic in raising the standard of efficiency throughout the engineer corps, insisting that all applicants be found both practically and theoretically competent by the severest tests. He designs all the machinery for the new vessels.

The following are the names of the vessels in the service: "Woodbury," "Dallas," "Dexter," "Manhattan," "Hamilton," "Crawford," "Chase," "Winema," "Colfax," "Morrill," "Boutwell," "McLane," "Forward," "Seward," "Galveston," "Wolcott," "Rush," "Bear," "Corwin," "Grant," "Perry," "Johnson," "Fessenden," "Hamlin," "Hudson," "Chandler," "Washington," "Guthrie," "Smith," "Hartley," "Calumet," "Tybee," "Penrose," "Sperdy," and "Windom."

RHODE ISLAND, a New England State, one of the original thirteen, ratified the Constitution May 29, 1790; area, 1,250 square miles. The population, according to each decennial census, was 68,825 in 1790; 69,122 in 1800; 76,931 in 1810; 83,015 in 1820; 97,199 in 1830; 108,830 in 1840; 147,545 in 1850; 174,620 in 1860; 217,353 in 1870; 276,531 in 1880; and 345,506 in 1890. By the State census of 1895 it was 384,758. Capitals, Providence and Newport.

Government.—The following were the State officers during the year: Governor, Charles W. Lippitt, succeeded in May by Elisha Dyer; Lieutenant Governor, Edwin R. Allen, succeeded by Aram J. Pothier; Secretary of State, Charles P. Bennett; Treasurer, Samuel Clark, who died Dec. 27, and was succeeded by Clinton D. Sellow; Attorney-General, Edward C. Dubois, succeeded by W. B. Tanner; Adjutant General, F. M. Sackett; Auditor, A. C. Landers; Superintendent of Education, T. B. Stockwell; Chief Justice of the Supreme Court, Charles Matteson; Associate Justices, John H. Stuess, Pardon E. Tillinghast, George A. Wilbur, Horatio Rogers, W. W. Douglas, and Benjamin M. Bosworth; Clerk, B. S. Blaisdell. All are Republicans.

Finances.—By the Auditor's report in April it was shown that the receipts for the preceding year were \$1,453,843.82. Included in this amount is \$48,565.98, which represents the proceeds of loans. The receipts of the year showed an increase of nearly \$27,000. The expenditures were \$2,031,109.28. Included in this amount is \$642,060.19, paid on account of the construction of the new Statehouse, which is provided for by the issuing of bonds. The additional sum of \$52,500 for interest on these bonds, and \$20,000 paid for the sinking fund established for their redemption are also included in the amount expended. Assuming a deficit of nearly \$91,000 on the first day of the year, the expenditures of the State were met.

Education.—The enrollment in the public schools in 1896 was 59,241; the average number

belonging, 46,261; the average attendance, 41,691; the number of teachers, 1,702, with an average of 1,551; and the total expenditures \$1,905,885.85, of which \$646,907.74 was for permanent improvements.

There were 47 free public libraries, which received State aid to the amount of \$5,853.75. The

ELISHA DYER, GOVERNOR OF RHODE ISLAND.

number of volumes in them was 261,684, and the number of patrons was 45,298.

At the Agricultural College a two years' course in roadmaking has been established, including English literature, geometry, trigonometry, surveying, electrical mechanics, physical geography, mineralogy, geology, and steam engineering, besides a month's work each spring at actual roadmaking, ten hours a day. The college graduated 10 students in June.

The Friends' School held its one hundred and thirteenth commencement in June, with a graduating class of 27.

The registration at Brown University shows 860 names, including the 149 on the roll of the Women's College. About 120 were graduated at the commencement. There were 27 graduates of the Women's College. Pembroke Hall, its new building, was dedicated Nov. 22.

Much interest was shown throughout the country in the resignation of Dr. E. B. Andrews, President of Brown University, on account of the principle involved. Because of his views in regard to the free coinage of silver, which were judged to be injurious to the interests of the university, the corporation appointed a committee to confer with him concerning his public utterances on the subject. The outcome of the conference was his resignation. The action of the corporation was criticised as an attempt to interfere with the freedom of individual opinion. At length the corporation requested him to withdraw his resignation, and it was withdrawn Sept. 14.

Exercises in connection with the dedication of an historical tablet placed on the First Baptist Church of Warren were held May 25. The tablet

commemorates not only the fact of the erection of the first Baptist meeting-house in Warren, but also that in 1767 was erected the parsonage, which for three years was the home of Rhode Island College, now Brown University. The church and parsonage were burned by British troops May 25, 1778.

The one hundred and fiftieth anniversary of the incorporation of the town of Warren and the fiftieth anniversary of the Warren High School were celebrated.

Military.—There were 151 inmates of the Soldiers' Home at Bristol, in May, 26 of whom were in the hospital.

The hospital corps of the State militia celebrated its first anniversary Oct. 19 with a parade and drill. It was organized in October, 1896, but the service performed on July 4, when more than 50 who had been overcome by the heat of the day were succored by the corps, first brought it prominently before the public. The State camp was held at Quonset Point in July, with a larger attendance and better work than in 1896. A design has been accepted for a new State armory, the estimated cost of which is \$286,000.

Charities and Corrections.—The inmates at the State institutions at Cranston, Dec. 21, were classified as follows: House of Correction, 210 men, 112 women, 322; State Hospital for the Insane, 319 men, 354 women, 693; State Almshouse, 154 men, 163 women, 26 boys, 28 girls, 371; State Prison, 177 men, 4 women, 181; Providence County jail, 273 men, 21 women, 294; Sockanosset School for Boys, 304; Oaklawn School for Girls, 41. The number of inmates at the State institutions Dec. 21, 1887, was: Men, 1,117; women, 654; boys, 330; girls, 69. Total, 2,170. There were 181 patients at the Butler Hospital for the Insane, Jan. 1. The State Home for the Care of Dependent and Neglected Children had an enrollment of 125 in April. Several of the institutions are badly overcrowded.

The boys at Sockanosset School turned out work valued at \$3,915.78. The expenditures were \$50,022.22.

The report of the warden of the State Prison shows the receipts to have been \$26,455.02, while the expenditures were \$49,995.60, or an excess of \$23,540.58 of the expenditures over receipts.

The condition of unoccupied convicts was described in February as follows: "A shocking state of affairs exists at the State Prison. There are men confined within those gaunt gray walls who can not be provided with work. These men want to labor during the day so as to take their minds off their miserable situation, but there is nothing for them to do. The contract shops are overcrowded, and every inch of available space is employed. In the prison yard is a little one-story wooden building which they call the 'annex.' In this annex 130 men are confined, owing to the lack of cell room in the prison proper. From morning until night the 130 prisoners, most of whom are short-term men, sit and mope. In other States the prison rules permit the men thus confined to converse one with another, to read, and to play checkers, but at Cranston the regular jail discipline prevails, and the inmates of the annex may do absolutely nothing but think."

The gross expenses of the State institutions were \$250,521. The receipts from labor, etc., \$42,080.78.

Banks.—The condition of the banks, as reported in January, was as follows:

The total resources reported by savings banks, including those in liquidation, amount to \$72,391,433.95, which shows a shrinkage since the last report of \$49,951.95. Deposits decreased nearly the same amount, but the number of depositors gained 896, and of this gain 610 were of those depositing

under \$500. Seventeen savings banks declared annual and 13 semi-annual dividends. The savings banks hold, in loans on mortgages of real estate, \$26,924,985.19; in bank and other stocks, \$3,917,817.91; in United States bonds, \$3,040,887.50; in State Bonds, \$347,455.56; and in all other bonds, \$26,362,985.16. The amount of deposits is \$98,685,697.90, and the whole number of depositors is 136,148. Of the real-estate mortgages all but \$4,366,344.08 is in Rhode Island property.

The total resources of the trust companies show a shrinkage of \$715,706.65. Their deposits on participation account increased \$437,788.14, and depositors 635, but deposits on general account decreased \$1,235,131.99. The average rate of dividend for the year was 34 per cent. Of the \$2,340,430.09 invested by the trust companies in real estate, somewhat more than half is in property in other States.

The Mercantile Trust Company of Providence went into voluntary liquidation in November. The old Union Bank, which went into liquidation in 1889, has paid its debts in full and the shareholders have been paid \$45.50 per share. The Phoenix Savings Bank suspended payment in March.

The report of the national banks in June shows that the total resources of these banks amount to \$55,869,198.21. The average reserve held is 25.54 per cent.

Labor.—A dispatch from Providence, Dec. 1, says: "The voluntary offer of Charles Fletcher to restore the schedule of 1863 to the operatives of the Providence and National worsted mills has been carried out, for to-day the increase of 30 per cent. goes into effect. The other mill owners have fallen into line, and about 25,000 operatives will be drawing the new pay."

The New Capitol.—In order to test the right of the Capitol Commissioners to contract for a State-house that will cost at least \$3,000,000, while the Legislature had authorized an expenditure of only \$1,500,000, the Governor asked the opinion of the Supreme Court. The answer was in favor of the commission. As no limit was mentioned in the act providing for the building, the court held that it was not exceeding its powers. At the same time, the commissioners were warned that, while they have the authority to proceed, they must not contract for work without funds, but if the funds get low must apply to the Assembly.

The Assembly proposed to leave the building without the dome for the present, and to defer the work on the terraces and approaches, as well as on the interior decorations. The commission presented its report in May, giving the following statement:

"The price for so much of the building as has been contracted for is \$1,576,000. This provides the building ready for occupancy, with the exception of the elevators, the electric wiring and lamps, a boiler house with boilers and conduit to the State-house, and the furniture. The estimated expense for these matters is \$168,000.

Revision of the Constitution.—The commission to revise the Constitution authorized by the Legislature was appointed by the Governor in March. Four of the 15 members are Democrats. The work was not finished at the close of the year.

Political.—State officers were elected April 7. There were five tickets—the Republican, Democratic, Prohibitionist, Socialist-Labor, and Liberal.

The Prohibitionists held a State convention in Providence, Feb. 22.

The Democratic convention in Providence, March 10, adopted resolutions of which the following is a part:

"We charge the Republican Legislature with cowardice, in that they have three times refused to

legislate before election so that the people before re-electing them could judge of their acts, and after election have passed bills in the interests of the monopolistic corporations and inimical to the rights of the people of this State, and we invite the close attention of the citizens of this State to the character of the legislation which will be attempted after the present election is past."

The ticket follows: For Governor, Daniel T. Church; Lieutenant Governor, Fayette Bartlett; Secretary of State, Miles A. McNamee; Attorney-General, George T. Brown; Treasurer, Edmund Walker.

The Socialist-Labor party met in convention March 12, and adopted the following declaration of principles:

"That the proceeds of all wealth created should be distributed equitably among the actual producers, and that the instruments of production should be the property of society.

"That the capitalist class, by controlling the political power, appropriates to themselves the greater part of the product of labor, and possess themselves of the tools of production, and this causes all the iniquities from which the working class now suffer.

"That to secure the product of labor and the machinery of production to their rightful owners, the working class must unite at the polls, withdraw the political power from the capitalist class, retain it in their own hands, and institute the co-operative commonwealth—the employment of themselves by themselves."

The ticket was: For Governor, Franklin E. Burton; Lieutenant Governor, Bernard J. Murray; Secretary of State, James Jefferson; State Treasurer, Frederick J. Frank; Attorney-General, John Devlin.

The Republican convention, held in Providence, March 16, chose the following candidates: For Governor, Elisha Dyer; Lieutenant Governor, Aram J. Pothier; Secretary of State, Charles P. Bennett; Attorney-General, Willard B. Tanner; General Treasurer, Samuel Clark. These candidates were elected.

Following is the vote for Governor: Dyer, Republican, 24,309; Church, Democrat, 13,675; Peabody, Prohibitionist, 2,096; Burton, Socialist, 1,386; Larry, Liberal, 357.

Legislative Session.—The Providence session began Jan. 26, and the Newport session May 25. J. Edward Studley was Speaker of the House. The Governor's message explained that, to meet the excess of expenditures for the year, it had been necessary to discount a note for \$50,000, and draw upon the tax for 1897 to the extent of more than \$25,000. Balances from the appropriations for Providence County jail, for lands in Cranston, and for the Providence armory, amounting to \$137,905.35, had been referred back to the treasury in accordance with resolutions of the Legislature. The regular income from ordinary sources was larger than that of any previous year by \$26,817.28.

An act was passed to provide for licensing and regulating the receiving, boarding, and keeping of infants. It requires that any person other than an overseer of the poor, or manager of any State or charitable institution, or any duly authorized officer or agent of the same, who receives, boards, or keeps for hire, any infant under the age of two years not related by blood or marriage to, or not legally adopted by, or committed to him, must have a written license from the Board of Charities and Corrections, approved by the Board of Health of the city or town where it is proposed to keep the child. The penalty for violation of the act is a fine of \$100, or imprisonment for one year, or both; and if the defendant in a prosecution claims rela-

tionship to the child in question, or legal custody of it, the burden of proof is with him.

Another act for the protection of children forbids the employment of any under the age of sixteen years in theatrical and circus performances and the like, unless it be in connection with churches, or schools, or private instruction in dancing or music, or unless it be under the auspices of a Rhode Island society incorporated, or organized without incorporation, for a purpose authorized by law, or unless it be with the written consent of the mayor of the city or the president of the town council where such child is to be employed; or in any mendicant or wandering occupation, or for the exhibition of deformity, etc., the Society for the Prevention of Cruelty to Children may seize and detain any child so occupied as a witness at the trial of the person responsible.

The color of the State flag was changed from blue to white, the original color, which was changed to blue in 1883.

Power was given to the authorities of Providence to establish a public-school teachers' retirement fund. The sources of the fund are to be legacies and gifts; 1 per cent. of the salaries paid to teachers who shall, prior to Oct. 1, 1897, elect to come under the provisions of the act; and 1 per cent. of the salaries paid to all teachers appointed after said date; provided that no teacher shall be assessed for more than 1 per cent. of \$1,200 a year; and interest or income from these moneys. Those entitled to payments from the fund are teachers who have contributed at least five years and have taught a certain time—for men at least thirty-five years and for women at least thirty—of which service twenty years shall have been in the public schools of the city—next preceding the time of retirement. The annuity received shall be equal to one half the salary at the time of retirement, provided that in no case shall it exceed \$600 a year.

Some changes were made in the road laws, and \$30,000 was appropriated for macadamizing sample sections of highway not more than one half mile in length, under the direction of the highway commissioner.

The laws on insolvency were amended, providing that in suits for assigned property the assignee may intervene in any action relating to the property of the insolvent, and may take upon himself the prosecution or defense of such suits. Judgments in suits begun in the lifetime of one who has left an insolvent estate, or before the estate was declared insolvent, are to be included with the other claims.

It was provided that any person who is so addicted to the habitual, excessive, and dangerous use of alcohol or of any poisonous drug, as to render it necessary for his own welfare or for the safety of the community that he should be restrained and cured, may be restrained by his next friend either within his own house or in the Butler Hospital for the Insane during such period, not exceeding one year at any one time, as may be requisite to effect his cure.

A sixth Associate Justice of the Supreme Court was provided for.

Among the appropriations were the following: For expenses of the General Assembly, \$32,300; judicial expenses, \$103,500; for educational purposes, \$171,800; for free public libraries, \$6,500; for the State Home and School, \$20,000, besides the products of the farm; for support of the indigent insane, \$8,000; for State printing, \$34,000, and binding, \$6,500; for advertising and publishing laws, \$10,000; for militia and military affairs, \$45,950; for the Board of Charities and Corrections, \$225,000; for relief of Union soldiers, sailors, and

marines, \$13,000; for the Soldiers' Home, \$18,000; for the College of Agriculture, \$10,000; for the Institute for the Deaf, \$19,000; for the interest on Statehouse bonds, \$52,500.

A section of the criminal law was amended to read as follows: "Whenever an indictment shall be found against any person for any offense, and the petit jury shall not be satisfied that he is guilty of the whole offense, but shall be satisfied that he is guilty of so much thereof as shall substantially amount to an offense of a lower nature, or that the defendant did not complete the offense charged, but that he was guilty only of an attempt to commit the same, the jury may find him guilty of such lower offense, or guilty of an attempt to commit the same, as the case may be, and the court shall proceed to sentence such convict for the offense of which he shall be so found guilty, notwithstanding that such court had not otherwise jurisdiction of such offense."

An appropriation of \$10,000 was made for additions and improvements at the permanent camp grounds, and it was provided that "the first machine-gun battery shall be composed of one battery of not more than 4 guns, and shall consist of 4 commissioned officers and not more than 50 privates."

A resolution was adopted calling for the appointment of a commission to revise the Constitution, to consist of 15 members and to be nonpartisan; and another asking that the Rhode Island Congressmen support a bill in Congress for the preservation of the frigate "Constitution."

A matter of historical interest was brought up in the Senate in February. A copy was shown of the log of the British frigate "Rose," which was at anchor in the harbor of Newport during the early part of 1775, giving account of an action between two colonial sloops and a tender of the frigate. The document goes to show that this State had the first conflict in the Revolution between vessels regularly commissioned by this colony and a naval vessel of Great Britain. It was ordered printed.

Other acts were: Providing for the testing and labeling of fertilizers.

Amending the game laws.

Empowering Roman Catholic Church corporations to acquire and hold lands for burial purposes and property in trust for the maintenance and improvement of burial grounds.

Prohibiting the selling of cigarettes to boys under sixteen years of age.

ROMAN CATHOLIC CHURCH. The hope of Leo XIII for the unification of all branches of the Christian Church was further indicated in the year 1897 by an encyclical letter, issued in May and entitled "The Operation of the Holy Spirit in the Church." It is an earnest appeal for the return of all dissident Christians to the original unity of the Church. That the long-continued efforts of the Holy Father toward this end have been partly, at least, crowned with success was shown in 1897 by the return to Catholicism of some thousands of schismatic Copts under the hierarchy established in Egypt. The schismatic Bishop of Diarbekir, in Mesopotamia, early in the year voluntarily surrendered his orders and declared his allegiance to the see of Rome. Leo XIII also lent his aid toward a resolution of the difficulties of the election of a successor to Gregorius Yusuf, pontiff of the Arabian Greek Church. The Greek College of the Propaganda at Rome was given over to the instruction of candidates for the Greek rite only, under the government of the Benedictines.

By a new apostolic constitution issued on the feast of St. Francis of Assisi (Oct. 4) Leo XIII inaugurated a change in the government and constitution of the four religious communities known as the Observantists, Reformed Friars Minor, Dis-

cussed (barefooted) Franciscans, and Recollects. These orders, which were offshoots from the original institute founded by Francis of Assisi, previously had had autonomy and distinct customs and privileges. Henceforth they are to be united under the same rule and constitution, and governed by one minister general. This change was an important one, implying a decided reform in many respects in some of the communities. All hereafter are to be called Friars Minor, to wear the same habit and surrender all distinctive privileges. The two other Franciscan orders, the Conventuals and Capuchins, remain distinct.

Among the other principal public acts of the Holy See this year was the important document, issued in January, enforcing again the rules of the Index against prohibited books. In August the Pope issued an encyclical letter to the bishops of Austria, Switzerland, and Germany, on the occasion of the tercentenary of the blessed Peter Canisius, one of the first Jesuit priests, and an apostle of Catholicism in the time of the Reformation. He also delivered several allocutions during the year before the cardinals and to different deputations or pilgrimages. The most important of these was the one delivered to the French workmen on the occasion of their pilgrimage to the Vatican. In January he sent an encyclical letter to the bishops of France, on the occasion of the twenty-fifth anniversary of their national vow (the building of the Church of the Sacred Heart at Paris). In August he wrote a similar encyclical to the episcopate of England, which was about to celebrate the thirteenth centenary of the landing in Kent of St. Augustine and the missionaries from Rome.

The most important of the decisions of the Holy Office during the year was that affirming the authenticity of 1 John v, 7: "Because there are three who give testimony in heaven: the Father, the Word, and the Holy Ghost, and these three are one." The modern editions of the New Testament omit this verse, since, according to German and English critics, the Greek manuscripts do not give it. Since the verse in question had an important bearing on the Catholic teaching of the distinction of Three Persons together with the unity of their nature in Godhead, its rejection by critics caused Catholics to have recourse to the apostolic see and to submit the question whether this verse was to be rejected or its authenticity doubted. The reply of the Holy Office, given Jan. 13, was "No" in both particulars.

The Pope strongly disapproved of the celebration of the nineteenth centenary of the Redemption, as he had previously disapproved of a similar centenary of the birth of the Blessed Virgin. He demonstrated his usual activity in the matter of ecclesiastical studies by several important reforms in the Vatican seminary, the seminaries of Spain, Mexico, and South America, as well as by a fatherly letter concerning the attendance at Italian universities of members of religious or teaching orders or of the secular priesthood. During the year the King of Siam visited him at the Vatican, as also did the extraordinary ambassador of the Shah of Persia.

Leo XIII has pleased all the lovers of art by the restoration of the Borgia apartments, in which were many masterpieces of the Renaissance. Reproductions of paintings of this epoch were published in a magnificent work, copies of which were sent by the Pope to the sovereigns of Europe and to President McKinley. The long and tedious conflict concerning the new Church of St. Joachim, at Rome, was settled by a decision in favor of the Pope, and the submission of the Abbé Brugidou, formerly pastor of that church.

Two saints were canonized by the Consistory of Cardinals in the year, Anthony M. Zaccaria, founder of the Barnabites, and Peter Fourier, of Mattaincourt, surnamed the Apostle of Lorraine. A consistory held in April created four cardinals: Most Rev. J. M. Martin de Herrera y de la Iglesia, Archbishop of Santiago de Compostella, born Aug. 26, 1835; the Most Rev. P. Ercole Coullié, Archbishop of Lyons, born March 14, 1829; the Most Rev. J. W. Labouré, Archbishop of Rennes, born Oct. 27, 1841; and the Most Rev. W. M. Romano Sourrien, Archbishop of Rouen, born Feb. 27, 1825.

Statistics.—Five cardinals died in the year 1897: William Sanfelice di Acquavella, Archbishop of Naples; Angelo Bianchi, Prodatary, Bishop of Palestrina; Camillo Siciliano di Rende, Archbishop of Benevento; Anatolo Moneschillo y Viso, Archbishop of Toledo, Patriarch of the West Indies; Joseph Guarino, Archbishop of Messina.

The Roman Catholic Church is governed by the Bishop of Rome as its head. He is assisted by a senate, known as the Sacred College of Cardinals. This body when complete numbers 75. The members are ranked by ancient custom in 3 divisions: Cardinal bishops, of whom there are 6; cardinal deacons, of whom there are 16; and cardinal priests, of whom there are 53. Each cardinal has what is called a title—that is, a local church at Rome—of which he is nominally the head or pastor. The episcopate of the Catholic Church is divided into patriarchal, archiepiscopal, and episcopal sees. These again are divided into the Latin rite and Oriental rite. There are 8 Latin patriarchal sees, which have now only an historical importance—Constantinople, Alexandria, Antioch, Jerusalem, Lisbon, East Indies, West Indies, and Venice. The Oriental patriarchal sees are 6: Antioch, from which are named three patriarchs, of the Melchite rite, the Maronite rite, and the Syriac rite; Cilicia, of the Armenian rite; Babylon, of the Chaldaic rite; and Alexandria, of the Coptic rite.

There are 191 archiepiscopal sees in the Catholic Church, of which 173 belong to the Latin rite. The episcopal sees number 767, of which 714 are of the Latin rite. There are besides certain abbeys, archpresbyteries, priories, prelates, and prelatures of an episcopal character, 17 in number, making in all some 1,064 officers of episcopal or quasi-episcopal character or jurisdiction.

The Catholic Population of the World.—In 1897 the number of Catholics was reckoned as follows: Europe, 158,753,710; Asia, 9,320,000; Africa, 2,800,000; America, 51,100,000; Oceania, 980,000; total, 223,000,000.

The United States.—On Jan. 19 Dr. T. J. Conaty, formerly of Worcester, Mass., was installed as the rector of the Catholic University at Washington. Bishop Keane, his predecessor, having resigned, was called to Rome and was there raised to the dignity of Archbishop of Damascus *i. p. i.* and made a canon of St. John Lateran and advisor to the congregations of Propaganda and Ecclesiastical Studies. The Sisters of Notre Dame undertook the establishment of a college for the higher education of women by the purchase of 20 acres of land in the immediate proximity of the Catholic University.

The Catholic Summer School met, in July, at Plattsburg, N. Y., for a six weeks' session. A summer school was also held at Madison, Wis., and a winter school was conducted at New Orleans.

The question of members of the Greek Catholic Church living in the United States was settled in May by a pontifical decree permitting them to conform to the Latin rite, provided that no Greek church should be accessible to them. When, however, they should return to their own country, they must adopt again the Oriental rite.

The annual meeting of the archbishops of the United States was held at Washington, Oct. 31.

The following episcopal appointments were made during the year: Right Rev. James Trobec, Bishop of St. Cloud; Right Rev. Thomas J. Lenihan, D. D., Bishop of Cheyenne; Right Rev. John J. Monaghan, D. D., Bishop of Wilmington; Right Rev. Edward P. Allen, D. D., Bishop of Mobile; Right Rev. Edward W. O'Day, Bishop of Nesqueley; Right Rev. James Quigley, Bishop of Buffalo; Right Rev. John Fitzmaurice, Coadjutor Bishop of Erie; Right Rev. Edmond F. Prendergast, D. D., Titular Bishop of Seillio *i. p. i.*, Auxiliary Bishop of Philadelphia. The Most Rev. P. L. Chappelle was transferred from the archdiocese of New Mexico to that of New Orleans.

Other appointments: Very Rev. Joseph Eigenmann, appointed provincial of the Congregation of the Fathers of the Holy Ghost in the United States; Rev. Father Fidelis, C. P., elected general consultor of the Passionist Congregation for the United States; Very Rev. Edward J. Purbriek, S. J., appointed provincial of the New York and Maryland provinces of the Jesuit order to succeed Very Rev. William O'B. Pardow; Very Rev. George Deshon, elected superior general of the priests of the Institute of St. Paul the Apostle.

The College of St. Francis Xavier, in the city of New York, on June 21, celebrated its golden jubilee. On Dec. 5 was celebrated the fiftieth anniversary of the Cathedral of Milwaukee. Most Rev. Patrick J. Ryan, Archbishop of Philadelphia, celebrated his twenty-fifth anniversary of episcopal consecration on April 21. The golden jubilee of Very Rev. Augustine F. Hewitt, Superior General of Priests of the Institute of St. Paul the Apostle was celebrated on March 27, and was followed by his death on June 3. Other deaths were: Most Rev. Francis Janssens, D. D., Archbishop of New Orleans, on June 12; Most Rev. Thomas L. Grace, Bishop of St. Paul; Right Rev. J. T. Butler, D. D., Bishop elect of Concordia, Kan.; and Rev. Father Havermans, of Troy, N. Y., the oldest priest in the United States.

Alaska.—The Very Rev. John B. Rene, S. J., was made Prefect Apostolic of Alaska, with residence at Juneau City. There are in Alaska 11 priests, 8 churches, 3 hospitals, 5 schools, and 2 orphanages with 250 pupils.

Canada.—The hierarchy of Canada is composed of 8 archbishops and 24 bishops. The clergy number 2,917, of which 2,208 are diocesan, 709 religious. There are 2,555 churches and chapels, and 14 seminaries with 711 students. There are 85 schools or colleges for boys and 275 academies for girls. The charitable institutions are 240. The Catholic population numbers 2,092,936. The most important religious event of the year was the encyclical of the Pope, issued to the Canadian episcopate on Dec. 8, by which he counseled patience under the oppressive legislation that took from the Catholic people of Manitoba their established rights in the matter of schools. He advised moderation, mildness, and charity, in order thereby to obtain more quickly a thoroughly Christian legislation. Until that time he desired the Catholics to draw from the existing laws all the good possible, and, where it might prove necessary, to found schools themselves, and to provide them with teachers who should not be inferior in learning and training to the teachers of the state schools.

For furthering the adjustment of the Manitoba school question, the Pope appointed Right Rev. Mgr. R. Merry del Val apostolic delegate to Canada. Mgr. Paul Bruchesi was consecrated Archbishop of Montreal, Aug. 8. The episcopal see of Vancouver island was made vacant by the death of Right Rev.

John N. Lemmens, Aug 31. Right Rev. J. E. Legal was appointed Conductor Bishop of St. Albert.

England.—Among the chief events of the year was the passage of the educational bill, which was much desired by Roman Catholics, as it embodied the principles of denominational education. A desire long cherished by English Catholics was at last satisfied by the pontifical permission to study at the Universities of Oxford and Cambridge. Houses of study were at once opened in both of these institutions for Catholic youth, and before the close of the year there were at Oxford more than 41 Catholic students.

The Queen's jubilee was celebrated with much enthusiasm by the Catholics of England. Cardinal Vaughan issued a pastoral letter in praise of her Majesty's reign and general policy. The Catholic hierarchy of Australia joined in the same sentiments. The following words express the sentiments of the address: "The auspicious event thus commemorated, as it is without precedence in the history of the empire, so does it mark an epoch glorious beyond a parallel in the expansion of commerce, in the spread of intellectual culture, in the development of scientific research, and in the general elevation of the social condition of the people. Of the many measures of state policy that have left their impress on your reign we note with special interest the adoption of the great principles of religious equality as being secured to all your Catholic subjects, and we would fain recognize in the manifold blessings which benign Providence has bestowed the merited reward of an enlightened legislation." During the year the Anglican archbishops made a reply, temperate in tone, to the papal bull "Apostolicæ Curæ," of the preceding year, whereby the validity of English ordinations had been formally rejected by the Pope after hearing the report of a special commission of theologians. In September the Catholic Church of England celebrated the thirteenth centenary of the arrival of St. Augustine and his missionaries at Ebbfleet, in Kent; all the bishops of England and representatives of the French episcopate were present.

There are in England 25 Catholic episcopal sees, with 1 archbishopric and 1 cardinal. The clergy number 3,000, of whom 2,143 belong to the diocesan clergy and 947 to the religious orders. There are 1,812 churches or chapels.

Right Rev. John Carroll, third Bishop of Shrewsbury, died Jan. 14.

Ireland.—The most important event of the year was the agitation for the establishment of a Catholic university. The promise of this very desirable institution, which seemed so difficult to obtain, was at last brought about in the speech of Mr. Arthur Balfour, in the House of Commons, proclaiming it the desire and intention of the Government to grant to Ireland a specifically Catholic university. This seemed necessary on account of the Catholic opposition to Trinity College, Dublin, and the 3 Queen's colleges, in which alone the Irish Catholics have hitherto been able to obtain a university education in their own country. In June the thirteenth centenary of the death of St. Columba was celebrated on the Scotch island of Iona by pilgrimages, celebration of masses, and discourses. Not only the Catholics, but Anglicans and Presbyterians held such celebrations. It was a public acknowledgment that to a great extent the British Isles owed the benefit of civilization and religion to St. Columba, born in Donegal, in Ireland, and the parent of numerous Columban monasteries in Ireland, Scotland, and England. Another event of importance was the translation to Ireland of the relics of the blessed Thaddeus McCarty, an Irish bishop of the fifteenth

century, who died in the odor of sanctity and was buried at Ivrea, in northern Italy. Finally the Irish bishops issued to their parishes an important pastoral concerning the activities of the Church in reference to political affairs. The following words give the spirit of this document: "No matter what given line of action may conduce to the temporal prosperity, whether of individuals or of a people, or to the advancement of a political cause, worthy in itself of all encouragement and praise, that line of action becomes unlawful in the light of Christian morality if it be in conflict with any principle of morals." During the year there took place a large and important pilgrimage of the Irish clergy and people to Rome. The vacant episcopal see of Rome was filled by the appointment of Right Rev. Dennis Kelly, D. D.

France.—The Pope repeated during the year his instructions to the bishops and faithful of France, inculcating a reconciliation with the republic and the existing form of government. There was much enthusiasm in the direction of the canonization of Joan of Arc. A pilgrimage of French workmen visited the Pope in August. In most of the French dioceses services were held in honor of the Franco-Russian alliance.

Germany.—The archiepiscopal see of Freiburg, in Baden, long vacant as the result of a conflict between the civil authorities and the cathedral chapter, was filled by the appointment of Bishop Kempl, of Fulda. In the year the venerable Father Knopp, who had established the famous water cure at Wörishofen, passed away.

Norway, Sweden, Denmark.—In the northern kingdoms the Catholic Church, so long excluded from them, made much progress in the year 1897. The Norwegian Storting abrogated in part the last of the restrictions against Catholicism, by which the Jesuits and other religious orders were forbidden to establish themselves in the country. The restrictions remained in force against the Jesuits as an order, although they may remain there individually. The other religious orders, male and female, were allowed to establish themselves in that country.

Russia.—Several favorable modifications took place in the relations of the Holy See to Russia. They were only concessions of detail, but none the less important as showing an apparent amelioration in the relations which had been strained for some time. As a result of one concession the Catholic bishops of Russia were permitted to go to Rome without a special *ukase*. Seven new bishops were nominated at once and consecrated. It was also stipulated that the Uniat Catholics, 3,000,000 of whom adhered to Rome at the end of the sixteenth century, should thenceforth be left to worship undisturbed. Only a few thousands of them were found still faithful to the Roman communion. This question was always one of the most burning points between the two powers. The question of the obligatory teaching of the Russian language in all the Polish seminaries, under the control of a Russian official, remained still a cause of dissension. No complete peace was concluded between Russia and the Holy See, and all relations between the bishops and the Pope were still carried on by means of the Ministry of Worship, which involved the refusal of a free communication of the episcopacy with Rome. The Poles were not all satisfied with the conduct of the Pope; they accused him, though wrongfully, of separating the cause of religion in Poland from the general national aspirations of the entire Polish people. The Russian priest Tolstói, a relative of the writer, was severely punished for the conciliatory attitude which he manifested toward the Pope during a somewhat

lengthy stay at Rome. In all these matters the most anti-Catholic influence was that of Pobedonostsev, who was a champion of a Russification by which the Protestants of Finland and the Catholics of Poland were equally to be forced into a system that meant the destruction of both religions.

Switzerland.—The fourth International Scientific Congress of Catholics was held at Freiburg about the middle of August, and was attended by some 700 members from all parts of Europe and from the United States. The third centenary of the death of blessed Peter Canisius was celebrated in that town on the same occasion, this having been the seat of his labors; at the same time an encyclical letter to the bishops of Switzerland, Austria, and Germany was received, in which the Holy Father urged again the principles and methods of Catholic education.

Spain.—The most notable ecclesiastical event of the year was the excommunication of the Minister of Finance by the Bishop of Majorca for the confiscation of certain property belonging to the sanctuary of Lluch; the confiscation had been ordered by the civil authorities. After some negotiations the matter was amicably settled.

Italy.—The relations of the Holy See with the Italian Government did not substantially change in the year 1897. The prohibition to Catholics to vote in state elections was maintained by a repetition of the previous papal advice. Several congresses of a particular or general character were held in pursuance of Catholic interests, at Venice, Genoa, Milan, and elsewhere in Italy. This work of Catholic congresses, general and local, attracted the serious attention of the Italian Government, which issued late in the fall a series of circulars of a repressive nature. During the year the fifteenth centenary of St. Ambrose was celebrated at Milan, and a colossal statue was erected at Bagnorea to the great Franciscan theologian St. Bonaventura.

Foreign Missions.—In China the church in Tientsin was formally dedicated, in the presence of French officials and Chinese mandarins. This was taken as an official reparation of the cruel massacre perpetuated in 1870, whereby several French missionaries and sisters lost their lives, together with many native Catholics. The murder of two German missionaries by a Chinese mob led to a demand for indemnity on the part of the German Emperor, which ended in the seizure and retention by the German authorities of an important port and extensive territory.

The notable events of the year in Japan were the opening of a new church at Sendai, a spot famous in the Catholic history of Japan, of the Church of the Twenty-six Martyrs at Nagasaki, and of the hospital of Osaka.

In Turkey during the Turco-Grecian War the Pope interfered with success at Constantinople for the protection of Catholic and other Greeks in that city.

The Catholic missions in Madagascar increased rapidly under the protection of the French Government. There were in 1897 in Madagascar 61,464 Catholics, with 258,956 catechumens or persons preparing for baptism.

From the reports of the Seminary of Foreign Missions at Paris it appears that in the missions controlled by that society there were in 1897 38,882 adult baptisms and 172,716 baptisms of pagan children. The report of the *Lions Society of the Propagation of the Faith* shows that in 1897 the sum of 517,113 francs was raised for missionary purposes. Similar associations existed in all parts of the Catholic world.

In general in 1897 the Catholic Church had 13,300 missions in foreign or pagan lands. Of these

8,500 were French. There were 4,500 brothers (laymen) engaged in the same work. Some 52,000 women were occupied as sisters in these missions, and of these 33,000 were French; so, too, of the 119 priests murdered in these missions 95 were French, which is equivalent to saying that the foreign missions of the Catholic Church were chiefly carried on by the French.

ROUMANIA, a monarchy in eastern Europe. The legislative power is vested in a Senate of 120 members, elected for eight years by property holders divided into two classes, and a Chamber of Deputies containing 183 members, elected for four years by all the people who pay taxes, divided into three electoral classes. The reigning sovereign is Carol I, a prince of Hohenzollern-Sigmaringen, who was elected Domn of Roumania on April 20, 1866, and was proclaimed King on March 26, 1881. The ministry at the beginning of 1897 was made up as follows: President of the Council and Minister of Agriculture, Commerce, Industry, and Domains, M. Aurelian; Minister of Justice, M. Pheudre; Minister of Public Instruction and Worship, M. Mazerco; Minister of War, Gen. C. Budisteano; Minister of Foreign Affairs, C. J. Stoicesco; Minister of Finance, G. C. Cantacuzino; Minister of the Interior, M. Lascar; Minister of Public Works, M. Porumbaro.

Area and Population.—Roumania has an area of 48,307 square miles, with a population in December, 1894, of 5,417,249. The number of marriages in 1896 was 47,230; of births, 232,417; of deaths, 166,189; excess of births, 66,228. Bucharest, the capital, had 232,009 inhabitants in 1894.

Finances.—The revenue in 1896 was 202,507,632 lei, or francs, and the expenditure 216,560,567 lei, leaving a deficit of 14,052,935 lei. The budget for the financial year 1898 makes the revenue 215,153,000 lei, of which direct taxes produce 33,610,000 lei, indirect taxes 61,160,000 lei, State monopolies 50,170,000 lei, domains 25,383,000 lei, public works 16,838,000 lei, the Department of the Interior 10,242,000 lei, that of Finance 4,570,000 lei, that of War 1,325,000 lei, that of Foreign Affairs 160,000 lei, that of Worship and Instruction 200,000 lei, that of Justice 200,000 lei, and other sources 11,295,000 lei. The total expenditures are set down as 215,153,000 lei, of which 76,215,109 lei are for the service of the public debt, 66,500 lei for the Council of Ministers, 6,146,898 lei for the Department of Domains, 5,642,070 lei for that of Public Works, 18,510,787 lei for that of the Interior, 25,324,927 lei for that of Finances, 44,470,335 lei for that of War, 1,635,181 lei for that of Foreign Affairs, 27,084,424 lei for that of Worship and Instruction, 6,613,196 lei for that of Justice, and 443,573 lei for a fund for supplementary and extraordinary credits. The public debt on April 1, 1897, amounted to 1,240,432,700 lei, on which the annual charge is 73,291,518 lei.

The Army and Navy.—Military service is obligatory for all Roumanians from the age of twenty-one. The period of service is seven years with the colors or on leave, and two years in the reserve, but active service in the permanent army must not exceed three years in the infantry, four years in the territorial cavalry, or five years in the territorial infantry. There are four army corps of two divisions each, with a special division for the Dobrudja. The peace effective of the permanent army in 1897 was 3,269 officers, 388 civil employees, 940 military cadets, and 54,445 rank and file, with 390 pieces of field artillery and 11,723 horses. The territorial army numbered 70,270 men, with 7,200 horses. The total war effective is 3,948 officers and 168,000 men, with 52,604 horses.

The naval force comprises a deck-protected cruiser of 1,400 tons, a school-ship, an aviso, 5 gun-

boats, 3 sloop gunboats, 3 first-class and 2 second-class torpedo boats, a vessel for the service of the mines, and 4 torpedo launches. The personnel numbers 120 officers and engineers and 1,000 men.

Commerce.—The value of the importations in 1896 was 337,922,929 lei, and of the exportations 324,056,652 lei. The imports of cereals were 4,000,000, and exports 276,500,000 lei in value; imports of fruits, vegetables, and colonial products were 23,400,000, and exports 14,700,000 lei; imports of drinks 1,000,000, and exports 2,400,000 lei; imports of animals and animal alimentary products 9,300,000, and exports 10,300,000 lei; imports of combustible materials 9,400,000, and exports 1,900,000 lei; imports of mineral products, glass, and crockery, 8,100,000, and exports 200,000 lei; imports of metals and metal manufactures 61,300,000, and exports 2,500,000 lei; imports of hides, skins, leather, and leather manufactures 15,100,000, and exports 1,200,000 lei; imports of timber and wood manufactures 6,400,000, and exports 7,400,000 lei; imports of textile materials and manufactures 150,900,000, and exports 2,800,000 lei; imports of paper 6,100,000, and exports 200,000 lei; imports of drugs, etc., 15,400,000, and exports 400,000 lei; imports of fats and oils 6,300,000, and exports 100,000 lei; imports of all other articles 20,800,000, and exports 3,500,000 lei. The capital and energy of the Roumanians have been applied hitherto to the raising of grain, while the mineral and forest resources have been neglected. Crude petroleum is found along the foot of the Carpathians toward Bukovina and Galicia, and in the plains below down to the Danube. Although wells have been worked for a quarter of a century, the industry is yet in its infancy, and suffers from lack of capital and technical knowledge. The chief aim is to supply the home market, and only 15 per cent. of the product crosses the frontier. The crude oil is to be found in enormous quantities, but well-sinking, boring, working, and transport are all defective. The recent agricultural crisis has directed the attention of the Roumanians more to their mineral wealth, and Hungarian, French, and German syndicates and the American Standard Oil Company have also obtained concessions for working oil wells.

The imports and exports were divided, in 1896, among various countries as follows, values being given in lei:

COUNTRIES.	Imports.	Exports.
Great Britain	78,967,000	111,951,000
Austria-Hungary	92,854,000	32,037,000
Belgium	9,890,000	113,849,000
Germany	95,807,000	17,033,000
France	25,883,000	8,788,000
Turkey and Bulgaria	15,471,000	15,494,000
Italy	7,525,000	10,310,000
Russia	8,121,000	6,159,000
Switzerland	4,647,000	47,000
Greece	2,393,000	383,000
All other countries	1,667,000	6,939,000
Total	337,922,929	324,056,652

The economic situation in Roumania has recently improved much. With a favorable harvest in 1896, and better prices for grain, the purchasing power of the country increased, and railroad receipts and Government revenue reflected the improvement, as well as the savings-bank returns.

Navigation.—There were 28,232 vessels, of 7,489,154 tons, entered at Roumanian ports during 1896, and 29,028, of 7,500,711 tons, cleared.

The merchant marine in 1896 comprised 271 sailing vessels, of 60,024 tons, and 28 steamers, of 1,054 tons. The Government has had 5 large steamers built in Glasgow and Kiel, with the object of transporting in Roumanian bottoms to Mediter-

anean, English, and German ports a part at least of the cereal exports.

Communications.—The state railways in operation in 1897 had a total length of 4,368 miles, while 189 miles were under construction and 578 miles were surveyed.

The post office in 1896 forwarded 12,289,991 letters, 8,286,827 postal cards, and 25,019,636 newspapers, circulars, etc. The receipts amounted to 5,579,760 lei; the expenses, including the telegraph department, were 8,598,607 lei. The telegraph lines had a length of 4,268 miles, with 10,150 miles of wire. The number of internal telegrams was 1,706,535, external telegrams 489,944, telegrams of service 96,070, telegrams in transit 81,572, total 2,373,121.

European Commission of the Danube.—Austria-Hungary, France, Germany, Great Britain, Italy, Roumania, Russia, and Turkey are represented on the International Commission that exercises police and other sovereign rights on the Danube below Brada and is authorized to collect tolls and dues to meet its expenses. It was created by the Treaty of Paris in 1856 for the purpose of removing the banks of sand and other obstructions at the mouths of the river and keeping them in the best navigable condition. Its powers, enlarged by the Treaty of Berlin in 1878, were prolonged till April 24, 1904, by the London treaty of March 10, 1883. The receipts in 1896 were 3,798,500 francs, of which 2,569,426 francs came from dues collected during the year and the remainder was a surplus carried over. The expenditures were 846,688 francs for administration, 569,740 for technical services, 196,113 for various charges, 589,848 for special expenditure during the year, and 311,271 for purchase of material and payment of accounts; total, 2,513,600 francs, leaving a surplus of 1,284,900 francs. There are besides a reserve fund and funds for pensioning employees and pilots, amounting to 1,881,849 francs. The number of vessels cleared at the Sulina mouth in 1896 was 1,713, of 1,794,534 tons, comprising 1,317 steamers, of 1,723,549 tons, and 396 sailing vessels, of 71,985 tons. Of the total number 609, of 1,097,737 tons, were British; 252, of 254,739 tons, were Greek; 103, of 113,113 tons, were Austrian; 77, of 79,682 tons, were Italian; 341, of 7,646 tons, were Turkish; 35, of 45,106 tons, were French; 117, of 44,785 tons, were Russian; 19, of 21,328 tons, were German; 12, of 19,117 tons, were Spanish; 34, of 18,587 tons, were Roumanian; 4, of 10,724 tons, were Belgian; and 13, of 19,400 tons, of other nationalities. The cargoes included 7,434,000 quarters of wheat, 1,395,000 of rye, 2,354,000 of maize, and 1,899,000 of barley.

Political Affairs.—The entire Cabinet tendered its resignation to the King on April 7. The National Liberal party had still a great majority in the Chamber and in the country, and the absence of its leader, Demeter Sturdiza, from the Cabinet was a source of weakness to it. He had been compelled to resign the premiership four months before in consequence of the arbitrary manner in which he had dealt with the case of the Metropolitan Primate Gennadius, and now his party wanted his services again at the helm. The new Cabinet was constituted on April 12, as follows: President of the Council and Minister of Foreign Affairs, Demeter Sturdiza; Minister of Finance, G. Cantacuzino; Minister of the Interior, M. Phocikidi; Minister of Agriculture, Commerce, Industry, and Domains, A. Stoilejan; Minister of Public Worship and Instruction, Spiro Karet; Minister of Public Works, I. I. C. Bratiano; Minister of Justice, Alexander G. Djuvara; Minister of War, Gen. A. Berendei.

The question of the right of foreigners to inherit or of foreign heirs to hold landed property in Rou-

mania came up during the ministry of M. Aurelian. In 1878 the Roumanian Constitution was revised, subsequent to the Treaty of Berlin, in order to admit Jews to citizenship. There was inserted a clause precluding foreigners, without distinction of religion, from acquiring property rights in real estate in Roumania. It was not supposed at that time that foreigners already owning such property in Roumania, which they did to the extent of 10,000,000 lei, could not bequeath the same to their children. J. C. Brătianu, then Premier, assured the Italian Government in a diplomatic note that such was not the intent of the law. However, when the clause came to be construed later by the Roumanian judges few of them were of the opinion that foreigners could inherit land in Roumania, many held that they could dispose of it by sale and keep the proceeds, and some considered that they were not even entitled to the value of the property thus inherited, and that it ought simply to be appropriated by the state. Foreigners of various nationalities affected by this law asserted the full right to possess inherited property, basing it on the Brătianu note, which they regarded as a condition of the subsequent recognition of Roumanian independence by Italy and other powers. The Aurelian Cabinet, wishing to establish the principle that foreign heirs, while not entitled to hold real estate, were entitled to the full value of their inheritances, introduced a bill into the Senate stipulating that such heirs should sell the property descending to them within three years. It was proposed to the foreign representatives that the new agricultural bank should purchase such property for the benefit of the peasantry. The diplomatic representatives at Bucharest in an identical memorandum rejected this suggestion, and consequently the bill was abandoned. A project to allow foreign heirs to take possession of property was drawn up in March and subsequently came before the new Cabinet. While M. Sturdza was considering this question the Court of Cassation gave a final interpretation of the existing law in two decisions awarding to foreign heirs the value of the property inherited, but denying their right to hold the property. A treaty between Roumania and Turkey was said to have been signed July 12 by which Roumania, in return for advantages already conceded, bound herself to support Turkey in the event of the military aggression of Bulgaria. A difficulty arose between the Roumanian and the Greek governments because stringent measures were adopted by the former to prevent the return of Greek volunteers to Roumania. When King Carol visited Buda-Pesth to return the visit of the Emperor Franz Josef the Roumanian Irredentists organized a demonstration as a protest against the idea that the vindication of Roumanian claims to Transylvania had been abandoned. Speeches made while in opposition by Demeter Sturdza himself against the dual monarchy and in behalf of the oppressed Roumanians of Hungary were placarded by agents of the present Opposition on the walls of Bucharest. The Premier was once at the head of the agitation against the triple alliance and in behalf of unredeemed Roumania, and when he took office in October, 1895, he was obliged to give a reassuring explanation. A joint note addressed to the Balkan states by Count Goluchowski and Count Muravieff, praising their correct attitude during the Greco-Turkish war, was an official promulgation of the new Austro-Russian accord in the Eastern question, and the *entente* existing between Roumania and Austria-Hungary received fresh confirmation by the royal meeting at Buda-Pesth in September and the visit of King Carol to the Czar at St. Petersburg in November. M. Sturdza declared that Roumania had become a factor in the action of the

great powers and had acquired an influential position, as was shown by the interchange of visits with foreign sovereigns; that she was in sympathy with the triple alliance, which guaranteed universal peace, and also with the Russo-French alliance, which pursued the same object; that she was not one of the Balkan states, and had no part in their fermentations, but she assisted the powers in their efforts to preserve peace and upheld the understanding at which Germany, Russia, and Austro-Hungary had arrived for the maintenance of the *status quo* in the Balkans and of the independence of the Balkan states.

The Government introduced in the autumn two bills that savored strongly of anti-Semitism. According to one of them the Jews were only to be allowed to enter the secondary or intermediate schools on condition that there was room for them after all the Roumanian applicants had obtained admission. This practically amounted to their exclusion. The second bill exempted Jews from military service, calling upon them to pay a progressive tax instead. Most Jews were satisfied with this, but the younger generation, hoping through military service to obtain naturalization, began to hold public meetings against the Government proposal, to which the Opposition also objected as being unfair to the Roumanians themselves, who alone would be called upon to discharge military duties. At some of these meetings an angry tone prevailed. One of them was broken up by Roumanian students, who were in no way restrained by the police. The newspapers that usually reflect the views of the Government condemned not the rioters, but the Jews, who had exasperated the Roumanians. The mob of Bucharest was stirred up by the controversy, and on Dec. 5 a serious riot occurred. The authorities had taken no precautions, although inflammatory placards had been printed, and when riotous processions passed through the streets smashing windows the detachments of gendarmes that followed, ostensibly to preserve order, remained entirely passive. The mob attacked Jewish shops with iron bars and sticks and pillaged more than a dozen. Many persons were wounded. In the course of the night 100 arrests were made. Disturbances took place simultaneously in several places in Moldavia, and in Galatz more than 100 shops were sacked and the synagogue was damaged.

RUSSIA, an empire in northern Europe and Asia. The throne is hereditary in the order of primogeniture in the dynasty of Romanoff-Holstein-Gottorp. The Government is an absolute monarchy in which the legislative, judicial, and executive powers are united in the Emperor. The Emperor, otherwise called the Czar, is assisted by a Cabinet of ministers, each of whom has charge of an executive department; by a Council of State that examines and passes upon projects of law submitted by the ministers; by a Ruling Senate that watches over the general administration and superintends the judiciary; and by a Holy Synod that directs religious affairs. The Czar is the head of the national Russian Church, which follows the Orthodox Greek Catholic rite and maintains the relations of a sister Church with the Patriarchates of Constantinople, Jerusalem, Antioch, and Alexandria. The reigning Emperor of All the Russias is Nicholas II, born May 18, 1868, who succeeded his father, Alexander III, on Nov. 1, 1894. The Committee of Ministers at the beginning of 1897 was made up as follows: Minister of the Imperial House and Appanages, Gen. Count J. J. Vorontzoff-Dashkoff; Minister of War, Gen. P. S. Vannovsky; Minister of Marine, Vice-Admiral P. P. Tyrtoff; Minister of the Interior, J. L. Goremykin; Minister of Public Instruction, Count J. D. Delianoff; Min-

ister of Finance, S. J. Witte; Minister of Justice, N. V. Muraviev; Minister of Agriculture and State Domains, A. S. Yermoloff; Minister of Railroads and Communications, Prince Hilkoff; Minister of Finland, Lieut.-Gen. von Dachn; Controller General, T. J. Filippoff; Procurator General of the Holy Synod, K. P. Pobedonostsev; without portfolios, D. M. Solsky and N. J. Stoyanovsky. The last named was acting Minister of Foreign Affairs from the time of the death of Prince Lobanoff, in August, 1896, until the appointment on Jan. 11, 1897, of Count Michael Muraviev. The Grand Dukes George (his apparent), Vladimir, Alexis, and Michael were also members of the Cabinet, and J. N. Durnovo, Secretary of State, was its president. On May 24 Count Vorontzoff-Dashkoff retired from the office of Minister of the Imperial Court and Director of the Imperial Stud, which he had filled for sixteen years.

Area and Population.—European Russia has an area of 1,902,092 square miles, with a population, according to the provisional results of the census of Feb. 9, 1897, of 94,188,750, consisting of 46,433,636 males and 47,755,114 females. Poland has an area of 49,157 square miles and a population of 9,442,590, comprising 4,733,879 males and 4,698,711 females. The area of the Grand Duchy of Finland is 144,255 square miles, with an estimated population of 2,563,000. The area of the Caucasus is 180,843 square miles and the population is 9,723,553, comprising 5,129,931 males and 4,593,622 females. Siberia has an area of 4,833,496 square miles and a population of 5,731,732, comprising 2,959,557 males and 2,772,175 females. The area of Russian Central Asia is 1,548,825 square miles and the population is 7,590,275, divided into 4,084,900 males and 3,505,375 females. The aggregate area of the Russian Empire is 8,660,282 square miles, including internal waters, and the total population is 129,839,900. The cities having in 1897 more than 100,000 inhabitants were the following: St. Petersburg, 1,267,023; Moscow, 988,610; Warsaw, 614,752; Odessa, 404,651; Lodz, 314,780; Riga, 282,943; Kieff, 248,750; Kharkoff, 170,682; Vilna, 159,568; Saratoff, 133,116; Kazan, 131,508; Ekaterinoslav, 121,216; Rostov, 119,889; Astrakhan, 113,075; Tula, 111,048; Kichineff, 108,506.

Finances.—The receipts of the treasury in 1895 were 1,255,819,000 rubles from ordinary and 162,275,000 rubles from extraordinary sources; total, 1,418,094,000 rubles. The expenditures were 1,137,810,000 rubles for ordinary and 383,009,000 rubles for extraordinary purposes; total, 1,520,819,000 rubles. The budget estimate of ordinary revenue for the financial year 1897 was 1,318,366,495 rubles, and of the total receipts, including 3,808,627 rubles from extraordinary sources and 91,795,936 rubles from the loan of 1891, 1,413,971,058 rubles. Of the ordinary receipts 39,921,328 rubles came from land and personal taxes, 44,047,800 rubles from trade licenses, and 13,854,500 rubles from the 3-per-cent. tax on incomes from invested capital, making the total receipts from direct taxation 97,823,628 rubles; 159,687,100 rubles came from customhouse duties, 284,900,000 rubles from the tax on drink, 34,917,000 rubles from the tobacco tax, 21,061,000 rubles from naphtha oils, 47,526,000 rubles from beet-root sugar, 7,015,500 rubles from matches, 39,169,696 rubles from stamps, 17,355,000 rubles from succession duties, 4,200,000 rubles from passports, 9,000,000 rubles from the tax on railroad and express passengers, 3,000,000 rubles from the fire insurance tax, and 7,086,815 rubles from various duties, making the total receipts from indirect taxation 625,918,111 rubles; 3,781,430 rubles came from the mines, 1,303,750 rubles from the mint, 26,363,700 rubles from the post office, and 15,696,000 rubles from the

telegraphs, making the total from state monopolies 47,144,880 rubles; the receipts from rent of domains, etc., were 14,523,000 rubles; from sales of domain lands 508,429 rubles; from the produce of state movable property 2,861,471 rubles; from forests 32,400,340 rubles; from state mines, factories, technical institutions, and stores 24,566,351 rubles; from state railroads 259,998,944 rubles; the Government's share in receipts of private companies, 1,821,000 rubles, making the total from state domains and property 353,260,504 rubles; the payments for the redemption of land by peasants amounted to 87,678,000 rubles, and various other receipts to 66,541,272 rubles, including 27,981,526 rubles from the recovery of loans, 14,848,827 rubles repaid by railroad companies, 16,809,629 rubles of interest on various funds, and 1,650,000 rubles of war indemnity.

The total expenditure for 1897 was estimated at 1,413,971,058 rubles, of which 1,284,858,862 rubles were ordinary disbursements and 129,112,196 rubles extraordinary outlay for the construction of railroads. Of the ordinary expenditures 369,116,694 rubles were for the service of the debt, 2,660,828 rubles for the superior Government bodies, 19,632,364 rubles for the Holy Synod, 12,819,667 rubles for the Ministry of the Imperial House, 4,762,138 rubles for the Ministry of Foreign Affairs, 284,379,994 rubles for the Ministry of War, 59,902,175 rubles for the Ministry of Marine, 304,135,429 rubles for the Ministry of Finance, 33,431,000 rubles for the Ministry of Domains, 25,495,487 rubles for the Ministry of Public Instruction, 236,910,346 rubles for the Ministry of Roads and Communications, 79,502,825 rubles for the Ministry of the Interior, 42,815,033 rubles for the Ministry of Justice, 6,810,644 rubles for the Controller General's office, 1,543,818 rubles for the imperial stud, and 12,000,000 rubles for unforeseen expenses. The extraordinary expenditure comprises 64,500,000 rubles for the Siberian Railroad, over 33,500,000 rubles for other railroads, and nearly 31,000,000 rubles for rolling stock.

The public debt on Jan. 1, 1897, amounted to 2,028,826,100 metallic rubles and 2,857,203,942 rubles payable in currency, making the total, reduced to credit rubles, 6,050,770,092 rubles, reckoning a metallic ruble equal to 1½ credit rubles. The financial accounts for the year 1897 showed a deficit of 80,000,000 rubles, occasioned by the purchase of 50,000,000 rubles in gold for the conversion fund and 26,000,000 rubles for gold transactions at the state bank. The ordinary revenue for the year amounted to 1,369,000,000 rubles, and the ordinary expenditure to 1,238,000,000 rubles; the extraordinary revenue to 43,000,000 rubles, and extraordinary expenditure to 253,000,000 rubles. The excess of expenditure over revenue was covered by drawing bullion from the treasury. The chief feature of the ordinary revenue returns was an increase of 61,000,000 rubles in the receipts of the Government railroads.

M. Witte announced at the beginning of 1897 his determination to carry out his scheme of monetary reform by the fixation of the ruble in gold. He had studied for years a plan for putting an end to the fluctuations of exchange. When he found that German speculators were making a profit out of dealings in paper rubles he prevented the exportation and importation of these by collecting a duty on them at the frontier. In preparation for his plan of fixing the gold value of the ruble he obtained gold abroad in such quantities that Russia had the largest gold reserve in the world. M. Vashnegralsky, when Minister of Finance between 1887 and 1892, added gold to the amount of 309,000,000 rubles to the stock in the treasury and the state bank, and M. Witte added 200,000,000 rubles more,

making the stock of gold, independent of 25,000,000 rubles that had passed into circulation, 804,000,000 rubles, equal to 1,206,000,000 paper rubles, when was 85,000,000 rubles more than the amount of notes issued. The paper rubles were current for only two thirds of the mint value of the silver ruble that they were supposed to represent, and the minister was not disposed to redeem them at their nominal value. He therefore took the current rate and made it the fixed legal rate. The first step toward the resumption of specie payments was announced in an imperial ukase on Jan. 15, 1897, ordering the minting of imperials of the same weight and fineness as the old ones, with an inscription designating their value as 15 rubles, instead of 10 as formerly. The fixing of the exchange on a gold basis was provisionally ordered in November, 1895, and since early in 1896 the state bank had been practically charged with the duty of cashing paper currency at the rate of 1 ruble 50 kopecks for 1 ruble in gold. The obligations of Russia which stipulate payment in metallic rubles are not affected by the new currency laws, being still payable in gold rubles at the old rate of 10 to the imperial. The total amount of paper notes in circulation on Jan. 1, 1897, was 1,121,282,000 rubles, protected by 500,000,000 rubles in gold. A ukase issued on Sept. 10, 1897, provides that the future issue of paper rubles by the state bank shall be strictly limited in extent by the demands for the circulating medium, and must be secured by a gold reserve equal to half the amount issued up to 600,000,000 rubles and covering the whole issue in excess of that sum. The gold reserve at that date amounted to 750,000,000 rubles, while the paper in actual circulation was 1,068,000,000 rubles. The 1- and 3-ruble paper notes were withdrawn from circulation so as to enforce the currency of the new silver ruble pieces, which the public did not willingly accept on account of their inconvenient weight and bulk. As the new gold currency was not readily taken the banks were ordered in September to give 20 per cent. in gold in cashing all checks.

The Army.—Military service lasts in European Russia five years in the active army, thirteen years in the reserve, and five years in the first ban of the territorial army. The conscripts of Turkestan and the Amur territories, as well as the marine troops, serve seven years in the active army. Recruits who are excused from service in the active army as being below the physical standard are enrolled in the second ban of the territorial army. The Cossack cavalry after three years of preliminary instruction in their native villages serve four years in the first ban, four years in the second, and five years in the reserve. The contingent of recruits for the permanent army in 1896 was 274,659 men, not including 2,750 Caucasians. In 1895, out of 982,227 young men who reached the age of twenty-one, among whom were 46,846 Jews and 28,167 Mussulmans, 30,498, including 7,524 Jews, failed to present themselves, 154,237 were rejected by the surgeons, 229,143 were inscribed in the first ban of the Opoltschenie, or militia, and 272,992, including 14,118 Jews, were taken into the active army. The number of men called to the colors in 1897 was 283,000, besides 4,500 natives of the Caucasus to serve in local regiments. The empire is divided into 13 military circumscriptions, forming as many independent armies, besides the Transcaspian region and that of the Don Cossacks. The 6 circumscriptions embracing European Russia and the Caucasus are occupied by 22 army corps. The effective strength of the Russian army in time of war is estimated at 61,100 officers and 3,400,000 men. The field army has 18,000 infantry officers and 960,000 men, 3,500 cavalry officers and 110,000

men, 2,600 artillery officers and 90,000 men, and 800 engineer officers and 40,000 men; total, 24,900 officers and 1,200,000 men. The reserve troops have 12,000 infantry officers and 750,000 men, 2,500 cavalry officers and 90,000 men, 800 artillery officers and 26,000 men, and 200 engineer officers and 9,000 men; total, 15,500 officers and 875,000 men. The fortress troops number 2,300 infantry officers and 170,000 men, 1,400 artillery officers and 80,000 men, and 300 engineer officers and 10,000 men; total, 4,000 officers and 260,000 men. The replacement reserves consist of 4,000 infantry officers and 230,000 men, 800 cavalry officers and 40,000 men, 600 artillery officers and 30,000 men, and 100 engineer officers and 6,000 men; total, 5,500 officers and 306,000 men. The strength of the Opoltschenie is 9,500 infantry officers and 686,000 men, 350 cavalry officers and 12,000 men, 450 artillery officers and 28,000 men, and 100 engineer officers and 4,000 men; total, 10,400 officers and 730,000 men. The customhouse guards on the frontier number 800 officers and 29,000 men. The Russian infantry is still armed for the most part with the Berdan rifle of 1870, having a caliber of 10·7 millimetres. Several corps stationed on the European frontiers have the three-line repeating rifle of 1891, of 7·62 millimetres caliber, with 5 cartridges in the magazine. The cavalry have Berdan carbines and sabers, and some of the Cossacks carry lances also. The artillery armament consists of 1,750 field guns, mostly of the model of 1877, and 224 mortars. Finland has its own army, numbering on the peace footing 236 officers and 6,020 men.

The Navy.—Russia maintains four independent fleets, of which the largest is the Baltic fleet, comprising 10 first-class battle ships, 2 of which are not yet finished, 3 powerful cruisers, of which only the "Rurik," of 10,933 tons, is completed, 7 other first-class armored and 2 deck-protected cruisers, 11 second-class cruisers, 4 torpedo cruisers, 4 armored gunboats, 1 deck-armored gunboat, 10 coast guards, 3 school-ships, 39 torpedo boats of the first class, 81 of the second class, 6 armed yachts, and 7 armed transports, besides 4 deck-protected cruisers of the first rank, 1 armored cruiser of the type of the "Rossiya," and 19 torpedo-boat destroyers building. The improved armored cruisers, of which several are in contemplation, will have a displacement of 14,000 tons. The new deck-protected cruisers "Pallada," "Diana," "Aurora," and "Svetlana" will displace 6,630 tons and carry an armament of 6 6-inch, 6 4·7-inch, and 35 smaller quick-firing guns. The battle ships "Peresvet" and "Oslabiya," of 12,674 tons displacement, now building, will exceed in weight of fire the "Petrovskiy," "Poltava," and "Sevastopol," of 10,960 tons, completed in 1894 and 1895, which have 16 inches of armor and carry 4 12-inch guns in turrets, besides powerful secondary and quick-firing armaments.

The Black Sea fleet is composed of 7 battle ships, built between 1886 and 1897, 2 Popoffki monitors, 1 first-class cruiser, 6 gunboats, 3 torpedo cruisers, 20 first-class and 10 second-class torpedo boats, 3 school-ships, 3 armed steamers, and 8 transports, besides 13 auxiliary cruisers of the volunteer fleet which are employed in the merchant service in time of peace. This fleet will soon be augmented by 2 battle ships of the type of the "Sviatellia," of 12,480 tons, carrying 4 12-inch guns in barbettes and 8 6-inch, 4 4·7-inch, and 52 smaller quick-firing guns, and by 2 destroyers.

The Siberian fleet consists of 1 second-class cruiser, 4 gunboats, 2 torpedo cruisers, 7 first-class and 8 second-class torpedo boats, 2 armed steamers, and 5 transports. There are 4 more torpedo boats under construction. The flotilla in the Caspian

Sea consists of 4 gunboats, 4 side-wheel steamers, and 1 steamer for post service.

The personnel of the navy in 1897 comprised 1 admiral general, the Grand-Duke Alexis, 13 admirals, 28 vice-admirals, 37 rear admirals, 90 captains, 213 commanders, 654 lieutenants, 241 lieutenant commanders, 89 naval architects, 288 mechanicians, 297 surgeons, and noncommissioned officers and seamen making up a total of 38,086 men.

Commerce and Production.—The imports of merchandise into European Russia in 1896, comprising all that passed the European frontiers and those of Finland, the Black Sea, and the Caucasus, had a value of 540,267,000 rubles, in which total alimentary products made 69,805,000 rubles, live animals, 2,277,000 rubles; raw and partly manufactured materials, 306,656,000 rubles; and manufactured articles, 161,529,000 rubles. The total exports of merchandise over the European frontiers were 684,475,000 rubles in value, of which 382,919,000 rubles represented articles of food, 15,144,000 rubles live animals, 257,828,000 rubles raw and partly manufactured materials, and 12,906,000 rubles manufactured articles. The imports of cotton were 59,439,000 rubles in value; machinery and agricultural implements, 58,632,000 rubles; iron, 38,422,000 rubles; wool, 31,825,000 rubles; tea, 19,163,000 rubles; colors, 16,133,000 rubles; coal, 15,553,000 rubles; chemicals and drugs, 12,430,000 rubles; fish, 12,177,000 rubles; iron and steel manufactures, 10,908,000 rubles; hides and skins, 10,005,000 rubles; fruits, 9,069,000 rubles; wine, 7,027,000 rubles; oils, 6,909,000 rubles; paper and stationery, 6,804,000 rubles; raw silk, 6,704,000 rubles; aluminum bronze, 6,275,000 rubles; watches and clocks, 5,710,000 rubles; coffee, 5,604,000 rubles; metal plates, 5,482,000 rubles; indigo, 5,110,000 rubles; woolen goods, 4,625,000 rubles; lead, 4,551,000 rubles. Of the total value of the exports of European Russia the cereals made 323,177,000 rubles; flax, 72,364,000 rubles; seeds, 41,627,000 rubles; timber, 37,660,000 rubles; petroleum, 26,740,000 rubles; eggs, 19,775,000 rubles; hemp, 19,212,000 rubles; animals, 15,138,000 rubles; sugar, 11,830,000 rubles; legumes, 11,172,000 rubles; bread, 9,603,000 rubles; hides and skins, 8,295,000 rubles; hair and bristles, 8,132,000 rubles.

Enormous strides have been made in Russian manufactures and industry, whereby the output is now valued at 2,000,000,000 rubles, while the entire produce of agriculture does not exceed 1,500,000,000 rubles in value. Russia nevertheless exports 51 per cent. of the breadstuffs required by importing European countries, and the proportion of her exports compared with those of America increased in a marked degree between 1891 and 1896. The chief economic feature of wheat-growing in Russia is the low cost of production, lower even than on the best virgin soils of the United States, due to the existence of a belt of rich black earth extending across the southern part of European Russia and across the Ural mountains into Siberia. A prolonged drought in the summer of 1897 caused a bad harvest in Tula, Moscow, Orel, Tamboff, and Kursk and neighboring districts, where grass and trees were withered by the sun and the ground became so hard that it could with difficulty be plowed in order to sow the winter wheat. The provincial authorities and the Imperial Government made large advances of money to avert a famine.

Foreign capitalists, mostly French and Belgian, have within half a dozen years invested \$5,000,000 rubles in iron and coal mines and locomotive and car shops. In 1895 there were 1,412,047 tons of pig iron, 415,443 tons of wrought iron, and 557,155 tons of steel produced, while 767,774 tons of iron

and steel were imported. Coal showed a production of 8,870,968 tons, an increase of 354,889 tons over 1894. The textile industries have made rapid progress. In the spring of 1897 there was a strike of cotton spinners in new mills established in St. Petersburg that indicated that an organized labor movement was in course of development.

The Russian merchant navy on Jan. 1, 1897, consisted of 944 steamers and 3,891 sailing vessels. By a law which goes into effect in 1900 foreign vessels are forbidden to engage in the carrying trade between Russian ports of the Baltic, the Black Sea, and the Pacific coast.

Railroads.—The length of railroads in operation at the beginning of 1897 was 22,491 miles, not counting the railroads of Finland, the Transcaucasian line of 940 miles, nor 1,896 miles completed in Siberia. A railroad running from Volodga to Archangel and bringing this port on the White Sea in communication with Moscow was opened on Sept. 20, 1897. An extension of the Transcaucasian Railroad from Merv to the port of Koshk, on the Afghan border, was begun in December and will be completed in three years' time, the distance being 197 miles.

Posts and Telegraphs.—The post office in 1895 forwarded 230,654,000 internal and 29,844,000 foreign letters, 41,322,000 internal and 5,683,000 foreign postal cards, 392,439,000 internal and 20,648,000 foreign newspapers and circulars, and 16,545,000 internal money letters, of the value of 22,107,669,000 francs, and 554,000 foreign ones, having a value of 461,176,000 francs. The postal receipts were 160,290,628 francs; the expenses of the postal and telegraph service were 116,595,628 francs and the receipts from telegraphs 53,534,432 francs. The imperial telegraph lines had in 1895 a total length of 76,327 miles, with 160,358 miles of wire. Including the Anglo-Indian and private lines the total length of telegraphs was 80,979 miles, with 162,553 miles of wire. The number of paid internal messages in 1895 was 11,527,162; of service dispatches, 892,433; of international messages, 961,800 sent and 978,520 received; of transit messages, 186,828; total, 14,546,753 messages.

Internal Affairs.—On July 1, 1897, the monopoly of the spirit trade in accordance with M. de Witte's scheme for increasing the public revenue and at the same time abolishing the worst evils of the drink traffic, such as the sale of adulterated and unwholesome spirits, the encouragement of drunkenness, and illegal pawnbroking, was extended over the whole empire. The main features of the scheme are the abolition of the existing excise on grain spirits, the official control of the distilleries, which are to supply to the Government rectified spirits in such quantities and at such prices as may be decided, and the establishment of central spirit stores by the Government in each province, whence the spirits will be distributed in sealed vessels to special shops in towns and rural districts, where the liquor is retailed by official agents. Hotels and restaurants may also be licensed to sell the spirits. The new scheme was first applied tentatively in the four eastern provinces of Perm, Ufa, Orenburg, and Samara, with favorable financial results to the Government. On July 1, 1896, it was extended to Bessarabia, Volhynia, Ekaterinoslav, Kieff, Podolia, Poltava, the Taurida, Kherson, and the Black Sea provinces. The new scheme applies only to vodka, or whisky, and not to wine or beer, which continue to be sold under ordinary licensing arrangements.

The extension of Russia's frontiers induced the Government to offer state aid and certain privileges for the purpose of colonizing new territories on the confines of the empire, and at the same time relieving the poverty of populous districts suffering from the universal agricultural depression. When Siberia

ria began to be opened up by the great transcontinental railroad emigration to the undeveloped fertile districts of that part of the empire was also encouraged by the Government. More than 7,000,000 acres were surveyed and parceled out for colonization between 1893 and 1895. The migration of peasants to the new lands took on such dimensions that early in 1897 the Government found it necessary to stem the tide. Over 200,000 persons found their way eastward across the Ural mountains during 1896, and 25,000 of these were obliged to tramp back to their former homes in miserable plight. All the more fertile soil that was free of forest and accessible to the railroads had been disposed of, and the rough ground of the steppe that remained could only be managed by farmers having capital and employing a force of laborers. Consequently the Government stopped the grant of pecuniary aid to voluntary colonists and curtailed its assistance to pauper emigrants. During 1897 several thousands of selected emigrant families from among the Cossacks of Orenburg and the Don were transported at Government expense to the Amur district and there provided with lands and loans of capital and granted immunity from taxation and other privileges.

In July the judicial reforms instituted in European Russia in 1864 were extended to Siberia, so that the whole empire was at last endowed with a uniform modern system of public justice. The change was decided upon in 1896, and was finally announced on May 27 in a rescript of the Czar declaring that, in consequence of the construction of the railroad and other measures intended to satisfy the needs of Siberia, the development of civil life there had made such progress that the antiquated and imperfect system of justice that was in force could no longer meet the indispensable requirements of the country. When Nicholas II visited Warsaw in September he was received by the whole population with demonstrations of loyalty that were unprecedented in Poland.

Foreign Policy.—The predominance of Russia in the councils of Europe was not less apparent after the appointment of Count Muravieff than under the management of his predecessors. Germany had been gradually ousted from the position of leading European power and the French alliance had been employed for the political advantage of Russia. Without fighting a battle Russia has continued her conquests, supported by France and Germany and without objections from England or Austria, which a few years before had strenuously opposed the expansion of Russian interests. Bulgaria was completely under Russian influence, and the other Bal-

kan states had returned to their old allegiance. Japan had been deprived of the full fruits of her victories by the veto of Russia, and in the far East the Czar was slowly but surely establishing his supremacy in Pekin, and even British statesmen now considered it a political and economical necessity that Russia should have an ice-free seaport. Englishmen admired the firm, humane, and consistent policy by which Russia had within a few years introduced complete order and security into the conquered provinces of Central Asia, the masterly statesmanship that had changed the warlike tribes and fanatical town population into peaceable and loyal subjects of the Great White Czar, and the steady and well-directed enterprise that was transforming the desert into a garden and extending to these wild regions all the blessings of science and civilization. Reforms in Anatolia could not be enforced by Europe because Russia would not allow the Sultan's authority to be superseded. When the Greek question came to a crisis all the European powers waited to see what Russia would do. In Constantinople M. de Nelidoff could dictate to united Europe as well as to the Sultan. By the treaty signed by Prince Lobanoff and Marshal Yamagata on May 28, 1896, Korean independence was guaranteed under the joint protection of Russia and Japan, which declared their readiness to assist the King of Korea in maintaining order and to guarantee foreign loans for the purpose of establishing financial equilibrium, insuring the organization of the army and police, and arranged to keep detachments of troops of equal strength in the country as long as might be necessary for safeguarding their respective interests. Russian officers went to Korea in February, 1897, for the purpose of acting as military instructors and forming regiments of infantry and cavalry and batteries of artillery. The Emperor of Austria and later the German Emperor visited the Czar in August, a few weeks before President Faure arrived at Cronstadt to return the visit of the Czar. On this latter occasion the alliance between Russia and France was announced in unmistakable terms. In his meeting with the German Emperor the Czar spoke of the traditional bonds and the good relations happily established between the two neighboring empires as furnishing a guarantee for the maintenance of general peace, which formed the object of his constant efforts and fervent wishes, and in replying the German Emperor spoke of traditional and intimate relations, founded on an unshakable basis, and then promised to stand by the Czar with his whole strength in the great work of preserving the peace of nations.

S

SALVADOR, a republic in Central America. The legislative body is the National Assembly, a single chamber of 42 members, elected for each annual session by direct universal male suffrage. The President, who is elected for four years by the vote of the nation, is Gen. Rafael Antonio Gutierrez, inaugurated on March 1, 1895. The Vice-President is Dr. Prudencio Alfaro. The Cabinet in the beginning of 1897 was composed as follows: Minister of Foreign Affairs, Justice, and Public Instruction, Dr. Jacinto Castellanos; Minister of the Interior, Dr. Prudencio Alfaro; Minister of Finance and Public Works, Dr. Cornelio Iguaz; Minister of War and Marine, Estanislao Perez. It was reconstituted during the year, when the Diet of the Greater Republic of Central America assumed direction of foreign affairs, Dr. Juan F. Castro be-

coming Minister of War, Dr. Antonio Ruiz Minister of Public Works, Finance and Credit, and Justice, and Dr. Carlos Bonilla Minister of Charity and Public Instruction.

Area and Population.—The area of Salvador is estimated at 8,100 square miles, and the population at 803,534. Of the native inhabitants not more than 20,000 are of pure white race. The population of San Salvador, the capital, is about 50,000. The military forces are about 3,000 active troops and 18,000 militia.

Finances.—The budget for 1896 makes the total treasury receipts \$10,174,000, of which \$5,144,000 are import duties, \$273,000 export duty on coffee, \$2,524,000 the duty on spirituous liquors, \$202,000 stamp duties, and \$2,031,000 other receipts. Expenditures are set down at the total of \$9,745,000.

of which \$47,000 are for the National Assembly, \$54,000 for the executive, \$77,000 for foreign affairs, \$1,487,000 for the interior, \$2,845,000 for finance, \$1,908,000 for war and marine, \$339,000 for justice, \$738,000 for public instruction, \$1,417,000 for public works, \$443,000 for public security, \$209,000 for posts and telegraphs, and \$91,000 for other charges. The internal debt in March, 1896, amounted to \$8,000,000. The payment of the external debt has been undertaken by the London Works Company, limited, in return for valuable concessions. It amounted to £254,000 sterling. In August, 1897, the National Congress, in an extraordinary session, passed a bill putting the country on a gold basis, on account of the depreciation of silver. All custom duties were declared to be payable in gold only after October, 1897. The President was authorized to negotiate a foreign loan of \$2,500,000.

Commerce.—The products of the soil are coffee, indigo, sugar, and tobacco. Gold, silver, copper, iron, and quicksilver are found. The total value of the imports in 1896 was about \$13,000,000, and of the exports \$10,000,000. The exports of coffee were valued at \$7,500,000; indigo, \$2,000,000; tobacco, \$100,000. The foreign trade in 1895 was divided among the different countries as follows:

COUNTRIES	Imports.	Exports.
United States	\$714,000	\$4,392,000
Great Britain	1,217,000	1,694,000
France	467,000	3,125,000
Germany	319,000	2,364,000
Other countries	174,000	2,321,000
Total	\$2,991,000	\$13,896,000

During 1896 the arrivals at the three ports of the republic numbered 338 vessels.

Communications.—The railroad mileage is 73 miles. The telegraph lines have a length of 1,705 miles. The number of dispatches in 1896 was 60,682.

SANTO DOMINGO, a republic in the West Indies, otherwise called the Dominican Republic, occupying the eastern part of the island of Hayti, or Santo Domingo. The Congress is a single Chamber of 24 members, elected for two years by the direct suffrage of qualified voters. The Constitution was last revised on June 12, 1896. The President, who holds office for four years, is Gen. Usses Heureaux, first elected in 1886, and re-elected three in succession, the last time for the term beginning Feb. 27, 1897. The Vice-President is Gen. Wenceslao Figueroa. The Cabinet was composed in 1897 as follows: Secretary of the Interior and Police, Gen. J. D. R. Belancourt; Secretary of Foreign Affairs, Enrique Henriquez; Secretary of Justice and Public Instruction, S. E. Valverde; Secretary of Fomento and Public Works, Gen. T. Cordero; Secretary of Finance and Commerce, J. Alvarez; Secretary of War and Marine, Gen. T. D. Morales.

Area and Population.—The area is estimated at 18,045 square miles, with a population of 610,000. Santo Domingo, the capital, has about 20,000 inhabitants. The people are in part a mixed race, descended from the Spanish conquerors and the aborigines, and in part negroes and mulattoes, the descendants of former slaves.

Finances.—The revenue in 1896 was \$1,551,158 in gold, of which \$1,498,064 came from customs. The public debt on Aug. 9, 1897, amounted to \$4,236,750 sterling, besides a railroad loan of £500,000. An English syndicate, in October, 1897, obtained control of customs revenue for one hundred years, and also of the railroad to Puerto Plata, with the exclusive right to build other railroads, in return

for which the syndicate undertook to pay the debt due to an American syndicate and assume all the outstanding obligations of the Government, and made a new loan to the Government of \$7,500,000, on condition that the Government should not seek to contract other loans to be repaid for the period of five years. The syndicate was to receive and collect all duties on imports and exports and pay over to the Government for its interest 10 per cent. and a certain percentage of the revenue from customs.

Commerce.—The imports in 1896 were valued at \$1,703,595 in gold, and exports at \$2,008,817. The exports are indigo, coffee, sugar, copper, iron, sugar, logwood, hides, goat-skin and bones, cotton fabric, hardware, earthenware, and tinware, are the chief imports.

Communications.—The railroads in operation in 1896 had a total length of 116 miles, and have since been extended. The length of telegraph lines in 1897 was 456 miles. The post office in 1895 forwarded 685,638 internal letters and printed inclosures, and 240,950 in the international service.

SERBIA, a monarchy in southeastern Europe. The legislative body is the Skupstina, a single Chamber of 198 members, elected by the direct suffrage of male adult citizens who pay 15 dinars in direct taxes. The King is Alexander I., born Aug. 14, 1876, who succeeded as a minor on March 6, 1889, on the abdication of his father, Milan I. and entered on his personal reign on April 13, 1893. The ministry, formed in June, 1895, was composed as follows: President of the Council and Minister of Foreign Affairs, Stoyan Novakovich; Minister of the Interior, D. Marinkovich; Minister of Justice, A. Nisichich; Minister of War, Gen. D. Franasovich; Minister of Finance, H. Popovich; Minister of Public Works, M. Petrovich; Minister of Public Instruction and Worship, I. Karaclievich; Minister of Commerce, Agriculture, and Industry, W. Stoyanovich.

Area and Population.—Serbia has an area of 19,050 square miles. The population on Jan. 1, 1897, was 2,345,832, of whom 1,304,197 were males and 1,141,640 females. The number of marriages in 1896 was 20,841; of births, 26,732; deaths, 63,399; excess of births, 33,331.

Finances.—The budget for 1897 makes the total revenue 61,659,720 dinars, or francs, of which 20,803,720 dinars came from direct taxes, 3,000,000 dinars from customs, 2,927,000 dinars from excise, 2,500,000 dinars from law courts, 17,159,000 dinars from monopolies, 3,428,000 dinars from domains, posts, and telegraphs, etc.; 852,000 dinars from instruction and sanitary service funds, 5,700,000 dinars from the state railroad, and 3,290,000 dinars from other sources. The total expenditures were fixed at 61,255,607 dinars, of which 1,200,000 dinars were for the civil list, 390,000 dinars for ex-King Milan's allowance, 28,640 dinars for court employees, 12,747,596 dinars for the service of the debt, 120,000 dinars for the Skupstina, 234,000 dinars for general credits, 2,251,838 dinars for pensions and subventions, 1,816,128 dinars for justice, 4,822,180 dinars for public instruction and worship, 1,251,985 dinars for foreign affairs, 2,763,765 dinars for the interior, 8,302,475 dinars for finance, 14,115,000 dinars for war, 3,948,633 dinars for public works, 3,001,229 dinars for agriculture and commerce, 348,453 dinars for miscellaneous expenses, and 1,305,032 dinars for the Board of Audit.

The public debt on Jan. 1, 1897, amounted to 408,237,000 dinars, of which 254,429,000 dinars consisted of the 4-per-cent. conversion loan of 1895.

The Army.—Obligatory service for two years in the active army was enacted by the law of Jan. 6, 1896. The effective strength provided for in the budget of 1896 was 661 infantry, 6000

men, 101 cavalry officers and 1,400 men, 270 artillery officers and 4,000 men, 65 engineer officers and 1,000 men, 10 officers and 300 men in the train, 49 sanitary officers and 500 men, 68 administrative officers and 24 officers on the staff; total, 1,248 officers and 21,200 men, with 4,846 horses and 192 field guns. The war effective is 160,751 men of all arms in the regular army, 126,610 in the first ban of the militia, and 66,005 in the second ban; total, 353,366 officers and men.

Commerce.—The total value of the imports in 1896 was 33,448,000 dinars, of which 19,234,000 dinars came from Austria-Hungary, 4,122,000 dinars from Great Britain, 3,550,000 dinars from Germany, 1,609,000 dinars from Turkey, 1,428,000 dinars from the United States, and the remainder mainly from Roumania, France, Switzerland, Italy, and Russia. The exports were valued at 53,386,000 dinars, of which 47,035,000 dinars went to Austria-Hungary, 2,508,000 dinars to Germany, 1,989,000 dinars to Turkey, and the remainder mainly to Roumania, Bulgaria, and France. Of the exports 23,427,000 dinars were horticultural and agricultural products and 22,333,000 animals and animal products. The transit trade was 16,844,000 dinars.

Communications.—There were 377 miles of railroad in operation at the beginning of 1897. The telegraphs in 1896 had a total length of 1,980 miles, with 4,170 miles of wire. The number of messages in 1896 was 803,480, of which 672,100 were internal, 120,060 international, and 11,320 in transit. The post office in 1895 carried 8,124,000 internal, 116,000 international, and 1,934,000 transit letters.

The Simich Ministry.—The Radicals, who had abstained from political activity since the suspension of the Constitution in 1894, became active again in 1896, and at the close of the year carried a large number of the Progressists with them in a demand for a more vigorous prosecution of the Servian claims to Macedonian bishoprics, secured the passage of a resolution in the Skupshtina in favor of an amendment of the Constitution, and produced a Cabinet crisis. M. Novakovich and his colleagues offered their resignations on Dec. 27, 1896, and M. Simich, who was summoned from Vienna, where he represented the Servian Government, formed a new ministry on Dec. 30, which was composed of Moderate Radicals, the Progressists and the Liberals having declined to take part in a coalition Cabinet. The new ministry was composed as follows: President of the Council and Minister of Foreign Affairs, Georg Simich; Minister of Finance, Dr. M. Vuich; Minister of the Interior, Mirka Georgevich; Minister of War, Gen. Miskovich; Minister of Public Works, M. Velimirovich; Minister of Public Instruction and Worship, Andrea Nikodich; Minister of Justice, M. Milanovich. The Government in a circular letter to its representatives abroad said that the change was due to home affairs alone, and that it intended to maintain the traditional relations of Servia with Russia, and with Austria-Hungary. The Servian Government, while urging on the Porte the claims of the Macedonian Servians to have bishops of their own nationality, preserved a pacific course during the Greco-Turkish war, and in April received, with the Government of Bulgaria, an identical note from the Austrian and Russian Foreign Ministers expressing satisfaction at its correct attitude during the crisis. Bishop Ambrosius, the Greek ecclesiastic appointed to the see of Uskub by the Ecumenical Patriarch in spite of the protests of Servia, was removed before the close of the same month. Other concessions in regard to the Servian Church and schools were promised by the Sultan.

General elections were held in the beginning of July, and resulted in the return of 188 Radicals and 4 members of the Opposition. The Skupshtina was convened for an extraordinary session on July 13 to give its sanction to expenditures occasioned by the critical condition of affairs in the Balkans. The Chamber granted an extraordinary credit for warlike preparations. Arnauts of the sandjak of Kossovo committed many depredations on Servians on both sides of the border. The Servian Government called the attention of the Porte to the chronic disturbed state of the frontier, and declared its intention to pursue the marauding Albanian bands into Ottoman territory, if necessary. A Turco-Servian commission was appointed to inquire into the late raids. Subsequent attacks made almost simultaneously on seven frontier posts led the Servian Government to make a formal protest to the powers. The Ottoman Government subsequently posted troops on the frontier to prevent a recurrence of disorders. The dispute with the Ecumenical Patriarch was finally arranged by confirming Ambrosius as titular bishop, but appointing the Servian Archimandrite Firmilianos to direct the see.

The Georgevich Cabinet.—A fresh ministerial crisis was provoked by the return of ex-King Milan to Belgrade after Premier Simich had striven to prevent his coming. The father of Alexander I regarded the Radicals as his enemies because they had espoused the cause of Queen Nathalie in his divorce proceedings and also as inimical to his son. During the King's absence abroad with his father serious differences of opinion on questions of a financial, military, and political nature had arisen between him and his ministerial advisers. The King was specially averse to raising the constitutional question, which the ministers regarded as urgent and which they were pledged to settle at the earliest possible moment. On Oct. 19, the day of ex-King Milan's arrival with the King, M. Simich tendered the resignation of the whole Cabinet, which was at once accepted. M. Georgevich, the Servian minister at Constantinople, was intrusted with the task of forming a new ministry, which was completed on Oct. 23, as follows: President of the Council and Minister of Foreign Affairs, Dr. Vladan Georgevich; Minister of Finance, Steva D. Pryovich; Minister of Commerce, Agriculture, and Industry, Simon Lozanich; Minister of the Interior, Jefram Andonovich; Minister of Public Instruction and Worship, Andrea Georgevich; Minister of Justice, Costa Cristich; Minister of War, Col. Vukovich; Minister of Public Works, Col. Atanatskovich.

SIAM. an absolute monarchy in southeastern Asia. The reigning King is Chulalongkorn, born Sept. 21, 1853, who succeeded his father, Mongkut, on Oct. 1, 1868. The King is assisted by the Sabha Senabodi or Cabinet of Ministers, composed mostly of half-brothers of the King. The ministers are aided by European advisers in their several departments, and the whole administration has been organized under the direction of M. Rolin-Jacquemyns, formerly a Belgian Cabinet Minister. A Legislative Council, composed of active and retired ministers of state and at least 12 members appointed by the King, was instituted by the decree of Jan. 10, 1895, for the preparation and deliberation of laws. The reorganization and modernization of the administration was seriously begun after the French victories over Siam in 1893, which severed from the kingdom 110,000 square miles of territory and 3,000,000 people formerly subject to Siam. The treaty concluded with France on Oct. 3, 1893, made the Mekong the boundary between Siam and the French possessions in Indo-China,

and reserved a strip of 25 kilometres along the west bank of the river within which Siam must not station any military force, while the French are allowed to erect stations there. In January, 1896, the French and British governments made an arrangement guaranteeing the integrity and neutrality of the diminished Kingdom of Siam, embracing the basin of the Menam river and the Meklong, Peehaburi, and Bangpakong basins, with the coast from Muong Bang Tapan to Muong Pae, and including also the territory north of the Menam basin, between the Burmese frontier, as delimited in 1891, the Meklong river, and the eastern watershed of the Me Ing. The present area of Siam is about 245,000 square miles, with a population estimated at 10,000,000, not half of whom are Siamese, the rest being Laotians, Malays, Chinese, and immigrants from Cambodia, Burmah, and India. The immigration of Chinese coolies in 1896 was 37,475. Bangkok, the capital, has about 200,000 inhabitants, nearly half of whom are Chinese. The official and prevailing religion is Buddhism. Siamese is legally established as the official language. The King's revenue is approximately estimated at \$9,650,000, of which \$1,800,000 is collected from customs duties, \$3,450,000 from property and monopolies, \$600,000 from land taxes, and \$3,800,000 from various duties. All the taxes are farmed except the customs duties. There is no public debt.

The imports in 1896 were valued at \$14,747,000, against \$19,384,000 in 1895, and the exports at \$27,505,000, against \$25,280,000. The exports of rice in 1896 were valued at \$21,209,000; cattle, \$463,000; fish, \$427,000; pepper, \$278,000. There were 468 vessels, of which 333 were British, entered at the port of Bangkok in 1896, and 475 cleared, of which 336 were British. Over 85 per cent. of the tonnage was British, compared with 71 per cent. in 1886, 50 per cent. in 1876, and 25 per cent. in 1866. Not more than 5 per cent. of the fertile soil in the Menam valley has yet been brought under cultivation. Recently irrigation canals have been dug to extend the area of rice cultivation. Nearly all the skilled and the unskilled labor in the populous valleys is performed by Chinese, and most of the trade is in their hands. In the teak forests of the north Khamus, who are French subjects, and Burmese and Karens, who are British subjects, are the only workers.

The length of railroads in operation in 1897 was 179 miles, including the new line from Bangkok to Korat, which was opened on March 27. Concessions for other railroads have been granted. The telegraphs had a total length of 1,780 miles. There are numerous schools, in some of which English is taught. Progress has been made in judicial as well as in administrative reform. Domestic slavery is being gradually abolished. In the course of 30 years both the import and the export trade of Siam has nearly trebled. The export of teak has increased twentyfold.

The military forces have recently been augmented, and now consist of about 10,000 men, half of whom are in Bangkok. They are being armed with Mannlicher rifles. Ordnance has also been purchased recently. There is a corps of 800 elephants protected by bullet-proof armor. The army is commanded by Italian, Danish, and other European officers.

After the war of 1893 the French retained the city of Chentabun as a pledge for the fulfillment of the engagements entered into under the treaty of peace. Constant friction has ensued between the two governments. The French, instead of gaining in influence by their victory over Siam, have been systematically excluded from the Government posts and the profitable commercial concessions that have

been conferred on Europeans. The influence of the English over the King's favorite, on the other hand, more pronounced than ever, and the French in Indo-China attributed to this the continued unfriendliness of the Siamese Government. One of the stipulations of the treaty was that the native inhabitants of the left bank of the Meklong should be permitted by the Siamese authorities to return to their former homes. It was also provided that French subjects detained on any pretext whatever should be delivered over to the French authorities. When the Siamese Government gave no effect to these engagements, the French colonial officials, acting on the theory that all Annamites, Cambodians, and Laotians in Siam were French subjects, even though their families had been domiciled in Siam for centuries, granted certificates of consular protection to any person belonging to these races and to Chinamen who applied for them, declaring that they had come from the other side of the Meklong. Persons provided with such certificates were exempt from forced labor and from the jurisdiction of the Siamese courts. The wholesale adoption, as French subjects of the people of Siam consequently caused much annoyance to the Siamese Government, which was irritated also by the continued French occupation of Chentabun.

During 1897 King Chulalongkorn visited all the European capitals to study improvements that he might introduce into his country. While in Paris he discussed the differences between the two countries with French statesmen, and these conferences paved the way to a better understanding. M. Hanotaux consented to the abrogation of the clause in the treaty of 1893 by which the Siamese Government undertook to hand over all French Annamite and Laos subjects of the left bank of the Meklong as well as the Cambodians detained on any pretext. In January, 1897, the German minister was arrested by the police because his horse injured a Chinaman. For the violation of diplomatic immunity the Siamese Government made a suitable apology. About the same time Vice-Consul-General E. V. Kellett, while investigating a claim of an American citizen in the teak forests of northern Siam, was arrested because he was assaulted by soldiers when he demanded the release of his servant from police custody. At the request of the minister, J. Barrett, the American gunboat "Machias" was sent to Bangkok. The claim that Mr. Kellett was inquiring into was that of the estate of Dr. Cheek, to whom the Siamese Government had made a concession, and had loaned him implements and elephants for the purpose of getting teak wood out of the forests. Believing that he had violated his contract, the Siamese authorities seized the wood, and also the elephants, and abrogated the concession. For this a claim of \$200,000 was made through the American minister. The Siamese Government agreed to the arbitration of this claim, and to the investigation by a mixed commission of the case of Mr. Kellett. This investigation showed that the American consular officer was right in his assertion of extraterritorial jurisdiction, and consequently the Siamese Government apologized for the act of its officers and soldiers, and subjected them to punishment. The Cheek claim, together with the counterclaim of the Siamese Government against the estate, was referred to the decision of Sir N. J. Hamon, the British chief judge in China.

SIGNALS, NIGHT. Night signals have been used in a very crude form for hundreds of years; but no system for international use, for communication on land or sea, ever has been established, though several nations have adopted and used night-signal codes arranged to a given chart. The merchant

marine of the world has no established code. Night signals are used for many purposes, for communication between vessels at sea, between vessels and the shore, on railways as danger and headway signals, and by the army and navy. Each nation has its own secret plan and chart, the code book of which is protected in every way possible, and a piece of lead is attached to the cover, so that,

when in use on a war vessel it can be thrown overboard to prevent its falling into the hands of an enemy. In the army other means are provided for its destruction.

A simple, comprehensive night-signal code, as an auxiliary to the international commercial day-signal code, is still wanted. This would add much to the protection of life and property. Innumerable attempts have been made to establish a simple night-signal system. The latest was when President Cleveland made this the first subject to be acted upon by the International Maritime Conference of 1889. Signaling by day is easy, because there are many established means by which it may be done. Most of the day systems are operative only at short distances, depending on flags, disks, and semaphores. Flash signals by means of mirrors form the only day system now in use for signaling at a great distance.

It was not until after the loss of the White Star steamship "Atlantic," in 1873, that distinguishing signals were brought into use, and a special distress signal and signal to call a pilot for use on United States lake and sea coasts were adopted. On that occasion rockets and blue lights were displayed, and were mistaken for a salutation to a passing steamer, instead of distress signals, for which they were intended. The need of a distinguishing night-signal system was never fully realized until this disaster occurred. Now most of the steamship lines have adopted distinguishing night signals. These are registered in the Government bureau, and the list is published in several nautical almanacs. Some lines use a simultaneous display of pyrotechnic fires as a distinguishing signal—three lights, one forward, one amidships, and one aft. This is objectionable for these reasons: If a vessel is abreast, three lights at a long distance merge, and they are still more liable to be thus seen when approached head on. Should any one or two of these signals fail to burn, the display would not be perfect, and if seen at a distance the display were complete, it would not be understood by the party signaled, as they would not know that the first display was perfect. Simultaneous displays are the most objectionable and are more rarely understood. Signals of one or more colors in the same cartridge burning in succession do away with any chance of failure or misunderstanding.

The night signals in use prior to 1860 were torches, rockets, Roman candles, and red, white, and blue lights, besides lanterns with colored glass. In 1840 Benjamin Franklin Coston, an American, at

the age of nineteen, invented what are now known as the "Coston night signals," but he did not complete this invention. It was patented in 1859, several years after his death, by his widow, Martha J. Coston. This idea was first given to him by his conversations with Commodore Stockton and Commodore Stewart of the United States navy, on signals used in the maritime world. Marryat's numeral code of flags was then in use for day signaling, and Mr. Coston arranged a system of night signals applicable to this code, which is represented on the colored chart accompanying this article. The first complete signals made by Benjamin F. Coston were made in the Washington Navy Yard, where he was stationed as a master in 1845, one year before he retired from the navy and two years before his death. The ordnance square of the navy yard is named for him on account of this invention, and it is the only square in the yard named for a master, all others being named for officers of high rank. The Coston night signals were adopted by the United States navy, and the colors chosen were green, red, and white. All the distinguishing signals are given in "Bliss's Nautical Almanac."

Since these signals were first constructed many improvements have been made. In 1840 the composition fires were put up in waterproof boxes. When one was to be used the cover was removed and the box placed upon a board; port fire was then used to ignite it. The display was made from the surface or deck. The colors used were red, white, and blue in combination. Under the 1859 patent, as used by the United States navy during the civil war, compounds for producing red, white, and green were put up in cartridge cases made of tinfoil and Manila paper, and a quick match attached, the color green being substituted for blue, because it was not possible at that stage of the arts to produce a distinct, durable, and safe blue-light composition. The visibility of the colors should be the same at all distances. William F. Coston has overcome this, after trials covering several years. The so-called blue light made by the general fireworks manufacturers, and in use by the maritime world, is not a blue—it is a poor white light. The cartridge was so constructed as to be placed on a wooden handle, by which it was held while the display was made. In 1863 the cartridge was so constructed as to be placed in the socket of a peculiarly made pistol and to ignite by a percussion cap. This was the apparatus supplied to the United States army. In 1877 the United States navy adopted the Coston aerial night signal, invented by H. H. Coston, late captain in the United States Marine Corps. It now also uses search lights and the Adoise system, which is operated by a keyboard turning on and off incandescent red and white lights. The Coston aerial system was invented by H. H. Coston in 1863. Mrs. Martha J. Coston took out the first patent for friction-igniting signals in 1871. William F. Coston, the second son of Benjamin F. Coston, further improved the

IMPROVED HOLDER.

Coston signals by igniting them by means of a percussion cap, and made a signal combining aerial and surface display, thereby enlarging the scope of its utility. The patent was granted in 1881.

The signals were adopted by the governments of the United States, France, Italy, Denmark, Hol-

land, and Brazil. The first saving of life by the use of these signals was in 1803, when the "Monitor" foundered off Cape Hatteras, but the entire crew, numbering 26, were saved. The Coston signals were put into use in the United States Life-Saving Service when it was organized in 1873, and they have been in use in that service ever since. Many hundred vessels have been warned, and thousands of lives and millions of property saved, by their use in the hands of the patrolmen of this service. The highest awards, medals, and diplomas have been granted them at all the international exhibitions—in Vienna (1873), Ohio (1875), United States Centennial (1876), Liverpool, England (1886), and the World's Columbian Exposition (1893). The value and use of signals in time of war can best be understood when it is known that 1,200,000 signal cartridges were furnished during the civil war. Hon. Gideon Welles, Secretary of the Navy, in his report to Congress, declared that the signals were of incalculable value to the navy throughout the war. Most of the blockade runners that were captured were detected by their use. The New York Yacht Club, the Brooklyn Yacht Club, and the Eastern Yacht Club jointly were the first to adopt a night-signal system, using a letter chart applicable to the international commercial day-signal code, and also a distinguishing signal. Other yacht clubs have since adopted the Coston signal as their distinguishing night signal.

The Coston signal can be used in any kind of weather and displayed from any place. They can be distinctly seen at a distance of fifteen to twenty miles.

The Coston pilot-call signal, as established for use on the United States coast, shows the colors white, red, white in succession, the whole being one signal. The Coston distress signal, as adopted and in use in United States waters, displays the colors red, white, red in succession.

The cipher and signal code used by the army and navy during the war of the rebellion was a numeral system. The page of the book was just signaled, and then the number of message on the page.

The Coston signal is now employed by the Government in the following branches: The navy uses the aerial signal, patent of 1877. The Life-Saving Service, Lighthouse Service, Revenue-Cutter Service, Weather Bureau, and Army Signal Corps use the 1881 patent. The National Guard of the State of New York also uses the 1881 patent, and have arranged a signal code and chart of four elements. The requirements to be taken into consideration with regard to effective and reliable signals of this nature are many. The colors must be pure and brilliant, and must burn evenly, with very little smoke. The compounds must not be liable to deterioration from long storage or dampness or to spontaneous combustion. Simplicity in arrangement of chart and code is also to be taken into consideration, and compactness of apparatus is desirable.

The last patent taken out on Coston signals was in November, 1896, by William F. Coston.

SOUTH CAROLINA, a Southern State, one of the original thirteen, ratified the Constitution May 23, 1788; area, 3,750 square miles. The population, according to each decennial census, was 249,073 in 1790; 345,591 in 1800; 415,115 in 1810; 502,741 in 1820; 581,185 in 1830; 594,398 in 1840; 668,507 in 1850; 703,708 in 1860; 705,606 in 1870; 905,577 in 1880; and 1,151,149 in 1890. Capital, Columbia.

Government.—The following were the State officers during the year: Governor, W. H. Ellerbe; Lieutenant Governor, M. B. Sweeney; Secretary of State, D. H. Tompkins; Treasurer, W. H. Timmerman; Comptroller, James Norton, who was

elected to Congress at Charleston about Nov. 1, by L. P. Elyson, appointed by the Governor; Attorney-General, W. A. Barker; Assistant General, J. G. Watts; Superintendent of Education, W. D. May-

W. H. ELLERBE, GOVERNOR OF SOUTH CAROLINA.

field; Chief Justice of the Supreme Court, Henry Melver; Associate Justices, Eugene B. Gary, Ira R. Jones, and Y. J. Pope; Clerk, U. R. Brooks. All are Democrats.

Finances.—The state of the finances at the close of 1897 is described in the Governor's message to the Legislature of 1898 as follows:

"During the session of the General Assembly for 1896 a levy of 44 mills was laid to meet the current expenses of the fiscal year ending Dec. 31, 1897. The sum raised by this levy proved insufficient, and we have a deficit of \$100,000. By using every dollar from every available source and by overdrawing small amounts upon banks in which large sums of the State's funds have been deposited, we have met all current obligations without borrowing. The books were opened for the collection of taxes Oct. 15, and since that time we have used money thus collected to pay current expenses."

The taxable property amounted to \$173,794,382.

By the report of the Sinking Fund Commission it appears that since the commission was established in 1878 it has brought into the treasury about \$262,765, which otherwise would have been lost to the State. The commission has charge of land-commission lands, abandoned lands, and unpaid taxes. It has sold the past year 783 acres of land-commission land.

Abandoned land under South Carolina law is land that has been for ten immediately preceding years upon neither the forfeited land list nor tax duplicates. Ten years' absence from all tax books, therefore, and not actual abandonment, is the legal definition of "abandoned land."

At a meeting of the Sinking Fund Commission of Jan. 17, 1896, it was found that of the hundreds of thousands of acres of abandoned lands up to that time placed upon the tax books and offered for sale, there remained unsold only about 13,000 acres, which were bid in for the Sinking Fund Commission for want of bidders at the tax sale.

Education.—The school enrollment in 1897 was 258,183, of whom 139,156 were colored. The total shows an increase of 25,846 over that of the preceding year. The expenditures were \$697,068.06, an increase of \$124,430.82. During the year 153 school-houses were built, at a cost of \$22,728.93. The standard of examination for applicants for teachers' positions has been raised, and the increased number of those holding the higher grades of certificates shows increasingly better preparation. There are 98 high schools and academies and 60 graded schools.

There are 4 State colleges for the education of the white race, 1 for the colored, and the Institution for the Deaf and the Blind, with separate buildings for the races. The white colleges show an enrollment of 1,112 pupils, 81 teachers, 81 buildings (buildings and grounds, valued at \$692,600, exclusive of Olmson's buildings and grounds), 5 libraries, containing 40,500 volumes, valued at \$60,750, and an average session of 9-4 months, the Institute for the Deaf and the Blind being included in these figures. The colored college shows an enrollment of 1,033 pupils, 32 teachers, 10 buildings (buildings and grounds valued at \$84,000), and an eight months' session.

There are 20 private colleges for whites. The reports of these show an enrollment of 2,703 pupils, 186 teachers, 88 buildings (buildings and grounds valued at \$836,500), large and valuable libraries, and an average session of nine months.

There are 3 private colored colleges. The reports of these are not full, but they show an enrollment of 1,191 pupils, 28 buildings, valued at \$224,000, and libraries containing 4,300 volumes, valued at \$4,000.

The School for the Deaf and Dumb had an enrollment of 179, with an average attendance of 142. The cost of support, which includes all running expenses, was \$130.77.

The Penitentiary.—The number of convicts at the close of the year was 723, showing a decrease of 95 during the year. The institution has not only been self-supporting, but has paid \$9,649 on one of the farms, and turned \$10,000 into the State treasury. The report says the sanitary condition of the building is bad. During the year 26 have died; the death rate, it is explained, is increased yearly from disabled and sick prisoners sent to the institution from the county chain gangs, some of whom live only a few days.

The Hospital for the Insane.—The receipts of this institution during the year were \$106,066.39, of which \$100,000 was from the State treasury; the expenses were \$102,290.49. The whole number under treatment during the year was 1,257, and the daily average 875; the number of deaths was 142. A new building for colored men, for which the Legislature appropriated \$7,500, is in process of construction.

A fire occurred, June 2, destroying the laundry, electric plant, carpenter shop and mill, and injuring the boilers and engines. The laundry has been rebuilt with insurance money.

Militia.—There are five regiments of infantry, three of cavalry, the Fourth Battalion, and some independent companies. The appropriation was cut this year to \$8,000.

A court of inquiry was ordered to investigate the conduct of the Adjutant General in a difficulty, May 28, between the nine-sevenths students of the South Carolina College, at Columbia. The troops had permission to use the college grounds for parade on the 26th, but by some mistake went on the 28th. A game of ball was in progress. The acting president told the Adjutant General that the students had permission to use the grounds,

but there was room for all if the troops remained on one side. The officer during some part of the parade ordered the students away, and directed the police to move them back. They resisted, and the troops were ordered to press upon them. The result was a riot. The court of inquiry found that the order to clear the field was an assumption of authority on the part of the officer that was "unwise, unnecessary, and unwarranted," and recommended that he be reprimanded by the Governor. As the Adjutant-General is a constitutional officer, he can be removed only on impeachment by the General Assembly.

Railroads.—The report of the Railroad Commissioners at the end of the year says that, with but few exceptions, the physical condition of the railroads of the State has been improved. The Carolina, Knoxville and Western Railroad is still in the courts, and is not operated. A year ago the Carolina Midland had been consolidated with the Greenwood, Anderson and Western Railroad, and ten miles of new road built, but some financial trouble with the contractor arising, a receiver was appointed.

Improvements have been made in the Charleston and Western Carolina, the Plant system, the Lancaster and Chester, the South Carolina and Georgia, the Atlantic Coast Line, the Ohio River and Charleston, and the Columbia, Newberry and Laurens.

Products.—The phosphate miners have paid only 25 cents a ton royalty to the State since April 1; the former rate was 50 cents. The State has received \$40,700 this year from that source; a company that failed in October still owes the State \$10,384. A large company, the Coosaw, went out of business June 1. The rock mined during the year is estimated at 76,313 tons, and the amount shipped at 95,237 tons.

The value of the gold product of this State in 1896 was given as \$63,300.

The number of spindles in operation in 1897 was 1,151,174, and of looms 34,528, of which 1,061,304 spindles and 30,736 looms are on the Southern Railway.

There are more than 300 lumber mills in the State, with a combined capital of about \$4,000,000.

Crime.—The annual report of the Attorney-General says there has been a gradual increase of homicide cases disposed of in the State each year since 1888. The year 1888 began with 107 cases, and the year 1897 ends with 225 cases. There were 2,485 criminal cases disposed of in 1897. The per cent. of convictions in all the cases disposed of is 37, and of the cases actually tried about 65. The per cent. of convictions in homicide cases is about 27.

There were two lynchings in January, one near Sumter and one near Orangeburg. The Episcopal clergy, under instructions from the bishop, preached, Dec. 19, on the increase of crime in the State.

Attack on Mormons.—About three years ago some Mormon missionaries came to the State and made 50 or more converts in Kershaw and Fairfield Counties. No opposition appears to have been made at that time, but in July of this year their place of worship was burned by so-called regulators, and visits were made to houses of members of the Church, who were warned not to harbor any of the elders, most of whom are from Utah. Two of these were taken out and whipped. Other demonstrations appear to have been confined to threats and the flourishing of guns and pistols. On complaint of the Mormons 24 persons were arrested and tried and acquitted.

Charleston.—A law of 1894 gave power to the Governor, the Secretary of State, and the Comptroller General to appoint a Board of Police Commissioners for any city or incorporated town, when they should deem it advisable and for the interest

of good government, their tenure of office to be co-terminal with that of the appointing board; but the State board was authorized to discontinue the Board of Police Commissioners when, in their judgment, it was no longer needed. Nothing was done under the law for a year after its passage; then Gov. Evans made such appointments for Charleston, on the ground that it was necessary for the enforcement of the dispensary law. The board continued to exist until Oct. 1, when it was abolished by proclamation of the present Governor.

The city now has rapid transit, an electric railway having gone into operation in July.

A trade and commercial issue of the "News and Courier" in September makes a good showing for the business progress of the city. The amount transacted during the year was given as more than \$75,000,000, an increase for the year of \$8,000,000. There are now 24½ feet of water from the city to the sea. The completion of the jetties "has made Charleston the most accessible and finest deep-water port on the South Atlantic coast."

The Dispensary.—The report of the Board of Control of the Dispensary for 1897 shows the receipts to have been \$1,196,068.45, including a balance of \$78,265.04 from 1896, and the disbursements \$1,134,167.19, leaving a balance of \$61,901.26. The amount placed to the credit of the school fund during the year was \$146,443.

The dispensary has again this year occupied much of the public attention. Decisions given in the Federal courts have interfered with its success. In January the Supreme Court decided that those provisions of the law that forbid citizens of the State from importing liquors into the State for their own use are in contravention of the interstate commerce clause of the national Constitution, and therefore invalid.

This was a confirmation of the decision of the circuit court.

On Oct. 1 the Governor dismissed the entire force of constables, leaving the local authorities to enforce the law in the towns and cities, retaining only a few detectives to suppress "blind tigers" in the country.

The dispensary act makes it the duty of the State Board of Control to withhold their share of profits of the dispensary from any town or city in which the authorities do not enforce the law. So far the profits have been withheld from one town.

Legislative Session.—The General Assembly met Jan. 12 and adjourned March 3. There were no Republicans in the Senate, and there was but one in the House. All the other 158 legislators were Democrats. Daniel K. Norris was president of the Senate, and Frank B. Gary Speaker of the House. The Governor and Lieutenant Governor were inaugurated Jan. 18.

Joseph H. Earle, who was chosen as the candidate for United States Senator at the Democratic primaries, was formally elected by the Legislature with but one opposing vote to succeed Senator Irby. James C. Klugh was elected judge of the circuit court to succeed Judge Earle.

First in importance, probably, of the measures passed was the income-tax bill. It provides that from and after Jan. 1, 1898, an annual tax shall be levied on the gains, gross products, and income received during the preceding year by every citizen, from any source whatever, where such income amounts to \$2,500 or more. The tax is 1 per cent. on incomes from \$2,500 to \$5,000; 1½ per cent. on those from \$5,000 to \$7,500; 2 per cent. from \$7,500 to \$10,000; 2½ per cent. from \$10,000 to \$15,000; and 3 per cent. for all above \$15,000. A like tax is to be collected from the profits of any business carried on in the State by persons residing outside of the

State, except such corporations as are specially exempted, provided that no estimating gains, profits, and income there shall not be included interest upon such bonds or securities of this State or of the United States the principal and interest of which are by the law of their issue exempt from taxation. The assessments are to be made by county officers.

The Governor sent a special message on the finances, Feb. 4, showing a deficiency in the general fund of \$34,061.66 unprovided for. He suggested that the deficiency might be made up by increasing the levy or by providing for a graduated income tax and a graduated license tax. The income tax was decided upon as above, and by another act additional license fees were required from foreign insurance companies doing business in the State.

An act to prohibit trusts and combinations was passed.

Among bills affecting railroads were: Requiring common carriers to pay or refuse to pay all claims for loss, breakage, or other damage within sixty days from the time the claim is made; authorizing the Railroad Commissioners to require all railroads to erect depots, and to impose a penalty for their failure to do so when required; to limit the hours of labor of certain employees of horse-railway companies and electric-railway companies and other street-railway companies; to provide for the collection of due railroad taxes; amending and re-enacting the act to incorporate the South Carolina and Augusta Railroad; to make corporations liable for damages resulting to landowners from the wrongful obstruction of water courses; to provide a penalty on railroad companies owning, leasing, or operating competing railroad lines within the State, and to provide for recovery thereof; repealing the act of 1887 entitled "An Act to validate and confirm the consolidation of the Augusta, Edgefield and Newberry Railroad Company with the Northwestern Railroad Company; to provide for the forfeiture of abandoned railway property; to incorporate the Atlantic Coast Line Railroad Company of South Carolina and to authorize the consolidation of certain railroads under that name; to provide for the transportation by common carriers of bicycles.

The dispensary laws were amended so as to provide for the licensing and restricting of distilleries in the State, and to regulate the importing of liquors for personal use.

The free-school law of the State was amended. It was made a misdemeanor for any State or county officer to receive any rebate on schoolbooks or supplies or advertising; and pupils of the public schools are to be provided with text-books at actual cost.

Four new counties were established—Greenwood, Cherokee, Bamberg, and Dorchester—the propositions for creating them having received the required vote in the territory covered. Four others that were proposed—Dillon, Edisto, Salem, and Calhoun—had failed at the popular election. The laws on county government were amended by several acts.

One of the measures passed has for its object the keeping of actions out of the Federal courts and in the State courts as far as possible.

Other acts were:

To prevent the employment of other than convict labor on any State farm, and the prevention of the employment of convict labor on any private farm.

To exempt soldiers and sailors in the service of the State of South Carolina or of the Confederate States in the war between the States from taking out license as hawkers and peddlers required by statute.

To prescribe punishment for laborers who violate either written or verbal contracts after having received supplies.

To protect the Mongolian pheasant.

To authorize and empower the sheriffs to purchase and keep at the courthouse a pair of bloodhounds, for the purpose of tracking convicts and fugitive lawbreakers.

Prohibiting the carrying of concealed weapons.

Authorizing the Phosphate Commission to reduce and regulate the royalty on phosphate rock.

Requiring any instituted company or association to be possessed of \$100,000 surplus, or in lieu thereof to have \$100,000 on deposit with some State for the benefit of all policyholders, or in lieu thereof to deposit with the Treasurer of this State valid securities aggregating \$10,000, said securities to be subject to any judgment against said companies, and such judgments shall operate as a lien on such securities.

To protect terrapin and oysters.

To regulate the appointment of receivers by the courts, restricting them in the exercise of their discretion, requiring due notice to be given, and providing that the costs of unnecessary receiverships be charged upon the persons asking for the appointment.

To provide for the election of the State Board of Medical Examiners by the State Medical Association.

To provide for a laborers' lien.

To prohibit secret Greek-letter fraternities or any organizations of like nature in State institutions.

Among resolutions adopted by the House was one declaring that the United States should acknowledge the independence of the republic of Cuba.

Bills to repeal the free-pass law, and to require separate railway coaches for colored passengers, also an anti-cigarette act, were defeated in the Senate.

United States Senator.—Joseph H. Earle, who was elected to succeed Senator Irby, died May 20. The Governor appointed John L. McLaurin to fill the vacancy till a successor should be chosen. Primaries were ordered for Aug. 31 to ascertain the choice of the people. The Democratic State Committee marked out a plan of campaign for two months, and the candidates made speeches in every county. They were J. L. McLaurin, Ex-Gov. Evans, Ex-Senator Irby, S. G. Mayfield, and J. T. Duncan, but the two last named withdrew after a short time. The canvass was most excited, and the speeches sometimes were bitterly personal. McLaurin was assailed as being a protectionist, having voted in favor of protective amendments to the Dingley tariff bill. They stood: McLaurin, 29,326; Evans, 11,375; Irby, 5,159.

SOUTH DAKOTA, a Western State, admitted to the Union Nov. 3, 1889; area, 77,650 square miles; population, according to the census of 1890, 328,808. Capital, Pierre.

Government. The following were the State officers during the year: Governor, Andrew E. Lee, Populist; Lieutenant Governor, Daniel T. Hindman, Republican; Secretary of State, William H. Riddle; Auditor, Henry E. Mayhew; Treasurer, Kirk G. Phillips; Attorney General, Melvin Grigsby; Superintendent of Public Instruction, Frank Crane; Commissioner of Fish and Game, and Public Lands, John L. Lockhart; Railroad Commissioners, W. T. La Follette, Alexander K. Stephens, William H. Tompkins; Chief Justice of the Supreme Court, Dighton Carson; Associate Justices, Howard G. Fuller and Dick Haney; Clerk of the Supreme Court, Jessie Fuller.

Finances.—The balance in the State treasury, July 1, 1896, was \$412,159.99. The receipts during the fiscal year, including balance of previous year,

were \$1,001,283.24; the disbursements, \$593,338.38; and the balance remaining July 1, 1897, was \$407,744.86.

The receipts of the general fund from all sources during the fiscal year, including sale of revenue

ANDREW E. LEE, GOVERNOR OF SOUTH DAKOTA.

warrants and transfer from the deficiency fund, were \$800,072.55. The disbursements for the same period were \$670,724.96, leaving a balance of \$129,347.59.

The bonded indebtedness was reduced \$126,600, leaving a total bonded indebtedness of \$1,011,600, of which \$99,000 bears interest at the rate of 5 per cent. per annum, \$322,600 at 4½ per cent., \$362,500 at 4 per cent., and \$227,500 at 3½ per cent.

The assessment of the 2,798 miles of railroads, as equalized by the State board, was \$9,124,700. The assessment on lands, as equalized, was \$74,363,869; on town lots, \$15,982,527; on personal property, \$20,455,227. The total valuation of the telegraph companies operating in the State is \$127,202; of express companies, \$57,500; of telephone companies, \$53,406. The total valuation of all assessable property is \$120,175,431. The amount of taxes paid by railroads in 1896 was \$239,366.69. The amount of taxes due the State from the counties on July 1, 1897, was \$411,220.18.

Banks.—An abstract of the condition of the 29 banks doing business in the State on Dec. 17, 1896, shows a much stronger reserve on that date than on Oct. 6, the date of the last report, the increase being from 40.02 to 47.66 per cent. The principal items are as follow: Loans and discounts, \$2,893,845; value of stocks, securities, banking houses, and other real estate, \$1,229,260; due from other banks, \$316,563; reserve on hand and deposited with reserve agents, \$1,882,959, of which \$347,850 was gold; total resources, \$7,208,290. Liabilities: Capital stock, \$1,835,000; surplus fund and undivided profits, \$474,504; due to other banks, \$315,054; deposits, \$4,068,568; borrowed money, \$46,500.

A later statement, issued in June, says that the 27 national banks show total resources of \$6,712,537, the loans and discounts being \$2,919,716, and the reserve \$1,484,486, of which the gold amounted to \$326,045. The deposits were \$3,841,916, and the average reserve held was 38.01 per cent.

Insurance.—The business of outside fire insurance companies in South Dakota for 1896 amounted to \$360,436 in premiums, against \$164,145 in losses. Total risks taken, \$13,421,835. The life losses paid during the year were about \$141,000, with a total line of \$1,200,000.

Education.—The number of persons of school age June 30, 1896, was 87,991, of whom 74,662 were enrolled in the public schools. The number of schoolhouses provided for them was 4,634 and the number of teachers, 4,288. The total amount received from all sources for the support of the schools during the year was \$1,988,423.33, of which \$290,261.27 was balance remaining on hand July 1, 1895. The sum of \$877,286.40 was received from district tax; \$60,600.84 from sale of bonds within the year; \$327,640.71 by apportionment; \$122,644.11 from all other sources, including money in the county treasuries. The principal expenditures for the year were: For salaries of teachers, \$749,087; for redemption of bonds, \$82,004.42; for interest on outstanding bonds, \$80,423.85. The cash in hands of district treasurers July 1, 1896, was \$333,507.91; in the hands of the county treasurers, \$70,635.32.

Judicial.—A recent decision of the Supreme Court declares that the homestead is exempt from mechanics' liens under any conditions or circumstances. The same court declared that the actual cost of the construction of railroads had nothing to do with their value as assessable property, but that their power to earn income must be considered.

Mineral Wealth.—The first bulletin of the State Geological Survey was issued by the State Geologist, giving a comprehensive review of the topography and geological formations in South Dakota. The location and nature are described of the ores, earths, building stone, fuels, and water supplies.

Practically, all the gold comes from the Black Hills, and the yield per ton of ore is given at values ranging from \$2.03 to \$3.87. Placer mining has nearly ceased. The production of gold in the Black Hills for 1893 was \$4,000,000; of silver, \$181,527. The yield of gold in 1896 was \$8,235,000, which was an increase of \$3,325,000 over the output of the preceding year. The valuation of the silver and copper mined with the gold was placed at \$1,000,000.

Extensive deposits of iron ore, which have not been developed, occur in the Black Hills. Copper deposits are extensive and numerous, and, like the iron, have not been developed. The average per cent. of these ores, as assayed by the School of Mines, is 35 per cent. copper, equal to 700 pounds of metal copper per ton, worth, at present rates, \$112. Lead, manganese, nickel, and tin are also found in varying quantities.

Political.—James H. Kyle was elected by joint ballot to succeed himself in the United States Senate. Local elections were held through the State on April 7, 1897.

SPAIN. a constitutional monarchy in southwestern Europe. The legislative power is vested in the Cortes, consisting of a Senate of 360 members and a Congress of 432 members. The Senate is composed half of life and official members—namely, princes of the blood royal, grandsons of Spain having an income of 60,000 pesetas, and the superior functionaries of state; and half of members elected for five years by corporate bodies and the highest taxpayers. The members of the Congress, or Chamber of Deputies, are elected for five years in the proportion of 1 deputy to 50,000 inhabitants by electoral colleges, the delegates to which are elected by all male Spaniards who have attained the age of twenty-five years.

The King is Alfonso XIII, born May 17, 1886, who succeeded his father, Alfonso XII. His mother, Maria Christina, daughter of King Ferdinand, Archduke of Austria, was a Spanish Regent during his minority. The regent was deposed on March 24, 1902, was exiled, and the beginning of 1897 of the following members: President of the Council, A. Canovas del Castillo; Minister of Foreign Affairs, the Duke of Tetuan; Minister of Justice, Count Topeda de Valdemora; Minister of Education, Juan Navarro de Rivera; Minister of War, Lieut. Gen. de Azanaraga; Minister of Marine, Rear Admiral Jose M. Boscanger; Minister of the Interior, Fernando Castellan; Minister of Agriculture, Commerce and Public Works, Antonio Canales Rivas; Minister of the Colonies, Tomas Castellano.

Area and Population. The area of Spain is 197,670 square miles. The population was estimated in 1892 at 17,974,223. Madrid, the capital, has about 500,000 inhabitants; Barcelona, 275,000; Valencia, 175,000; Sevilla, 145,000; Malaga, 135,000; Murcia, 100,000. The most emigration, which is mainly to Brazil, Uruguay, and the Argentine Republic, was \$258 in 1892.

Finances. There was a deficit of 21,500,000 pesetas, or francs, in 1896, one of 25,749,300 pesetas in 1895, one of 74,732,686 pesetas in 1894, and in previous years the accounts were also closed with large deficits. The budget for 1897 made the receipts 773,765,261 pesetas and the expenditure 757,765,658, showing a surplus of 16,000,000 pesetas. To attain this funds were raised for expenditures classed as extraordinary by means of loans. The revenue is derived from direct taxes on lands, houses, live stock, industry, commerce, registration, titles of nobility, mortgages, and mineral products; from indirect taxes on imports, articles of consumption, and tolls on bridges, ferries, etc.; from the Government monopoly of tobacco, the mint, the lottery, etc.; and from income from Government property. For 1898 the ordinary revenue was estimated at 883,279,771 pesetas and expenditure at 873,865,877 pesetas. The extraordinary budget for 1897 gave an expenditure of 236,106,000 pesetas, largely intended for naval development. In order to meet increased expenditures and 92,000,000 pesetas required for interest and redemption of the late loans guaranteed on the customs, Minister J. Navarro Rivero proposed a temporary surtax of 10 per cent. on all taxes and duties, with the exception of the land tax, which was estimated to produce 20,000,000 pesetas; additional taxation in the colonies to the extent of 32,000,000 pesetas; and a loan of 40,000,000 pesetas guaranteed by a proposed petroleum monopoly, whereby the exclusive privilege of dealing in this commodity would be granted for twenty years. In case the colonies should fail to raise their quota, the deficiency would be made good out of the proceeds of another loan secured on a similar monopoly of gunpowder and explosives. In order to meet the extraordinary expenditure, the minister proposed another loan guaranteed by the lease of the Almaden quicksilver mines and an increase in navigation dues to the extent of 12,000,000 pesetas a year. The extraordinary expenditure for 1898 was placed at 227,000,000 pesetas, more than half of which was for naval and military expenditure. A Philippine loan of 140,000,000 pesetas guaranteed by the Philippine customs and also by the customs of the Peninsula and paying 6 per cent. interest, was issued at 92 in July, 1897.

The external debt was on June 30, 1896, stated to be 1,971,151,000 pesetas; the public and external debt, 2,350,808,300 pesetas; the internal loans, 1,619,500,000 pesetas; and 1,941,430,000

pesetas, not including a floating debt of 450,000,000 pesetas nor the Cuban debt. In 1897 the total public debt was stated to be 8,911,000,000 pesetas, including the Cuban debt of upward of 1,750,000,000 pesetas. An internal loan of 400,000,000 pesetas was obtained in November, 1896, for the purpose of paying off pressing obligations to the Bank of Spain and providing for the continuance of the war in Cuba.

The Army.—All able-bodied Spaniards are liable to serve in the army. The annual contingent was fixed by the law of Dec. 16, 1891, at 80,000 men. The period of active service is three years, beginning at the age of nineteen. After their term of active service has expired the soldiers are inscribed in the first reserve for three years, and then for six years in the second reserve. The effective strength of the regular army on the peace footing in 1896 was 128,183 men, divided into 64,190 infantry, 14,376 cavalry, 11,744 artillery, 5,294 engineers, 1,500 administrative troops, 900 in the medical service, 1,296 royal guards, 14,697 gendarmes, and 14,186 customhouse guards. By the royal decree of May 20, 1897, the strength of the army in Spain was fixed for the year ending June 30, 1898, at 100,140 men, while the forces in Cuba and the Philippines would be maintained at a strength to be determined by the eventualities of war. The war strength of the regular army in 1897 was stated to be 132,000 infantry, 17,156 cavalry, 12,166 artillery, 11,027 engineers, 11,140 administrative troops, and 483 surgeons; total, 183,972 men, with 14,250 horses and mules and 500 field guns. Between November, 1895, and May, 1897, there were sent to Cuba 13 expeditions, comprising 181,738 men, 6,261 officers, 40 generals, 212,542 rifles, 91 field guns, 12 quick-firing guns, 92,088,670 cartridges, and 29,500 shells; to the Philippines were sent 27,768 soldiers, 881 officers, 9 generals, 43,100 rifles, 24 guns, 21,726,585 cartridges, and 30,604 shells.

The Navy.—The Spanish navy in 1897 possessed two battle-ships. The "Cristobal Colon," launched in 1896, has a displacement of 6,840 tons, engines of 14,000 horse-power, and an armament of 40 guns, with 4 torpedo-ejectors. The "Pedro d'Aragon," of the same model, was under construction. The "Pelayo," launched at La Seyne in 1887, of 9,900 tons displacement, with 6,800 horse power and a speed of 15.8 knots, with a belt of armor 18 inches thick over the vital parts and 11 inches on the barbettes, carries 2 12½-inch guns in turrets fore and aft, 1 11-inch gun in a barbette on either side, a 6½-inch gun in the bow, and a battery of 6 4½-inch guns on each broadside. There are 6 first-class armored cruisers, launched between 1890 and 1893, but not all ready for service. Five of these, the "Almirante Oquendo," "Cardenal Cisneros," "Infanta Maria Teresa," "Princesa de Asturias," and "Vizcaya," have each a displacement of 7,000 tons, 12,000 horse power, and 20 knots nominal speed, a belt of 12 inches of steel armor and 8-inch armor over the gun imposts, and an armament of 2 11-inch guns mounted in barbette turrets fore and aft, and a battery of 6 7-inch guns on each side. A more powerful cruiser is the "Emperador Carlos V," resembling the Russian "Rurik," and having a displacement of 9,000 tons, engines of 15,000 horse power, and a main armament of secondary armament. The first-class cruisers "Navarra" and "Victoria" are old vessels fitted with new engines and modern armaments. The second-class deck-armored cruisers "Alfonso XIII" and "Lezama," of 4,800 tons displacement, with engines of 12,000 horse power, designed for a speed of 20 knots, have their armament disposed in a model manner. The unfinished armored cruiser "Cataluña," of 6,648 tons and engines of 15,000 horse power, will carry 23

guns and 18 torpedo-ejectors. Of smaller cruisers and gunboats Spain has 28 that are capable of making 12 knots or better, and 71 of less speed. Of the former there are five of the "Infanta Isabel" class, of 1,130 tons displacement, and a speed of 14 knots. Next after these in importance are three torpedo gunboats, not yet completed, of the type of the English "Sharpshooter." Of gunboats there were 10 fitted with torpedo tubes, besides 3 that were unfinished, of 600 tons on the average, 4 of 500 tons, 7 of the first class under 250 tons, 28 of the second class, and 41 of the third class. The torpedo fleet included 2 torpedo-boat chasers, 20 torpedo boats of the first class, 3 of the second class, 4 vedette boats, 1 torpedo school-ship, and 4 not yet completed destroyers, besides 2 more ordered in England.

The *personnel* of the navy in 1896 comprised 1 admiral, 6 vice-admirals, 15 rear admirals, 20 captains of first-class and 41 captains of second-class vessels, 87 commanders, 100 lieutenants of first-class and 258 of second-class vessels, 224 ensigns, 658 employees, 64 pilots, 14,000 sailors, and 9,000 marines. The navy is recruited by conscription among the seafaring population.

Communications.—The railroads open to traffic in 1896 had a total length of 7,628 miles.

The length of telegraph lines in 1894 was 23,636 miles, with 59,247 miles of wire. The number of messages was 5,962,339, including 3,812,544 internal, 1,988,300 international, and 161,495 service dispatches. The receipts were 8,090,296 pesetas. The post office in 1895 forwarded in the internal service 82,543,000 letters, 669,000 postal cards, 48,801,000 newspapers, circulars, and parcels, and 137,000 money letters of the value of 169,834,000 pesetas; in the international service 20,439,000 letters, 408,000 postal cards, 20,144,000 newspapers, etc., and 48,000 money letters of the value of 32,059,000 pesetas; and in transit 184,000 letters and 50,000 newspapers and parcels. The receipts were 23,900,627 pesetas; expenses, 11,132,144 pesetas.

Commerce.—The total value of the imports in 1895 was 838,500,000 pesetas, and of the exports 804,942,000 pesetas. The imports of cotton were 78,568,000 pesetas in value; coal, 46,580,000 pesetas; timber, 44,281,000 pesetas; tobacco, 40,914,000 pesetas; wheat, 32,428,000 pesetas; salt fish, 27,518,000 pesetas; animals, 24,803,000 pesetas; machinery, 24,510,000 pesetas; chemicals, 22,945,000 pesetas; sugar, 19,003,000 pesetas; iron, 18,513,000 pesetas; ships, 16,180,000 pesetas; coffee, 15,293,000 pesetas; wool, 14,291,000 pesetas; silks, 14,124,000 pesetas; woollens, 14,014,000 pesetas; cacao, 13,309,000 pesetas; linen yarn, 12,188,000 pesetas; petroleum, 8,576,000 pesetas; silk, 8,024,000 pesetas; cotton goods, 6,668,000 pesetas. The exports of wine were valued at 122,235,000 pesetas; iron, 46,577,000 pesetas; lead, 44,128,000 pesetas; cotton goods, 43,384,000 pesetas; copper, 43,341,000 pesetas; oranges, 42,240,000 pesetas; boots and shoes, 25,695,000 pesetas; animals, 23,977,000 pesetas; cork, 22,085,000 pesetas; olive oil, 17,771,000 pesetas; raisins, 15,996,000 pesetas; wool, 14,278,000 pesetas; wheat flour, 12,937,000 pesetas; almonds, 11,807,000 pesetas; hides and skins, 10,595,000 pesetas; grapes, 10,271,000 pesetas; paper, 7,982,000 pesetas; quick-silver, 7,446,000 pesetas; esparto, 6,269,000 pesetas. Spanish industry was disastrously affected by the rebellions in Cuba and the Philippines. Half the mills in Catalonia were closed in 1897, causing much misery, which would have been more apparent had there not been such a drain on the working population to supply recruits for the armies in the field. In the country villages, too, the farm work was to a great extent left for the women and old men to do. The stoppage of work and scarcity of food caused

riots in Barcelona, Malaga, and other places. The value, in pesetas, of the commerce with the different countries and colonies in 1895 is shown in the following table:

COUNTRIES.	Imports.	Exports.
France.....	255,500,000	239,300,000
Great Britain.....	160,200,000	205,000,000
Germany.....	51,300,000	40,000,000
Belgium.....	26,900,000	25,000,000
Portugal.....	97,200,000	54,000,000
Sweden and Norway.....	50,500,000	1,300,000
Russia.....	51,000,000	
Roumania.....	2,000,000	
Italy.....	24,300,000	9,000,000
Turkey.....	5,000,000	
Netherlands.....	4,000,000	14,000,000
United States.....	80,000,000	12,000,000
Cuba and Puerto Rico.....	64,700,000	190,700,000
Argentine Republic.....	14,000,000	10,000,000
Philippine Islands.....	25,000,000	25,000,000
Morocco.....	9,000,000	1,000,000
Other countries.....	41,700,000	62,000,000
Total.....	659,500,000	764,500,000

Navigation.—During 1896 there were 10,669 Spanish vessels, of 6,532,320 registered tons, and 9,788 foreign vessels, of 7,425,666 tons, entered at Spanish ports, and 8,492 Spanish vessels, of 6,233,551 tons, and 9,498 foreign vessels, of 7,829,255 tons, cleared.

The merchant navy in 1895 numbered 1,041 sailing vessels, of 172,729 tons, and 427 steamers, of 313,178 net tons.

Political Affairs.—During the two troubled years of the Canovas ministry the dynastic Liberals had loyally refrained from embarrassing attacks on the Conservatives. At last, on May 19, 1897, Señor Sagasta declared the truce between his party and the Conservatives at an end, and that the Government, which had sent 200,000 men to the islands and was not yet master of the ground trodden by the soldiers and had borrowed 400,000,000 pesetas, and yet still owed the officers and men in Cuba 200,000,000 pesetas of back pay, and which had permitted the Carlists to arm in the Peninsula and separatist agitation to become rife in certain provinces, having existed hitherto only by the good will of the Liberals, must henceforth bear alone all responsibility for its policy. This arraignment of the Government aroused high party feeling. Two days later the Duke of Tetuan struck Prof. Augusto Comas, one of the leading Liberal Senators, in the lobby of the Cortes. In consequence of this affray he offered his resignation as Minister of Foreign Affairs, but withdrew it at the request of Señor Canovas. The Premier told the Chamber that Spain had refused the proffered intervention of the United States and had declared that she would not admit foreign interference; also that in an unofficial exchange of opinions the European powers had by their attitude of great reserve in defining their views led the Government to believe that they would offer no effective intervention between Spain and the United States. The Liberals called for the retirement of the Duke of Tetuan, but the Premier considered his services necessary for the conclusion of the negotiations relative to the controversy with the United States. His treatment of the Tetuan incident as purely personal and not a political affront displeased the Liberals and the dissident Conservatives who follow Señor Silveira, who demanded the dismissal of the Minister of Foreign Affairs and refused to enter the Cortes until satisfaction had been given them. After vainly appealing to the Liberals to return and unite with the Government in an energetic stand against the interference of the United States in Cuba, Señor Canovas decided to adjourn the Cortes

and carry on affairs without the aid of Parliament. This course was considered by public opinion as unconstitutional and a conspiracy toward a dictatorship, and consequently had to be abandoned. The parliamentary deadlock ended in the resignation of the Cabinet on June 2.

The sessions of the Cortes were suspended during the crisis after financial supplies had been voted indefinitely, and authority given to issue treasury bonds and contract loans secured in the name of Spain for the prosecution of the Cuban and Philippine wars. After consulting Gen. Martínez Campos, López Domínguez, and Basco, the Queen Regent on June 6 invited the Conservative ministers to resume their portfolios. The Cortes were not reconvened. The Cabinet on returning to office considered the means of raising 20,000,000 pesetas in order to strengthen the navy in view of the critical relations with the United States. In the beginning of August there were riotous demonstrations in Madrid against the *alcorno* tax. Meanwhile the anarchists, who have been numerous in Spain since the time when the disciples of Bakunin introduced his doctrines among the workmen of Barcelona after the conflict between them and the Marxist Collectivists which split the International Association of Laborers in 1889, were plotting vengeance for the inhuman torments that their brothers had been made to undergo in the fortress of Montjuich, at Barcelona. There were 324 men and women imprisoned in Montjuich in consequence of the anarchist outrage at Barcelona on June 7, 1896, when a bomb was exploded in the midst of a religious procession. Of these, 5 were immediately shot; 26 were condemned to death on May 1, 1897; 20 were sentenced to terms of imprisonment, some of them for life; the rest were ordered to be expelled from Spanish territory. Of these, 28 embarked for Liverpool in July, but 120, having no money, were still detained in prison. The British Government protested against the sending of anarchists to England, and the Spanish Government promised not to do it again. Of the Barcelona prisoners, 50 were in France. In December, 1896, rumors of horrible tortures inflicted on some of the prisoners in order to extract confessions from them began to be circulated throughout Europe. The prisoners succeeded in conveying information to their friends outside regarding the tortures and the foul dungeons in which they were incarcerated without air or light. Of 20 or 30 men who were subjected to actual torture 2 were subsequently set free, and these made depositions recounting what they had suffered. Some of the prisoners were deported to the fever-stricken, uninhabited West African island of Rio d'Oro. Among the persons imprisoned were Freemasons, Republicans, tradesunionists, and Radicals, for the explosion was made a pretext for crushing all anti-monarchical parties. On Aug. 8 an anarchist fired three shots from a revolver at Señor Canovas in the hotel of the baths of Santa Agueda at Guesaldar, in the Basque Provinces. The Premier, shot in the forehead and the breast, expired within an hour. The assassin, a Neapolitan, declared he killed Señor Canovas in the accomplishment of a just retribution, and that the deed was the outcome of a vast conspiracy to avenge the Barcelona anarchists and Dr. Rizal, the organizer of the Philippine insurrection. The Queen Regent appointed Gen. Martínez Campos, the Minister of War, Prime Minister *ad interim*. The assassin was sentenced to death by a special military court, and was executed on Aug. 20. The Spanish Government, after the proposal that international measures be adopted against anarchists, which was being discussed by Italy, Austria, Russia, and Germany, had had by England, Switzerland, the United States, and

France. The main feature of Spain's proposal was to found a penal colony where dangerous anarchists, to whom no country will any longer afford right of asylum, shall be detained for life.

Gen. Azcarraaga announced that the Government would continue the policy of Señor Cánovas, and reposed full confidence in the conduct of Gen. Weyler in Cuba, both civil and military. After the arrival of Stewart L. Woodford, the new American minister, who presented his credentials to the Queen Regent on Sept. 13, Señor Silvela and some other politicians proposed that Spain should abandon Cuba. Señor Sagasta foresaw in the divisions in the Cabinet his own speedy advent to power and the application of his scheme of Cuban autonomy. A Cabinet crisis was precipitated by the act of the Bishop of Magera in excommunicating Señor Reverter, the Minister of Finance, for having taken possession of the treasury of the church of Luch, although the archbishop had forbidden the excommunication. The other members of the Cabinet upheld their colleague and appealed to the Pope, although the bishop had acted in accordance with the canon law and within his rights. Gen. Azcarraaga made a final attempt to concentrate all sections of the Conservatives, but he could not induce Señor Silvela to co-operate with Romero Robledo, whom he had denounced as a corruptionist, nor to countenance Gen. Weyler's proceedings. Exchange had risen to over 30 per cent., and the steady rise in the price of food stuffs, owing to the growing depreciation of the silver and paper currency, further increased the popular feeling against the ministry. Commercial circles were alarmed at the position of the Bank of Spain, which had now an enormous note circulation. The instructions of the new American minister and the financial and military straits of the Government rendered a change in the Cuban policy advisable, but the ministers could not agree on any new policy. The ministry had a meeting on Sept. 29 to discuss the removal of Weyler as a possible means of prolonging its existence. The conference having resulted in no decision on this point, and no other solution having been presented, the ministers found it necessary to resign. The Queen Regent accepted their resignations at once, and on Oct. 4 Señor Sagasta formed a Liberal ministry as follows: President of the Council, P. M. Sagasta; Minister of Foreign Affairs, Pio Gullón; Minister of Justice, C. Groizard; Minister of the Colonies, S. Moret y Prendergast; Minister of the Interior, F. R. Capdepon; Minister of War, Gen. M. Corrao; Minister of Marine, Rear-Admiral Bermejo; Minister of Finance, Lopez Puigcerver; Minister of Public Works, Commerce, and Agriculture, Count Xiquena. At the first meeting of the Cabinet a scheme of Cuban reforms drawn up by Señor Moret on the basis of autonomy was accepted in principle, and on Oct. 9 an order for the removal of Gen. Weyler was adopted and was immediately signed by the Queen Regent. Marshal Ramon Blanco was chosen as Weyler's successor. It was decided to send out another 20,000 men in order to prosecute the campaign against the insurgents, although it might be necessary, but there was to be no more of extermination in the system of warfare. To prevent the complications growing out of the abuse of American citizenship by Cubans who use it as a shield for revolutionary activity, the Government of Spain had submitted to the Government of the United States, soon after the advent of the McKinley administration a draft of a naturalization convention that was the outcome of a discussion previously carried on with Secretary Olney, and was in general scope almost identical with the treaty subsisting between the United States and Ecuador. It was proposed that if a

naturalized citizen renews his residence in the country of his birth without the intention of returning to the country where he was naturalized, he shall be held as having resumed the obligations of his original citizenship, and that a residence of two years in his native country shall, in the absence of rebutting evidence, be construed as an in-

PRAXEDES MATEO SAGASTA, PRIME MINISTER OF SPAIN.

tention to stay there and shall annul his naturalization. The United States Government was not prepared to settle the question of naturalization at this inopportune moment, when the Cuban question called for a speedy settlement. The note presented by Gen. Woodford before the resignation of the Conservative Government was couched in courteous and friendly terms, giving repeated assurances that the President of the United States desired only peace and amity between the two nations; but, on the other hand, it gave a distinct warning that American interests were suffering severely from the insurrection, that the attitude of neutrality could not be indefinitely prolonged, and that, if tranquility was not very soon re-established, the insurgents would be formally recognized as belligerents. It even went further than this, and in the form of amiable expressions of good will toward Spain suggested that the time had come for a compromise between the contending parties, and made on the part of the President a tender of good offices with a view to bringing about this result, hinting ominously that if Spain should decline this offer of amicable intervention the President will have to consider how American interests are to be protected. The note, which was presented on Sept. 23, called upon the Spanish Government to formulate before the end of October definite proposals by which the tender of mediation could be made effective, or to give satisfactory assurances that the war would be brought to a speedy end.

The Sagasta Government before answering the American note published its programme of Cuban reforms, and then asked that time be given to test the effect of the system of autonomy in pacifying Cuba. The suggestion of foreign intervention contained in the Woodford note produced a fierce out-

burst of national indignation in Spain. The Spanish Government failed to fulfill either of the conditions on which Gen. Woodford was instructed to insist as indispensable unless the United States was to be compelled to see to the means of protecting American interests in Cuba. Not within the month, nor yet at the end of the year, were peace and order restored in Cuba by the armed force of Spain, nor were any facilities given for bringing about a compromise through the good offices of the United States. The project of autonomy as first formulated was a great advance on the Aburriza and Maura schemes, granting identity of civil rights for the inhabitants of the colony with those of Spaniards, and giving them an executive government responsible to a chamber elected by popular vote, which would control the estimates, vote the supplies, and fix the customs tariff, the authorities at home reserving for themselves only the regulation of foreign affairs, of the army and navy, and of the judiciary. Under pressure of the protected manufacturers of Catalonia and the official and mercantile elements who regard Cuba only as a fiscal preserve for their own enrichment, the Cabinet curtailed the proffered rights or so hampered them with reservations as to deprive them of all value even in the eyes of the former autonomists of Cuba, taking back the promised financial independence and control of the customs duties and giving to the Spanish Governor General an absolute veto over the acts of the Legislature.

STREET RAILROADS. Among the most marvelous of modern enterprises are the street railroads—marvelous because of their phenomenally rapid growth and the innumerable changes in power and speed from year to year. These changes, owing largely to electrical developments, have followed one another very rapidly since 1890, when the number and condition of street railroads was first systematically investigated and reported upon by the Federal Government at the taking of the eleventh census. As the "Annual" goes to press, every reliable indication points to the "underground electric" system as the best adapted and most likely to become generally used for urban passenger traffic.

Development of the Underground System.—One of the oldest successful underground electric surface railroads is that of Buda-Pesth, Hungary. "So far as the street surface is concerned," said the "Railway World," when the practicability and general utility of the plan had been thoroughly demonstrated, "they [the electric lines] do not show any striking difference from ordinary street tramways operated by horses. There are no poles, or span wires across the streets, . . . nor is there a third rail, or a third grooved slot.

"There are simply two rails on each track, upon which run the car wheels as on ordinary lines, and these are not employed in any way as part of the electric circuit for conveying current. The latter travels to and from the motor cars along conductors in an underground conduit or channel made of concrete, and carried underneath the whole length of one rail of the track."

In September, 1891, the Minneapolis and St. Paul electric railway announced the perfect working of their latest innovation—i. e., the burying of their feed wires, thus removing from sight and danger the most obtrusive portion of the overhead structure. For comparison with the most approved methods of 1898, the following statement regarding the conduit on the Minneapolis-St. Paul Railway is worthy of mention: "The conduit is located between the tracks, and is built as follows: two-inch plank, first treated by boiling in kerosene, is used for constructing a long trough of the desired size. This trough is so nailed together as to be continu-

ous, and without joints from manhole to manhole, a distance of 400 feet. The trough is placed below the surface at such a depth that the top is 6 inches below the passing line."

Mr. C. J. Field, in an address before the American Society of Mechanical Engineers at the close of 1894, came nearer the mark than any of his predecessors in dealing with the problem of the movement for installation of rapid passenger cars in cities. "Underground traction, . . . or the placing of the trolley wire, with all its dangers, under the surface of the street, is the simplest and desirable result to be obtained in our large cities of electric traction. . . . The conduit to be most used will be one similar to a cable conduit, with the trolley conductors placed at the sides in the shape of a channel or angle bar or rod of iron or copper, which will be divided into sections and fed by underground feeders laid along the line of the road. Shoes or brushes will convey the current from the trolley wire to the motors on the car."

One of the most important events to be recorded in noting the rapid progress of the surface railroad movement was the offer made by the Metropolitan Traction Company, of New York city, in November, 1893, through the Board of Railroad Commissioners, of a \$50,000 prize for the invention of a system of street-railroad propulsion superior to the cable and the trolley.

The offer has resulted in the working out of numerous schemes aiming at the desired end, although the original offer only held good until March 1, 1894. The general idea of the company in making the offer was "to encourage the invention of some sort of underground trolley system which would be free from the disadvantage of liability to kill horses and men in the streets above it." At this writing the lines operating through a large portion of the area controlled by the company have been adjusted to a safe and reliable underground trolley system, described below, and likely to meet all ordinary requirements for a lengthy period.

The Approved Underground Trolley System.

—Until the Metropolitan Traction Company of New York city adopted this system on their Lenox Avenue line, only two underground trolley lines existed in the world, one at Buda-Pesth, already mentioned in this article, the other on the Port Rush road, near the Giant's Causeway, Ireland. The illustration giving an end view of a car, such as has now been put in use on the Fourth Avenue, Ninth Avenue, 59th Street, and other lines of the Traction Company, enables the reader to see and quickly understand the principal details of the approved system, now likely to supersede all others.

"Through the conduit on each side," says the "Scientific American," "the contact bars are carried by hangers. These bars are connected laterally with feeder wires placed just under the outer shoulder of the iron casting. The feeder bar is a wrought-iron pipe, 1½ inch interior diameter and 2 inches exterior diameter. The pipe is inserted in 30-foot lengths and bonded at the ends with copper-wire connections, bolted into the hanger slots. The pipes are easily discernible in the illustration.

"The hangers, also plainly to be seen on the immediate right and left of the pipes in the picture, depend upon a porcelain cup for their insulation, which cup is corrugated inside and out, and sets into a correspondingly corrugated cast-iron cup, receiving in its central aperture the iron hanger rod, all being secured together by cement.

"To the lower end of the hanger rod a socket is bolted, and to this the pipe, in its turn, is bolted, the end of the bolt in the pipe passing through a slot 1½ inch long in order to provide for expansion

and contraction by heat and cold. The head of the bolt is so shaped that it can be introduced into the slot, when by a revolution of 90° the bolt is secured to the pipe.

"That vital portion, the electrical contact apparatus, termed the 'plow,' is attached to the car body, and is built up of sheet steel, with wood and fiber insulation, its form generally being a parallelo-

BROADWAY CABLE, FULL SIZE.
(By permission, from the "Scientific American.")

gram. When it is remembered that the slot itself is only $\frac{1}{4}$ of an inch wide, it will be seen how accurately the plow has to be constructed to correspond thereto in size.

"Its shank is $\frac{7}{8}$ inch in thickness, giving a clearance of a little over $\frac{1}{4}$ of an inch on each side. To construct the shank, 2 sheets of steel $\frac{1}{4}$ of an inch thick are bolted together, and in the center and at the ends a central shoulder and end pieces are inserted for keeping them $\frac{1}{4}$ of an inch apart, thus providing 2 passages between them of this width and 3 inches long, going all the way down. This shank is 9 $\frac{1}{2}$ inches wide, and descends well into the conduit.

"On each side of the lower portion of the shank are carried the contact shoes. These are castings, each being $4\frac{1}{2}$ inches by $2\frac{1}{2}$ inches, and $\frac{3}{4}$ inch thick. A single shoe is used on each side. In the picture these shoes are similar in appearance to spoon or helle bowls, the convex surface being in contact with the pipe on either side of the central shank. The shoes are carried by sheet-steel springs $2\frac{1}{2}$ inches wide, which press themselves outward from the plow frame. Under the influence of these springs they are pressed against the conductors with a pressure of about 7 pounds."

In the experimental stage, as noted elsewhere, it was found that the conduits do not accumulate dirt, that the loss of current is not worse than on an overhead trolley, and the conduit has proved to be practically self-cleaning, requiring to be swept out perhaps two or three times in a year, the natural flushing force of rain doing the greater portion of the cleaning. The conduits are so constructed as to be self-cleaning.

Each car is supplied with two 25-horse-power motors, with electric heaters and electric lamps, including head lights.

Mr. C. B. Fennell, one of the speakers at a meeting of the Electric Society, 1894, said he thought it was a question "whether there is any extraordinary demand for an underground electric system," and he quoted from an authority who stated that "a successful underground system would be a great calamity for the street-railway interests of this country, from the fact that if one were adopted every little city throughout the country would demand that all the wires be put underground, and it would ruin nine tenths of the street

railways of this country if they were compelled to operate under such a system." The indications are now, after three years and a half, that the time when such a calamity as he predicted must happen has arrived, or at any rate is rapidly arriving.

Development of the Overhead Trolley System.—In June, 1891, an electric surface road was in full operation between St. Paul and Minneapolis, Minn. So successful and economical was its working that in the first six months it practically drove the steam railroads out of competition. One reason was the lower rates on electric roads. The railroads charged 30 cents single and 50 cents return fare, whereas the surface-road rate is only 10 and 20 cents respectively. This was not by any means the first successful road, but is a notable example of progressive work.

At a meeting of the American Street Railway Association in November, 1891, Mr. Pearson, connected with surface-railroad interests in Boston, stated that his road had at that time equipped 350 cars with electric motors. He announced that whereas the expense of operating horse cars had been practically 25 cents per mile the electric system cost but 20 cents, and would, he expected, get as low as 16 or 17 cents.

He estimated the total saving by use of electricity as equal to 25 per cent.

Useful facts and figures to show the rapid growth of the electric system on surface roads were quoted at length. For purposes of comparison with information given as for 1897-'98, they will be found of great service: "Three years ago [1888]," said President Watson, "there were only 13 electrical roads in the United States, now [November, 1891] there are over 400. . . ."

"The capital now invested in American electric railways exceeds \$75,000,000. 'Horse sense' counts for but little in this age of rapid transit. We old dogs have been obliged to learn new tricks, and without the usual privilege of serving an apprenticeship. Our stables are being converted into power houses; the electrician has taken the place of the veterinary surgeon; our drivers are being educated as motormen, and most of us have horse cars for sale."

Engineering Difficulties in the Northwest.

—One of the earliest and most difficult electric surface-road enterprises on record in connection with the rapidly developed movement forming the subject of this article was that undertaken and carried to a successful issue in 1891-'92 by the Tacoma and Steilacoom Railway Company, of Washington. The country between the two towns, a distance of 13 miles, is very rough and covered with a dense growth of giant fir and cedar trees, which had to be cut down for the right of way, and the immense stumps blown out with giant powder. Hills were cut through in places to a depth of 17 feet, and corresponding gullies filled up, and creeks crossed on long trestles.

The engineering difficulties of the route and, incidentally, the scenery on this road is thus graphically described in the "Street Railway Review": "Leaving the power house, the road runs one mile west through an immense cut 17 feet deep and 1,200 feet long, descending an 8-per-cent. grade 1,500 feet long, then turns to the south, and runs several miles through a dense forest of immense fir trees until, after descending a horseshoe curve or a 6-per-cent. grade for half a mile, the country opens out to a beautiful prairie dotted with dwarf firs and scrub oaks and covered with flowers and vines.

"Crossing this prairie for a mile, the road sud-

denly plunges down into an immense cañon, following the contour of the side on a 5-per-cent. grade for over a mile. . . . At many points it was necessary to blast a roadway out of the mountain side, and as the car glides along its narrow path, winding around the jutting points of rock, the tree-covered mountains above afford a striking contrast to the dashing water 100 feet below. The cañon ride is one never to be forgotten. Reaching the bottom of the cañon, the river is crossed on a trestle 300 feet long. Yet, in the face of so many obstacles as were constantly present throughout the entire route, a line of over 11 miles was opened within ten months of the date when the first ground was broken.

Improvements in Trolley Cars and Motors.—The progress of electric railways noticeable in the spring of 1893 was very marked. Mr. Bennett, an expert, in a current report on the subject, said, "We are now using much larger and heavier cars and more powerful motors, and the improvements due to the great advance of the electric power industry tend to increase the efficiency of the motors and gearing employed." What follows is worthy of especial note when viewed in the light of present conditions: "The development of the low-speed motor will lead to one in which, for ordinary speed of street traffic, the armature can be placed directly on the driving wheel, thus dispensing with all outside losses.

"When this result is arrived at, which time is not far off, and either a light-storage battery or a practical system of power transmission to do away with overhead wires and their attendant damages is developed, the electric street car will stand at the head of methods of surface rapid transit." Mr. Bennett quotes as an illustration the St. Louis suburban electric roads, "where, with modern cars and equipments, a run of eight miles out from the city is made in thirty minutes." This rate has been considerably increased since 1893. It is safe to say that under favorable conditions the same length of line in many cities is now traversed in from sixteen to twenty minutes.

Suburban and Rural Traffic.—Referring to the vast strides being taken in and near various cities in the matter of local passenger transportation, a New York scientific writer, in the summer of 1893, said: "While this and other cities have been progressing, the country has not been idle. The centralization of power and its distribution by the trolley system have inaugurated a cheap and rapid transportation system for suburban, and even rural districts.

"The country roads have been invaded by the trolley. The vigor of the movement of the day in favor of cheap transportation is here emphasized. In spite of the effects upon horses in frightening them, the country roads on all sides are presented to electric traction companies if they will only put down electric roads. . . . Already local steam roads have been most seriously affected by the competition with trolley roads."

Trolley Cars on Country Roads.—The agitation now in progress for an electric-car system on country roads was begun in 1893, when the Wheelmen's League advocated a plan whereby \$10,000,000 would be required for New York State alone.

Influence of the Trolley-Car System on Railroad Traffic.—The influence of the trolley cars on steam-railroad traffic in and near cities began to be

severely felt four years ago, and the decrease has been so great in numerous instances that local steam service has been practically suspended. An influential railroad man, speaking of the time when steam railroads were supposed to show a heavy falling off in the city and suburban traffic, said: "There is no use in our trying to compete with the trolley lines. We have to give the road to our patrons. We provide handsome service from the suburban stations, head, water, light and a seat for every passenger, while the trolley cars, for all almost nothing but transportation. They form the stations; crowd the passengers in so that many have no seat, and in that way manage to make money. We can't do things that way, and so I see no money for us in trying to compete with the trolleys. Of course they can't touch us on long-distance traveling, but in the near future I expect to see them absorb a large amount of our suburban travel." Since that time trolley service has gone to great lengths literally, and is an active competitor today in some districts not at all within the limits of what might reasonably be called "suburban."

Emergency Trolley Device.—A curious incident illustrative of the convenience of electrical appliances ingeniously applied during an emergency happened on the Lake Road Elevated Railroad. The trolley on one of the large electric cars was caught in a wire, and the entire trolley apparatus was torn off, falling to the street. The accident happened at a time when the traffic was heavy, and it was necessary to prevent a block. A linesman was equal to the occasion. He procured a piece of insulated wire, and after stripping each end of the insulating material, connected one end through the car roof and standing on the top of the car, held the other end, against the wire. A connection being thus made the car was run over

BROADWAY GRIP MECHANISM.
(By permission, from the "Tribune American.")

the elevated structure to the car, and it was not a delay to the other cars.

Trolley Cars for Mail Carrying Service.—Early in 1894 attention was drawn to the new uses to which trolley cars were being put in connection with mail carrying. Several city mail-car-

rying service of this character was introduced in Ottawa, Canada, and other cities, and has proved entirely satisfactory, the overhead trolley system being utilized for the purpose. For more than two years post-office cars, especially equipped, have been run as cable-car attachments on the Third Avenue road, New York city, and the idea of thus simplifying the delivery of mail at substations is likely to be developed until at last every important city route will be covered.

CROSS SECTION OF ELECTRICAL SUBWAY, SHOWING TROLLEY MECHANISM.
(By permission, from the "Scientific American.")

Trolley Cars for Pleasure Parties, Church Parties, etc.—The successful use of electric trolley cars for rapid conveyance of urban and suburban residents to and from their places of business has led to ingenious applications of the idea for purposes of pleasure. Palace trolley cars are now in use for theater and excursion parties. In Brooklyn, within the past two years, these cars at night are decorated with variegated lights of every hue and present a decidedly pleasing effect when seen at a distance in sparsely settled localities. In Boston cars for recreation purposes are painted in black and gold, with crimson panels. The trucks and running gear are of dark green.

The interior woodwork of these palace cars is of polished mahogany, and the upholstery is of plush and blue and red plush. Each car has twenty chairs, and each chair is provided with a wire hat-holder under the seat. Not only do people charter these cars for parties, but for churchgoing on Sundays and other routine events. Their provision in several cities has been large appreciated.

Trolley Parcel-Delivery System.—At St. Louis the convenience of the electric cars were further illustrated some time ago by the establishment of a parcel-delivery system. As early as 1895, one of the St. Louis trolley lines, a regular delivery system was organized, involving the collection and delivery of parcels by means of ordinary express packages. This particular line starts in the heart of the city and runs for seven miles through a thickly settled district. The car used for the work makes three trips per day, running on schedule time. The car is specially equipped for the purpose, and is maintained at its own.

The foregoing text reviews briefly the development of surface-road facilities from 1891 to 1895. From that date to the present much has been done to perfect the cable and electric systems. Improvements have taken place in almost every depart-

ment, especially those connected with car lighting, ventilation, ease of motion, and a score of other details, each contributing in a greater or less degree to the comfort and help of passengers anxious to reach their respective destinations at a maximum of speed and comfort with a minimum of expense and personal risk.

The Cincinnati Viaduct.—Various methods have been adopted in cities for carrying and connecting surface city lines across cuts, ravines, and

other open spaces.

One of the most substantial and at the same time most artistic so far constructed is that now in use at Cincinnati. The business portion of the city occupies a plateau nearly three miles wide, rising abruptly about 80 feet on the north side of the Ohio river, and beyond this is an irregular line of bluffs some 400 feet high, over and beyond which the city has spread. One of these hills is known as Mount Adams, and the illustration on page 746 represents a view on the Mount Adams and Eden Park Railway, forming

part of the street-railway system, the park being on a hill in the eastern part of the city.

Decision concerning Trolley Patents.—About the same time, the Patent Office announced the validity of the administrator's claim in the matter of Van Depoele and others who contested the right to use and profit by the overhead trolley system. After a delay of six years, a patent was granted to the estate of Dr. Charles J. Van Depoele, recognized as the inventor. The Van Depoele rights were purchased by the Thomson-Houston Electric Company, and the Patent Office decision just referred to gave this corporation a monopoly for seventeen years, covering all the electric railways in the country and their plants. When the decision was given, over 6,000 miles of these railways were actually in operation.

The Van Depoele Patent.—The principal clause in the patent granted reads thus: "In an electric railway the combination of a car, a conductor suspended above the line of travel of the car, a rearwardly extending arm pivotally supported on top of the car so as to swing laterally, and provided at its outer end with a contact device engaging the underside of the suspended conductor, and a tension spring for maintaining an upward-pressure contact with the conductor."

"Overhead" Electrical Railway.—On Nov. 9, 1892, the first train on the Overhead Electrical Railway—a distinct advance on current British methods of conveying city passengers to various points within city limits—was run successfully at Liverpool, England. The trip was reported as "very satisfactory, the behavior of the main engines and dynamos being all that was anticipated. . . . The construction of this railway resembles in general appearance that of the Sixth Avenue Elevated Railway, New York city."

Steam Elevated Roads—their Disadvantages.—The passing of the elevated steam railroad

as a desirable means of transportation for passengers is foreshadowed in a few timely remarks by the editor of the "Scientific American," in March, 1863: "The elevated steam street railways," said he, "are great conveniences to the public, but they are sources of dirt, din, and danger to many a passing victim on the streets below. Chunks of coal, bolts of iron, hot and cold water, fiery coals—these are only a part of the droppings that fall from the rattling trains." He notes also the occasional fall of a man. One, in particular, was fortunate enough—for his own salvation—to fall on a passerby. That they were "both considerably hurt" goes without saying.

Storage-Battery System.—The storage-battery system has had many trials and has met with many adversities, but its advocates are not by any means discouraged. Evidence of this was seen recently in New York when a number of large, perfectly equipped storage-battery cars were introduced on an important crosstown line. The perfecting of the system is looked for at an early date, and with it will quickly come its adoption for all short lines, to the obvious disadvantage of the old horse-car system, which, in all large cities, has practically run its course. This system has been advantageously put into operation at several points during the past seven or eight years. The "Julian" system was introduced on Fourth Avenue, New York, prior to 1890, but work was suspended owing to disputes as to patent rights.

In February, 1891, announcement was made that a contract had been signed for the equipment of a branch of surface railroad at Washington, D. C., with 6 storage-battery cars. The local company introducing this innovation was one of the first in the country to adopt electrical devices for car propulsion. About this time municipal authorities were being aroused to the fact that trolley poles within city limits were undesirable. Hence the introduction of a storage-battery system, which has met with varying success.

These six cars were made for the "Eles" system, and equipped with the Electric Dynamic Company's motors and gearing, the gearing running in oil, with dust-tight covers for motors, and with a number of "23 M" type accumulators, with average speed of eight hours, the maximum speed being 15 miles.

The next recorded success of storage-battery cars was at Dubuque, Iowa. In June, 1891, 9 cars were in operation, equipped with the Eles system. It is interesting in this connection to note the effect on the public mind of the new system introduced so successfully in numerous cities some seven or eight years ago. The unsightliness of appliances necessary for the working of the overhead trolley system had been a subject for much unfavorable comment. The opportunity to compare it with the storage system brought forth a more vigorous volley of objections to overhead appliances.

A local daily, the Dubuque "Times," is quoted as saying, in connection with the introduction of the storage system: "There is no tangle of overhead wires to spoil the view. But down the street, swiftly and silently, save for the loud ringing of the warning gong, comes a beautiful car, skimming over the rails like a thing of life, yet so perfectly under the control of the 'motomeer' that it can be brought to a standstill in half a car length. There is no rocky motion, no jarring. The cars run as smoothly and with apparently as little friction as a bird flies through the air."

At Oneida, N. Y., in the fall of 1893, a street car in actual use was propelled by storage batteries. The total run on one charge of the batteries was 135 miles. The car made daily from 64 to 90 miles

without a break in the service. The 125-mile run was made on a seven-hour charge. There were 96 cells used in the car. The motor was a single 30-horse-power Rac type. The motor winding was for 190 volts. The voltage of the 96 cells at the start of the 117-mile trip was 204; at the end 192 volts, a loss of only 12 volts in a day's trip. The car was lighted from a bank of 24 cells with 48-volt incandescent lamps.

Development and Decay of the Cable System.

—In the autumn of 1891 the original cable road, operated by the Clay Street Hill Railroad Company, San Francisco, became obsolete. The record of this line, extending from 1873, when the cable road was constructed to overcome the grades of from 10 to 16 feet existing on that thoroughfare, shows that the original grip car consisted of a low platform on small car wheels and supporting the grips. A rough railing surrounded it. The brakes consisted of steel levers, which were pressed against the four wheels.

Five men were necessary to run the dummy, one operating the grip and each of the remaining four standing with a steel lever in his hand ready to lock the wheels should the grip break. The trailer was a common "bobtail" horse car. The history of the cable is intensely interesting in the light of passing events. It dates back about twenty-eight years.

"Early in the '50's," says the "Scientific American," "A. S. Hallibur, now President of the California Wire Works, of San Francisco, conceived the idea of propelling street cars by means of an endless, traveling, underground cable. The scheme was at first considered chimerical, but finally three men of means—Joseph Britton, H. L. Davis, and James Moffitt—took the matter up. Then came the almost interminable task of working out the mechanical details of the idea, but it was finally completed, and on Aug. 18, 1873, hundreds of San Franciscans climbed up Clay Street hill to watch the trial trip.

"As the gripman who was to take the car over the road looked down the steep decline his courage failed, and Mr. Hallibur took the grip. At a given signal the car started off smoothly, amid shouts from thousands of throats. The trip was made without a hitch, and the innovation was pronounced a success."

Electric cars have taken the place of cable cars on Clay Street hill, and Mr. S. L. Foster, discussing surface-railroad topics in 1906, said, in this connection: "When we consider the daily spectacle of electric cars, unaided, climbing 144-per-cent. grades in San Francisco and 15-per-cent. grades in Oakland, and by means of a simple auxiliary device ascending a 25-per-cent. grade in San Francisco, where no cable grip could be made to hold, the impregnability of any cable proposition is open to question."

Another significant event happened in 1891. The cable surface-railroad equipment was replaced by an electric system at Grand Rapids. Nearly all of the expensive machinery, etc., was broken up and sold for old iron. The engines are utilized, however, to drive the dynamos that furnish the current. The grip slots and rails are retained on hill lines, and an auxiliary brake has been fitted on the cars to catch on these rails in case of emergency.

The Cable Lines on New York Thoroughfares.—With evident satisfaction, announcement was made from time to time in the past few years of New York city during the latter part of 1891 of the preparations then in progress for running the "Broadway and Seventh Avenue cable road." Neither the projectors of this proposed enterprise nor the expectant public of the period anticipated

so rapid an advancement of appropriate electrical inventions for underground propulsion of surface cars as has been witnessed within the marvellously short space of time since elapsed. Already the entire cable system is under condemnation as ancient and unreliable compared with the underground trolley system, now accepted as apparently the very best possible method obtainable.

The engineering difficulties connected with the construction of the Broadway cable road were far greater than have been encountered in the majority of steam-railroad enterprises since the days of Stephenson and Brunel. To cross rivers or to cut tunnels through rock as hard as adamant is mere child's play in comparison with the task undertaken

incident indicative of the then rapidly approaching triumph of electricity over other methods—not only in regard to speed, but also with a view to greater economy in working expenses.

The cable was abandoned, because its operation was too costly. As at Grand Rapids, curves were frequent and sharp, and there were other large items of extraordinary expenditure from wear and tear. The opportunity, too, for avoiding the handling and placing of unwieldy masses of cable was welcomed.

Completion of Two New York City Cable Roads.—The beginning of 1893 found the New York cable roads well advanced. On the Broadway and Seventh Avenue line the line between the

DANGER OF A SLACK CABLE.
(By permission, from the "Scientific American.")

by the men who accepted contracts for cable-line construction along Broadway. Naturally they expected many obstructions, but the obstacles met with were far more frequent and of a much more aggravating character than was anticipated at the start.

These obstacles included gas and water mains and valves; sewers, with their manholes, basins, and connections; Edison electric conduits, manholes, and subways with vaults; service boxes and air pipes; commercial cable conduits and vaults; main water pipes; steam pipes with expansion joints, return pipes, valves, and valve stems; and the adjustment and readjustment of the tracks for temporary and permanent tracks. All difficulties, as mentioned in a subsequent paragraph, were eventually overcome, and passenger traffic duly established. How little was known less than a decade ago of the future may be understood from the following extracts.

The *Scientific American*, of May 16, 1891, referring to the commencement of contract work on the Broadway cable road, remarks the first step in making "a city of cable roads. . . . The street-car horse man, within a few years, be almost banished from the city. . . . As for the former, the rapid advancement of the science and invention since the time when he placed the suggested transformation of the city into impossibilities.

Valuable Cable Road abandoned at St. Louis.—In April and May, 1892, the cable road of the St. Louis and Western Railway—which cost the city of St. Louis alone \$150,000—was demolished. The plant sold for a trifling sum. This is mentioned as one

Battery and Central Park had reached completion. The Third Avenue line was also complete except two very short uptown stretches and one at the southern end of the line. A franchise was granted for a Lexington Avenue cable line, and bids were being made for a similar privilege on Ninth Avenue.

The Broadway cable road, New York city, began actual passenger-carrying operations on May 11, 1893. The cable between the Battery and Thirty-sixth Street were started by the seven-year-old daughter of Mr. John D. Crimmins, who built the road. Miss Crimmins opened the steam valve of the 2,000-horse-power engine in the basement of the great power house of the company at the Houston Street station. In less than five years this vast subterranean power-house chamber, over 100 feet in length, under Broadway, and 40 feet in depth, has passed the highest point in its career of usefulness, and the days of the cable being numbered, this structure must ere long be abandoned for cable purposes as unnecessary.

The Third Avenue line was practically completed during the first week in December, 1893. Although this is a cable line, there are many variations in mode of working, these variations extending to engines, cars, grips and grip-operating devices, and differing from the Broadway plan in many other important particulars.

Signal Systems on Cable Roads.—Accidents on cable roads, whereby much vexatious delay to passengers was occasioned owing to the inability of road inspectors and other officials at a distance from power houses to communicate with engineers, brought about the installation of a useful signal system, placed in operation on the Third Avenue

road in the spring of 1894. The plan is at once complicated and simple. By a series of strikes on a gong, controlled from the engine along the route, notice is instantly given to engineers of accidents, delays, and other emergencies calling for prompt changes in cable sector.

Lighting Cars with Gas.—The problem of lighting the Broadway cable cars satisfactorily and conveniently was solved by the adoption of the Pintsch system. By this plan a very rich gas of more than 70 candle-power is obtained from crude petroleum. It will stand a very high degree of compression without materially affecting its illuminating qualities. Coal gas it has been proved, will not stand high compression, as it is a low candle-power gas, and loses 50 per cent under compression, whereas oil gas only loses about 10 per cent.

Length and Weight of Cables.—Some idea of this part of the work connected with operation of cable roads may be gained from the authoritative statement that a cable manufactured for use at Denver, Col., was 32,145 feet in length, weighing 80,867 pounds; another, for Portland, Ore., measured 33,000 feet, weighing 76,359 pounds; a third, for Kansas City, Mo., extended 32,300 feet, its weight being 95,200 pounds. It can be easily understood how acceptable any practical method for propulsion by electric power must have been, even at this period, to surface-railroad corporations, officers, and employees.

The autumn of 1892 found a complete cable equipment on many of the surface roads of Washington, D. C. The plant for the Pennsylvania Avenue and Fourteenth Street branches alone cost \$3,000,000. This, together with the Seventh Street road, made the most complete and one of the largest cable systems in the country.

Cable-Road Accidents.—The practical workings of the newly laid cable road in New York brought to light several frequent causes of traffic interruption. The "Scientific American," when public interest had been aroused owing to many delays and other annoyances, published a very interesting and instructive illustrated article on the

subject. Several of the most serious causes of accidents are explained.

"Not long since," says the article, "one of the cable cars in lower Broadway, when a fault in one of the cables started, and a stoppage was made by the gripman to stop the car, it was found impossible to release the grip. The car was then towed down Broadway toward Duane Street, passing everything before it, having a momentum estimated of not far from 1,200 horse-power. The immediate prospect of being stopped by the cable railway has no telegraph (there is a communication system now, 1898) the telephone was out of use, and in due course of time communication was had with the engineer at the power house, and the cable was stopped."

"On examination of the grip it was found that a certain amount of slack in front of the car allowed the formation of a loop which, as gripmen thought, took the form of a hitch around the projecting horns of the grip. The only way to release the grip from the cable in this case was to break the grip and remove it from the cable wheel. The car being towed back to the car house for tampering it to another car. Although the cable is sufficiently flexible to permit of passing around the large drums at the power station and over the guiding sheaves in the street it was far too rigid to permit of releasing the grip by any manipulation of the cable itself."

This is evident from an examination of the cable; the detailed construction of which is shown in this article. The center of the cable is flexible enough, being of hemp. The wire portion is formed of 6 strands, the exterior layer of each strand consisting of 11 wires, Nos. 9 and 11 alternating, the inner layer being formed of 7 Nos. 2 wires, while the center wire of the strand is also No. 9, making 19 rigid steel wires in each strand. A certain amount of slack is required in the roping wire to relieve the immense strain and tension. The loop found in the instance given above was caused by the allowance of slack being in excess of actual requirements.

The illustration of a broken strand in this article shows the condition in which the cable was found

ONE STRAND

RESULT OF A BROKEN STRAND

By permission from the "Scientific American."

after another adventurous trip of a runaway car on Broadway. "In this accident," says the "Scientific American," "the car behaved as in the other cases—that is to say, it was carried along the track irresistibly, and the gripman was unable to release the grip so as to stop the car. After the power house had been signaled and the engine stopped, an examination of the cable in the conduit showed that one of the strands of the cable had been broken, and the cable, in sliding through the grip, pushed back the strand until 1,500 feet of it had been piled

rigidly attached to a crosshead on the track frame by means of two vertical shanks of plate steel, M M, and is always carried at a fixed level. The upper jaw, B, is carried by a shank, L, which is raised or depressed by the action of levers attached to the crosshead and operated by the gripman.

"The jaws are each provided with two longitudinal grooves, so that the cable may be taken up on either side of the grip. When the car is stationary the cable runs in the groove in the lower jaw, and the car is started by depressing the upper jaw and

A DOUBLE-DECKED CAR.

(By permission, from the "Scientific American.")

up upon the cable, the strand thus shoved back upon the cable occupying a space of 200 feet behind the grip.

"This accident caused a delay of several hours. There was no remedy for the delay, as the spare cable had not been laid in the conduit. Traffic had to be suspended until the cable could be put into running condition, which was done by removing the loosened strand."

Slow-Speed Cable-Car Grip.—The adoption of the device shown in this article for permitting the reduction of cable-car speed on curves is the outcome of popular agitation in New York city demanding an adequate remedy for existing dangers at several places along the Broadway route, notably at the curve, corner of Broadway and Fourteenth Street, where the cars turn into Union Square. The suggested remedies were numerous, some practical, many impracticable, for one or more reasons.

The remedy ultimately chosen meets every requirement, and can be applied at will. "The construction of the ordinary form of cable-car grip is such that if a stop is made in the middle of a curve and the cable is released it will leave the grip and spring toward the center of the curve. Hence, in order to traverse a curve the gripman takes a firm hold on the cable and swings around on to the next tangent at full speed. This full speed is much greater than is allowed for by the city limits, and is so rapid as to be extremely dangerous to pedestrians at the crossings."

In the illustration showing perspective of grip, with retaining hooks attached, the parts marked H H are loose hooks, which keep the cable in the grip when the upper jaw, B, is raised to release the cable. The grip consists of a lower fixed jaw, C, and an upper movable jaw, B. The lower jaw is

gripping the cable, the speed of the car being regulated by the pressure of the grip. At full speed the cable is held perfectly stationary in the grip, and at slower speed it is allowed to slip somewhat, the car being carried along by the friction between the jaws and the cable.

"The cable is thrown out of the grip altogether, or 'tripped,' by raising a couple of wedges which are carried by links, R, bracket, P, and the two plates, E E, and are operated by a separate lever on the car. The plates, E E, are provided with stops, which, as the plates are lifted, engage the shank, I, and raise the top jaw, B.

"The trouble with the old form of grip was that when the upper movable jaw, B, was raised when traveling a curve the cable would spring out to the inside of the curve and be 'lost.' To remedy this the hooks, H H, whose cross section conforms to that of the upper jaw, B, are hung by links, G, to the jaw near its ends, and have a slightly larger vertical movement than the jaw. When the latter is raised sufficiently to release the cable, the hooks, H H, remain down in place and keep the cable from springing sideways out of the grooves."

Compressed Air as a Motive Power.—The use of compressed air as a motive power for city surface roads was brought prominently to notice in the early part of 1894 by use of that system for propulsion on the Nantes tramways and on the line from Paris to Nogent-sur-Marne. On the latter line each car is fitted with 9 steel storage reservoirs fixed underneath the car body, containing air at a pressure of 100 pounds to 176 pounds per square inch. Three of the reservoirs form a reserve in cases of emergency. The air is heated on its passage to the motor by hot water, which at starting has a temperature of 300° F.

The cars seat 50 passengers, and weigh upward of 14 tons. They will run 12 miles with a single charge on the level, but owing to the heavy grades one charge suffices for but 8½ miles; the consumption of air being 35 pounds per mile on the grades and about 24 pounds on the level. The objection to this system of traction has been the great weight of the reservoirs. These the engineer has succeeded in reducing. The feeding points are at intervals of about 1½ mile, and the car, as it runs over the points, automatically makes connection with mains supplied from a central station, a stop of a few seconds only being required to fill the reservoirs.

Gas-Motor Cars.—In 1893 much progress was made in European cities with gas-motor surface cars. Coal gas was chosen in preference to horse power, electricity, and compressed air, as being more economical for a train line between Neuchâtel and St. Blaise, a distance of 3½ miles. The gas motors use cylinders of gas compressed to 10 atmospheres, and containing enough gas to do the run out and home.

The motors are reported as being strong, simple, practical, and safe, and free from noise and smoke; they only require a weekly cleaning. The starting and stopping are instant and free from shock. The weight of the car, with 20 passengers, a driver, and a conductor, is about 6 tons. The highest ground on the journey is halfway, 40 feet higher than at the starting point, Neuchâtel. To get up a speed of 11½ miles an hour, 7.9 horse power is necessary. If another car is hitched on, also fully loaded, the journey takes 27.4 minutes. The cost of gas, with one car, is \$1.12 per thousand cubic feet, ½ cent per passenger per journey.

Experience in Europe has proved that gas can run a small traffic. A gas car can go anywhere, and there may be few or many in use. "Electric cars," says an authority, at this time, "are a good deal dependent on one another, and upon the arrangement of the track for them." In a report to the municipal authorities at Nordhausen, numerous advantages of gas cars over electric cars were noted. Among them were: Much less first cost; less current cost; independent action of cars, thus doing away with breakdowns; ease of beginning in a small way and gradually developing; and, lastly, ease of replacing gas motors by electric motors, while the inverse change can not be made in an electric car.

Statistics published in the fall of 1894 concerning the working of gas-motor cars, such as was referred to in previous paragraphs, show that in Europe the cost of a gas-motor car weighing 7½ tons empty, to carry 20 persons, and fitted with two 7-horse-power gas engines, is \$4,500, and the gas consumption, with 10 to 12 persons on board, is from 34.7 to 37 cubic feet per car mile. The cost of construction, 5 miles with cars running every five minutes, requiring 20 cars and working fourteen hours per day, is put at \$5,200 per mile, including everything, while in Germany, at the same period, an electric tramway costs \$37,240 per mile and a horse tramway \$28,180. Working expense for gas-motor cars are given as from 84 cents to 10 cents per car mile with a 10-horse-power gas motor, as compared, in Germany, with 7 cents per car mile for the electric system. "The conclusion arrived at is," says the writer, "that with similar traffic conditions a gas tram might be expected to give a return of 64 per cent, on the capital invested, while an electric tram would barely cover cost of working."

Oil Vapor as a Motive Power.—Oil vapor as a power for propulsion of surface cars was introduced early in 1893 on the London and Greenwich tramway system, England, and proved successful. The

Connolly motor, previously used in the United States, furnished the power. The engine is fixed in a small car, and is capable of developing 12 horse power on the brake. The last type—weighing 507.85 miles and carrying 4,182 passengers, the total consumption of oil was 79 gallons. The engine worked satisfactorily, taking gradients and sharp curves without difficulty, and the legal speed of 8 miles could easily be increased.

Wire-Rope Tramways.—This system is chiefly intended to exhibit the progress and present condition of surface city railroads, yet occasional branches outside of these limits will aid the traveler in forming an adequate idea of progress made in other directions toward the desired end, i. e., the rapid conveyance of passengers, in and near cities, to and from all destinations within easy reach for business or pleasure.

Four years ago a wire-rope tramway for passenger-car service over the Tennessee river at Knoxville was put in operation and worked successfully. The tramway was suspended at a height of 250 feet above the water. The cables were 1½ inch in diameter and the length of the span 1,000 feet. The car, when empty, weighed 1,200 pounds. It had a 14-foot body, was 6 x 6½ feet, and carried 16 passengers.

In Foreign Countries.—Shortly before the close of 1891 the first overhead electric "tram line" was opened at Leeds, Yorkshire. Previous electrical appliances in England were on the conduit central rail or storage-battery system, owing to the unsightliness of the overhead trolley equipment. The trolleys were on 21-foot standards, "the current being drawn off to the motors on the cars through a small grooved wheel, which is pressed against the under side of this bar, and runs along it as the car progresses. The return current from the car passes through the wheels to the rails and the return wire."

Many old developments have appeared as the electrical system gained in strength and patronage. At Chemnitz, Saxony, in 1894, horses were declared obsolete for street-car service; the trolley was substituted. At the same time the trolley pole was pronounced undesirable and superfluous. The method of stringing wires at Chemnitz is by means of ornamental rosettes fastened into the woodwork or walls of houses, having projecting hooks to which the wires are attached. These hooks are firmly fastened and are tested with seven times the weight they are called upon to bear. The plan works satisfactorily. A similar plan is now in use on the Brooklyn Bridge for trolley-car service.

Another novel feature on this line is that there are no car conductors. Fare boxes are attached to each end of the cars, and there are very few evasions of fare-paying. The fare is 10 pfennigs, a trifle less than 24 cents, including transfers. If 150,000 persons evade payment of fare, the total loss would be 15,000 marks. The number of delinquents would have to be trebled before the company would begin to lose, the saving of conductors' salaries amounting to more than 45,000 marks. In Saxony the people pay for food and drink in restaurants, saloons, and gardens on horse alone. Later on it is hoped the same condition may exist in the United States.

Double-Deck Cars.—The limited use of "double-deckers" for relief of congested morning and evening traffic on surface lines, such as the Broadway and Columbus Avenue routes in New York city, has frequently been advocated and will probably be instituted in due course. The present double-deck car given in this article is a specimen of the series constructed for use on the new electric railway in Cape Town, South Africa. These cars have a seating capacity of 100 passengers.

sengers—thirty-two above and a similar number below. The seats on both decks are arranged transversely, with a central aisle.

The increase of 100 per cent. cost is comparatively little extra dead weight. "The increased accommodation is obtained by the addition of a roof carried on light iron rods, two exit stairways, and the seats, together with such increase in the strength of the car body and frame as may be necessary. The platforms are specially constructed, and accommodation is provided for the motorman, controller, and brake apparatus on the outside of the step landing. The cars are mounted on Eureka maximum traction pavement trucks, and are equipped with Westinghouse No. 118 50-horse-power motors."

Mileage of Street Railways, also Number of Cars, 1893.—In showing the progress of surface roads, the New York "Sun," especially reliable in statistical matters, announced, in July, 1893, that "three years ago the mileage of horse roads was 5,113; of electric roads, 1,641; of steam roads, 554; and of cable roads, 527. Now the electric roads lead off others. . . . At the beginning of 1890, when

appliances for propulsion, etc. The total amount given, with interest, was \$1,246,000.

Cost of Electric and Cable Road Construction.—Some interesting facts and figures concerning surface-car systems were presented at a meeting of the New York Electrical Society in November, 1894. During the meeting it was announced that the cost of the New York city cable roads, single track, was not less than \$150,000 per mile; in Washington, D. C., about \$30,000; average cost of cable roads in cities per mile, \$60,000 to \$75,000.

Electric traction, it was stated, is very much harder on the rails than cable traction, when the headway is under three minutes. Cars for electric and cable roads are about equal in cost, but the motor costs from ten to twelve times as much as the grips, or a difference of about \$1,000 per car.

Advantages of Electric System as to Cost, etc.—Mr. S. L. Foster, writing to the "Street Railway Journal" in 1896 under this heading, said that, from comparisons made in San Francisco, people prefer to ride in electric cars. It was also ascer-

VIADUCT, CINCINNATI, OHIO.
(City permission, from the "Scientific American.")

the railroad building first began to be popular, in 1841, there were only 2,346 cars. Today the great increase in the number of lines that there are more than 1,000 miles of electric street railroads."

Franchises.—The companies interested in the construction of street-railway facilities to-day are anxious to get ahead for securing the franchises and municipal privileges. Just before the New Orleans and Lake Railroad company purchased from the municipal authorities of New Orleans, for \$700,000 cash down, a renewal of privileges already held. This renewal extends from 1906 until 1956. This security was needed and required by the company to justify a heavy investment in electrical

tained beyond any doubt that electric cars carry the people more cheaply. "These results were not obtained from a few electric cars run on level lines and at high rates of speed, but from the operation of upward of 150 cars at from one and a half to two and a half minutes headway at times, and on lines having grades as high as 14.5 per cent." Mr. Foster, in conclusion, said:

"Every time a cable power house can be dispensed with and the lines operated by electricity, that power house's item 'labor' is wiped out, and the item 'fuel' is reduced both on account of the less fuel required per car mile for an electric road as against a cable road, and because the cable houses are usually run noncondensing, whereas in the electric power house the engines are run condensing."

Use and Waste of Electrical Energy.—Consequent on the evident general acceptability of the electric system for surface roads, it is important to know something of the use and waste of electrical energy as applied or misapplied by motormen. Prof. Herman S. Hering, of Johns Hopkins University, in a paper on "The Use and Waste of Electrical Energy" read in 1896, said: "By far the largest part of the electrical energy used by the cars is expended in accelerating and lifting them—that is to say, in starting and in hill climbing. If a car be driven to the top of a hill, it represents, by the time it reaches the summit, an amount of energy which an intelligent motorman will carefully husband on the down-grade, using only as much current as will start it and utilizing the "drifting" capacity of the car when it reaches the level for as great a distance as possible. Motormen frequently use current on a down grade when it is totally unnecessary, and then jam down their brakes when reaching the foot of the grade, which results in a total loss of this energy."

"The tests show that 74 per cent. of the total energy expended per car mile in city work is used up in lifting and accelerating, and only 26 per cent. for horizontal traction."

"When a special motorman made a test he showed an economy of 15 per cent. on the up grade and 26 per cent. on the down grade, over the ordinary motorman. The saving per year on a ten-mile road, with 100 cars making 15 trips *per diem*, represents \$7,000. It was ascertained by the tests that on the same road, under similar conditions, one unnecessary stop per car per trip cost \$46.7 per year."

General Progress during the Past Three Years.—Most notable, perhaps, among the developments, improvements, etc., at home and abroad during the past three years have been the lighting of cable cars by electricity, as illustrated in the Brooklyn-Bridge system now in vogue; the introduction of a steam tramway along the banks of the Suez Canal, joining Port Said with Ismalia; the change of the Philadelphia street-car system from cable to trolley; the introduction of fenders for public safety in many cities; the adoption of the trolley system as a means of transporting funeral parties in cities; the determination of the Metropolitan Street Railway Company, New York city, to adopt the underground trolley as rapidly as possible on all its main lines, after ascertaining, by means of the Lenox Avenue experiment, that the efficiency of the system is not impaired, if proper appliances are used, by snow, rain, or other rough weather; the introduction of the overhead trolley system in Japan; the completion of the Boston subway; the installation of the overhead trolley system in Vienna, Austria; and the adoption, completion, and opening up of the underground trolley system on Fourth and other avenues in New York city.

Statistics.—In 1880 the street-railway mileage of road in the United States, as reported in the tenth census, was 2,050. In 1890 the mileage of track was 8,123 miles. In 1897 the total track mileage of the country was 15,718, an increase of 93.5 per cent. over 1880. The larger part of this increase

occurred in urban, and a smaller portion in rural districts.

Mileage.—The following table shows the mileage by motive power, in 1880 and 1897, as shown in the following table, published in the "Street Railway Journal":

Motive power.	1880.	1897.	Per cent. increase.
Animal	1,061	56	94.7
Electric	1,002	14,762	1,475.2
Cable	69	50	27.5
Miscellaneous	77	85	10.5
Total	8,123	15,718	93.5

The miscellaneous mileage is largely in elevated railroads in the Eastern and Central States, and in steam dummy lines in the Southern and Western States, Alabama particularly having a number of dummy roads.

By the same authority, the distribution by sections is given as follows:

Section.	1880.	1897.	Per cent. increase.
New England States	905	2,111	134.8
Eastern States	1,041	5,230	406.1
Central States	1,654	4,100	148.0
Southern States	423	1,100	160.8
Western States	1,060	2,277	114.8
Total	8,123	15,718	93.5

The number of passenger cars in operation on American street railways has grown from 32,565 in 1880 to 51,532 in 1897, an increase of 59.5 per cent.

Capital, Debt, etc.—Regarding capitalization, the following comparison can be made: The total earning power given in the census of 1890 for all the street railways then in existence was \$91,721,845; the total operating expenses were \$62,011,185; the total fixed charges were \$13,978,603; and the net income was \$15,734,757, from which was paid \$10,180,726 in dividends and \$1,217,193 for miscellaneous purposes, leaving a net surplus of \$4,336,828. "It is nearly certain," says the writer, "that our street railways today [1897] are earning at least \$150,000,000 gross, and it is probable that the net earnings applicable to return on investments, as figured by the companies themselves, would be between \$40,000,000 and \$50,000,000."

The order of States, taking the first five, or, rather, the five highest, in several classes of facts, 1897, is as under: Number of roads—New York, 141; Pennsylvania, 110; Massachusetts, 76; Ohio, 58; Illinois, 57. Track mileage, electric—Pennsylvania, 1,658; New York, 1,559; Massachusetts, 1,325; Ohio, 1,174; Illinois, 1,113. There are electric roads in every State and Territory. Track mileage, cable—California, 117; Missouri, 101; Illinois, 82; New York, 55; Ohio, 45. There are no cable roads in New England, and one mile of track in the Southern States. Track mileage, horse—New York, 298; California, 127; Texas, 54; District of Columbia, 44; Kentucky, 40. There are no horse cars in Vermont, Rhode Island, Connecticut, Delaware, Maryland, Montana, Utah, and Washington.

CAPITALIZATION.	1880.	1897.	Per cent.
Capital stock	\$211,277,798	\$846,131,691	299.5
Funded debt	151,872,990	633,679,178	417.4
Total capitalization	\$363,150,788	\$1,479,810,869	407.4
Capital stock per mile of track	\$26,010	\$53,799	105.3
Funded debt per mile of track	18,696	40,119	214.6
Total capitalization per mile of track	\$44,706	\$93,918	210.0

Cities.—Reference is made throughout the foregoing text to progress recorded during the past seven years in large cities. In order to secure, if possible, accurate official data concerning the present condition of transportation facilities for passengers in the largest municipalities, letters of inquiry were recently addressed to the mayors of all cities of 100,000 population and over in 1890. In very few instances have complete returns been rendered. But official figures have been secured from available data to enable a fair showing and comparison to be made. As there is a difference in the plan of statement between the official figures for 1890 and the returns secured for 1897, it will be most convenient for general reference to give separate tabular exhibits. The footnotes to each will explain the plan.

‡ Since beginning of 1898 horse power has been increased. See *.

• March, 1898.

In these tables, owing to the difference in plan, the only column admitting of a fair comparison is

the last, "length of all tracks." This shows for 1897 a total mileage of 6,857, against 3,995 in 1890, the increase being 2,862 miles of street-railroad track in 25 cities in seven years.

It may be noted from the tables that, whereas every city mentioned had 10 miles or more of horse-car track in 1890, 14 of the same cities in 1897 had abandoned horses as motive power. Other interesting facts may be seen from the tables. In 8 cities (1890) there were no electric cars, and in 10 other cities the electric-car mileage was less than 10. Now in 21 of the 25 cities the electric-car mileage exceeds 100. The record of Chicago, including the annexed territory, reaches the total of 830 miles of electric-car tracks, with more to be added, according to the most recent returns.

City Notes. *Chicago.*—In an exhaustive statement furnished for the "Annual Cyclopædia" by the mayor of Chicago, it is stated that the estimated cost of double-track horse-car railroad in that city is \$36,000 a mile; cable road, \$100,000; electric, \$40,000.

Boston.—The municipal authorities of Boston, in a letter to the "Annual," estimate the average cost per mile for electrical-car track, etc., at \$32,266; equipment, \$24,351; land and buildings, \$39,794.

San Francisco.—An estimate supplied by the mayor shows that the estimated cost of a cable road in that city is from \$100,000 to \$125,000.

Cleveland, Ohio.—In the statement furnished by the mayor of Cleveland it is noted that street-railroad companies in that city pay a general property tax of \$28.50 per \$1,000 of valuation. They also pay a license fee of \$10 on each car owned, and are required to pave a strip 14 to 16 feet wide when pavements are laid on streets occupied by tracks.

Washington, D. C.—It is reported officially that the cost of cable construction and equipment in Washington, D. C., exclusive of land, approximated \$87,200 per mile of single track. The cost of road-bed and engineering per mile of single track is approximated at \$53,177. The cost of construction, equipment, etc., of the Connett electric system now in use is approximately \$106,000 per mile of single track, including land acquired for power houses, sheds, etc. Cost of road bed and engineering, \$37,500.

SURETY COMPANIES. In view of all that has been said and written upon the dangers of one individual becoming surety for the honesty or good conduct of another, it is somewhat surprising that a system of corporate indemnity was not devised earlier than the middle of the present century. The theory of Prof. De Morgan, set forth in the "Dublin Review" for August, 1840, first applied the laws of average governing insurance to the moral hazard of personal integrity, though a society for the purpose of guaranteeing hired servants was organized at the Devil's Tavern, Charing Cross, London, in June, 1720, the advertisement being published in the "Daily Post." The advantages to employer and employed in a system that, assuming a risk with the expectation of meeting it, makes indemnification prompt and sure, and at the same time undertakes the punishment of an offender, while it relieves a person seeking honorable employment from the obligation to secure a bond, and enables him by the payment of a small premium to insure his own faithful conduct himself, can readily be perceived. Men who would prefer to forego obtaining a place rather than importune an unwilling friend and men not possessing friends able to do them the service of acting as surety are benefited by the existence of surety companies, while private individuals are free from the embarrassments attending personal suretyship—the contingency of loss and interminable liability, extending often be-

yond the lifetime of the surety, attached to the execution of private bonds. The security given is also far more tangible, not being subject to the uncertainties of death, insolvency, or removal of individuals. This system is thoroughly established in England as an element of commercial life, and in our own country it is gaining ground. In both countries the business of fidelity insurance, as it is termed, may be divided into two classes: that originally intended, the guarantee of persons holding places of trust in the ordinary occupations of life, as clerks in banks, mercantile, insurance, and railway offices, and the later development of corporate suretyship in the issuing of court bonds (of administrator, guardian, trustee, or receiver) and undertakings in attachment, appeal, and suits of like character.

In considering the first and simpler class of bonds, it is to be noted that the strictly business principles upon which surety companies act constitute their prime recommendation. In all essential elements the contract is one of insurance, and is entered into for a definite period, subject, moreover, to cancellation at pleasure of the insurer. Liability to loss on any single risk is limited to a certain percentage of capital or resources, and before any risk is assumed investigation is made not only into the character of the person seeking insurance, but the nature of the employment desired and the amount of salary to be received. Some occupations, it is conceded, afford too many opportunities for dishonesty, and are in general filled by a class of persons who are unfit subjects of fidelity insurance; while by the amount of salary received is generally determined the degree of responsibility, upon which depends the premium to be paid.

Periodical inspections are required, or made, of accounts of persons guaranteed, and a general supervision of behavior is maintained, while, as a protection against collusive fraud, the criminal prosecution of all defaulters is required as a *sine qua non*. This last is to be considered a more efficient check upon individuals tempted to delinquency than the theoretical "moral guarantee" of fear of involving friends or relatives, acting as private sureties, in ruin or disgrace. At one time the question was discussed by the English Government of superseding altogether the requirement of securing from public officials, the Lords of the Treasury having become "strongly persuaded, in the course of their inquiries, that the exposure and prosecution of defaulters, without exception and under all circumstances, offer in the long run a much more efficacious guarantee against the dishonesty of public servants than any pecuniary indemnity which it is possible to exact from them," and, although the proposition was not carried into effect, it was ordered that in every case of default report should be made, "whether or not the amount be recovered," that exposure and prosecution might be had.

The second class of obligations assumed by surety companies offers the disadvantages of indefinite duration and speculative character, pecuniary as well as "honesty" risks being in some cases incurred, dependent on contingencies and events. In England the acceptance by law of policies or bonds of surety companies in place of the form of bonds prescribed by statute removes in great measure the former objection, while in both countries surety companies require security as protection to themselves from the persons for whom they assume risks. Thus, the American Surety Company of New York, issuing the bond of an administrator for \$1,000,000, was secured by the bond of the administrator and of all the heirs interested in the estate, and also by the securities and funds of the estate deposited in a safe-deposit and trust com-

pany, under the personal control of the administrator and the surety company.

The Guarantee Society of London, incorporated in 1840 on the basis laid down in 1831 by the Morgan, secured, June 18, 1842, a special act of Parliament, authorizing the acceptance of its bonds by the treasury and by heads of Government departments. The principles of its business were approved by the then Chancellor of the Exchequer, the Hon. Henry Goulburn, and by his predecessor the Hon. H. T. P. Baring. On Aug. 20, 1867, was passed the guarantee by companies act, prior to which only such companies transacted surety business as were authorized by specific acts of Parliament. By this act the security of any qualified company was received, holding a certificate from the treasury, where its accounts were yearly filed. The Government officers security act of Aug. 11, 1875, repealed the foregoing, in consequence of the involved condition of affairs of the European Assurance Society, authorized to transact surety business, which had assumed large liabilities of other kinds of insurance, and for which an arbitration act had been passed three years previously, July 25, 1872. By this repeal the Government ceased to warrant the solvency of surety corporations, the treasury being forbidden to issue further certificates; but the security of such corporations was and continues to be received under treasury minute of Nov. 1, 1871.

The act of June 23, 1887, of the Canadian Parliament enabled the acceptance in the Dominion of Canada of the guarantee by policy or bond of any public officer by an incorporated company.

Prior to 1880 there were 3 surety companies in the United Kingdom, having a joint capital of more than \$465,000, which published no statistics and had no stock on the market, both circumstances indicating that the business investment was profitable.

At the opening of the year 1889 10 guarantee or surety companies were in existence in England, the policies of the larger being accepted by the courts of justice, the corporation of London, railroad companies, and various heads of Government departments. By a new method individual contracts are now dispensed by these companies, and a collective or "floating" policy, covering loss from a staff of employees of any number beyond five, is issued, the employer being insured against loss to the amount contracted for on each member of the staff. The lowest premium paid is 3s. per cent, and the highest 60s. per cent. The usual charge for clerks and cashiers is from 10s. to 30s. per cent. There is also a Bankers' Guarantee Trust Fund Society, to indemnify against loss from bank employees, and the Bank of England and several railway companies possess funds contributed by employees to secure their employers against loss by dishonesty of any of their number.

The first legislation with regard to fidelity insurance in the United States is found in chapter 463 of the laws of the State of New York for 1853. By acts of 1881, 1883, and 1886 the Legislature of that State extended the powers of surety companies to cover the judicial branch of security that has been referred to. Successive States have provided for the acceptance of this class of bonds in the following order: Rhode Island, 1884; Oregon, Florida, Maine, Nebraska, Indiana, California, Missouri, Wisconsin, Connecticut, Michigan, Pennsylvania, 1885; New Jersey, 1886; Massachusetts, 1884, 1886, and 1887; Illinois and Georgia, 1887.

While no restriction is imposed by the Government of the United States upon the acceptance of the guarantee of surety companies in cases within the jurisdiction of Federal courts and departments, there is no legislation enabling such Postmaster-

Generals Timothy O. Howe and Frank Hatton, in 1882 and 1884, called the attention of Congress to the subject, urging the advantages to the Government and to public officials of corporate suretyship, as did Secretary-of-War Robert T. Lincoln, in 1883, relative to paymasters' bonds, and the paymaster general of the army in 1882, 1883, and 1884. Mr. Glover, of Missouri, Jan. 26, 1886, introduced a bill in the House of Representatives authorizing the acceptance of corporate surety for officials by "any judge of any Federal court, or clerk thereof, district attorney, United States commissioner, head of a department, collector of customs or revenues," etc., and a similar bill, introduced in 1887, passed the House only in 1888. The surety companies existing in America in 1889 are:

The Guarantee Company of North America, a Canadian incorporation, having its central office at Montreal, Canada, established in 1872. This company confines itself exclusively to guarantee of officers and employees of financial and commercial corporations, and does not issue court bonds. The limitation of loss on any single risk is 5 per cent. of the capital. Offices of the company are established in New York, Boston, Chicago, Richmond, Philadelphia, Baltimore, Pittsburg, Louisville, Nashville, St. Louis, Detroit, and Washington. For security of patrons in the United States \$200,000 in United States Government bonds are deposited with the Insurance Department of New York.

The American Surety Company of New York, central office 160 Broadway, New York city, organized April, 1884, in addition to bonds given for persons in places of trust, also issues bonds and undertakings in the courts of New York and other States. President, W. L. Trenholm; Vice-President, H. Lyman. The liability to loss in any one case is less than 3 per cent. of the cash resources. The company has agencies at Montreal, Toronto, and London, Canada, and \$50,000 in United States Government bonds are deposited as security for patrons with the Finance Minister of Canada. The agencies in the United States number 110.

By opinion of the Hon. George A. Kirkpatrick, Q. C., Speaker of the House of Commons of Canada, "an employer bonded or secured by a Canadian surety company will have no advantage over one secured by a company organized in the United States in obtaining the amount of defalcation over and above the security given by the corporation."

The Fidelity and Casualty Company of New York, 214 and 216 Broadway, organized in 1876, transacts both branches of fidelity insurance, with a department of accident business. President, W. M. Richards, Vice-President, George F. Seward. The number of agencies in the United States is 35.

The Cash Trust, Safe-deposit, and Surety Company of Philadelphia was organized in 1886, and the Pacific Surety Company of California, 328 Montgomery Street, San Francisco, Cal., does an insurance business of guarantee and accident.

As early as 1849 a plan to combine life and fidelity insurance was mooted, but it has not been carried largely into effect.

The Art, a sort of combination of guild and friendly society, is found in all countries, in a measure, the principles of the same.

SWEDEN AND NORWAY, two kingdoms in northern Europe, under the same person of the sovereign. The throne and the crown descend to the heirs of the house of Bernadotte. Affairs common to both kingdoms are decided by a mixed Council of State. The royal crown prince is Oscar II, born Jan. 21, 1829, who succeeded his father, Carl XV, his brother, Sept. 18, 1872.

Sweden.—The legislative power is vested in the Riksdag, consisting of a First Chamber of 150

members elected for nine years by the provincial and municipal bodies, and a Second Chamber of 230 members elected for three years, 80 in the towns and 150 in the rural districts, by natives of Sweden who own or farm land of a certain value or pay taxes on an income of 800 kronor. The Council of State at the beginning of 1897 was composed of the following members: Minister of State, Erik Gustaf Boström; Minister of Foreign Affairs, Count L. W. A. Douglas; Minister of Justice, Dr. P. S. L. Annerstedt; Minister of War, Lieut.-Gen. Baron A. E. Rappe; Minister of Marine, Rear-Admiral J. C. E. Christerson; Minister of the Interior, J. E. von Krusenstjerna; Minister of Finance, R. Wersäll; Minister of Education and Ecclesiastical Affairs, Dr. Gustaf Fredrik Gilljam; Councilors of State, Baron Albert Lars Evert Akerhielm and Sven Herman Wikblad.

Area and Population.—The area of Sweden is 172,876 square miles. The population was estimated on Dec. 31, 1896, at 4,962,568, comprising 2,412,004 males and 2,550,564 females. The number of marriages in 1895 was 27,728; of births, 138,134; of deaths, 77,903; excess of births, 60,231. The emigration was 18,955, and the immigration 8,528. Stockholm, the capital, had 279,680 inhabitants at the end of 1896; Göteborg, 117,350.

Finances.—In the budget for 1898 the total receipts are estimated at 120,086,000 kronor, the value of the krona, or Swedish crown, being 28-6 cents. In this sum is included the surplus from preceding budgets, amounting to 14,229,000 kronor. The receipts classed as ordinary amount to 21,082,000 kronor, of which 1,694,000 are land taxes, 1,400,000 tonnage dues, 2,300,000 rent of domains, 665,000 the personal tax, 9,000,000 railroad profits, 1,410,000 telegraph revenue, 3,500,000 receipts from forests, and 1,118,000 various receipts. The extraordinary sources of revenue yield 82,975,000 kronor, of which 39,000,000 are from customs, 9,025,000 from the post office, 5,000,000 from stamps, 15,500,000 from the impost on spirits, 8,000,000 from the sugar duty, 5,600,000 from the income tax, and 850,000 from various sources. The State Bank pays out of its profits 1,800,000 kronor.

The total expenditures for 1898 are calculated at the same figure as the revenue. The ordinary expenditures amount to 80,358,773 kronor, of which 1,320,000 are for the royal household, 3,848,350 for justice, 606,750 for foreign affairs, 26,342,985 for the army, 7,046,340 for the navy, 5,738,800 for the interior, 13,800,698 for worship and education, 2,284,450 for pensions, and 18,376,400 for finance, including 2,658,000 kronor for the customhouse, 8,688,000 for the post office, 450,000 for excise control, 1,410,000 for telegraphs, 1,158,000 for forests, and 4,012,400 for other expenses. The extraordinary expenditures are set down at 27,047,127 kronor, of which 11,964,375 are for the army and navy and 15,082,752 for other purposes. The expenses of the debt are 11,243,000 kronor, besides 1,400,000 kronor set aside as a fund for insuring workmen against accidents, and 36,300 kronor remain as a surplus to be carried over.

The public debt in 1897 amounted to 289,566,573 kronor, of which 48,566,500 kronor were the internal loan of 1887, paying 3-6 per cent. interest, and the rest consisted of various foreign loans, paying mostly 3½ per cent.

Navigation.—The merchant marine on Jan. 1, 1896, numbered 2,030 sailing vessels of 301,727 tons, and 733 steamers, of 181,276 tons. There were entered during 1895 at Swedish ports 2,020 Swedish, 607 Norwegian, and 12,935 foreign vessels; total, 29,561 vessels, of 6,117,000 tons, of which 11,344, of 2,623,000 tons, were with cargoes. There were cleared 14,664 Swedish, 2,187 Norwegian, and 12,-

6,355 sailing vessels, of 1,283,913 tons, and 915 steamers, of 321,052 tons.

Commerce.—The foreign trade of Norway was divided in 1896 as shown in the following table, giving the values in kroner:

COUNTRIES.	Imports.	Exports.
Great Britain	62,017,000	56,347,000
Germany	61,903,000	17,882,000
Sweden	58,292,000	22,762,000
Russia and Finland	21,316,000	4,344,000
Denmark	10,962,000	4,896,000
France	5,213,000	7,044,000
Netherlands	5,034,000	7,562,000
Belgium	8,845,000	5,246,000
Spain	1,110,000	10,486,000
Portugal	267,000	808,000
Italy	1,413,000	2,554,000
United States	11,268,000	758,000
Other countries	4,582,000	7,132,000
Total	240,218,000	147,771,000

The imports of cereals were 35,700,000 kroner in value, and exports 400,000; imports of fermented liquors 6,200,000 and exports 300,000 kroner; imports of colonial products 26,400,000 and exports 1,100,000 kroner; imports of fruits and vegetables 3,800,000 and exports 100,000 kroner; imports of animals and provisions 16,500,000 and exports 44,200,000 kroner; total imports of alimentary products 88,600,000 and exports 46,100,000 kroner. The imports of coal were 13,500,000 kroner; imports of metals 8,500,000 and exports 1,300,000 kroner; imports of hides and skins 7,700,000 and exports 7,100,000 kroner; imports of textile materials 7,000,000 and exports 300,000 kroner; imports of timber 5,900,000 and exports 34,900,000 kroner; imports of minerals 5,400,000 and exports 4,200,000 kroner; total imports of raw materials 48,000,000 kroner and exports 47,700,000 kroner. The imports of metal manufactures were 11,600,000 and exports 3,500,000 kroner; imports of woven goods 35,900,000 and exports 6,400,000 kroner; imports of paper and paper products 2,300,000 and exports 7,500,000 kroner; imports of leather goods 2,200,000 and exports 300,000 kroner; imports of wood manufactures 4,300,000 and exports 20,000,000 kroner; total imports of manufactured articles 56,300,000 and exports 37,700,000 kroner. The imports of drugs and colors were 1,100,000 and exports 100,000 kroner; imports of oils 12,100,000 and exports 8,400,000 kroner; imports of miscellaneous merchandise 34,100,000 and exports 7,700,000 kroner.

Communications.—The railroads in operation in 1896 had a length of 1,202 miles. The length of the state telegraph lines was 5,232 miles, with 12,594 miles of wire; that of the telegraph lines belonging to railroad companies was 1,070 miles, with 1,060 miles of wire. There were 1,229,008 internal, 664,704 international, and 17,539 service dispatches sent in 1896; the receipts were 1,503,589 kroner, and expenses 1,549,113 kroner. The postal traffic in 1896 comprised 28,345,800 internal letters, including 1,965,700 money letters, containing 283,100,000 kroner, 10,285,000 foreign letters, including 85,700 money letters, containing 24,700,000 kroner, and 39,848,000 internal and 4,326,400 foreign printed inclosures; the receipts were 3,826,272 kroner, and expenses 3,707,711 kroner.

Political Affairs.—The Storting on June 16, 1897, unanimously voted a message to the King requesting him to negotiate treaties with foreign powers for the establishment of a permanently organized court of arbitration to deal with any conflict that might occur between them and Norway, which from its geographical position was so little exposed to conflicts that there appeared to be no difficulty in arranging such treaties. The triennial election of delegates to choose the representatives

for the Storting occurred in the beginning of October and resulted in large gains for the Left, rendering more acute the conflict with Sweden over diplomatic representation and foreign affairs. The ministers, however, did not resign. The Norwegian delegation in the Council of State had serious differences with the Swedish members in the autumn. The treaty of commerce and navigation between the two kingdoms expired in the summer.

SWITZERLAND, a federal republic in central Europe. The Federal Assembly is composed of the National Council, containing 147 members elected for three years by the direct vote of the nation, and the States Council, containing 44 members, two for each canton, elected for one, two, or three years, by popular vote in some cantons, and in others by the legislative authorities. These two bodies elect the Federal Council, composed of 7 members, which is the executive authority of the Confederation. Every Swiss citizen twenty-one years of age is an elector and is eligible to any of these bodies. Any act of legislation may be vetoed or any amendment to the Constitution carried by popular vote when a petition demanding the referendum is presented by 30,000 citizens or when the demand is made by 8 cantons. The Federal Council in 1897 was composed of the following members: President and Chief of the Department of Foreign Affairs, Dr. A. Deucher, of Thurgau; Vice-President and Chief of the Department of the Interior, M. Ruffy, of Vaud; Military Affairs, E. Müller, of Bern; Justice and Police, Dr. E. Brenner, of Basel; Commerce, Industry, and Agriculture, A. Lachenal, of Geneva; Finance, W. Hauser, of Zurich; Posts and Railroads, Dr. J. Zemp, of Luzern. On Dec. 15, 1897, M. Ruffy was elected President of the Confederation for the ensuing year, and E. Müller was elected Vice-President.

Area and Population.—The area of Switzerland is 15,976 square miles, with a population estimated in 1894 at 2,986,848. The number of marriages in 1896 was 23,784; of births, 91,835; of deaths, 59,379; excess of births, 32,456. The number of emigrants over the sea in 1896 was 3,330, of whom 2,789 emigrated to North America and 499 to South America. The city of Zurich had 151,994 inhabitants in July, 1897; Basel had 89,687, and Geneva had 86,535.

Finances.—The revenue of the Federal Government in 1896 was 87,262,389 francs, of which 473,009 francs were derived from real property, 1,897,013 francs from invested capital, 53,326 francs from the general administration, 35,335 francs from the Political Department, 344,654 francs from the Departments of the Interior and of Justice and Police, 2,589,214 francs from the Military Department, 46,466,535 francs from the Department of Finance and customs, 216,339 francs from the Department of Industry and Agriculture, 35,245,822 francs from the post office, telegraphs, telephones, and railroads, and 31,142 francs from various sources. The total expenditures were 79,559,658 francs, of which 4,283,387 francs were for interest and amortization of the debt, 1,066,337 francs for general administration, 556,249 francs for the Political Department, 9,814,437 francs for the interior, 374,161 francs for justice and police, 23,200,849 francs for the Military Department, 4,339,300 francs for finance and customs, 3,275,150 francs for industry and agriculture, 25,173,972 francs for the postal service, 7,147,484 francs for telegraphs and telephones, 277,973 francs for railroads, and 50,369 francs for unforeseen expenses. The indebtedness of the Confederation on Jan. 1, 1897, amounted to 80,870,764 francs and the assets to 175,461,492 francs.

Commerce.—The special commerce of Switzerland with different countries in the year 1896 was

valued in francs according to the Customhouse returns as follows:

COUNTRIES	Imports	Exports
Germany	294,971,000	172,301,000
France	177,612,000	92,500,000
Italy	152,200,000	79,500,000
Austria-Hungary	71,112,000	40,410,000
Great Britain	51,000,000	14,000,000
Netherlands	5,400,000	4,000,000
Belgium	24,700,000	11,000,000
Spain	10,500,000	11,000,000
Russia	65,000,000	24,000,000
Rest of Europe	25,000,000	20,000,000
United States	29,250,000	20,000,000
Rest of America	20,000,000	20,000,000
Asia	31,000,000	21,000,000
Africa	10,000,000	2,000,000
Australasia	4,000,000	2,000,000
Unreported		2,000,000
Total merchandise	503,820,000	498,301,000

The imports of coin were 67,973,000 francs and the exports 50,555,000 francs.

The imports of grain and flour were 114,900,000 francs in value; raw silk, 110,200,000 francs; animals, 52,300,000 francs; coal, 40,700,000 francs; woolen goods, 46,600,000 francs; precious metals, 39,500,000 francs; iron, 36,500,000 francs; wine, 34,000,000 francs; chemical products, 31,800,000 francs; cotton cloth, 31,500,000 francs; raw cotton, 30,400,000 francs; machinery, 24,500,000 francs; iron goods, 23,500,000 francs; timber, 22,600,000 francs; sugar, 21,200,000 francs; coffee, 18,100,000 francs; barley, malt, and hops, 14,200,000 francs; leather, 13,000,000 francs; silk manufactures, 12,300,000 francs; wool, 11,600,000 francs; building materials, 10,700,000 francs; books, etc., 10,200,000 francs; linen goods, 9,800,000 francs; haberdashery, 9,600,000 francs. The values of the principal exports were: Silk goods, 132,700,000 francs; cotton goods, 117,200,000 francs; watches, 100,400,000 francs; cheese, 38,700,000 francs; raw silk, 37,300,000 francs; spun silk, 32,400,000 francs; machinery, 30,000,000 francs; chemical products, 22,700,000 francs; milk, 18,700,000 francs; cotton yarn, 18,000,000 francs; animals, 14,300,000 francs; straw goods, 11,100,000 francs; woolen yarn, 10,000,000 francs; precious metals, 8,900,000 francs; woolen goods, 8,900,000 francs; hides and skins, 8,700,000 francs.

Communications.—The railroads in 1896 had a total length of 2,254 miles.

The state telegraph lines in 1896 had a total length of 4,435 miles, with 12,608 miles of wire. The number of messages sent in 1896 was 3,848,482, of which 1,741,018 were internal, 1,441,556 international, 527,184 forwarded in transit, and 138,731 service dispatches. The post office carried in 1896 88,002,000 domestic and 36,447,000 foreign letters, 16,997,000 domestic and 11,433,000 foreign postal cards, 30,703,000 domestic and 20,806,000 foreign newspapers and circulars, 4,418,000 domestic postal remittances amounting to 488,014,000 francs, and 5,015,000 foreign ones to 495,812,000 francs.

Legislation.—In the session of the Federal Assembly that began on June 8, 1897, the question of the state purchase of the railroads and a scheme of insurance against accidents and sickness were considered. The National Council unanimously decided upon the introduction of a system of compulsory insurance. On Oct. 7 it adopted by 48 votes to 29 the bill authorizing the Swiss Confederation to repurchase the five principal railroads according to the terms of the concessions at the dates when these expire, in 1903 as regards four of the lines and in 1906 for the St. Gothard Railroad. The States Council had disapproved of the nationalization of the railroads, but the divergence between the votes of the two bodies was arranged, the pro-

ject was adopted subject to the referendum, and preparations were made to submit it to the popular vote early in 1898.

Labor Congress.—An International Congress for the Protection of Labor was held in the latter part of August, 1897, at Zurich in accordance with the resolution of the Swiss National Labor Congress at Bern in April, 1903. The International Labor Congress was open to representatives of working-class associations of all parties and all religions. The only qualification was that the delegates should be in favor of state intervention and legislation in labor questions, a provision which shut out the anarchists only. Catholics who side with the workers rather than with the capitalists were cordially invited, and they responded without hesitation. The Socialists promised to appear in force, but the French and Italian delegations, as well as the leaders of the English Independent Labor party, failed to keep their promises. There were 107 delegates belonging to the Liberal party and some representatives of evangelical associations and Liberal Social reformers besides trade unionists of all shades of opinion, so that at a congress of 315 members the Socialists, who were strongly represented from Switzerland, Germany, Austria, and Belgium, were counterbalanced by an equally numerous moderate party. The British delegation, representing 150,000 workers, proposed in the interest of Sunday recreation and of the liberty of non-Christians that Sunday should not be retained as the exclusive day of universal rest, but that, while all industrial undertakings should be closed on that day, another day of recreation for labor should be provided for those working people whose services are required on that day for the good of the community as well as for Jews or others who devote another day to religious observances. They desired to change the English and Scotch Sunday into an intellectual and pleasure holiday, but to their surprise the Continental Socialists joined with the Catholics in defeating their general proposition in favor of thirty-six consecutive hours of rest per week. The congress voted in favor of the prohibition on stringent penalties of Sunday labor, except when such labor is absolutely necessary to secure the resumption of work on Monday, or when for technical reasons the process of production can not be interrupted, or in occupations the continuation of which is required for the education and recreation of the people. The resolution went on to say that in no case should Sunday rest be interrupted under the pretext of covering any deficit of production, that all exemptions under the law should not be left to the discretion of magistrates and officials, but should be plainly stated in the act, and that where workmen are employed on Sunday they should have alternate Sundays free and a free day in the week for the Sunday on which they work. A stringent resolution restricting unwholesome trades was carried. One introduced by Prof. Frismann, of Moscow, which was adopted unanimously, favors prohibiting night work in all but very exceptional cases, also overtime in the case of young persons and in the case of women after eight o'clock in the evening, or only allowing it in consequence of pressure of business, and the institution of three-hour shifts where continuous labor is indispensable. A difference between the Catholics and Socialists arose over the question of women's work. A resolution of Gaston Flourens, a Catholic member of the Belgian Parliament, in favor of gradually abolishing the work of women in large industries, on the ground that it was injurious to the sexes in factory labor, was opposed by Herr Bebel, Socialist member of the German

Reichstag, who argued that women were as badly treated in small trades, shops, and home work as in the large mills, and it was defeated by 165 votes to 98. The congress voted in favor of strengthening the laws protecting women in all forms of employment, resolving that they should receive the same wages as men for the same work, and that the maximum hours of labor for women should be eight per day and forty-four per week, with a rest of forty-two hours from noon on Saturday, and for six weeks after confinement women should not work and should receive an indemnity equal to their wages from the state or municipality. The congress resolved that home work causes serious social and sanitary evils, prevents the organization of workers and the application of labor laws, but it defeated a motion in favor of its total abolition, the Socialists being divided on the question, which was referred to another congress as being too complex for immediate solution. Laws still in force in Germany and Austria permitting the corporal punishment of servants were condemned, and a resolution was carried declaring that domestic servants and agricultural laborers should have the right of

combination. The English resolution fixing the age of juvenile labor at sixteen years was lost, and an amendment was carried substituting the limit of fifteen years. The resolution in favor of an eight-hour working day by legal enactment was carried easily. In regard to the ways and means of realizing labor protection the congress concluded unanimously that good laws are of no avail unless the people concerned have the right to vote and are free to combine nationally and internationally, and are thus in a position to bring the necessary pressure to bear so that the laws may be effectively carried out. To meet the objection of foreign competition and facilitate the international assimilation of laws for the protection of labor, the congress requested the governments of Europe to create an international office of labor. In the meantime the congress created a central office of its own, composed of the committee by which it was organized, which will convoke another congress when some practical necessity arises for making a further and similar manifestation of the opinions on which Catholic and evangelical and Socialist labor organizations are united.

T

TENNESSEE, a Southern State, admitted to the Union June 1, 1796; area, 42,050 square miles. The population, according to each decennial census since admission, was 105,602 in 1800; 261,727 in 1810; 422,771 in 1820; 681,904 in 1830; 829,210 in 1840; 1,002,717 in 1850; 1,109,801 in 1860; 1,258,520 in 1870; 1,542,369 in 1880; and 1,767,518 in 1890. Capital, Nashville.

Government.—The following were the State officers in 1897: Governor, Robert L. Taylor; Secretary of State, William S. Morgan; Treasurer, Edward B. Craig; Comptroller, James A. Harris; Attorney-General, G. W. Pickle; Superintendent of Instruction, Price Thomas; Adjutant General, Charles Sykes; Commissioner of Agriculture, John T. Essary; Labor Commissioner, A. H. Wood; State Geologist, J. M. Safford; Railroad Commissioners, Ernest L. Bullock, Newton H. White, and Frank M. Thompson; Chief Justice of the Supreme Court, David L. Snodgrass; Associate Justices, W. C. Caldwell, John S. Wilkes, W. K. McAllister, and W. D. Beard; Justices of the Court of Chancery Appeals, M. M. Neil, S. F. Wilson, and R. M. Barton. All the State officers are Democrats.

Finances.—The Treasurer's books show that on Jan. 1, 1898, there was a balance on hand of \$240,159.49, which includes \$225,000 borrowed recently. The net balance, therefore, on Jan. 1, 1898, was \$15,159.42. The total amount borrowed during the year was \$725,000. Taking from this the net balance on hand, the total actual deficit for the year is \$709,840.58. A large number of outstanding warrants, if added, would make the total actual deficit at least \$1,000,000.

The receipts from Dec. 19, 1896, to Dec. 19, 1897, including the amount borrowed, were \$1,748,748.70, and the disbursements were \$1,992,006.34.

The interest on the State debt for the fiscal year was \$555,679.60.

The deficit results, in part at least, from the reduction of the tax rate in 1895 from 30 to 20 cents. The Legislature of 1897 raised it to 45 cents, including 15 cents for schools.

The Railroad Commissioners increased the valuation of the railroad, telegraph, and telephone companies by nearly \$33,000,000, and the Board of Equalization, after hearing objections from the

companies, sustained the commissioners. The companies brought suit in the United States district court, and a temporary injunction was granted. The court required the roads to pay taxes under the assessment of 1896, this sum to be paid as taxes for 1897, and to go as a credit on the present assessment, if sustained on final hearing, and without prejudice to the State's rights.

In October an important decision was rendered in the Supreme Court which will have the effect of securing a large amount of taxes to the State and the counties, that a tax lien has priority over a mortgage right.

A controversy began in 1891 between the State and the Tennessee Coal, Iron, and Railroad Company, growing out of the Penitentiary lease and the mining troubles. The company, having defaulted in the payment of rentals on the lease of convicts and other respects, was sued by the State for more than \$200,000. The company set up counter-claims. A compromise was made, Dec. 14, 1893, whereby the company agreed to pay \$150,000 in full settlement. Of this, \$75,000 was to be in cash and \$75,000 in deferred payments, for which a decree was to be entered, if the same was not discharged in convict labor. This decree was entered early in 1896 and a reference ordered to ascertain what payments had been made. The master's report showed that the decree had been reduced to \$44,034.74. The company excepted to this, but the report was confirmed by the Court of Chancery Appeals.

Crime and Convicts.—The amount expended for criminal prosecution during the year ending Dec. 19 was \$219,199.78, exclusive of the salaries of attorneys-general, which amounted to \$35,694.35. The amount paid for criminal prosecutions during the fiscal year ended Dec. 19, 1896, was \$174,968.75.

In March there were 473 convicts at Brushy mountain, 113 at Inman, 391 at the new prison, and 522 at the old prison; total, 1,499. Several escaped this year from the old prison. The new one has been erected at a cost of \$600,000.

The purchasers of the Harriman Railroad refused to be bound by a contract entered into when the State bought its mining property at Brushy mountain in regard to the rates for hauling coal. Suit

was brought, and judgment was rendered in May in the United States Circuit Court of Appeals in favor of the State.

Banks.—The statement of the national banks of Tennessee shows that the average reserve of all combined on Oct. 5 was 31.37 per cent, or a little over 7 per cent. above the legal requirements. The total resources were \$35,226,414.24, and the liabilities as follow: Capital stocks paid in, \$8,700,000; surplus funds, \$1,914,134.24; undivided profits less expenses and taxes paid, \$839,332.19; national

and Memphis. The latter said: "I shall not deny that the carriers had a right to take satisfaction upon the fact as additional fact, for a low rail and water rate from the East via Nashville to Nashville in making and forwarding their goods; but this rule is not to be carried to the absurd length in making defense in this business and unless the carriers can show where the commission failed to take into account some material right which the carriers had, I will sustain the order of the United States Commerce Commission."

The Tennessee Central was sold this year, and its completion is regarded as a certainty.

Building and Loan Associations.—Several Knoxville associations have been in difficulty this year. One of them, the Southern, is the largest in the South. A receiver was appointed Jan. 22. Its last annual report showed assets and liabilities of \$5,300,895. The amount due installment and paid-up stockholders is \$2,929,004.80.

Products and Industries.—The national Agricultural Department estimated the State's wheat crop in 1897 at 7,500,000 bushels, an advance over that of 1896.

The lumber business amounts to about \$15,000,000 annually.

The report of the Commission of Labor, rendered in April, shows that the value of the industrial production in Tennessee in 1896 was the largest in its industrial history. The production of coal was 2,663,714 tons, 343,904 tons larger than the previous year. The output of coke was 372,746 tons, a slight decrease from 1895. There were required 504,218 tons of coal to produce this coke, of which 318,941 tons were washed. The most notable feature in the coke industry is the increased attention paid to the preparation of the coal for coking. In 1891 but 11 per cent. of the coal used in the manufacture of coke was washed, whereas 59 per cent. was washed during the past year. This has resulted directly from the successful effort in the part of farmers men to manufacture pig iron profitably at its present low price, which required a more economical fuel.

The report shows that 246,328 tons of pig iron, of which 219,749 tons was coke pig and 27,249 tons charcoal iron, was produced in 1896. There were in operation nine furnaces, of which six were coke and three charcoal. Of iron ore 326,191 tons were produced.

The total production of phosphate since the discovery in Tennessee in 1895 was 114,188 tons.

Mob Violence.—A negro believed to be guilty of the horrible murder of a young girl near West Point was shot in the street of that place, July 15, in the presence of about 500 people, and his body was burned. The Rev. Mr. Edmundson, a colored preacher, who had secreted the man in his house during the search for him, was hanged by the mob three days later near Florence, Ala.

At Savannah, Oct. 12, about 50 Whitesaps went to the cabin of Det. Pryor, colored, and riddled it with bullets. A shot broke the negro's arm, and while the disabled member was dangling by his side he and his wife fired several shots at the gang. In the morning one dead man and four badly wounded were found near the cabin. The negro had been warned, with many others, to leave the community, and his cabin had been visited on several occasions.

Clarksville.—The one hundred and third anniversary of the day on which pioneer settlers of Clarksville were massacred by Indians was celebrated Nov. 11. The number of visitors was estimated at 20,000. There was a parade, an address by Senator Turley, and a sham battle, representing the agreement with the Indians.

Ruskin.—The socialist, William D. Ruskin, founded in 1894 at Tennessee City, was removed in 1895

ROBERT L. TAYLOR, GOVERNOR OF TENNESSEE.

bank notes outstanding, \$1,342,805; due to other national banks, \$1,046,357.41; due to State banks and bankers, \$1,545,700.12; dividends unpaid, \$12,131.50; individual deposits, \$17,219,151.31; United States deposits, \$180,785.77; deposits of United States disbursing officers, \$36,214.44; notes and bills rediscounted, \$157,002.04; bills payable, \$1,719,000; liabilities other than above stated, \$300; total liabilities, \$35,226,414.24.

Insurance.—The following figures give an idea of the condition of the Insurance Department: Gross fees received to Dec. 31, 1897, were \$11,076. The gross fees received Dec. 31, 1896, were \$8,532.70. State tax from insurance companies to Dec. 31, 1897, \$102,566.10. The amount for the previous year was \$98,671.22. The amount of insurance agents' tax to Dec. 31, 1897, was \$7,291.63. During the previous year it was \$7,188. The license of the Massachusetts Mutual Benefit Life Association was revoked in August, the members having failed to respond to a call for extra assessment made necessary by the financial condition of the company.

An investigation of the Farmers' Mutual Insurance Association of Nashville in December showed it to be in a precarious condition. "The trouble seems to be," says the report, "that the cost of insurance has greatly exceeded the expectations of the members."

Railroads.—A decision was given, Dec. 14, in the United States circuit court against certain railroad companies entering Chattanooga, which have been discriminating against that city in the matter of freight rates and in favor of Nashville

to its present location in the Yellow Creek valley has been very successful, having increased its assets in the three years from \$15,000 to nearly \$100,000. It was chartered by 19 men, who contributed in money and material \$15,000. These men settled on a barren waste, without houses, wells, or machinery. The plan of incorporation and by-laws made it necessary that each member should be a socialist, be willing to do any work that seemed best for the general good of the colony, and receive no wages other than the maintenance of himself and his family. Every man and woman who is able to do so is expected to work forty-eight hours of each week. Their leisure is spent in athletic exercise in the gymnasium, reading in the library, attending music and dancing classes or the school of political economy, in the study of the sciences, or any line desired. The foundation is laid for a school to be called "the College of the New Economy." The colony had 280 members in July.

Legislative Session.—The fiftieth session of the General Assembly began Jan. 4 and ended May 1. John Thompson was president of the Senate, and Morgan Fitzpatrick Speaker of the House.

Gov. Taylor was inaugurated Jan. 21. In March the Legislature re-elected the Secretary of State, the Treasurer, and the Comptroller. The Governor's message advised legislation amending the election laws so as to protect the legal voter, prevent unlawful voting, and do away with the abuses of the poll-tax law; also reform of the fee system, increase of the tax levy, abolition of unnecessary offices, making penitentiary convicts self-supporting, the establishment of a reformatory for youthful offenders, and an appropriation for the Centennial Exposition.

Assessment and revenue laws were passed. The tax-rate was raised to 30 cents for general purposes, with 15 cents for schools. The office of back-tax attorney was abolished, and delinquent taxes are to be collected by the trustees of the counties. Changes were made in the laws on privilege taxes, which will increase the income from that source.

There was a general demand for legislation to reduce the cost of criminal proceedings. The Comptroller's report showed that the State paid for this purpose in 1895 \$242,136; and it was estimated that the cost to the counties was about three times as much. Under the fee system the clerk of a criminal court sometimes earned \$10,000, while the salary of the judge was \$2,500. Three bills affecting the county attorneys-general were passed. One abolishes the system of payment by fees, and fixes their salaries at \$2,500; a second act allows assistant attorneys-general in the four largest counties, and a third permits county courts to vote \$1,000 a year additional salary in counties of more than 80,000 inhabitants—Davidson and Shelby Counties.

An act called the Jarvis law, which was passed, will save about \$700,000 a year on the cost of criminal trials. It was opposed on the ground that in a majority of cases it would confiscate the services of sheriffs, clerks, and witnesses; and was brought before the courts in test cases. In two courts it was declared unconstitutional; but the Supreme Court found that it is not open to any constitutional objection, and is valid.

At the special session of 1896 a bill was passed providing for the submission to popular vote of the question of calling a constitutional convention, and April 1, 1897, was named as the time for the election. But as the subject was not mentioned in the call for the extraordinary session, the constitutionality of the act was called in question, and the Governor did not issue the call for the election. In order to do away with the doubt, a bill to the same

effect was passed in the regular session, naming Aug. 5 as the day of the election, and on May 5 the Governor issued a proclamation accordingly. At that election the people decided against holding a convention by a vote of about three to one.

A railroad commission was created, to be composed of three members, one from each grand division of the State. They are to be also *ex officio* State tax assessors of railroad, telegraph, and telephone property.

A law was passed prohibiting the sale or giving away of cigarettes and cigarette papers. This law was assailed in the courts, on the ground that it was unconstitutional—a restriction of interstate commerce—and the decision, given in October, in the United States circuit court, was against the law. It, however, covered but part of the question involved, and other test cases have been brought, one court holding that, while cigarettes may be brought into the State and sold in the original packages, they can not be sold again in the State, either in the original packages or otherwise. Others hold that they may be sold in any way. Appeal on the cases decided will be taken to the Supreme Court.

A law was made for the government of the militia, instituting radical changes. The period of enlistment was made three years; the Governor was authorized to appoint 20 aids with the rank of colonel on his honorary staff; the rank of assistant adjutant general was reduced from colonel to major, and the rank of other officers was also reduced; the office of inspector of rifle practice was abolished, both for the brigade and the regiments.

An act "for the protection of boarding schools and colleges for females and the principals and inmates thereof" makes it unlawful for any one "willfully and unnecessarily to interfere with, disturb, or in any way disquiet the pupils of any school or college for females in this State, or the principal or teachers in charge of them, while on any public road or street, or in any building or structure, or on the school premises. Nor shall any communication be had for such purposes with such pupils or any one of them, either orally or in writing, or by signs or otherwise, and it shall also be unlawful for any person to enter upon any such school or college premises, except on business, without first having obtained permission of the principal in charge. And it shall be unlawful for any person or persons to loiter, wander, stand, or sit upon the public roads, streets, alleys, sidewalks, or other places, or to frequently and unnecessarily pass along the same in such manner and with intent to annoy, vex, or disturb the owners, lessees, or occupants of any premises in the State used for the purpose of a school or college for the education of females, or with intent to disturb, annoy, and harass the teachers, principals, or pupils or any one of them as they pass along the public highways, streets, or alleys of any city in the State." The penalty is a fine of \$5 to \$50 for the first offense, and for subsequent convictions \$10 to \$50, with imprisonment at the discretion of the court ten to thirty days.

A design for an official flag for the State was adopted. It is to be red, blue, and white, and "so shaped by diagonal lines as to represent the geological lines of the State." The proportions of width and length are to be 2 to 3. "The dimensions of the three colors employed shall be governed by a diagonal line drawn from the upper corner to the lower corner through the center of said colors employed in its construction, and the width of the three colors measured on said lines so drawn shall be equal. The figure '16' shall be on the white field, and shall be made blue in color. The words 'The Volunteer State' shall be placed diagonally on the blue field, and of yellow or gold letters."

Resolutions were passed authorizing the State funding board to borrow money at the lowest rate of interest obtainable when, in their opinion, the necessities of the State should demand it, and to cancel 400,000 bonds of \$1,000 each outstanding against it; and authorizing the Secretary of State, the Attorney-General, and the Comptroller to settle the tax suit against the Mobile and Ohio Railroad.

Committees were appointed to investigate State institutions and officers. The Committee on the Penitentiary reported that they found "no evidences of dishonesty or fraud in connection with the prison management." They recommended some changes so as to concentrate the management and the responsibility, to reduce expenses, and to guard against excessive punishments. A bill was passed for better regulation of the prison.

The Committee on the University made several criticisms on its management, the principal of which was that "the trustees have not provided the kind of instruction which the law of the United States and the State of Tennessee requires should be given." The committee declares that this instruction should be limited to "the agricultural and mechanical arts," and while they commend the university highly as a literary and scientific institution, they say it is not a practical agricultural and mechanical school; that there is no authority for giving instruction at the university in "scientific and classical studies," which they charge are made the chief object of the institution, instead of farm and mechanical work.

To this the trustees replied, showing that the committee have misquoted the law of the United States fixing the instruction to be given at these colleges and have omitted a clause which expressly requires instruction to be given in "scientific and classical studies," and contending that the training should be, and is designed to give students a sound education, thereby enabling them to become practical farmers.

Other enactments were:

Appropriating \$17,000 for the Confederate Soldiers' Home.

Making married women who are engaged in business subject to the same liability for debt as single women so engaged.

Changing the line between Davidson and Williamson Counties.

Regulating the inheritance tax so as to make it fall equally on the inheritance of children of the half and those of the whole blood, and increasing the jurisdiction of county courts.

Requiring a contestant for the office of Governor to give a bond of \$25,000 for the costs of the contest; providing, however, that the penalty shall not be enforced against the contestant or his securities unless the joint Assembly shall be of opinion that the contest was not in good faith, or was malicious or unwarranted, or made for political effect, or without reasonable cause.

To prevent the attachment or garnishment in this State of salaries or wages which are earned or payable in another State.

Appropriating \$50,000 for the Centennial Exposition.

Providing for quarantine against Texas cattle fever.

For the suppression of trusts and combinations to control and limit trade.

For regulating the incorporation of mutual benefit associations.

Prohibiting the wearing of any insignia of labor organizations by those not members.

United States Senator.—Senator Isham G. Harris died July 8, and Thomas B. Turley was appointed

by the Governor to fill the vacancy. The Legislature will elect a successor at the special session which the Governor has called to meet Jan. 17.

The Centennial Exposition. The Tennessee Centennial and International Exposition was held at Nashville, from May 1, 1895, to Oct. 3, 1896, inclusive, and in some respects a national as well as an exposition work. These particulars apply to every the patriotic nature of the enterprise, the celebration of the one hundredth anniversary of the admission of the State to the Union, the opportunity of noted structures of ancient times, and the great amount of work performed without any expense. The first suggestion of such a celebration was made when the centennial of the founding of Nashville was celebrated, in 1891. After that came other suggestions, the first of which was made by Douglas Anderson, a member of the Nashville bar, who in August, 1892, sent to several papers in the State a letter making the proposition to hold a centennial exposition in 1895 in commemoration of the State's admission to the Union. In the autumn of 1893 Capt. William C. Smith took up the idea, and after consultation with many friends brought the matter before the Commercial Club and other organizations. The Commercial Club adopted resolutions on the subject, the idea was received with marks of popular approval, and the papers of the State expressed their frankness to such an enterprise. Committees were appointed by the Commercial Club, the Board of Trade, the Historical Society, the Art Association, the Tennessee Press Association, and the Southern Engineering Association, and the result of these consultations was the formation of a committee and the election of officers. James M. Head was chosen chairman, and correspondence was opened with the mayors of Tennessee cities, with the chairmen of county courts, with industrial and commercial organizations, and historical, agricultural and horticultural societies, and with associations having for their object the advancement of science, art and manufactures. An address to the public was issued, and the newspapers were liberally supplied with items concerning the movement. The convention was called for June 19, 1894, and on that day there was a well-attended meeting of representative men from many sections of the State. James M. Head called the meeting to order. W. A. Henderson was made temporary chairman. Dr. R. A. Bailey, B. Kirk Rankin, and J. W. Ferguson were made secretaries, and the committees were appointed. The report of the Committee on Resolutions formulated the general outline of a plan for celebrating the centennial on purely patriotic grounds, and making the display largely historical, but having in view the material wealth of the State and the undeveloped resources. The Hon. R. J. Morgan was made permanent chairman, and the temporary secretaries made permanent. The plan adopted provided for holding the exposition at Nashville, in the autumn of 1895, designated the departments, and recommended for officers the following: Nat. Baxter, Jr., of Nashville, President; W. A. Henderson, of Knoxville, Vice-President; A. W. Wells, of Nashville, Director General; William C. Smith, of Nashville, Director of Works; T. T. Wright, of Nashville, Secretary; Treasurer to be elected by the directors; Frank Goodman, of Nashville, Auditor; J. M. Head, of T. J. Tins, of Nashville, General Counsel. Mr. Wright declined the office of secretary, and J. B. Kilbreth was elected to the place. Persons residing in other States were invited to participate. The charter was procured, and the organization was effected at an early date. The first substantial aid came from the community in which Nashville is situated, and the county voted

\$50,000 to the enterprise. The directors decided to petition the Legislature for a bonus of \$350,000, and sent a delegation to Washington in December, 1894, to urge Federal aid. The bill in Congress failed, and the Legislature adjourned without voting a dollar. Then the citizens of Nashville made up their minds that they would hold the exposition themselves, whether State and Government aided them or not. In the end they triumphed, but they had to bear the burden almost alone.

The work of interesting the State was carried on unceasingly, and at last the Legislature passed laws enabling counties to make appropriations for displays of their own resources at the exposition and to enable the city of Nashville to subscribe \$100,000 to the enterprise by majority vote of the legal voters. In July, 1895, the subscriptions amounted to \$62,635, including the \$50,000 given by Davidson County. A meeting was held in the evening of July 8, and proved to be the turning point in the fortunes of the enterprise. Just as the Hon. Tully Brown closed a patriotic appeal, the news came that the City Council had passed the bill submitting to a vote of the people the proposition to subscribe \$100,000 to the capital stock. The officers tendered their resignations, believing that those who had subscribed should have the right to elect, and the hall had become so crowded that in answer to a demand for more room the meeting marched to Watkins Hall, increasing as it went. A committee of nine was appointed to consider the question of reorganization, and the meeting reluctantly adjourned. Within two weeks the subscriptions had reached \$165,000. An immense gathering assembled at the Tabernacle and heard the report of the committee of nine, which proposed Major J. W. Thomas, President of the Nashville, Chattanooga and St. Louis Railway, for President of the Exposition Company. This gentleman accepted the office with the condition, made by himself, that he receive no salary. He also furnished an efficient secretary in Charles E. Currey, on the same terms. Van Leer Kirkman was elected Vice-President; W. A. Henderson, Second Vice-President; John Overton, Jr., Third Vice-President; W. P. Tanner, Treasurer; and Frank Goodman, Auditor. These gentlemen served throughout the period of preparation and during the exposition proper. President Thomas and an executive committee had charge of all affairs when the directors were not in session, and all served without compensation. On July 30, 1895, Major E. C. Lewis was appointed director general.

West Side Park, two miles from the heart of the city, reached by all the street-car lines, as well as by the Nashville, Chattanooga and St. Louis Railway, was chosen as the site. The first call for 10 per cent. on subscriptions was made, payable Sept. 1, 1895. Sept. 12 the director general outlined his plans. The central figure and the architectural center of the exposition was to be a reproduction of the Parthenon. The foundations of this building were begun Sept. 10, and the corner stone was laid with appropriate ceremonies Oct. 8. Subscriptions continued to increase in amount through the winter of 1895 and the spring of 1896, and the city voted the \$100,000 at the election held for that purpose, only 488 votes being cast against the proposition. The bonds were sold at a premium. Owing to the opening of the presidential campaign and the growing scope of the enterprise, it was decided to postpone the opening until May 1, 1897, and to continue the exposition through six months. The construction of the buildings was continued, and every one of them was ready for the opening day except the Government Building and the Education and Hygiene Building, which had been begun almost at the last moment.

On June 1, 1896, the Woman's Building and the Auditorium were complete, so that in these two buildings the ceremonies incident to the celebration of Tennessee's actual centennial were held. To this celebration came citizens of 12 States and at least 125,000 Tennesseans participated in the exercises. In July the Nashville, Chattanooga and St. Louis Railway and the Louisville and Nashville Railroad Company each subscribed \$25,000 in cash to the exposition, in addition to more than \$10,000 in transportation already given. This policy of aid on the part of the railroads continued throughout the exposition. These and the other subscriptions enabled the management to prosecute the work without cessation, and to pay for every dollar's worth of work when it was completed. In the latter half of 1896 applications for space were so numerous as to necessitate enlargements of several of the buildings. Visiting delegations from the large cities came, and were so much pleased that they went home and inaugurated the movements which resulted in the erection of special buildings of great beauty. The press of the country gave the exposition an unusual amount of attention from the beginning, and the cost of advertising it was merely nominal. For more than a year beforehand every effort had been made to secure the meeting in Nashville during 1897 of as many of the great bodies and conventions as possible, and the list of special days was the longest ever had by any exposition.

A renewed effort at Washington resulted in the appropriation by Congress of \$130,000, of which \$30,000 was for a building and the remainder for a display, the appropriation being conditioned on the previous subscription by private persons of \$500,000. This was in December, 1896, and in two weeks the additional \$27,000 thereby made necessary had been secured. The struggle with the Tennessee Legislature was harder and less successful. At first \$350,000 had been asked for, but at the session early in 1897 it was decided to ask for only \$100,000. After a bitter struggle with the opponents of the measure, the State of Tennessee, through its representatives, voted \$50,000. Of this, but a part was available, for \$30,000 was used to purchase the Agricultural Building, and the rest used in placing the State exhibit and in the expenses of administration. The last great struggle came not long before the opening day, in the effort to incorporate Centennial City. This brought up the question of the sale of malt, vinous, and spirituous liquors. A bill for the incorporation of Centennial City was introduced in the Legislature. It was the work of the combined intelligence and conservatism of the entire Executive Committee, but was denounced as the work of brewers and distillers. The laws of Tennessee do not allow the sale of spirituous or malt liquors within four miles of a school, except within an incorporated municipality, and the Centennial Park is just outside the city of Nashville, with schools and universities around it. The Executive Committee asked for a limited corporation, which should expire on Dec. 31, 1897. They took the view that, having invited the people of the world to join in the celebration of the centennial of Tennessee, as the host they must allow the tastes and customs of their guests to be consulted as far as might be, and that beer and wine might be sold under proper restrictions. Not one of the Executive Committee was engaged in any industry connected with the liquor traffic, directly or indirectly. The opposition to the measure was bitter and persistent, but finally it became a law. Bonds were prepared for \$220,000, and a loan was obtained that kept the treasury replenished. This was paid off before the exposition closed. Just before the opening Dr. W. L. Dudley, of Vanderbilt University, was elected

director of affairs, the work of the director general being too much for one man.

The opening exercises were held May 1 in the Auditorium on the grounds, and after the speeches and music the machinery was formally started by the pressure of a button by President McKinley in Washington. The report of a cannon answered at the instant that the machinery was started and the exposition formally opened. The Legislature and a host of other distinguished visitors were present. The exposition ran its course without a single serious casualty, without the slightest suspicion of scandal of any kind. Half the States of the Union had their special days, when their governors or other representatives were present, and showed their friendly relations to the people of Tennessee. President McKinley and his Cabinet were present June 11 and 12, when the celebration of Ohio and Cincinnati Days took place at the Cincinnati Building. The Woman's Department made of Mrs. McKinley's presence the social event of the summer. The attendance culminated in the observance of Nashville Day, Sept. 11, the anniversary of the original incorporation of Nashville. But the crowning effort of the exposition workers was directed to making J. W. Thomas Day exceed all others, and it was seen that the attendance was within a few hundred of 100,000. Director General's Day was another great day, ranking among the five greatest. Nebraska Day, when the Governor of that State and William Jennings Bryan were present, ranked third of the days. United Confederate Veterans' Day was fourth.

Organization.—The organization of the Exposition Company was as follows: President, John W. Thomas; Vice-President for East Tennessee, W. A. Henderson, Knoxville; Vice-President for Middle Tennessee, Van Leer Kirkman, Nashville; Vice-President for West Tennessee, John Overton, Jr., Memphis; Director General, E. C. Lewis, Nashville; Director of Affairs, W. L. Dudley, Nashville; Commissioner General, A. W. Wills, Nashville; General Counsel, S. A. Champion; Secretary, Charles E. Curry, Nashville; Treasurer, W. P. Tanner, Nashville; Auditor, Frank Goodman, Nashville; Chairman of Finance Committee, S. J. Keith, Nashville; Chairman of Legislative Committee, Tully Brown; Executive Committee—President J. W. Thomas, chairman, J. W. Baker, E. E. Barthell, G. H. Baskette, Tully Brown, H. W. Buttorff, S. A. Champion, E. W. Cole, M. J. Dalton, W. L. Dudley, J. H. Fall, T. D. Fite, W. A. Henderson, W. H. Jackson, Samuel J. Keith, Van L. Kirkman, E. C. Lewis, H. H. Lorton, Samuel M. Murphy, J. J. McCann, J. H. McDowell, J. C. Neely, John Overton, Jr., H. E. Palmer, A. H. Robinson, W. P. Tanner, J. W. Thomas, Jr., J. VanDeventer, R. F. Wilson, Luke E. Wright. Chiefs of departments: Engineer in Charge, R. T. Creighton; Art, Theodore Cooley; Machinery, George Reyser; Electricity, J. W. Braid; History, G. P. Thruston; Commerce, J. H. Bruce; Agriculture, T. F. P. Allison; Geology, Mines, and Mining, J. M. Stafford; Forestry, A. E. Baird; Negro, Richard Hill; Children's, W. T. Davis; Woman's, Mrs. Van L. Kirkman; Concessions, S. B. Wadley; Admissions, J. N. Brooks; Military, Charles Sykes; Music and Amusement, W. L. Dudley, chairman of committee; Installation, E. P. Blodgett; Transportation, J. W. Thomas, Jr.; Publicity and Promotion, Herman Justi; Board of Management of the Government Display, Charles W. Dabney, President; Education, W. L. Dudley; Hygiene, Medicine, and Surgical Appliances, Dr. J. D. Plunket; Grounds and Building, W. C. Kilvington; Live Stock and Poultry, Van L. Kirkman; Foreign, A. Macchi. The Board of Directors

numbered 169 from all parts of the State and met monthly. The company was chartered under the general laws of the State.

Centennial City.—Centennial City stands unique in the history of municipalities. It was short-lived, but in its ideal character it suggests the perfect ideal commonwealth. Like the little Kingdom of Monaco, it was beautiful, artistic, and given up largely to the pursuit of pleasure. There was an application for office considered for the office sought the man, being named in the act of incorporation. An act of the Legislature provided that organized State fairs shall be exempt from the payment of any license for privileges taxable by the laws of the State. As the income of the exposition was expected to be largely derived from amusement and other concessions, in the way of commissions, space rent, etc., the revenue bills of 1895 and 1897 continued this provision for State fairs and their tenants. In order to control the grounds at the Exposition it was seen that some sort of municipality would be necessary. Under the general law for organization of municipalities at least 15 qualified voters must reside within the territory to be incorporated, three-fourths of whom must give their consent. Not a single qualified voter resided within the centennial grounds. The bill to incorporate Centennial City provided that only the exposition grounds be included, and that the sale of intoxicants be not allowed, except once as a restaurant privilege and beer under proper regulations. The bill named the members of the board of aldermen, who should elect a mayor, to be *ex officio* recorder, with jurisdiction to try and punish offenders against the city laws; but no revenue was provided for except what came from fines and forfeitures. The charter was to expire by limitation Jan. 1, 1908. An arm of the government created without power to raise revenue except by fines and forfeiture, known to be wholly insufficient to pay the necessary expenses, a police known as the Centennial Guard, authorized by the ordinances of the city, and which acted *ex officio* as a fire department, and could be increased if required, to 1,000 men, was unique. Though nearly 2,000,000 people visited the exposition, very few dollars' worth of anything was stolen, no one was seriously injured, and not a single death occurred as the result of violence. The mayor and board of aldermen named in the charter were Norman Farrell, Edward Buford, John W. Thomas, Jr., W. L. Dudley, H. W. Buttorff, E. C. Lewis, and W. H. Jackson. The board elected Norman Farrell mayor, Norman Farrell, Jr., secretary and treasurer, and Eastman G. Curry chief of police.

The Park.—The site of the exposition was West Side Park, a former race course on which more than \$100,000 had been expended in grading and laying out the grounds before it came into the hands of the exposition management. Lakes existed already fed by running streams, with hundreds of trees, many of them forest monarchs. The hills and rolling country to the west were a continuation of the characteristics found in the park. The beautiful suburbs of Nashville reached to the very fence inclosing the place. The main buildings were arranged in the form of an ellipse, the Parthenon, in an elevated position, occupying the center. Around this ellipse, following the old race course, were arranged the Government, Minerals and Forestry, Negro, Machinery, Agriculture, Transportation, Commerce, Administration, Children's, and Woman's Buildings. In the southern portion of the inclosed ellipse was the Auditorium, and in the northern portion the Education and Hygiene Building, while the smaller structures were scattered promiscuously, but always with a view to picturesque-

ness. Arbors covered with native vines or with gourd vines led from the Auditorium to the Children's Building on the west, and to the Parthenon on the north. Capitol Avenue, on which were most of the State, county, and city buildings, ran toward the east from the Rialto, which spanned Lake Wausau directly in front of the Parthenon. The dome of the Commerce Building, the ridge line of the Parthenon, the statue of Pallas Athene, the Rialto, the middle of Capitol Avenue, and the dome of the State Capitol, two miles away, were in a straight line. Everything in the way of flowers was used lavishly in beautifying the grounds, and nearly 1,000,000 plants were in full bloom during the summer. Besides the Parthenon, the most striking structures were the flag-staff, 250 feet high, the reproduced Pyramid of Cheops used as the Memphis Building, the exact reproduction of the

Alamo as the Texas Building, the copy on exact lines of the Rialto at Venice, the Administration Building of the World's Fair with statuary and every detail reproduced on a scale of one sixth as the Illinois Building, and the famous Blue Grotto of Capri, on an island in the lake. Other unique attractions were cotton and tobacco fields in full growth, where all the operations connected with the culture and gathering of these crops were shown as the season progressed; old-time cotton presses and water wheels, pioneer cabins and furniture, wild-cat distillery, flax hatching and spinning; the gondolas from Venice and the native Venetian gondoliers; the chines in the Auditorium tower; the History Building, with its relics more valuable than their weight in gold, to preserve which a permanent brick building had been constructed; statuary, including a bronze statue of Commodore Vanderbilt, by Moretti, of New York, which has since been removed to a permanent home on the grounds of Vanderbilt University; the statue of Pallas Athene, 25 feet in height, the largest statue ever made by a woman, the work of Miss Enid Yandell, of Louisville. Fountains, lakes, flowers, and aquatic fowls made up the accessories. Palms and cacti were everywhere in evidence, and many of the floral designs were at once stupendous and beautiful. Lily lake was filled with every obtainable variety of water lily.

The Buildings.—The names of the buildings, style of architecture, size and cost are given herewith: Exposition buildings proper—Agriculture, Renaissance, 153 × 510, \$30,000; Administration, modern, \$1,650; Auditorium, colonial, 200 × 250, \$20,000; Air-Ship House, 30 × 60, \$500; boiler house, 30 × 100, \$2,500; band stand, Oriental, \$1,287; Children's Building, modern, 80 × 80, \$5,124; Commerce Building, Roman, 527 × 126 and 160 × 60, \$40,000; Customhouse, modern, \$800; main entrance, Egyptian, 16 × 50, \$1,550; concessions, modern, \$1,500; small entrances, \$600; Education and Hygiene, Renaissance, 144 × 144, \$12,000; flag-staff, 250 feet high, \$2,500; hitch stable, 25 × 200, \$300; Emergency Hospital, Renaissance, 30 × 50, \$2,000; Negro Emergency Hospital, \$500; History Building, Greek, 80 × 80, \$10,000; Machinery Hall, Greek, 100 × 350, \$20,000; Minerals and Forestry, modern, Roman-Doric, 426 × 101 and 162 × 72, \$20,000; Pool, Greek, 50 × 150, \$2,500; Negro Building, Spanish Renaissance, 80 × 250, \$12,300; Nursery, modern, \$800; Parthenon, Greek, 110 × 230, \$30,000; Power Building, modern, \$1,850; power house, \$1,000; Rialto, Venetian, \$4,000; Transportation Building, Renaissance, 116 × 400, \$16,987; Terminal Building, and Nashville, Chattanooga and St. Louis Railway Exhibit Building, Roman, 120 × 120, \$12,000; Train Exhibit Shed, 75 × 300, \$2,500; Woman's Building, colonial, 65 × 165, \$14,000; blacksmith shop, bath houses,

bonded warehouses, three military buildings, carpenter shop, and oil house. Other exhibit buildings were as follow: Alamo, or Texas Building; Alabama, Cincinnati, Cotton Belt Railway, Chambers Brothers' brick factory, Round Bale Company Warehouse, Illinois Building, Junior Order of United American Mechanics, Knoxville, Kentucky, Ladies of the Maccabees' Beehive, Knights of Pythias, Memphis, New York, Red Men, Settler's Cabin of 1797, Seaboard Air Line palace car, Woodmen of the World, Page Woven-Wire Company, and the United States Government Building, which cost \$30,000. Restaurants—Alhambra, Café Militaire, Casino, Clubhouse, Lion Roof Garden, Schlitz Pavilion. The amusement buildings were Beauty Show, Brownie Show, Blue Grotto, Chinese Village and Beauty Show, Cyclorama Battle of Gettysburg, Colorado Gold Mine, California Big Tree, Cuban Village, Cinematographe, A Day in the Alps, Electric Carroussel, Fire Dance and Roltaire's Illusions, Giant Sessaw, Gladish Wheel, Trained-Animal Show, Moorish Palace, Mirage, Lincoln and David Cabins, Night and Morning, the Old Plantation, Ocean Wave, Old Times in Tennessee, Phantom Swing, Streets of Cairo, the Chutes, Palace of Illusions, shooting gallery, the Nebraska Sod House, Wild West Show, Phonograph Parlor, two Japanese tea houses, Model Chinese Farm, and the Bureau of Public Comfort. Besides these there were hundreds of smaller concession houses and stands, such as are found at all expositions, for the sale of innumerable articles.

Electric Lighting.—The problem of illumination was satisfactorily settled, and no department gave greater satisfaction. The electrical department was organized July 1, 1896, with J. W. Braid as chief and J. W. Pentecost as superintendent. A conduit for the underground system was laid in the autumn, and the force was gradually increased as the work grew, until 77 men were engaged. The cost of the department was \$28,000. The lights were turned on in full on the evening of May 1, 1897, and never was there a delay or any break of any kind. There were 18,382 incandescent lamps and 458 arc lights used in the scheme of decoration and illumination. The plant included fifteen dynamos, and the decorative lamps were distributed as follow: Fountain, 102; Woman's Building, 368; Children's Building, 534; Commerce Building, 1,442; garlands, 424; Transportation Building, 540; Agriculture Building, 1,897; Machinery Hall, 502; Negro Building, 384; island, 200; Rialto, 602; Minerals and Forestry Building, 568; Auditorium, 812; Arbor, 109; Parthenon, 390; Terminal Station, 912; Education and Hygiene Building, 522; Memphis Building, 346; Illinois Building, 236; Administration Building, 196; Pool, 164; main entrance, 88; History Building, 382; Vanity Fair, for decorative purposes purely, 965; making a total of 12,685; for illuminating in buildings, concessions, etc., 5,697 lamps were used, making a grand total of 18,382 lamps.

Art Department.—The art department in the Parthenon of the exposition comprised the largest collection of fine pictures even gathered in the South. Theodore Cooley, the chief of this department, enjoyed a personal acquaintance with such a large proportion of the artists of the country that he had exceptional facilities for getting pictures loaned, and many of the best private galleries helped in his work. The art catalogue was a work of art itself. More than 5,000 letters were written in eighteen months, and the result was most satisfactory. Leon Roecker, of Chicago, superintended the hanging of the pictures, completing the work ten days after the exposition opened. The jury of awards was composed of F. Hopkinson Smith, of New

York; Thomas Allen, of Boston; and Halsey C. Ives, of St. Louis. A prize offered the painter of the picture declared most popular by ballots of all visitors who chose to express themselves was awarded to John G. Brown, whose picture "Hills over Head" received a very large plurality. There were 967 paintings and nearly 200 pieces of sculpture in the collection, besides the architectural drawings and other works in allied fields of art.

Woman's Department.—The management of the Woman's Department was in the beginning left entirely to the women, the only part the men took being to erect the building for them after a design prepared by Mrs. Sara Ward Conley, of Nashville. The first actual organization was headed by Mrs. H. L. Craighead as president and Mrs. Bettie M. Davidson as chairman of the Executive Committee, but upon Mrs. Craighead's resignation Mrs. Van Leer Kirkman was elected president of the department. The first large sum secured was by a special woman's edition of the Nashville "American," which netted them nearly \$3,000. Every member of the State Board and every member of the Executive Committee was pledged to raise not less than \$25, and many of them gave entertainments, at their residences and elsewhere, which brought them many times that sum. Ward and district Centennial Clubs were organized by them in Nashville and Davidson County, and much money thus raised. When the exposition opened they had exclusive control of all privileges and concessions in their building, and altogether they raised more than \$30,000. The women of Memphis spent \$4,000 in decorating the main hall of the building, which they took as their part of the work; Chattanooga women paid \$2,000 for the decoration of the Chattanooga Room, and each of the rooms thus taken in charge by the women of a city or State or county had a great deal of money spent upon it. In one room were shown the articles invented and patented by women. There was a library where were gathered 4,000 volumes written by women in all parts of the world, though mainly in the United States. A model kitchen was equipped by Chattanooga women, and courses of lessons in cooking were given throughout the exposition period. Other special rooms were decorated and furnished, and mainly filled, by New York, Chicago, Georgia, Knoxville, Maury County, Sumner County, and Murfreesboro. Women notable in every department of modern life were brought to Nashville by women's congresses, musical festivals, and lectures. The first month's congresses were managed by Miss Clara Conway, and those of the remaining period by Mrs. Robert F. Weakley. The organization of the department was as follows: President, Mrs. Van Leer Kirkman, Nashville; Vice-President for East Tennessee, Miss Mary Boyce Temple, Knoxville; Vice-President for Middle Tennessee, Mrs. Florence K. Drouillard, Nashville; Vice-President for West Tennessee, Mrs. Charles N. Grosvenor, Memphis; Vice-President for the State at Large, Mrs. J. W. Thomas, Nashville; Secretary, Miss Ada Scott Rice, Nashville; Treasurer, Mrs. Robert F. Weakley, Nashville; Executive Committee—Mrs. Van Leer Kirkman, Mrs. Florence K. Drouillard, Miss Mary Boyce Temple, Mrs. C. N. Grosvenor, Mrs. J. W. Thomas, Mrs. Robert F. Weakley, Mrs. G. W. Fall, Mrs. M. P. Maguire, Mrs. M. B. Pilcher, Mrs. F. L. Blume, Mrs. S. A. Champion, Mrs. John Hill Eakin, Mrs. Norman Farrell, Mrs. T. F. Kendrick, Mrs. Isadore Lewinthal, Mrs. James S. Pilcher, Mrs. G. H. Ratterman, Mrs. John Rahm, Sr.

Machinery Department.—The great departure in the Machinery Department was the separation of the exhibits from the power plant and the refrigeration of the former, so that this exhibit could

be inspected at any time, at the hottest day free from the discomforts that attend the usually characteristic close and stifling atmosphere constituted of 6 Morris Compressors, each with two cylinders, 4 being rated at 400 horse power each and 2 at 250 horse power each. The actual horse power furnished was 2,800. On some of the engines used daily in Machinery Hall were the most successful Phoenix engine 150 horse power and two kilowatts Western Electric dynamo, 125 horse power direct-connected engine and 1.8-2.5 kw.; Triumph dynamo, and 2 Wood dynamo of 80 kilowatts. The shafting used for distributing the power was under the floor the full length of the building, the lines of shafting being driven by 1 Hamilton Corliss engine of 500 horse power and 1 Lane & Bell Co. Corliss engine of 400 horse power. The power house contained 4 Worthington engines of 300 horse power each and 1 400-horse-power Rock engine. These engines furnished the power for driving 6 alternating and 5 arc dynamos. In the pump house were 1 Underwriters fire pump and 1 Worthington compound. Each was capable of delivering 1,000 gallons of water a minute with a pressure of 150 pounds to the inch. The water was taken from the main of Nashville. Capt. George Reyer, chief of the department, had valuable assistants in James A. Robinson, Henry Mack, and L. G. Graham, superintendent of the power plant. The force numbered 40 men. Notable among the exhibits of interest to the South was the round bale cotton press, a wonderful contrast to the old method, also a great cutting machine from a Providence, R. I., firm, and measuring tools by which measurements as small as .00001 are readily made. These exhibits are not singled out because they were better than the others, but because they seemed to mark a great advance in mechanical science.

The State Displays.—The strong purpose was to show the history of Tennessee for the past hundred years and the hopes that lay in the unopened possibilities of the State. These resources were fully shown—minerals, forest products, agricultural products, phosphates, clay, and cotton—and the showing was very satisfactory. The displays made by various counties in the State were given space, as a rule, in the Agricultural Building, but some of them were in the Minerals and Forestry Buildings, notably that of Chattanooga and Hamilton County. Other counties and cities had special buildings, of which Memphis and Knoxville were particularly notable. The general collective State exhibit was made in the Agricultural and Minerals and Forestry Buildings. The Nashville, Chattanooga and St. Louis Railway had a complete display of the products of all the territory along its line, and this was allowed to remain after the exposition closed, as the nucleus of a permanent exposition.

Music and Amusements.—The expense for music and amusements was \$359,64.90, of which the larger part was spent for music. Great bands were in attendance throughout the exposition, the season opening with the Bellstadt-Ballenberg band of Cincinnati, for four weeks. Following this came Innes's band, Victor Herbert's 224 Regiment Band, and Centeno's band, with the spectacular "Ballad of our Nation"; then the Bellstadt-Ballenberg band played a return engagement for the last four weeks of the exposition. Other musical acts consisted of a few special performances, and were not draw as was expected; fireworks were very popular; sham battles and 200 other miscellaneous games and otherwise. Races, gun, and other athletic contests were also popular, and other events, which were always witnessed by great crowds.

Receipts and Disbursements.—Up to April 1, 1898, with considerable assets in the way of salvage yet unrealized upon, the receipts and disbursements of the Exposition Company proper had been as follows: Receipts—admissions, \$435,399.95; concessions, \$124,735.60; individual subscriptions, \$257,015.44; city of Nashville subscription, \$100,000; Davidson County subscription, \$50,000; State of Tennessee subscription, \$50,000; salvage, \$32,175.35; from various departments, \$27,783.72; total, \$1,087,227.85. Of the receipts from the departments all were in small sums, comparatively, the Electrical Department being the only considerable source of receipts, \$16,785.37 being received for lights furnished. Of the admissions, gate receipts amounted to \$394,799.20, the season tickets to \$28,537, and the photographic passes, etc., to \$12,029.25. This gives the total of \$435,399.95, representing 1,273,827 paid admissions. The total registered by the turnstiles was 1,886,714, showing that the number of entrances on passes and all free admissions—workmen, soldiers, *concessionnaires*, employees, distinguished guests, press, etc.—aggregated 612,887. Against these receipts the disbursements were as follow: Preliminary organization, \$16,263.07; administration, \$63,964.89; publicity and promotion, \$79,564.85; grounds and buildings, \$520,390.51; commissioner general's department, \$15,630.50; Art Department, \$25,639.29; Agricultural Department, \$14,448.51; Machinery Department, \$80,527.72; Electricity Department, \$67,991.17; Geology, Mines and Mining, \$2,525.58; Forestry, \$759.20; Hygiene, Medicine, and Surgical Appliances, \$789.63; Live Stock and Poultry, \$551.77; Military, \$7,193.17; Educational, \$408.80; Children's Department, \$3,081.13; Negro Department, \$2,609.68; Woman's Department, \$749.48; music and amusements, \$99,864.99; Admissions Department, \$25,134.18; concessions, \$18,923.67; guard, \$38,329.38; installation, \$3,728.60; hospital, \$3,339.84; history, \$766.53; foreign, \$3,358.98; inaugural ceremonies, \$7,212; total, \$1,087,227.85. The small cost attached to the running of the Woman's Department is explained by the fact that after the preliminary work the women paid their own running expenses and raised the money themselves.

Sundry Statistics.—There were on the grounds 2 stone dams, 5 bridges, 2 arbors, 4 lakes, 10 miles of road, 5 miles of water pipe, and 3 miles of sewers, all constructed by the Engineering Department. Altogether there was in use 190 acres of ground. During the six months there was used 11,338,210 cubic feet of water, or about 80,000,000 gallons. Of ice there was used 489,075 pounds. Of sewerage there was removed 128,712 barrels of 55 gallons each, 2.6 per cent, being solid matter. The greatest number of men employed in the Engineering Department was 436, the week before the opening, when 54 teams were used, and the pay roll was \$5,126.30.

TEXAS, a Southern State, admitted to the Union Dec. 29, 1845; area, 265,780 square miles. The population, according to each decennial census since admission, was 212,592 in 1850; 604,215 in 1860; 818,759 in 1870; 1,591,749 in 1880; and 2,235,523 in 1890. Capital, Austin.

Government. The State officers in 1897 were: Governor, Charles A. Culberson; Lieutenant Governor, George T. Jackson; Secretary of State, J. W. Madden; Treasurer, W. B. Vaughan; Comptroller, R. W. Finley; Superintendent of Public Instruction, James M. Carlisle; Commissioner of the Land Office, Andrew J. Baker; Commissioner of Agriculture, Insurance, Statistics, and History, A. J. Rose, succeeded by Jefferson Johnson; Attorney General, Martin M. Crane; Adjutant General, W. H. Mabry; Health Officer, R. M. Swearingen; Chairman of the Railroad Commission, John H. Reagan; Chief Jus-

tice of the Supreme Court, Reuben R. Gaines; Associate Justices, Leroy G. Denman and Thomas J. Brown; Clerk, Charles S. Morse. All the State officers are Democrats.

Finances.—The appropriations for all purposes for 1897 and 1898 amounted to \$4,384,855.90. The disbursements for one year preceding were \$2,884,700.03.

The report on school-land operations in 1897 is as follows: "Lands leased during the year, 4,859,808 acres. Canceled leases during same time caused by nonpayment of rental, expiration or sales, 2,571,702 acres. There are now under lease and in good standing 9,947,942 acres. The lease money paid on the lands leased in 1897 was \$145,794.24, and on leases already existing there was paid \$137,457.97, or a total of \$283,252.21, which was paid into the available school fund for the education of the children of the State. This is an unprecedented year in this department."

The State school fund was this year large enough to pay all the apportionment for the school year for the first time in five years, a balance due from the State having been left over each August for that length of time.

Education.—The school population this year was 775,933, an increase of 24,598 over that of 1896. The apportionment for each of the two years 1897 and 1898 was \$4 *per capita*.

The Sam Houston Normal School had 350 students and 88 graduates. The attendance at the Prairie View Normal also was large.

There were 730 students in attendance at the State University. In the medical department, which is at Galveston, while the other departments are at Austin, there were 270, of whom 34 were in the School of Pharmacy. The degree of doctor of medicine was conferred on 33, one of them the only young woman graduated by the department. As she had not reached the requisite age, her diploma was withheld. Two of the graduates in pharmacy were Sisters of Charity.

The university has received valuable gifts this year, notably a library of about 25,000 books and pamphlets from Sir Swante Palm, who has been Swedish consul at Austin for thirty years. This library is valued at \$100,000 and contains many rare works, manuscripts, and engravings.

A resolution was adopted in the lower house of the Legislature in June calling for an investigation into the truth of the report that there "have been employed and included in the faculty of said university those who are not in sympathy with the traditions of the South, but hold our traditions and our institutions in contempt, and circulate and teach political heresies in place of the system of political economy that is cherished by our people."

The instructor alluded to is Prof. Houston, who teaches political economy and is the author of a work on the subject, in which, it is charged, he advances ideas not in sympathy with the spirit and interest of Southern institutions. President Winston also comes in for a share of blame. An address at an alumni banquet at Dallas in March has the following paragraph, which has been quoted against him:

"The Constitution of our State seems to be made up mainly of prohibitions. It is a series of don'ts. It is a sort of combination of the democratic idea of everybody doing what he pleases without interference from anybody, and the old carpetbagger idea that the State should be protected from plunder by its public servants. And the result is, that we have a Constitution, and we have a machinery of government in Texas which is the most remarkable obstruction to progress that probably exists anywhere."

The report of the committee said: "We have not had time to make a critical examination of the book, but from a casual reading would pronounce it to be unacceptable from a Southern standpoint, as setting forth principles contrary to Southern teachings. We questioned Prof. Houston, who is a South Carolinian, with regard to the book, and he stated that it was written before he came to Texas, and that in his teaching here it was not used, nor was it referred to. The personal predilections of the regents are, other things being equal for Texas men first, and Southern men next. And we are satisfied that there has not been taught in the university anything objectionable to Southern people. We ascertained that of the professors 2 were from North Carolina, 1 from New Jersey, 2 from Indiana, 3 from Virginia, 4 from Texas, 1 from New York, 1 from Georgia, 1 from South Carolina, 1 from Wisconsin, 1 from Kentucky, 1 from Maryland, 1 from Alabama, and 1 from Switzerland; and in addition there were employed 11 graduates of the University of Texas as instructors and tutors and fellows. In answer to a direct question, the Board of Regents stated that on their part there has never been any desire to employ professors or not to employ professors because of their coming from the Northern States. The sole test has been fitness for the position, which has included a careful inquiry into family history and moral character."

A college has been founded at Stephenville, called the John Tarleton College, from the name of the founder, who left about \$75,000 for the establishment of a college in Erath County for students not otherwise able to gain a collegiate education. Mr. Tarleton bequeathed an equal amount to a benevolent school at Knoxville, Tenn., his native place.

The Penitentiary.—There were 4,672 penitentiary convicts, June 30. Of these, 1,813 were contract forces, 687 were working on share farms, 195 on the State farms, and 241 were on railroad forces.

Charities.—The Institute for Deaf, Dumb, and Blind Colored Children, at Austin, has 75 pupils. The old building was pronounced unsafe, and the Legislature this year made appropriation for a new one, which will cost \$11,280. It was to be finished in October. The State School for the Deaf had an attendance in 1897 of 178.

At the end of the year there were 197 inmates at the Confederate Soldiers' Home, and 42 more were accepted, and will be admitted as soon as accommodations are prepared. The allowance for maintenance for the year was \$28,000.

A new school building has been put up this year at the State Orphans' Home, at a cost of about \$12,000, and a \$4,000 hospital building and a \$3,000 addition to one of the other buildings are to follow. There are 343 children at the home, which is at Corsicana.

The Buckner Orphans' Home, near Dallas, was burned on the night of Jan. 15, and 17 children lost their lives. There were 127 inmates.

Railroads.—The most noteworthy incident in railroad history in the State this year was the compromise between the State and the Southern Pacific in the rebate suits. These were on account of discriminations in rates, in violation of the regulations of the Railroad Commission, which, as was alleged, had been going on for years and made the company liable for fines and penalties aggregating a large amount. There were 7,000 cases against the road and connecting lines. The proof of the rebates was in voucher stubs in the hands of a former auditor of the road. The compromise provided that the road should plead guilty in 50 of the cases, receive the minimum penalty in each (\$500), and have the other 6,950 virtually dismissed; so that the State received \$25,000.

The commission made a low tariff of freight rates on cotton, reducing rates which went into effect Aug. 15.

New roads projected during the year are the Southwest Texas, which is to go from Brownham to Brownsville by way of Corpus Christi, and from the latter point to Eagle Pass, and the Texas Southern, the line of which will be 400 miles, including parts already constructed. The Arkansas Central has filed articles of incorporation, proposing to build from Fort Smith, Ark., to Paris, Texas.

The citizens of Jasper County, having failed in several projects to have railroad lines extended to Jasper, the county seat, have been building a connecting road this year, entirely doing the work themselves. Five percent of the stock was paid in at the beginning to meet the requirements of the law, and much of the remaining stock has been paid for in labor. The road starts without a dollar of indebtedness.

Products.—The cotton crop of 1896-97 amounted to 2,254,000 bales. The prices were fast the highest quotation for middling the standard grade at Galveston during the season being 89 cents a pound, and the lowest 69 cents. The corn yield was estimated at 68,628,000 bushels, the wheat at 7,174,000 bushels, and the oats at 24,045,000 bushels. A large crop of mesquite beans was harvested this year.

Discoveries of gold in Llano, Uvalde, Gillespie, Williamson, and neighboring counties have attracted attention this year, and it is believed that valuable deposits have been found. This region is not far from the capital. Discoveries of a rich vein of gold and silver ore has also been reported from Presidio County, on the Mexican border in the southwest. Rich discoveries of copper in western Texas are reported, and all sorts of Carbons are being developed.

Yellow Fever.—It appears to be an open question whether the State was visited by the fever when this was epidemic in other Gulf States. Cases of illness were pronounced yellow fever by Dr. Gutierrez, and quarantine was established. But at a meeting of the South Texas Medical Association, Dec. 28-29, at Beaumont, the majority took the ground that the disease was dengue, and that there was no yellow fever in Texas.

The Antitrust Law.—This law, passed in 1893, was declared void by Judge Swayne of the United States district court, in February. He said in part: "If there is any one thing evident from a careful study of the act, it is that it is aimed to favor the agricultural class, and is against the merchant and mechanic, and all the others, without either reason or justice. This law that deprives the citizen of all his rights of contract, and that seeks to divide citizens, not exactly by the calling they follow, but by the source of the property they hold, and exempts 80 per cent of them from the penalties it visits upon the remainder, is not sustained by any good reason or excuse, is not just, is utterly without support in law, and can have no just purpose, is vicious class legislation, depriving the citizen of his constitutional right of life, liberty, and property without due process of law, contrary to the law of the land."

Nob Violence.—A negro was lynched at Brown Jan. 23 for assault. Six negroes were killed at Sunnyside, April 29, by a mob, mostly of the same race. Their crime was the murder of an innocent child, a young woman, and two young girls after an assault on the girls and the burning of the bodies of the victims. At Tyler, May 24, a white man in jail who was accused of murdering a negro to murder another white man, was hanged. The former held an insurance policy for \$10,000. At

Rosebud, May 14, three negroes were lynched for attempted assault on two white girls; and for the same crime a negro was taken from the jail at Nacogdoches, Aug. 7, and hanged. None of these victims had been tried. A resolution introduced in the Legislature mentions also a lynching at Elgin. In a message on the subject the Governor said: "Its growth is alarming and ominous. For a time the sole objects of its vengeance were those charged with criminal assault upon females, and thus found some measure of provocation and apology in manly and chivalric instincts. Taking encouragement from this toleration, it now seeks to judge and punish for murder, and in a recent instance in Waller County was used for the suppression of testimony. It has reached that stage in this State where it is an indictment of the whole people and defilement of their civilization. Experience makes it plain that ordinary judicial machinery is inadequate, and if it is to be destroyed and the State spared further debasement extraordinary measures must be adopted."

The Texas Rangers.—Following is the work done by the Rangers during a single month—December, 1897: They made 40 arrests during the month for various crimes, made 70 scouts, assisted the sheriffs 47 times, guarded jails 9 times, attended district courts 34 times, made 9 attempts to arrest that failed, and traveled during the month 4,843 miles.

Galveston.—The harbor improvements have given the city a straight, wide channel leading to the wharves. The depth in the channel at mean low tide in December, 1895, was 21 feet; in December, 1896, it was 25 feet; and in December, 1897, it had increased to 26½ feet. As the channel has deepened the whole space between the jetties has shown an increase in depth. The jetties, including expenditures on previous projects, have cost \$8,019,867. Work was suspended on the south jetty Feb. 14, 1897. That jetty is completed, unless it is decided to extend it to the 30-foot curve. The north jetty is completed as far as its effect on the channel is concerned. The bars have been entirely removed. The length of the south jetty is 34,800 feet; that of the north jetty is 25,907 feet.

After deep water was secured a new line of steamers was established between New York and Galveston, resulting in a rate war by which the shippers and producers have benefited. The city has an elevator capacity of 2,750,000 bushels. The port can handle 70,000,000 bushels of grain during the season. Galveston now has fifteen direct lines of European steamers and two lines to Mexico.

Dallas.—A monument to the soldiers of the Confederacy was unveiled at Dallas, April 29. The shaft is surrounded by statues of Gen. Lee, Jackson, and A. S. Johnston, and Jefferson Davis. It was erected by means of the efforts of the Daughters of the Confederacy.

Legislative Session.—The twenty-fifth regular session began Jan. 11. Joseph B. Dibble was president *pro tempore* of the Senate, and Representative Dashiell was speaker of the House.

The Governor and Lieutenant Governor were inaugurated Jan. 19. The regular session was adjourned May 21. In less than two hours a call was issued for a special session, to begin at noon the following day. It closed June 20. The cost of the two sessions is given as \$170,000.

The appropriation bill passed at the regular session was vetoed by the Governor in the interest of economy. The object of the special session was to secure one that should meet with executive approval, as well as bills on other subjects on which the party was pledged to legislate—responsibility as to fellow-servants, official fees, and others.

The fee bill, enacted at the special session, affects 63 counties—those with a vote of more than 3,000—but in some respects it operates upon all. The reduction of the fees of sheriffs and clerks of the district and county courts paid by litigants will probably average 20 per cent. The fees of assessors are reduced, and the payment by the State and counties for assessment equalized.

The general appropriation bill passed at the special session and approved carries appropriations for two years amounting to \$4,384,855.90. This is \$395,137.49 less than the total appropriation made in the bill that was disapproved at the regular session. Included in this bill was \$50,000 heretofore paid out of the available school fund for the support of the Normal Institute and Department of Education, and \$172,000 for the erection of new buildings at the Colored Asylum, the Orphans' Home, the Agricultural College, and the Terrell and San Antonio asylums. The additions to the asylums will afford accommodations for 700 additional patients.

Among school measures were an act for uniform primary text-books, provision for enlarging the facilities of the university, the Agricultural College, and the Sam Houston Normal School, and for setting apart 50,000 acres of land for a university for colored students. The price of school lands to actual settlers was reduced, and they will be permitted to acquire more sections than before—a measure which is expected to increase the school fund by promoting speedy sales.

An act to suppress lynching provides for immediate trials in cases of criminal assault, for the legal denunciation of participants in mobs as murderers with a view to their speedy conviction, and for the perpetual exclusion from office of any sheriff or other officer who permits mob violence in his county.

A new and more stringent law was made for the collection of delinquent taxes.

An act was passed providing for a labor lien to protect accountants, bookkeepers, artisans, craftsmen, factory operatives, servants, mechanics, quarrymen, common laborers, and farm hands.

It was provided that the proceeds of the voluntary sale of the homestead of a family shall not be subject to garnishment or forced sale within six months after such sale.

Bills were passed for improving the roads in certain counties, and one providing for a system of drainage along the public roads of the State and for the improvement and encouragement of natural drainage.

The Aransas Pass Harbor Company was authorized to buy from the State Harbor island.

The law on divorce was amended so as to make husband and wife competent witnesses. Laws were made in regard to new trials and appeals, concerning absent evidence and presumption of regular proceedings in the court below.

A method was prescribed for determining contests for the office of presidential elector. An election on the question of abolishing the corporation of a town of 500 to 10,000 inhabitants may be held on petition of 25 qualified voters. Where an entire county has adopted local option any town or subdivision therein may hold a local-option election.

An act to prevent the sale and distribution of immoral publications makes it a felony, with penalty of two to five years in the Penitentiary. Selling or giving intoxicating liquors to minors is to be punished by a fine of \$25 to \$100. Throwing missiles or discharging firearms at or into any moving train, residence, church, schoolhouse, etc., is made a misdemeanor, punishable by fine of \$5 to \$1,000 or imprisonment in the county jail ten days to two

years. The provision for imprisonment was struck out of the punishment for carrying concealed weapons, and also from the penalty for disturbing public worship. The minimum term for horse theft was placed at two years, and the maximum at ten. Receivers and concealers of stolen property must be punished in the same manner as the thieves. Entering and remaining concealed in a house by day or night for the purpose of committing theft constitutes burglary. The penalty for perjury, except in cases specially provided for in the penal code, is to be imprisonment for two to ten years.

The sale or gift of deadly weapons to minors is prohibited, and minors are forbidden to gather in pool or billiard rooms.

A bill was passed defining "cold storage" of liquors, and affixing a penalty for maintaining "cold-storage" plants in local-option counties, precincts, etc.

The Railroad Commission is authorized to make emergency freight rates. Street railways and suburban belt lines carrying freight are placed under the control of the Railroad Commission.

The act providing for the incorporation of private corporations was amended.

Bills were passed to prevent the spread of diseases of horses, cattle, and sheep. The herding of animals on the land or within a half mile of the residence of any citizen without his permission is forbidden; but exception is made in the case of droves held for shipment, provided the owner pays for pasturage and any damage that may be done.

It was made a felony for any officer of a bank or banking institution or trust company to receive or assent to the receipt of deposits of money or other valuable things after having knowledge of the insolvency of such institution.

The tax on life insurance companies was increased to 2 per cent. of their gross premium receipts. An annual tax of \$200 is to be levied upon persons selling liquor or medicated bitters in local-option districts upon physicians' prescriptions.

The franchise tax acts were amended.

It was provided that personal property temporarily removed from the State and subject to taxation shall be assessed in the county where the owner resides or the one where his principal business office is.

Foreign corporations having permits to do business in the State are granted the same rights with domestic corporations.

It is made unlawful for any fire or marine insurance company to place any contract or policy except through legally authorized and licensed agents, residents of the State.

The Land Commissioner is empowered to declare forfeit all land heretofore sold by the State under various acts of the Legislature for failure to pay any portion of interest thereon.

Under what appears to have been a wrong construction of an act of 1887 which granted authority to sell sections of public lands in counties organized before 1875 to other than actual settlers, provided they were isolated and detached from other public lands, lands near the coast were sold for much less than their value. When the matter came before the Legislature in 1893 an appropriation was made to refund the purchase money to buyers of such as were illegally sold; but, as claims were filed amounting to much more than the appropriation, the officials in charge made no payments. A bill was therefore passed at this session to validate the sales.

Other enactments were:

A fellow-servant law to protect railway employees against corporate negligence.

Authorizing corporations to engage in the busi-

ness of becoming surety on bonds and other obligations.

Providing that the homestead of a married man shall not be sold without consent of his wife; also that husband and wife shall join in the conveyance of real estate which is the separate property of the wife.

Amending the fish and game protection law.

Prohibiting the admission to records of instruments in any other language than the English.

Providing for the disorganization of the county of Loving and to attach its territory to the county of Reeves; also abolishing the organization of Bachel and Foley Counties and attaching them to Brewster County.

Providing for the establishment of a public park on the site of the battlefield of San Jacinto.

Requiring cities to provide for an examining and supervising board of plumbers.

Quieting title to lands located and surveyed by virtue of land certificates granted under the act giving to persons who have been permanently disabled by reason of wounds received in the service of this State or the Confederate States a land certificate for 1,280 acres of land, and to validate patents issued on such locations and surveys.

Regulating the practice of dentistry, and creating a State examining board.

It was resolved to ask the Government to take measures, by treaty or otherwise, to provide for the punishment of crimes committed this side the border of Texas by Mexicans who then flee to their own country and are secure from arrest.

Proposed Constitutional Amendments.—An election was held Aug. 3 to decide on the adoption of three amendments to the Constitution passed by the Legislature. They were all defeated by large majorities. They were: 1. To permit the formation of irrigation districts in west Texas. 2. To validate certain county bonds held by the school fund and heretofore declared invalid by the Supreme Court. Similar bonds are held by individuals, but the amendment did not apply to these. 3. Authorizing certain counties in the western part of the State to give aid in the construction of railroads.

Other amendments were proposed by the Legislature this year. Among them were: Providing for a county judicial system, in which all the duties now discharged by district judges and district attorneys shall devolve upon the county judges and county attorneys; changing the *per diem* of members of the Legislature; authorizing pensions to disabled Confederate soldiers.

Political.—A conference of Democrats, attended by more than 1,000, was held at Waco, July 30. Together with resolutions in favor of bimetallicism was one declaring it to be the sense of the meeting that the State committee should propose a primary election throughout the State in 1898 "for the selection of the nominees of the Democratic party and for the settlement of such issues as there may be serious conflict over within the party; the details of the recommendation to be made by said committee to be hereafter formulated and adopted, it being the purpose of this resolution to reaffirm as a principle of Democratic faith the relegating to the body of the Democracy the right and power of making their voice the voice of the Democratic party, expressed in a free and untrammelled manner, which experience has proved may be best done in a primary election."

The State Populist Executive Committee issued an address to the party, Oct. 27, which said in part:

"We call attention to the fact that our party management is now controlled by the initiative, referendum, and imperative mandate, thus placing

party machinery in the hands of the people themselves."

The State Farmers' Alliance, at Dallas, Aug. 19, adopted by a unanimous vote the report of the committee severing allegiance with the National Alliance.

TIN-PLATE MANUFACTURE. In 1891 the increase of tariff on tin- and terne-plate from 1 cent a pound to 2½ cents a pound induced many firms in the United States to go into the manufacture. The domestic consumption in this country was then a little more than 500,000,000 pounds annually, the larger part of which was imported from Wales, where there are very productive tin mines. Native tin hardly exists in the United States, having been found in only a few places, in quantities unprofitable for mining. Hence there was no inducement to manufacture tin-plate in this country until the tariff raised a material discrimination in favor of the American. The remarkable growth of the industry since 1891 is shown in a few figures, the statistics being taken from reports made up to June 30 of each year. It should be understood first that black plates are sheets of untinned iron, tin-plates sheets of tinned iron, and terne-plates those in which an alloy of lead is used in the tinning. In 1891-'92 there were manufactured in this country 4,539,590 pounds of tin-plate and 9,107,129 pounds of terne, 32 per cent. of which was made from imported black plates, the remainder being from American black plates. In 1892-'93 the total home output of tin- and terne-plates was a fraction less than 100,000,000 pounds, 56 per cent. being from foreign black plate, owing to the fact that the construction of the American black-plate mills had not kept pace with the tinning sets in operation. Black-plate mills were rapidly erected, and the product of 140,000,000 pounds in 1893-'94 included only 28 per cent. of foreign black plate. Since 1896 the foreign black plate has been but a small factor in the manufacture of American tin- and terne-plate. The next year (1894-'95) there was an enormous increase in the American product, the total running up to 334,014,798 pounds, while the last report (for 1896-'97) gives the figures 436,438,035 pounds. Although foreign black plate has almost ceased to come into the United States, yet the importation of tin- and terne-plates continues, owing to rebates of tariff to certain great corporations. The total imports for 1896-'97 were 244,407,601 pounds, or more than half as much as was manufactured in this country. To offset this, we exported 139,246,130 pounds, which figures include a large portion of the tin-plate imported, which simply came here for transshipment, mostly to southern countries.

The capacity of the American mills, Jan. 1, 1898, may be safely given at 600,000,000 pounds, and the domestic consumption at 550,000,000 pounds. There are now about 250 black-plate mills in operation, and more than 500 tinning sets. The manufacture is so well established, and the machinery in use has been so much improved, that in spite of the fact that the wages paid in the American mills average about 25 per cent. more than those paid in Wales, the reduction in the tariff does not materially affect the industry. The standard size of tin-plates is 14 × 20 inches, and the weight of a sheet varies from half a pound to a pound, the average being perhaps two thirds of a pound. They are put up in boxes, 112 sheets to the box, and the jobbers' price to the trade in 1897 for a good quality of plate was from 7 to 8 cents a pound. Imported tin-plates, which sold at 4½ cents a pound in 1880, and at 3 cents from 1887 to 1891, in 1897 averaged 2½ cents a pound.

Manufacture.—The American methods of manufacture differ in many respects from the practices in the older mills of Wales, owing to the utilization

of new time-saving machinery. A black-plate mill, which is simply a rolling mill fitted up especially for rolling steel or iron for tin-plates, is provided with hot rolls, heating furnaces, shearing machines, doublers, elevators, conveyors, tramways, etc. The tinning department includes pickling machines, tinning pots, annealing ovens, oil baths, cooling racks, cleaning machines, etc. The first operation is the placing of steel billets in the furnace and heating to a welding temperature, when the billets are rolled into bars about 7 inches wide and ¼ to ½ inch thick. The bar is cut into lengths of somewhat more than 20 inches, so that a margin may be left for subsequent trimming to 20 inches. Reheating then becomes necessary, after which the bar is rolled to a length of 56 inches, and matched with a similar bar or sheet, the two being doubled together while still hot, and then trimmed in a doubling shears. This doubling and rolling continues until there are 8 thicknesses, which are then placed together in a machine, and commonly trimmed to the standard size of 14 × 20 inches, the final trim being given in what are known as squaring shears. This completes the ordinary black plate of commerce, which derives its name from its color, it being covered with dark scale, frequently termed forge scale, largely the result of oxidation.

Pickling.—Before the coating with tin it is essential that the scale shall be totally removed, else the tin will have a tendency to scale off. Pickling in hot dilute sulphuric acid is resorted to for this purpose, and the American pickling machines, whose introduction was coincident with the manufacture in this country, are marvels of labor-saving and automatic mechanism, conducting the entire processes of pickling and "swilling," as the cleansing is sometimes called. The main feature of the pickling machine is an upright tubular column, that lengthens and shortens telescopically under the pressure of steam, admitted by valves under the control of an attendant. To the top of the column are attached three radiating cross arms, each bearing a hook on which may be hung a bundle of plates. At the beginning of the operation one of these arms extends over a tramway, on which the black plates are run out on small cars. Another arm swings over the pickling vat, and the third arm over the swilling vat. A bunch of plates is hung on the outer arm, and swung over the pickling vat. The steam pressure is then lowered in the column, and allows the plates to become submerged in the sulphuric bath. A regular up-and-down motion is then imparted to the column, which raises and lowers the plates about a foot at a stroke, which agitation assists the sulphuric acid in its work of eating off the scale. When they are thoroughly clean the column is raised to swing the plates out of the pickling vat and around to the swilling vat, where they are agitated again to remove the acid. At the next hoist the plates are swung back to the tramway, to be reloaded on a car. By this means the operations of loading and unloading the plates are carried on continuously with the pickling and swilling, and the manual labor required is simply the hooking and unhooking of the plates and the operation of shifting the steam valves. Electric methods of pickling have also been tried with some success.

Annealing.—After pickling it is necessary to pack the plates in boxes so that the air and moisture will be excluded, these boxes being suited to the annealing furnace. Iron boxes are commonly employed, having flaring tops and bottoms so as to retain the sand in which the plates are packed. These boxes are placed in an annealing oven, where a temperature is maintained that keeps the plates at a dull-red heat. There they remain ten to twenty

ty-four hours, and are then removed and permitted to cool very gradually. Being then undisturbed, they may be kept for weeks, or even months, without oxidizing seriously. The next process is the cold rolling, the object of this being to give a better finish to the plates, which are passed cold between hard-chilled rolls of great size and strength so that they exert a pressure that has a rammering effect. In some of these cold mills the rolls are 2 feet in diameter, and have housings that weigh more than 7 tons each. After the cold rolling a second pickling is required, so that the last remains of oxidation may be removed before tinning. This second dipping is termed white pickling, and is followed by scouring in sand and water by means of hemp pads, after which there is a rinsing, when the plates are ready for tinning.

Tinning.—The best plates are tinned by the palm-oil process, and inferior grades by the acid process. The essential difference in these is the substitution in the latter of chloride of zinc and muriatic acid for palm oil. In the palm-oil process the plates are thoroughly coated with oil before dipping in the tinning pot. The molten tin in the pot is also covered with oil. The plates are dipped in the tin three times, being well brushed between the second and third dippings. A final rolling in a bath of palm oil is given to add a finish. After the plates have been exposed for a time in cooling racks, they are taken to the cleaning machine and rubbed with bran, which absorbs the remains of the oil. In a common form of cleaning machine the plates are fed to a bed which passes them under a cylinder, arranged to rub them with the bran. Polishing or dusting, sometimes by hand and sometimes by machine, is the last process before packing the plates in boxes for the market.

The tin ore or pure tin metal is brought into the United States in the form of blocks, bars, pigs, and grain, and most of our supply is from Wales, though a portion comes from Malacca, where are located the largest tin mines in the world. In 1896-'97 we imported 50,460,123 pounds of tin, of the value of \$6,535,852. All this ore or metal comes in free, but on tin-plates there is now a tariff of 1½ cent a pound.

TURKEY, an absolute monarchy in eastern Europe, western Asia, and northern Africa. The Sultan is the eldest prince of the line of Osman. Abdul Hamid II, the thirty-fourth Sultan of the Osmanli dynasty, born Sept. 21, 1842, succeeded his brother Murad V, who was deposed on Aug. 31, 1876, on the ground of insanity. The Sultan is recognized as Khalif, or temporal chief of Islam, not only within the bounds of the Ottoman Empire, but by a large proportion of the Sunni Mohammedans outside. In matters of religion and law the Sultan is advised by the Sheikh-ul-Islam and guided by the decisions of the Ulama, a body of eminent expounders of the sacred books which sits in Constantinople. In civil and political matters the Sadrazam, or Grand Vizier, is the chief executive officer under the Sultan. These two functionaries, together with the ministers at the head of the departments of State, form the Privy Council or Cabinet of the Sultan, which was composed in the beginning of 1897 as follows: Grand Vizier, Halil Rifat Pasha; Sheikh-ul-Islam, Mehmed Djemal Eddin Effendi; Minister of War, Riza Pasha; Minister of Justice and Ecclesiastical Affairs, Abdurrahman Pasha; Minister of Marine, Hassan Pasha; Minister of Foreign Affairs, Ahmed Tevfik Pasha; Minister of the Interior, Memduh Pasha; President of the Council of State, Said Pasha; Grand Master of Artillery, Zeki Pasha; Minister of Finance, Ahmed Nazif Pasha; Intendant of Religious Endowments, Galib Pasha; Minister of Public Instruction, Zuhdi Pasha; Minister of Commerce and

Public Works, Ma'mud Pasha. Secretary of the Grand Vizier, Memduh Pasha. In 1894 Pasha succeeded Said Pasha as Minister of Finance on Oct. 2, 1897.

Area and Population.—The area of the immediate possessions of Turkey is 1,582,528 square miles, and their population amounted to 27,694,600. The European vilayets with an area of 65,500 square miles, have 5,612,500 persons, and an area 2,949 square miles, has 264,000. The Asia Minor area 301,600 square miles has 2,530,000. The Arabian area 80,264 square miles, has 2,472,000. Syria and Mesopotamia, area 215,349 square miles, 4,000,000. Arabia, area 174,700 square miles, 1,000,000. Tripoli, area 308,739 square miles, 1,000,000. The census of 1885 makes the total population 27,694,600. The vilayets of Bosnia and Herzegovina and the sandjak of Novi Bazar, occupied and administered by Austria-Hungary by virtue of the Treaty of Berlin, the island of Cyprus, administered by Great Britain under the Anglo-Turkish convention of June 4, 1878, the tributary principality of Bulgaria, and the autonomous province of Eastern Roumelia now united with it have been freed from Turkish jurisdiction in consequence of the last Russo-Turkish war, though nominally they are still integral parts of the Ottoman Empire. Their aggregate area is 75,010 square miles, with a population of 4,867,752. The tributary principality of Samos, with an area of 180 square miles and 50,963 population, has had an autonomous Christian administration since 1832. The position of the viceroyalty of Egypt, now occupied by British troops, has been merely tributary since the time of Mehmet Ali. Including all the provinces that still recognize the suzerainty of the Sultan, the area of the empire is 1,652,000 square miles and the total population is 28,000,000.

Finances.—The revenue under the control of the Minister of Finance, with deduction of the revenues assigned to the 1864 Administration, was £ T. 14,308,700, and the ordinary expenditure was £ T. 14,137,940. In 1891, showing a surplus of £ T. 200,760 in the ordinary budget, but the extraordinary expenditure in the same year, chiefly for military purposes, was £ T. 779,000, producing a deficit of £ T. 548,200. In the succeeding years down to 1896 there was an annual deficit of about £ T. 1,000,000, which was met by fresh loans, while an annual sum exceeding these was laid by for the sinking fund of the old loans. On the basis of these figures Sir Edgar Vincent in December, 1896, estimated the future normal revenue at the disposal of the Minister of Finance at £ T. 13,961,700 and the expenditures at £ T. 15,354,000, giving an annual deficit of £ T. 1,352,300, which, however, might easily be avoided by means of financial and administrative reforms. The debts outstanding on June 30, 1897, amounted to £ T. 127,688,688, exclusive of £ T. 25,000,000 of war indemnity due to Russia and £ T. 10,000,000 of floating debt. The 1864 Administration in the financial year 1897 received £ T. 1,114,805 from the liquor, salt, stamp, and silk duties, £ T. 768,771 from the tobacco excise, £ T. 90,962 from tobacco tithe, £ T. 88,007 from the Eastern Roumelian tribute, £ T. 102,396 of tribute from Cyprus, £ T. 50,000 of customs duties on Persian tobacco, and £ T. 47 from other sources, making £ T. 2,165,188. The expenses were £ T. 95,979, leaving the net receipts £ T. 2,069,215.

The official estimate of the revenue of the Turkish Government for the year ending 1897-1898, is £ T. 18,511,322, or approximately 850,000,000 of the Turkish lira or pound being worth 100 piastres, and the estimate of expenditures is £ T. 18,423,411. The average receipts for the same period ending with 1895 were £ T. 18,927,745, of which £ T. 4,321,329 came from tithe, £ T. 2,511,264 from the *seraghis*,

or land and property tax, £ T. 742,135 from the *temettu*, or income tax, £ T. 886,210 from payments in lieu of military service, £ T. 1,737,849 from the *aghnam*, or tax on sheep, etc., £ T. 321,273 from various other direct taxes, £ T. 2,165,784 from customs, £ T. 2,571,146 from other indirect taxes, £ T. 532,793 from the military departments, £ T. 1,938,202 from the civil departments, £ T. 51,775 from the profits from the tobacco *sigar*, and £ T. 1,136,316 from tributes. The average annual expenditures for the same period were £ T. 19,796,182, of which £ T. 932,550 were for the civil list, £ T. 6,483,253 for the service of the public debt, £ T. 795,400 for pious foundations, etc., £ T. 5,296,953 for the army, £ T. 1,254,174 for the gendarmerie, £ T. 653,170 for the navy, £ T. 552,122 for the artillery, £ T. 901,853 for the Grand Vizierate, State Council and Interior Department, £ T. 901,853 for the Finance Department, £ T. 459,541 for the Department of Justice, and £ T. 1,892,137 for the other civil departments.

The Army.—The laws of 1880, 1886, and 1888 make service in the Turkish army obligatory. The term of service in the permanent army is three years, which can be shortened by a money payment, by virtue of which any recruit can obtain indefinite leave of absence after five months of active service. After serving in the active army every Turk is liable to duty for three years in the *Ichtiat*, or reserve, then for eight years in the *Redif*, or territorial army, and six years in the *Mustahfiz*, or territorial army reserve. Conscripts assigned originally to the *Tertibani*, or depot reserve, have to serve only from six to nine months. The army is divided into seven *Ordus*, or military districts, outside of which are two independent divisions, in Hedjaz, Arabia, and in Tripoli. Six of the *Ordus* have to furnish in time of war *corps d'armée*—namely, 1 corps of Nizam, or troops of the line, 2 corps of *Redif*, and 1 corps of *Mustahfiz*. The five principal *corps d'armée* have each 64 battalions of *Redif*, the sixth corps 32. The infantry is armed with Mauser rifles, part having 7·65 and part 9·5 millimetres caliber, with magazines holding 5 cartridges. The approximate strength of Nizam in 1897 was 350,000, of the *Redif* 300,000, and of the *Mustahfiz* 250,000; total, 900,000 men, of whom 750,000 had a thorough military training. In three of the Asiatic *Ordus* are being organized 48 regiments of Hamadiéh cavalry, a militia commanded by tribal leaders, which furnishes its own horses and equipment, while Government supplies the arms.

The Navy.—The Turkish navy has been much neglected, and many of the vessels are inefficient for lack of crews, repairs, or armament and supplies. The nominal strength in 1897 was 3 iron-clads with gun-mounted batteries, 2 turret ships, 2 turret cruisers, 7 armored corvettes, 1 monitor, 1 armored gunboat, 2 river gunboats, 2 torpedo-boat cruisers, 15 torpedo-boats of the first class, and 7 of the second class, besides 24 unarmored vessels; the "Hamidieh," of 6,700 tons, carrying ten 10·2-inch guns, and a gun battery, the "Mesoudiye," of 9,000 tons, carrying twelve 10-inch Armstrongs, the reconstructed "Osmanieh," of 6,400 tons, armed with 11-inch Krupp guns, the unfinished belted cruiser "Abdul Kader," of 8,000 tons. The armored vessels are all out of date, small, or too weakly armed and protected. The unprotected cruisers of 4,050 tons and three smaller ones are in course of construction.

Navigation.—There were 123 steamers, of 35,523,438 tons, and 141,800 sailing vessels, of 2,885,706 tons, entered and cleared Turkish ports during 1896. The merchant navy in 1897 comprised 104 steamers, of 48,572 tons, and 1,114 sailing vessels, of 249,206 tons.

Commerce.—The commerce with foreign countries in 1894 is shown in the following table, giving the values in Turkish piasters, worth 4·4 cents:

COUNTRIES.	Imports.	Exports.
Great Britain.....	905,498,000	573,598,000
France.....	274,105,000	355,826,000
Belgium.....	96,579,000	5,864,000
Netherlands.....	13,735,000	39,684,000
Germany.....	28,170,000	29,466,000
Austria-Hungary.....	516,353,000	132,865,000
Italy.....	62,448,000	46,086,000
Greece.....	42,815,000	23,384,000
Bulgaria.....	125,120,000	36,144,000
Servia.....	6,615,000	6,730,000
Roumania.....	71,480,000	23,866,000
Russia.....	150,443,000	33,521,000
Persia.....	67,158,000	1,720,000
Egypt.....	68,356,000
Tunis.....	2,042,000	41,000
United States.....	2,051,000	15,033,000
Other countries.....	9,820,000	1,514,000
Total.....	2,310,806,000	1,326,242,000

The imports of sugar were 175,500,000 piasters in value; of cereals and flour, 172,100,000 piasters; of cloths, 167,700,000 piasters; of quilts, 133,000,000 piasters; of woolen and cotton stuffs, 120,700,000 piasters; of drugs and colors, 102,400,000 piasters; of cotton yarns, 89,500,000 piasters; of coffee, 88,700,000 piasters; of rice, 83,400,000 piasters; of hides and skins, 83,400,000 piasters; of animals, 56,600,000 piasters; of madapolams, 54,300,000 piasters; of cashmeres, 46,300,000 piasters; of petroleum, 46,100,000 piasters; of iron, 46,000,000 piasters; of hardware, 42,900,000 piasters; of broadcloth, 42,400,000 piasters; of timber, 37,400,000 piasters; of raw silk and cocoons, 33,200,000 piasters; of haberdashery, 32,900,000 piasters; of butter and cheese, 32,500,000 piasters; of paper, 28,700,000 piasters; of carpets, 27,200,000 piasters; of silk goods, 25,500,000 piasters; of coal, 25,300,000 piasters; of packing cloth, 24,900,000 piasters; of clothing, 24,000,000 piasters; of copper, 23,800,000 piasters; of fezes and hats, 22,600,000 piasters. The exports of raisins were 178,200,000 piasters; of raw silk and cocoons, 166,800,000 piasters; of cereals and flour, 127,400,000 piasters; of mohair, 69,400,000 piasters; of cotton, 67,500,000 piasters; of opium, 54,000,000 piasters; of drugs and coloring matters, 53,800,000 piasters; of gall nuts, 53,000,000 piasters; of coffee, 47,200,000 piasters; of hides and skins, 42,900,000 piasters; of minerals, 39,300,000 piasters; of legumes, 39,200,000 piasters; of olive oil, 38,500,000 piasters; of wool, 38,400,000 piasters; of figs, 38,100,000 piasters; of seeds, 24,400,000 piasters; of sesame, 24,100,000 piasters; of dates, 24,000,000 piasters; of carpets, 20,800,000 piasters; of animals, 19,800,000 piasters; of nuts, 14,100,000 piasters.

Communications.—The railroads in operation in September, 1897, had a total length of 2,807 miles, of which 1,249 miles were in Europe, 1,347 in Asia Minor, and 211 in Syria.

The telegraph lines have a total length of 21,799 miles, with 33,761 miles of wire. There were 2,318,222 internal, 442,415 international, 58,780 transit, and 206,668 service dispatches sent in 1893. The receipts were 62,550,462 piasters; expenses, 27,564,884 piasters.

The postal traffic in 1893 comprised 8,117,000 internal, 2,586,000 international, and 2,048,000 transit letters, 48,000 internal, 80,000 international, and 48,000 transit postal cards, and 2,297,000 internal, 1,089,000 international, and 1,121,000 transit printed inclosures. The receipts were 21,358,911 and expenses 7,236,829 piasters.

The Armenian Question.—In January, 1897, the Armenians held in prison, except those who were under sentence of death, were released, and Arme-

nian refugees were allowed to return from abroad if they could show passports vised by the Ottoman consuls. The amnesty was not issued until the petition of the new Armenian Patriarch, Monseigneur Ormanian, had obtained the support of the French, Italian, and Austrian ambassadors. The Patriarchate guaranteed the good behavior of about 100 prisoners who were regarded by the police as dangerous. The death sentences of those who were in prison were commuted to imprisonment in fortresses until such time as the prisoners should show contrition for their misdeeds. As the amnesty could not be one-sided, it was accompanied by the release of all Mohammedan prisoners and a cessation of all proceedings against persons suspected of having participated in the Armenian massacres. In order to carry out the Armenian reforms demanded by the powers the Porte proposed a new loan and a readjustment of the debt guarantees. Influenced by the French, the Russian Government sent a note stating that, if the Ottoman Government should infringe the rights of the Council of the Public Debt or meddle with the revenues conceded to the holders of Turkish securities, Russia would be compelled, along with the other powers, to demand an international financial commission to study the financial situation of the Ottoman Government and the proportion of the revenues that should be assigned to its creditors, pointing out that this would be a fatal eventuality for the Turkish Government. M. Hanotaux suggested the addition of a Russian member to the Debt Commission, and the Czar approved; but after receiving the advice of M. Melidoff, the Russian ambassador at Constantinople, concluded that this would not advance the political interests of Russia. The Armenian gendarmes who had been enlisted under the reform charter of 1865 were systematically ill treated, so that they were forced to quit the service. The large fertile district north of Van, from which the Armenians had disappeared, was occupied by Kurds.

The Marquis of Salisbury had revived the discussion of Armenian reforms in a note to the British ambassador at Vienna, explaining that the British Government still desired the preservation of the Ottoman Empire, and considered that this end could only be insured and justified by introducing reforms in the present system of government, and suggesting that the Austrian ambassador at Constantinople consult with his colleagues regarding the reforms that it would be requisite to introduce into the Turkish administration in order to prevent the recurrence of frightful cruelties. The British Government, he stated, was prepared to join the other powers or a number of them in enforcing any measures that might be agreed upon, provided that if any one of the powers declined to take an active share in the measures such power should not offer any opposition to their being taken by the other powers. In a circular dispatch on Oct. 20, 1896, he explained the British policy in detail, and proposed a meeting of ambassadors for the purpose of considering and reporting to their governments what changes in the government and administration of the Turkish Empire are in their judgment likely to be most effective in maintaining the stability of the empire and preventing the recurrence of the cruelties of the last two years, it being previously understood that no action should be taken on any resolution on which all six powers were not agreed, but that any resolutions on which the powers were unanimous should be considered final and admitting of no objections on the part of the Turkish Government, and should be executed by the employment of any force that may be necessary and that the powers have at their command. Count Goluchowski, the Austrian Minister of Foreign Affairs, agreed to the

proposal on condition that the powers agree to insist on the execution of whatever proposals of reform they make to the Sultan. The Porte, Germany and Italy made similar proposals. Baron Marschall laid down conditions for the powers' acquiescence, which were that the powers should be unanimous, and that the object of all negotiations should be the maintenance of the integrity of the Turkish Empire. Germany's policy was to extend reforms to all the subjects of the Sultan without distinction of race or creed and to avoid all European conflict. M. Hanotaux treated the matter with great reserve in an extended correspondence obtaining first an assurance from Lord Salisbury that no violation of the integrity of the Ottoman Empire, no isolated action, and no condominium would be considered, and finally, on Dec. 28, 1896, declining to agree beforehand to the use of coercive measures, while willing to examine them at the proper moment if the powers were unanimous in recognizing their absolute necessity. M. Shoshkin thought that a threat to employ coercion would weaken the authority of the Sultan, through whom the reforms must ultimately be carried out, and that it would be unnecessary after the Sultan saw that the powers were united. He told the Turkish ambassador at St. Petersburg to telegraph to the Sultan that the era of paper reforms was past and that the powers were all acting together. The Russian minister thought that it would be time for the Powers to discuss what further steps were to be taken after the Sultan had refused to listen to reason. After consulting the Czar, the Russian minister agreed to the application of coercive measures in case the Sultan resorted to his customary legislation, provided there were unanimity among the powers. The Sultan made efforts to induce the powers to suspend diplomatic action for effecting an improvement in the situation in Turkey. To this end a circular was sent to the Ottoman ambassadors abroad, pointing out the reforms already executed, and suggesting that the initiative in the adoption of the necessary measures should be left to the Sultan. To these representations the powers generally replied that the matter was now in the hands of Europe.

The Armenian Patriarchate formulated a list of concessions desired immediately, with a view of relieving the terrible distress of the Armenians in the provinces, in response to which an imperial *irade* was issued adjourning for one or two years the collection of the military exemption tax from such as could prove their indigence, recommending the agricultural banks to advance money to Armenians, and promising to lend seed corn, barley, and wheat out of the Government tithe. The Government also issued proclamations announcing that all converts to Islam are free to return to the faith of their fathers, and that all women and girls carried off by Kurds and others are at liberty to go back to their homes. The conferences of the ambassadors led to no result. It was useless to bring pressure upon the Sultan for the execution of administrative reforms unless he could be provided with the financial means of carrying them out. The project of the French Government to institute an international financial control over Turkey in the interests of the bondholders was rejected by Russia and condemned by the central European powers. In answer to the representations of the ambassadors in regard to reforms the Porte suggested that the powers should fulfill their engagements undertaken in the Berlin Treaty to fix the contributions to be paid by the minor Balkan states toward the interest and principal of the Ottoman public debt. The signatories assumed the obligation to fix by agreement among themselves, in concert with the Sublime Porte, the

portion of the public debt of Turkey to be borne respectively by Bulgaria, by Montenegro, and by Servia, and to fix the annual tribute to be paid by Bulgaria. By the convention of 1881 the powers bound themselves to determine between their representatives at Constantinople and the Sublime Porte the portion of the debt to be borne by Greece in respect of the Ottoman territory ceded to her. The Porte has often reminded the powers of these obligations, which still remain unfulfilled. The Porte has also desired a revision of the treaties prohibiting Turkey from levying more than 8 per cent. customs duties. The results of the memorial of the Armenian Patriarchate, which included demands for the appointment of Armenians as tax collectors; the creation of boards composed partly of Armenians for the restitution of Armenian property pillaged during the riots; the surrender of clergymen charged with crimes to be tried by the Patriarchate in accordance with its ancient privileges; the admission of Armenian students to the military academies; and the prohibition of newspaper attacks on the Armenians, were so meager and unsatisfactory to the Armenians that the political agitation was renewed in the Anatolian provinces, as the Patriarch had warned the Turkish Government that it would be if the demands were not granted, although he declined to undertake any responsibility for the actions of the revolutionary committees when the Government sought to impose such an engagement as a condition for granting amnesty and relief. The revolutionists again collected funds from wealthy Armenians by intimidation, and over the Persian border they prepared to make raids. The renewal of agitation inflamed the Mussulman population afresh. In Tokat, in the Sivas district, a mob attacked the Armenians on March 19 while they were at church, and, after killing 89 persons and wounding 36, pillaged their quarter of the town. The disturbances spread to Arbah and other villages in the neighborhood. The military commandant, Hakki Pasha, was dismissed by the Government, the Vali of Sivas was removed, 185 arrests were made, and 61 persons were convicted of having taken part in the riot, of whom 15 were condemned to death. In the beginning of August revolutionists instigated raids on Kurdish villages in Van by 3,000 armed men from Salmas and other Persian frontier towns, but the Turkish military authorities were well prepared, and the raiders were driven back into Persia, but not before they had massacred 200 persons. On Aug. 18 a bomb was exploded in Constantinople in the court of the Grand Vizierate department, an attempt was made to blow up the barracks at Pera with another, and a man was caught entering the Ottoman Bank with a quantity of explosives sufficient to demolish the building. Although bands of Mohammedans appeared instantly in the streets with bludgeons to wreak vengeance on the Armenians, as they had a year before, the police preserved order and arrested 10 men who were concerned in the outrages. Of these 8 were afterward sentenced to death. The central Armenian committee at Constantinople sent its ambassadors at this time a circular appealing to the nations of Europe not to allow the Armenians to be annihilated, but to come to their aid and put an end to their sufferings, pointing out that the promised reforms have remained a dead letter, and warning the ambassadors that the Armenians, reduced to extremity, are resolved to commit acts of terrorism of which the occurrences of Aug. 26, 1896, were only the preliminaries; that they asked to live like men governed by law instead of under an absolute and arbitrary tyranny; and

would never cease to act until full satisfaction had been granted to demands sanctified by the blood of their martyrs. A few days later the police arrested Serkiz, the head of the Troschak, one of the principal Armenian revolutionary organizations in Turkey, having been appointed to that post by the central committee in London. The Austrian Lloyd agent at Mersina, Herr Brazzafolli, who had given passage on the Austrian steamers to many Armenian refugees during the disturbances in Asia Minor, was summarily expelled by the authorities in October because he had delivered some money sent through him by an Armenian committee. The Turkish Government afterward apologized for this act, and in compliance with the demand of the Austrian ambassador dismissed the Vali of Adana, and also paid a disputed sum claimed by the Oriental Railroad Company, an Austrian corporation.

Internal Reforms.—The Sultan acceded to a recommendation in Sir Edgar Vincent's report in favor of the control of the budget by a financial commission, to which he appointed two Europeans and two high Turkish officials. The Turkish party of progress and reform was offended by the virtual exile of Marshal Fuad Pasha, under the disguise of his appointment to the command of the army corps at Bagdad. As a result of the conflict between the Phanar and the Servian Government in regard to Macedonian bishoprics, the Patriarch Anthimos, after dismissing the Metropolitans of Herelea and Anchiolos, who had resisted the Servian and Roumanian claims, was forced by the Synod to resign on Feb. 10, and Constantinos, Metropolitan of Ephesus, was on April 14 elected Ecumenical Patriarch. The Albanians, displeased by the contributions imposed for military purposes and increased taxes on wine and cattle, committed disturbances in the vicinity of Monastir. The Bulgarian Government urged on the Porte the introduction of liberal reforms in Macedonia in the direction of the absolute and practical equality of all the inhabitants in view of their loyal behavior during the war with Greece (see GREECE). The Porte in response to these representations made important changes, giving the Christians a share in the administration. After the successful campaign of the Turkish troops in Thessaly the attitude of the Young Turkish party toward the Government underwent a change, and a truce was arranged. The exiled leader Murad Bey, who was under sentence of death, was allowed to return to Constantinople. Arrests of Liberal Mohammedans continued to be made by the police, and the palace officials made extraordinary efforts to keep alive the policy of proscription, but without being sustained by the Government. When several young military officers were condemned to death by a court-martial on the charge of using seditious language, the Minister of War refused to allow the sentence to be executed.

The definitive treaty of peace with Greece was signed at Constantinople on Nov. 22, and ratifications were exchanged on Dec. 18. The Turkish Government had intended to apply a part of the war indemnity of £ T. 4,000,000 to the reconstruction of the navy. A check to this project for augmenting the armaments of Turkey was administered by Russia in a note demanding a settlement of the arrears of the Russo-Turkish war indemnity, amounting to £ T. 1,300,000. An advance of £ T. 250,000 was obtained by the Government in the beginning of the year, an equal sum was advanced after the war upon the security of the indemnity, and at the close of the year the bank agreed to advance £ T. 400,000 more to pay for the transport of troops.

I

UNITARIANS. The Unitarian churches in the United States report for 1897 535 ministers, 455 churches, and 70,000 members.

American Unitarian Association. The seventy-second annual meeting of the American Unitarian Association was held in Boston, Mass., May 25. The directors in their report asserted that the financial condition of the society was better than that of any other missionary society in the United States of which they had knowledge. The treasurer reported that while since 1882 the expenditures had exceeded the income in amounts varying from \$7,000 to \$37,000 a year, for the past year the income had exceeded the expenditures by \$6,224, or, to state the situation more clearly, the excess of receipts over expenditures had enabled the board to pay all arrearages from past years, except \$3,080, and further payments to the Guarantee fund had been made since the books were closed that would reduce this amount by \$1,300, leaving only \$1,780 actual arrearages. A profit of \$1,817 had been realized on the sale of books. Seven bequests had been made to the association during the year, amounting in all to \$2,577. Seven new houses of worship had been built and dedicated, the enterprises having been assisted by loans, the annual installment repayments upon which to the fund would not exceed the rent of a hall. Ten of the beginnings regarded as hopeless had been dropped, while 14, showing more life, had been added. Unitarian book rooms and headquarters were established at San Francisco, Chicago, New York, Philadelphia, and Boston. Cordial relations were maintained with the Unitarians of Hungary, and the association, acting with the British and Foreign Unitarian Association, had appropriated \$300 to the church at Buda-Pesth. A satisfactory report was made of the mission in Japan, and the appropriations to it were ordered continued, and the extension of its work was recommended. Four general periodicals, with several "minor" ones, were represented as doing effective work. A considerable part of the report of the Board of Directors was devoted to the condition of the ministry. Concerning ministerial supply, the association voted that "while we believe there is need of an advisory bureau of information to mediate between parishes and ministers, we also believe that this function should be entirely separated from the administration of the American Unitarian Association."

National Conference.—The seventeenth meeting of the National Conference of Unitarians and other Christian churches was held in Saratoga, N. Y., Sept. 20 to 23. The Hon. George F. Hoar presided. The council reported respecting the general condition of the societies, and presented recommendations concerning closer organization for practical work, with a policy and method adapted to attract those who engage in independent movements outside the Unitarian fellowship, and advising continued striving to promote the object of the association of producing union, sympathy, and co-operation among liberal Christians relative to the formation, as supplementary to the work of church organization and church building, of Unity Circles in places not yet ready for a regular church; respecting the endowment of the quarterly review of the denomination, the "New World"; and concerning a bond of church membership in the shape of the expression of a purpose and a pledge to help on the work of the Church. Action was taken by

the Conference looking to the establishment of a common endowment fund of "The Christian in the New World" quarterly. Resolutions were passed recommending the institution to the British and Foreign Unitarian Association of a system of compiling and keeping information concerning clergy members, parishes, societies, and churches, and advising consultation by the independent churches and societies represented in the Conference with the respective committees of fellowship in their sections of the union concerning the settlement or resignation of their ministers. The Fellowship Committee of the Conference was instructed to confer annually with the officers of the American Unitarian Association in regard to the list of ministers as published in the "Yearbook," recommending the addition or dropping of names, so as to make it as nearly as possible a list of those who are entitled to such recognition. A committee of five ministers and five laymen was instituted, to report to the Conference from time to time what changes, if any, in organization or methods are need, to deepen and extend the good influence of the Conference. Greetings were sent to the Liberal Congress of Religion which was appointed to meet in Nashville, Tenn., in October, with the sentiment added, "While seeking to do faithfully our own specific work as an organized religious body, we rejoice in the spirit which brings together members of various denominations to testify to the unity of the spirit, and to strengthen the work which we have in common."

The fourth biennial session of the National Alliance (of women) was held in connection with the meeting of the National Conference. The reports showed that the Alliance had 218 branches, with 9,145 members. The report of the Executive Board described the method employed of gathering information, the close fellowship maintained with the different branches, and the efforts made to secure active co-operation in all lines of work. The operations of the post-office mission had increased very largely within the past two years.

At the meeting of the Unitarian Temperance Society, also held in connection with that of the National Conference, summaries were given of what the society had achieved in the past ten years in developing a temperance sentiment among Unitarians, in efforts before legislatures and Congress, and in the development of "a sound and rational temperance literature which has met with wide recognition and has been sought for from all directions. The society invites to its membership all who would work for temperance by any method their consciences may approve."

British Unitarians.—The annual meeting of the British and Foreign Unitarian Association was held in London, beginning June 8, and was opened with a lecture by the Rev. R. A. Armstrong on "The Significance of the Teaching of Jesus." The reports presented at the business meeting showed that more than £2,500 had been received from subscriptions and donations, £433 from donations, £843 from dividends, £1,273 from sale of literature, etc., and that several lectures had been given. The grants for home and foreign work had amounted to £2,718. About 500,000 tracts had received aid. The free distribution of literature had cost more than £1,000, and included more than 2,000 books and pamphlets, and pamphlets. The income of the M'Quike trust amounted to £877, all of which was expended in Scotland.

The special Indian fund reached £1,559. Three Indian students were to be at Manchester College in the next year. By means of a "Special Service fund" of nearly £1,000 the Rev. Stopford Brooke had been retained for preaching at various churches in different parts of the country; and special literature to appeal to the more educated classes was in contemplation. More than 80 congregations had been supplied by one publishing house with the large one-volume edition of the Revised New Testament at a cheap rate, and a subscription had been received for 10,800 copies of the revision to be presented to the pupils of Dudley as a "jubilee" commemoration. In the work of the central postal mission a small decrease had taken place in the number of applicants for literature, which was attributed to the refusal of some newspapers to insert advertisements containing the name "Unitarian." Papers were read on the position of the minister with regard to the management of the church; means of increasing the membership of the churches; and "The Sunday-School Scholar and his Difficulties." At a meeting of the Temperance Association reports were made of progress in the inculcation of temperance principles, and especially with reference to preventing the sale of intoxicants to children.

The English Unitarian Triennial Conference, officially styled "The National Conference of Unitarian, Liberal Christian, Free Christian, Presbyterian, and other Nonsubscribing or Kindred Congregations," met in Sheffield, April 6. Five triennial meetings and one interim meeting had been previously held. The attendance was the largest on record. Among the foreigners present were several Hungarian Unitarians, and Mr. P. L. Sen, an Indian theist, a relative of the late Keshub Chunder Sen. Mr. J. R. Board, of Manchester, presided, and in his opening address spoke of some questions that had been raised in connection with the certification of candidates by advisory committees, which had given rise to some controversy, but which were not otherwise brought before the Conference. A resolution was passed declaring that no immediate educational legislation would be satisfactory to the Conference unless it provided that the superintendence of elementary education be everywhere placed under local elected authorities, who should have control in all schools receiving grants of public funds; that no preferential treatment be given in the distribution of public money to the denominational as compared with the board schools; that training colleges supported by public money be freely open to students of all denominations. The resolution further declared that no settlement of the education question could be regarded as satisfactory and final which did not provide that only secular education shall be directly or indirectly paid for out of public funds. Sympathy was expressed with the Cretans, and a resolution passed in favor of leaving the destinies of the island in the hands of its people. A resolution of greeting to the Evangelical Free Church Council (Federation of Free Churches) was unanimously adopted. The subjects of "The Deepening of the Spiritual Life of the Churches," "Moral Superannuation," "The Means of Revival and Ministry," "The Outlook in Relation to Social Life," "The Place of Immortality in Religious Belief," "Social Life," "Science," and "The Bible" were discussed; and, in a woman's meeting by women, the Sunday school, adult classes, working societies, temperance, and kindred questions.

UNITED BRETHREN CHURCH. The statistical tables of this Church for 1897 give it 1,724 ministers, 4,172 churches, and 255,117 communicant members.

The twenty-second annual meeting of the Board of Managers of the Woman's Missionary Association was held in Lisbon, Iowa, May 12. The total receipts of the society had been \$18,802, and the expenditures \$13,764. The association had 41 active branches, with 486 local societies and 7,571 members; 45 young ladies' bands, with 1,038 members; and 113 children's bands, with 4,052 members. The work of the association in Africa and China engaged the attention of the meeting.

The thirty-seventh quadrennial General Conference met at Toledo, Iowa, May 13. Reports were made by the Sunday-school secretary, the Executive Council of the Young People's Christian Union, the Board of Church Trustees, and other boards. The report of the standing Committee on Temperance mentioned its co-operation in the organization of the American Anti-Saloon League. The Committee on Educational Interests recommended the adoption of a uniform standard for all the schools of the Church in the courses of study leading to degrees. It was advised that a special effort be made to relieve the educational institutions of the Church from financial embarrassment. The Conference having been visited and addressed by Bishop Dubs, of the United Evangelical Church, a fraternal delegate was appointed to attend the next General Conference of that body. Further, the Conference resolved unanimously: "*Whereas*, The activities and polity of the Church of the United Brethren in Christ are in the most perfect accord with the tenets of the United Evangelical Church; and *Whereas*, The fraternal spirit between these bodies is most cordial; therefore, *Resolved*, That we are favorable to a still more intimate relation between these churches, and will consider overtures looking toward organic union; and that we favor the appointment of a commission composed of the Board of Bishops, which shall be intrusted with all matters looking to closer fraternal relations between our respective denominations." A committee was provided for to arrange for the celebration of the one hundredth anniversary of the meeting of the first Conference in the history of the Church, near Frederick, Md., to be held during the year 1900, and to close with the General Conference session of 1901. A minute was adopted emphasizing the importance of instructing the people on the preservation and ennobling of the Christian home, and urging that the pastors give this matter special attention. Bishop J. Weaver, retiring from active service on account of age, was elected bishop emeritus; the other bishops, Castle, Kephart, Holt, and Mills were elected for another term of four years. The Conference ordered that the bishop of a district must reside upon and preside over the district throughout the quadrennium. A proposition to the effect that no bishop shall be eligible to serve more than two successive quadrenniums was voted down. The Conference approved a ruling of the bishops upon a delicate case relating to their tenure of office; and decided that, "even if it were, in a parliamentary sense, legitimate, it would not be wise to restrict the tenure of the bishop's office by imposing a time limit of eligibility."

Conservative.—The conservative branch of the United Brethren Church was formed after the withdrawal of Bishop Milton Wright and 11 delegates of the same opinion with him from the General Conference of 1889, on account of its adoption of a new constitution and declaration of doctrine. It holds that this action of the General Conference was irregular and the changes made by it were illegal and touched points beyond the competency of the General Conference to determine. Hence it holds that it is the true United Brethren Church. It had, in 1897, 700 ministers, 855 churches, and

45,000 communicant members. The General Conference of 1897 elected Milton Wright, H. T. Barnaby, H. Floyd, and H. L. Barclay bishops for four years. It directed that each bishop should reside in his district during the four years, and fixed their salaries at \$1,000 a year each. The subject of changing the location of the publishing house was considered, Huntington, Ind., seeming to be the place most favored for the new location. Provisions were made for the organization of Young People's Societies, to be called the Young People's Association of the Church of the United Brethren in Christ.

UNITED EVANGELICAL CHURCH. The following is a summary of the statistics of this Church, as compiled in July, 1897: Number of conferences, 8; of itinerant preachers, 425; of local preachers, 201; of members, 57,028, showing a net gain of 1,910; of Sunday schools, 759, with 10,231 officers and teachers and 71,414 pupils; of members received during the year on confession of faith, 6,371; of baptisms, 1,664 of adults and 2,710 of infants; of churches, 605, valued at \$1,578,518; of parsonages, 134, valued at \$152,820. Amount of contributions: For conference treasuries, \$3,137; for the Sunday-school and Tract Union, \$642; for education, \$6,234; for Church extension, \$2,271; for missions (conference treasuries), \$25,049; for missions (general treasury), \$9,599, making a total of \$35,048 missionary collections; for building and repairing of churches and parsonages, \$100,118; for the Charitable Society, 318. The Keystone League of Christian Endeavor returned 373 senior and 35 affiliated societies, with 12,123 active and 3,347 associate members, and 83 junior societies, with 2,056 active and 915 associate members.

UNITED STATES OF AMERICA, a federal republic in North America. The legislative power is vested in the Congress, consisting of the Senate and the House of Representatives. There are 90 Senators, 2 from each State, elected by the State Legislatures for the term of six years, one third being renewed every two years. The House of Representatives has 357 members elected by the ballots of the adult male citizens in separate districts. The executive power is exercised by the President, who is commander-in-chief of the army and navy and has a suspensive veto over the acts of the Congress, which can be passed over his veto by a two-third majority. The Vice-President is president of the Senate, and in case of the death, removal on impeachment, or resignation of the President, he succeeds the latter for the remainder of the term. The Senate can remove the President or other executive officers for unconstitutional actions, on articles of impeachment voted by the House of Representatives. In case of the death or disability of both the President and the Vice-President, the Secretary of State becomes acting President, and after him other members of the Cabinet in their order. The members of the Cabinet, who are the heads of the eight administrative departments, and other high officials of the Government are nominated by the President and require the confirmation of the Senate. All treaties made by the President with foreign powers must be ratified by a two-third majority of the Senate. The President and Vice-President are elected by the majority of a college of electors chosen in each State in such manner as the Legislature prescribes, and equal in each State to the number of its Senators and Representatives in Congress. It is the practice for each political party that names electors to be voted for to select beforehand in a national convention its candidates for President and Vice-President, and for the electors, who are chosen in each State on a collective ticket, to cast their votes solidly for

the candidates for the office of President of the United States. The President will be in fact, though not in name, the head of the nation. The President will be elected for four years and reelection may be made for a second term. The President will be elected on the first Tuesday following the first Monday in November. The President will be elected for four years on the 4th of March following the election.

The President lost the term is William McKinley, of Ohio, who was elected in 1896. His Vice President is Garret A. Hobart, of New Jersey. The President's Cabinet was constituted in March, 1897. The members are: Secretary of State, John Sherman, of Ohio; Secretary of the Treasury, Lyman J. Taft, of Ohio; Secretary of War, Russell A. Alger, of Michigan; Attorney General, Joseph McKenna, of California; Postmaster General, James A. Fiske, of Massachusetts; Secretary of the Navy, John D. Long, of Massachusetts; Secretary of the Interior, Theodore N. Tilton, of New York; Secretary of Agriculture, James Wilson, of Iowa.

John Sherman has been prominent in national politics since the Kansas-Nebraska issue, that provided the civil war, on which question he as a member of an investigating committee of congress, wrote the majority report that started the nation. He was the eighth child in a family of sixteen children.

UNDER SECRETARY OF STATE

the junior by three years of his brother Gen. William Tecumseh Sherman. He was born in Lancaster, Ohio, May 10, 1823, and received in the common schools the foundation of the education that he acquired through his insatiable avidity for knowledge. He studied law, and at the age of twenty-one was admitted to practice. He was first elected to Congress in 1855. In 1859 he was a successful candidate for the speakership of the House, however, elected chairman of the Ways and Means Committee, and thus was made head of the House of Representatives. He entered the United States Senate in 1861, and sat until 1869, when he retired with the exception of the year 1870-1871, when he served as Secretary of the Senate under President Hayes, until President Grant called upon him to take the place of the late Senator

During the civil war Mr. Sherman was one of the staunchest and most influential supporters of the policy of President Lincoln. He took a prominent part in the reconstruction policy after the war, and during President Grant's second term came still more prominently before the country as the chief author and champion of the measures for the resumption of specie payments, which he afterward carried to a successful issue as the head of the Treasury Department. He was three times put forward as an eligible candidate for the presidency, but each time failed to secure the nomination.

Lyman Judson Gage, son of New England ancestry and was born in De Ruyter, N. Y., June 28, 1836. He had to earn his own living from the age of fifteen, became a clerk in the Oneida Central Bank at eighteen, removed to Chicago a year later, then labored as best he could, while keeping the banking business in view, became connected after a while with the Merchants' Loan and Trust Company, rose step by step till he became cashier, and gained such a reputation in this post that he was called to be cashier of the important First National Bank of Chicago in 1868, and in the same year was

Cavalry. He served with distinction throughout the conflict, was present in about sixty engagements under the command of Sheridan, Kilpatrick, or Custer, and received several wounds, and when the

LYMAN J. GAGE, SECRETARY OF THE TREASURY.

RUSSELL A. ALGER, SECRETARY OF WAR.

army was mustered out he received the brevet rank of major general for gallant and meritorious services during the war. He returned to commercial life, and in the course of years obtained almost a

JOHN D. LONG, SECRETARY OF THE NAVY.

elected President of the American Bankers' Association in 1880, he was made President of the First National Bank. He took a prominent part in the preparations for the Columbian Exposition for Chicago, and was one of those who pledged \$10,000,000 for the building of the exposition. He was the first president of the National Bankers' Association. He also presided over the bankers' meeting at the World's Congress Auxiliary. He was one of the many years of the Civil Federal Reserve Bank, and he has been known throughout the country for his views on honest money and banking reform.

Russell Alexander Alger, son of a farmer in Modine County, Michigan, in 1845. He was a family that was left destitute by the death of his father when Russell was thirteen. His mother became an aid and support to the family, and while yet a youth advanced toward success in the lumber business. When the civil war broke out he was chosen captain in the Second Regiment of Michigan

controlling interest in the Michigan lumber trade. In 1884 he was chosen to be the Republican candidate for Governor, with little hope of success, for

the Democrats and Greenbackers together had control of the State. Nevertheless he was elected by the largest majority ever given to a Republican candidate. This triumph made him a conspicuous figure in national politics and a possible candidate for the presidency. He held no other office, however, until President McKinley selected him for the post of Secretary of War.

John Davis Long was born in Rockfield, Maine, Oct. 27, 1838. He entered Harvard College when he was only fourteen years of age, but was graduated second in his class, of which he was chosen to be the poet at commencement. He was master of a school for a short time, then started on his professional life in Boston in 1862 and rose to an eminent position at the bar. He entered the State Legislature in 1875, and in 1876 was a candidate for Speaker. In 1879 he was elected Governor of Massachusetts, and he was reelected for the two succeeding terms, defeating Gen. Benjamin F. Butler both times. Subsequent to this he was elected to Congress, in which he sat for three successive terms. He was an unsuccessful candidate for the United States Senate. Secretary Long has long resided at Hingham, and in intermissions of his professional and business pursuits he has cultivated literature, producing a volume of light verse and a translation of Virgil's "Æneid."

Joseph McKenna was born in Philadelphia in 1855, was taken to California in childhood, was

James Albert Carr was born in 1852, in the town of Maryland, and was elected Governor of that State in 1905. He was a member of the Maryland General Assembly from 1882 to 1890, and was called by President McKinley to the position of

JAMES A. CARR, POSTMASTER-GENERAL.

Post-Office Department. He has been a candidate for Congress, and also for the governorship of his State, but the opposite party always had the majority. He was born in Maryland, June 10, 1852.

JOSEPH MCKENNA, ATTORNEY-GENERAL.

graduated at St. Augustine College, Bermuda, studied law, and after admission to the California bar served one term as district attorney, and was then, in 1875, elected to the Legislature, where he delivered a notable speech on the proposal to create the State Board of Railroad Commissioners. He was twice an unsuccessful candidate for Congress, was at last elected, and served for four terms, after which he was appointed a judge of the United States Court of California in 1892. In Congress he was a political friend and associate of William McKinley, whom he assisted in framing the tariff bill. When he formed his Cabinet, President McKinley appointed Judge McKenna Attorney-General.

JAMES A. CARR, POSTMASTER-GENERAL.

connected with his family. He was graduated at the University of Maryland, and entered into partnership with his father's firm, of which

head. He connected himself with various corporations that achieved success, and for a number of successive terms was President of the Merchants' and Manufacturers' Association of Baltimore.

Cornelius Newton Bliss was born in Fall River, Mass., in 1834. He went to New York city to embark in a mercantile career early in life, became an active and prominent dry-goods merchant, the head of the firm of Bliss, Fabyan & Co., and has long been prominent also as a leader in local politics, though unwilling to accept public office until President McKinley appointed him Secretary of the Interior. He has often been a delegate to State political conventions, and was chairman of a committee of the New York Chamber of Commerce that in Chicago urged the nomination of President Arthur in 1884.

James Wilson is a native of Scotland, but was educated in this country. He was born in 1835, came to the United States in 1851, passed through an academy, and became a farmer in Iowa of re-

JAMES WILSON, SECRETARY OF AGRICULTURE.

pute for practical and scientific knowledge, and a representative of agricultural interests in the State Legislature, of which he was a member for six years, serving one term as Speaker. He was elected next to Congress, where he sat for three terms. He is Secretary of Agriculture.

Area and Population.—The total area of the United States, including three Territories represented in Congress and the Indian Territory, but excluding Alaska, is 3,925,600 square miles, of which 55,600 square miles are covered with water. The area of Alaska is estimated at 531,400 square miles. The total population in 1890 was 62,831,000, including 179,321 in the Indian Territory and 30,329 in Alaska. The total population on Dec. 31, 1897, was estimated at 71,770,000.

The number of immigrants for the year ending June 30, 1897, not including those from Canada or Mexico, was 230,832. There were 16,198 laborers, 23,739 domestic servants, 11,560 farmers, 3,454 tailors, 3,325 shoemakers, 2,793 carpenters, 1,747 clerks, 1,743 miners, 1,337 blacksmiths. The total number of skilled laborers was 33,161; of professional men, 1,732; of unskilled la-

borers, 104,315; of no occupation, including women and children, 91,032; occupation not stated, 562.

The Army.—The United States regular army on June 30, 1897, consisted of the following forces:

TROOPS.	Officers.	Men.	Total.
10 regiments of cavalry	447	6,010	6,457
5 regiments of artillery	290	3,934	4,224
25 regiments of infantry	910	12,871	13,781
5 companies of engineers	18	500	518
Indian scouts, West Point, recruiting par les, hospital service, ordnance department, signal service, etc.	514	2,038	2,552
Total	2,179	25,353	27,532

The infantry weapon is the modified Krag-Jørgensen repeating rifle of 7-6 millimetres caliber. The cavalry is armed with Krag-Jørgensen carbines, sabers, and Colt revolvers. The artillery forces consist of 50 batteries of foot artillery and 10 mounted batteries, the latter having each 4 pieces. The field guns are breechloaders of a new system, having a caliber of 8-2 centimetres. The organized militia of the States and Territories had on Dec. 31, 1897, a strength of 1,391 staff and general officers, 5,290 cavalry, 4,906 artillery, and 101,873 infantry, giving a total authorized strength of 116,125 officers and men. The number in actual service was 113,460. The total population capable of bearing arms and liable to military service in case of war was estimated at 10,139,788.

The Navy.—The United States navy on Dec. 31, 1897, contained 11 armored battle ships built or building as follows: The "Maine," built in 1888, of 6,682 tons displacement, 9,293 horse power, 17-4 knots speed, a main battery of 4 10-inch and 6 6-inch breech-loading rifled cannon, and a secondary battery of 7 6-pounder and 8 1-pounder rapid-firing guns [destroyed in the harbor of Havana, Feb. 15, 1898]; the "Texas," begun in 1889, of 6,315 tons displacement, 8,000 horse power, giving a speed of 17 knots, a main battery of 2 12-inch and 6 6-inch breechloaders, and a secondary battery of 6 1-pounders, 4 3-7-centimetre quick firers, and 2 Gatlings; the "Massachusetts" and "Oregon," begun in 1891, of 10,288 tons displacement, 9,000 horse power, a speed of 15 knots, and a main armament of 4 13-inch, 8 8-inch, and 4 6-inch breechloaders, with an auxiliary armament of 20 6-pounders, 4 1-pounders, and 4 Gatlings; the "Indiana," a sister ship to these, launched in the same year and having the same dimensions, protection, and armament, with engines of 9,738 horse power, developing a speed of 15-54 knots; the "Iowa," begun in 1893, of 11,410 tons displacement, with engines of 11,000 horse power, making 16 knots, and carrying 4 12-inch, 8 8-inch, and 6 4-inch guns in the main battery, with a minor armament of 20 6-pounders, 4 1-pounders, and 4 Gatlings; the sister ships "Kearsarge" and "Kentucky," laid down in 1896, of 11,525 tons, with engines of 11,000 horse power, giving a speed of 16 knots, a main battery of 4 13-inch and 4 8-inch breechloaders, and a secondary battery of 14 5-inch, 20 6-pounder, and 6 1-pounder rapid firers, 4 Gatlings, and a field piece; and the "Alabama," "Illinois," and "Wisconsin," still on the stocks, the most expensive of all, costing \$3,750,000 each, having a displacement of 11,000 tons, to be engined for a speed of 16 knots, and built to carry 4 13-inch and 14 6-inch guns in the main batteries and a subsidiary armament of 16 6-pounders, 4 1-pounders, 4 Gatlings, and a field gun. There were 2 armored cruisers, the "New York," begun in 1890, having a displacement of 8,200 tons, with engines of 17,400 horse power, developing a speed of 21 knots, and carrying a main battery of 6 8-inch

and 12 4-inch guns, and a minor armament of 8 6-pounders, 4 1-pounders, and 4 Gatlings; and the "Brooklyn," laid down in 1893, with 16,000-horsepower engines and a speed of 20 knots, carrying a main armament of 8 8-inch and 12 4-inch cannon, and a secondary armament of 12 6-pounders, 4 1-pounders, and 4 Gatlings. The cruiser ram "Katahdin," launched in 1891, of 2,135 tons, with 4,800 horse power, is capable of making 17 knots, her sole armament besides the great ram consisting of 4 6-pounder rapid-fire guns. For coast defense the navy was provided with a large number of monitors, 6 with double turrets and 13 with single turrets. Of the former the "Amphitrite," "Miantonomah," "Monadnock," and "Terror," begun in 1874, have a displacement of 3,900 tons each, with 19 to 14½ knots speed, and armed with 4 10-inch, 2 6-pounder, 2 3-pounder, and 2 1-pounder rapid-fire guns, besides which the "Amphitrite" and the "Monadnock" carry 2 4-inch breechloaders and 2 37-centimetre quick-firing guns. The "Puritan," begun in 1875, has a displacement of 6,000 tons, a speed of 12½ knots, and an armament of 4 12-inch and 2 4-inch guns, with 6 6-pounders, 4 Gatlings, and 2 37-centimetre machine guns. The "Monterey," of 5,244 tons, can steam 13½ knots, and is armed with 2 12-inch and 2 10-inch guns, with a subsidiary armament of 6 6-pounders 4 1-pounders, and 2 Gatlings. The old monitors, built in 1862, are each armed with 2 15-inch smooth-bore cannon. The protected cruisers number 13, besides which there are 3 unarmored cruisers. The "Atlanta" and "Boston," of 3,000 tons, begun in 1883, have a speed of 15½ knots, and carry 6 6-inch and 2 8-inch guns, with 14 quick firers and machine guns; the "Chicago," of 4,500 tons, launched at the same time, steams 15½ knots, and carries an armament of 4 8-inch, 8 6-inch, and 17 smaller guns; the "Charleston," of 3,730 tons, launched in 1887, can make 18½ knots, and is armed with 2 8-inch, 6 6-inch, and 14 smaller guns; the "Baltimore," of 4,413 tons, launched in 1887, can make 20 knots, and is armed with 4 8-inch and 6 6-inch guns, besides a subsidiary armament of 14 guns; the "Newark," "Philadelphia," and "San Francisco," laid down in 1888, can make from 19 to 19½ knots, and are armed with 12 6-inch breechloaders and from 15 to 17 quick-firing and machine guns; the "Raleigh," of 3,213 tons, begun in 1889, can make 19 knots, and carries 10 5-inch, 1 6-inch, and 10 smaller quick-firing guns; the "Detroit," "Marblehead," and "Montgomery," unprotected cruisers, laid down in 1890, have a displacement of 2,080 tons, speed ranging from 18½ to 19½ knots, and an armament of 9 5-inch rapid-fire guns, 8 smaller ones, and 2 Gatlings; the "Cincinnati," built at the same time, has a displacement of 3,213 tons, a speed of 19 knots, and an armament of 10 5-inch, 1 6-inch, 8 6-pounder, and 2 1-pounder rapid-fire guns, and 2 Gatlings; the "Columbia," begun in 1890, of 7,375 tons, is a commerce destroyer able to steam 22½ knots, 1 8-inch breechloader, carrying 2 6-inch, 8 4-inch, 12 6-pounder, and 4 1-pounder quick firers, and 4 Gatlings; the "Minneapolis," her sister ship, laid down in 1891, made 23½ knots in her trial trip; the "Olympia," of 5,870 tons, begun in 1891, has a speed of 21½ knots, and carries an armament of 4 8-inch breechloaders, 10 5-inch rapid-firing guns, and 20 smaller ones, besides 4 Gatlings. Of modern gunboats there are the "Yorktown," "Petrel," "Bennington," "Concord," "Castine," "Machias," "Wilmington," "Helena," and "Nashville," of 892 to 1,710 tons displacement, built between 1887 and 1894, and armed with 6-inch and 4-inch guns, and strong secondary batteries. The composite gunboats "Annapolis," "Vicksburg," "Newport," "Princeton," "Marietta,"

and "Wheeling," of 1,000 tons, laid down in 1896, are designed for a speed of 12 knots, and will carry 6 4-inch, 4 6-pounder, and 2 1-pounder rapid-fire guns. The training ship "Albatross" is armed with 4 4-inch and 7 smaller rapid-fire guns; the dispatch boat "Dolphin" with 2 4-inch and 6 smaller ones. The dynamite cruiser "Albatross," built in 1887, has a speed of 21½ knots, and is armed with 3 15-inch pneumatic guns capable of sending 15-tonne projectiles 4 miles. A torpedo cruiser is in course of construction. The torpedo boats "Cushing," "Erickson," "Stiletto," "Foote," "Rodgers," "Winslow," "Porter," "Du Pont," and "Rowan," the last 6 built in 1896, have 3 ejectors for launch Whitehead torpedoes. The latest have a length of 175 feet and a speed of 27½ knots. The submarine-torpedo boat "Plunger" was also built in 1896. In 1897 the keels of the "Dahlgren," "Craven," and "Farragut" were laid, which are designed for a speed of 30 and 30½ knots, also of the "Davies," "Fox," and "Morris," and the smaller "Gwin," "Tallbot," "MacKenzie," and "McKee," steaming 20 and 22½ knots, and of the "Stringham," "Goldborough," and "Bailey," built to carry the first 7, and the others 4 6-pounders, besides 2 torpedo tubes, and to make 30 knots an hour.

Pensions.—The number of invalid ex-soldiers receiving pensions under the general pension act on June 30, 1897, was 336,299; of nurses, 663; of widows, etc., 94,618; of navy pensioners, 4,788; of sailors' widows, etc., 2,373. Under the act of June 27, 1890, the number of army invalids was 378,609; of widows, etc., 110,563; of navy invalids, 13,931; of widows, etc., 5,766. There was an increase during the year of 123 nurses and a decrease of 8,204 ex-soldiers, 2,513 widows and dependents of soldiers, 33 ex-sailors, and 14 widows and dependents of sailors under the general law, and an increase of 8,122 army invalids, 8,954 soldiers' widows, etc., 300 navy invalids, and 302 sailors' widows, etc., under the law of June 27, 1890, making a net increase of 5,336, and bringing the total number of pensioners on the roll up to 976,014, not including 6,832 original pensions and 762 restorations and renewals issued during the year but not yet mailed to the pension agents at its close. The number of widows of soldiers of the Revolutionary War was 7; that of surviving pensioners of the War of 1812 was 7 and of widows of soldiers of that war 2,810; of pensioners of the Mexican War, 10,922 survivors and 8,072 widows; of pensioners of the Indian wars, 2,373 survivors and 4,288 widows. The number of claims allowed during 1897 was 3,726 for invalids and 4,612 for widows, etc. There had been filed 2,183,416 claims up to June 30, 1897, and allowed 1,356,676. The payments during the year amounted to \$140,845,772, distributed among 746,829 invalids and 229,185 widows and dependents. The total disbursements from 1861 to the end of 1897 have been \$2,138,300,926. The expenses of disbursing the pension fund during 1897 were \$3,309,287. There were 30,101 new pensions added to the rolls during the year and 3,971 pensioners whose names had been dropped were restored, a total of 34,072, while 31,960 names fell away from the rolls through death, 1,074 through remarriage of widows and mothers, 1,843 through the coming of age of minors, 2,683 through failure to claim pension for three years, and 3,560 from other causes, making a total of 41,122. The total number of pension certificates issued during the year was 94,454, while 76,234 claims were disallowed, not including applications for an increase of pensions.

Public Lands.—The homestead entries during the year ending June 30, 1897, increased 4,452,289 acres, and entries under the timber-culture act 646 acres. The total area of lands patented by the

United States up to that date was 95,741,638 acres, viz., 4,433,073 acres to States for canal purposes, 1,987,027 acres to States for wagon roads, 1,406,211 acres under river improvement grants, and 87,915,327 acres to States and corporations for railroad purposes. The railroad selections during the year 1897 were 1,538,463 acres. The area of public lands vacant and subject to entry on June 30, 1897, was 591,343,953 acres, of which 319,949,833 acres were surveyed and 272,294,130 acres unsurveyed. The total area of public land surveyed up to June 30, 1897, was 1,061,075,643 acres, and the total area of land remaining unsurveyed was 754,448,745 acres, inclusive of Indian and other public reservations, unsurveyed private land claims and surveyed private claims in California, Arizona, Colorado, and New Mexico, the sections reserved for public schools, unsurveyed railroad, swamp land, and other grants, and unsurveyed mountain, lake, river, and other unproductive areas.

The Patent Office.—The number of applications for patents during the calendar year 1896 was 42,077; for design patents, 1,828; for reissues, 77; for registration of trade-marks, 2,005; for registration of labels, 59; for prints, 36; number of caveats filed, 2,271; total, 48,353. The number of patents granted, including designs and reissues, was 23,373; of trade-marks registered, 1,813; of labels, 1; of prints, 32; total, 25,219. There were 4,736 patents withheld for nonpayment of fees. The number of patents that expired was 12,133. The total number of applications filed since 1837 was 1,040,035, and the number of caveats filed was 107,415, while the total number of original patents granted, including designs, was 577,539. The receipts of the Patent Office during 1896 were \$1,324,059, and the expenditures \$1,113,413.

The Indians.—The appropriations of Congress for the Indian Bureau in 1896 were \$727,640 for current and contingent expenses, \$2,982,147 for treaty obligations to the Indians, \$695,625 for miscellaneous support and gratuities, \$82,050 for incidental expenses; \$549,903 for miscellaneous purposes; \$2,056,515 for support of schools, \$9,870 for interest on trust funds, and \$1,660,000 for purchase of Indian lands; total, \$8,763,751. The total Indian population of the United States, exclusive of Alaska, but including 32,567 taxable Indians counted in the general census, was 249,273 in 1890. The number of Indians on reservations, which was 256,127 in 1880 and 243,524 in 1890, was estimated at 248,815 in 1897. The number of births for the year ending June 30, 1897, was 4,326 and deaths 4,058. The area of the Indian reservations has been reduced from 241,800 square miles in 1880 to 162,991 in 1890, and 129,323 in 1897.

Immigration.—The immigration in 1897 was 230,832, of which number 1,554 were Bohemians, 15,025 Hungarians, and 16,052 other Austro-Hungarians, other than Poles, making the total from Austria-Hungary, except Poles, 33,031; 760 were Belgians, 2,085 Danes, 2,107 French, 22,533 Germans, 571 Greeks, 59,431 Italians, 890 Dutch, 5,842 Norwegians, 4,165 Poles, 1,874 Portuguese, 791 Roumanians, 22,750 Russians, other than Poles, 3,066 Spanish, 13,162 Swedes, 1,596 Swiss, and 152 European Turks; 9,974 were English, 28,421 Irish, 1,883 Scotch, 870 Welsh, and 25 British not specified, making the total number from the United Kingdom 41,173 and the total from Europe 216,397; 290 were from British North America, 91 from Mexico, 6 from Central America, 1,101 from the West Indies and Miquelon, and 19 from South America, making a total of 4,587 from America; 3,363 were Chinese and 6,299 other Asiatics, making 9,662 from Asia; 199 came from Oceania, and 37 from Africa.

Commerce.—The total value of the imports and exports of merchandise for the year ending June 30, 1897, was \$1,815,723,968, compared with \$1,662,331,612 in 1896 and \$1,539,508,130 in 1895. In 1885 the volume of trade was \$1,319,717,084; in 1875, \$1,046,448,147; in 1865, \$404,774,883; in 1855, \$476,718,211. The excess of imports over exports in 1897 was \$286,263,144; in 1896, \$102,882,264; in 1895, \$75,568,200. The total value of imports in the fiscal year 1897 was \$764,730,412, compared with \$779,724,674 in 1896, \$731,969,965 in 1895, \$577,527,329 in 1885, \$567,406,342 in 1875, \$238,745,580 in 1865, and \$257,808,708 in 1855. The value of domestic exports was \$1,032,007,603, the highest figure ever reached, having increased from \$863,200,487 in 1896 and \$793,392,599 in 1895, yet not much exceeding the total of \$1,015,732,011 for 1892, to which the domestic exports had gradually risen from \$683,862,104 in 1888. The exports of domestic merchandise in 1885 were \$726,682,946; in 1875, \$499,284,100; in 1865, \$136,940,248; in 1855, \$192,751,135.

The values of the articles or classes of articles imported in 1897 are given in the following table:

IMPORTS.		Value.
Agricultural implements.....		\$11,409
Animals, free of duty.....		300,436
Animals, dutiable.....		3,985,019
Antimony, ore and regulus or metal.....		4,464,608
Articles, the produce of the United States, returned, free.....		3,270,107
Articles specially imported, free.....		684,102
Art works.....		4,424,533
Asbestos, unmanufactured.....		191,097
Asphaltum or bitumen, free.....		395,554
Bark, hemlock.....		133,051
Beads and bead ornaments.....		979,283
Beeswax, free.....		43,330
Beverages:		
Ginger ale.....		199,470
All other.....		124,031
Bismuth.....		138,633
Blacking.....		136,909
Bologna sausages, free.....		76,303
Bolting cloths, free.....		212,385
Bones, crude, free.....		224,039
Bone and horn, manufactures of.....		147,067
Books, maps, music, and engravings, free.....		1,806,476
Books, maps, etc., dutiable.....		1,373,230
Brass, and manufactures of.....		147,130
Breadstuffs.....		2,774,763
Bristles, crude, free.....		385
Bristles, sorted, bunched, or prepared.....		1,216,794
Brushes.....		782,802
Buhrstones.....		23,569
Buttons and button forms.....		950,061
Cement, Portland, Roman, and other hydraulic.....		2,972,350
Chalk.....		48,954
Chemicals, drugs, and dyes:		
Alizarin colors and dyes, natural or artificial		1,022,970
Aargol or crude tartar.....		1,967,042
Cinchona bark, etc.....		142,512
Coal-tar colors and dyes.....		3,196,478
Cochineal.....		41,943
Logwood.....		611,010
Other dyewoods.....		119,716
Extracts of dyewoods.....		284,868
Glycerin.....		1,182,099
Gum arabic.....		85,807
Crude camphor.....		382,748
Gambier or terra Japonica.....		959,501
Shells.....		1,082,401
All other gums.....		3,204,790
Indigo.....		1,696,641
Licorice root.....		1,022,560
Lime, chloride of.....		1,375,560
Mineral waters, not artificial.....		581,947
Opium, crude, free.....		2,184,727
Opium, prepared.....		1,132,861
Potash, chloride of.....		458,095
Potash, muriate of.....		1,400,693
Potash, nitrate of.....		408,761
Potash, all other.....		632,203
Quinia.....		582,945
Soda, caustic.....		1,147,763
Soda, nitrate of.....		2,640,389
Sal soda and soda ash.....		1,324,016
Soda, all other salts of.....		67,684
Sulphur, crude.....		2,183,607
Sulphur, ground.....		248,048
Vanilla beans.....		884,865
All other chemicals, drugs, and dyes.....		5,057,068

The total value of dutiable merchandise was \$382,792,169; free of duty, \$381,938,243, being 49.94 per cent. of the whole. The total value of merchandise entered for consumption was \$789,251,300, of which \$381,902,414 represent articles free of duty and \$407,348,616 dutiable articles, 48.39 and 51.61 per cent. respectively. The duties collected amounted to \$172,760,361, representing an average *ad valorem* rate of 42.41 per cent. on the dutiable merchandise and 21.89 per cent. on the total imports, free and dutiable. The imports *per capita* of the population were \$10.84, the tariff duties \$2.37 *per capita*. Of the total value of imports entered for consumption \$254,657,954, or 32.27 per cent., were articles of food and animals, of which \$131,043,645 were dutiable, paying an average rate of 37.97 per cent., not including \$123,614,309 free of duty, and yielding \$49,755,484, which was 28.96 per cent. of the total duties collected; \$207,268,155 were articles in a crude state which enter into the various processes of domestic industry, being 26.26 per cent. of the total imports, and of this sum \$192,224,637 represent free and \$15,043,518 dutiable articles, paying an average rate of 20.11 per cent. and yielding \$3,025,927, which was 1.76 per cent. of the total customs revenue; \$69,822,999 represent articles wholly or partly manufactured, for use as materials in the manufactures and mechanic arts, being 8.85 per cent. of the total value of imports, and of these \$30,381,274 were free of duty and \$39,441,725 dutiable, paying an average rate of 29.10 per cent. and yielding \$11,478,985 of duties, 6.68 per cent. of the total duties; \$165,021,884 represent articles manufactured, ready for consumption, and of this sum, which is 20.91 per cent. of the total value of imports, \$27,284,175 were for articles free of duty and \$137,737,709 dutiable merchandise, on which \$55,278,753 of duties were collected, 32.18 per cent. of all duties collected, the average rate being 40.13 per cent.; \$92,480,037 represent articles of voluntary use, luxuries, etc., 11.72 per cent. of the total imports, and of these \$38,398,019 were free of duty and \$54,082,018 dutiable, on which \$52,240,044 of duties were paid, giving average rate of 62.13 per cent. and making 30.41 per cent. of all duties collected. The average rate of duty on iron and steel and their manufactured

products was 40.17 per cent.; on jewelry and precious stones, 16.33 per cent.; on leather and leather manufactures, 24.64 per cent.; on malt liquors, 38.24 per cent.; on distilled spirits, 136.92 per cent.; on wines, 49.37 per cent.; on silk manufactures, 46.85 per cent.; on sugar, 42.08 per cent.; on tobacco, 111.65 per cent.; on wool and its manufactures, 20.77 per cent.; on woolen manufactures, 46.44 per cent.

The animals imported free for breeding purposes have declined to the insignificant numbers of 204 cattle, 699 horses, and 2,382 sheep. The imports of asphaltum in 1897 showed a further increase to 122,129 tons. The imports of barley were 1,271,787 bushels; of wheat, 1,534,117 bushels. The imports of alizarin dyes were 6,148,208 pounds; of cochineal, 142,261 pounds; of logwood, 33,362 tons, little more than half as much as in the preceding year; of dye extracts and decoctions, 5,562,264 pounds; of argol or crude tartar, 23,457,576 pounds; of indigo, 3,522,016 pounds; of gambier, 31,349,545 pounds; of shellac, 7,151,459 pounds; of camphor, 1,469,601 pounds; of glycerin, 12,717,098 pounds; of cinchona and other barks from which quinia is extracted, 2,532,499 pounds; of quinia sulphate and alkaloids and salts of cinchona, 3,517,844 ounces; of crude opium, 1,072,914 pounds; of opium prepared for smoking and other containing less than 9 per cent. of morphia, 157,061 pounds; of crude sulphur, 130,133 tons; of caustic soda, 66,476,152 pounds; of soda nitrate, 83,331 tons. The imports of chicory root to be ground have increased from 7,951,042 pounds in 1894 to 16,930,163 pounds in 1897. Chocolate imports show an increase, amounting to 1,467,977 pounds, and the importation of crude cacao has grown from 17,634,779 pounds in 1894 to 31,406,612 pounds, while prepared cocoa—1,495,459 pounds in 1897—has increased but slightly. The imports of coffee in 1897 were 737,645,670 pounds, over 57,000,000 pounds more than in 1896, though the value was \$3,248,740 less. The imports of copper were 11,504,382 pounds. The importation of raw cotton fell off in 1897 to 51,898,926 pounds, after having steadily grown from 5,497,592 pounds in 1888 to 55,250,520 pounds in 1896. The imports of unbleached cottons in 1897 were 3,177,241 square yards; of bleached, dyed, colored, or printed cotton goods, 35,937,975 yards. The importation of cotton thread, yarn, and warp declined to 1,664,217 pounds from 2,431,835 pounds in the preceding year. The importation of eggs, which amounted to \$2,000,000 a year when they were free, has declined from nearly 16,000,000 dozen in 1889 to 580,671 dozen. The flax imports have grown from 5,008 tons in 1895 to 7,480 tons in 1897; those of hemp have declined from 6,177 to 5,096 tons; those of jute from 110,671 to 68,550 tons; those of isle from 12,207 tons in 1896 and 9,827 in 1895 to 6,313 tons; those of Manila from 50,278 tons in 1895 to 46,260 tons; those of yarns and threads from 16,000,000 pounds in 1890 and 3,593,000 pounds still in 1895 to 1,839,000 pounds. The imports of sisal grass have increased from 47,596 to 63,266 tons. The imports of gunny bags and burlaps, coir yarn, and binding twine have doubled in three years. In the fish imports there is an increase in imports of salmon from 827,873 to 1,848,563 pounds, and nearly as great an increase in other fresh fish, and a concurrent decrease in the imports of salt, dried, and smoked fish. Among fruits and nuts the imports of Zante currants increased from 11,640,577 pounds in 1895 to 29,188,570 pounds, while those of plums and prunes decreased from 14,352,057 to 710,028 pounds; those of dates and figs showed a falling off; those of lemons were \$1,000,000 less in value than in the preceding year, and oranges showed a decline. The imports of manufactured furs showed a falling off

of \$4,000,000 in two years. The imports of cylinder and crown glass were considerably larger, those of plate glass less. The imports of glassware decreased from 53,968,387 pounds in 1895 to 49,806,020 in 1897; other kinds and values from 163,650,982 to 156,232,824 pounds. The imports of bags were 2,438,363 pounds, against 2,687,749 pounds in 1896. India rubber decreased from 36,774 tons to 25,574,449 pounds. The imports of ironware were 543,243 tons, compared with 683,056 in 1895; of pipes 520,745 tons, compared with 1,812,675; of bars 1,601,645,571 pounds, compared with 45,882,274; of steel girders, blooms, bars, etc., 39,560,625 pounds, compared with 71,432,468; of sheet, plate, and tangers iron and steel, 9,553,233 pounds, compared with 91,246,002; of tin plates, terneplates, and tangers tin, 230,073,683 pounds, compared with 629,425,992; of wire rods, 25,123,178 pounds, compared with 97,067,082; of anvils, 733,492 pounds, compared with 1,745,754. Imports of manganese ore were 217,604,393 pounds, against 140,601,989 pounds in 1896; of nickel ore and matte, 174,360 hundredweight, against 156,090 hundredweight. The imports of rags increased from 42,192,088 pounds in 1896 to 51,181,000 pounds. Platinum increased in quantity from 5,731 to 6,357 pounds. The imports of cheese increased from 19,728,397 pounds in 1896 to 12,319,122 in 1897. The imports of salt free of duty increased from 346,733,181 pounds in 1896 to 363,134,519 pounds in 1897, and dutiable salt, which was brought in to the extent of 104,387,326 pounds in 1895, and only 6,226,319 pounds in 1896, increased from this latter figure to 15,223,837 pounds. Of linseed the imports were 105,222, against 4,166,222 in 1895. Imports of raw silk in 1897 amounted to 6,513,612 pounds, against 8,000,621 pounds in 1896. Imports of brandy were 337,595 gallons, against 259,704 gallons in 1896; of other spirits, 1,727,110 proof gallons, against 1,249,895. The imports of molasses have declined from over 35,500,000 gallons in 1888 and 15,000,000 gallons in 1895 to 3,702,471 gallons in 1897. The imports of beet sugar have risen from 284,221,230 pounds in 1895 to 604,646,965 in 1896 and 1,863,577,495 in 1897; those of cane and other sugar free of duty have declined from 1,064,124,277 pounds in 1895 to 431,196,980 pounds. The imports of raw sugar paying duty were 2,422,965,049 pounds, against 2,732,012,512 in 1896 and 2,104,657,159 in 1895. The quantity of cane sugar produced in the United States in 1897 was 644,175,323 pounds. The consumption of sugar in the United States was estimated at 644 pounds per capita in 1897. The duty collected on foreign sugar in 1897 amounted to \$41,233,732, the total importations amounting to 4,918,903,733 pounds. The average cost per pound in the foreign country was 2.61 cents in 1897, compared with 2.29 cents in 1896, 2.15 cents in 1895, 2.67 cents in 1893, and 4.35 cents in 1863. The imports of sulphur ore were 231,337 tons in 1897, against 176,402 tons in 1895. The quantity of tea imported was 113,247,175 pounds, against 93,968,272 pounds in 1896. The imports of leaf tobacco for cigar wrappers were 6,057,268 pounds in 1897, against 5,211,832 pounds in 1896; of other leaf, 7,747,950 pounds, against 27,713,114; of cigars, cigarettes, etc., 453,697 pounds, against 500,945. The imports of vegetables have declined in two years, beans and peas from 1,335,960 bushels in 1895 to 482,984; potatoes from 1,341,533 to 246,178 bushels. The imports of champagne in 1897 were 228,628 dozen bottles, against 246,363 in 1896; of still wine bottled, 309,281, against 314,190 dozen; of wine in casks, 2,297,952, against 2,834,988 gallons. The imports of malmagany in 1897 were 15,129 thousand feet; of logs and round timber, 323,737 thousand feet; of boards and other lumber, 883,735 thousand feet. The imports of clothing wools were 200,550,079 pounds in 1897,

against 117,233,440 pounds in 1896 and 82,615,995 pounds in 1895; of combing wools, 37,951,490 pounds, against 15,756,318 pounds in 1896 and 13,207,230 pounds in 1895; of carpet wools, 112,141,457 pounds, against 97,921,715 pounds in 1896 and 95,403,018 pounds in 1895; of woolen rags, noils, and wastes free of duty, 44,243,140 pounds, against 16,770,976 pounds in 1896 and 12,300,554 pounds in 1895; of woolen yarns, 1,842,556 pounds, against 2,023,000 pounds in 1896 and 2,403,846 pounds in 1895. The imports of carpets in 1897 were 470,757 square yards; of woolen cloths, 27,859,311 pounds; of dress goods, 22,048,526 pounds.

The values of articles of domestic merchandise exported in the year ending June 30, 1897, are given in the following table:

DOMESTIC EXPORTS.

	Value.
Agricultural implements:	
Mowers and reapers.....	\$3,127,415
Plows and cultivators.....	590,779
All others.....	1,522,492
Animals:

Total domestic exports.....	\$1,022,007,000

Agricultural produce, which constituted 83.25 per cent. of the total exports in 1890 and 74.45 per cent. in 1897, made 66.23 per cent. of the total of 1897; mining products made 2.01 per cent., a smaller proportion than in any year since 1888; forest products made 3.92 per cent., showing a gradual gain for four years; fishery products formed 0.63 per cent. of the total exports of the year; miscellaneous products other than manufactures formed 0.24 per cent.; and manufactures constituted 26.97 per cent., compared with 26.48 per cent. in 1896, 23.14 per cent. in 1895, 21.14 per cent. in 1894, 19.02 per cent. in 1893, 15.61 per cent. in 1892, 19.37 per cent. in 1891, 17.87 per cent. in 1890, 12.48 per cent. in 1889, 15 per cent. in 1870, and 12.76 per cent. in 1860. The value of the agricultural products exported in 1897 was \$683,471,139, exceeding the exports of this class in any year except 1892, when it was \$709,328,232; the value of mining products exported was \$20,804,573, about the average of the previous eight years; the value of the forest products exported was \$40,480,321, more than 30 per cent. more than in 1896, nearly twice as much as in 1886, and four times the exports of 1860; the value of the fishery exports was \$6,477,951, a little less than in 1896, 13 per cent. less than in 1890, and 10 per cent. less than in 1880, but exceeding all other previous years; the value of miscellaneous products exported was \$3,479,228, a falling off from previous years; the exports of manufactured products were \$277,285,391 in value, compared with \$228,571,178 in 1896, \$183,505,743 in 1895, \$183,728,808 in 1894, \$158,023,118 in 1893, \$158,510,937 in 1892, \$168,927,315 in 1891, \$151,102,376 in 1890, \$102,556,015 in 1889, \$68,279,764 in 1870, and \$40,345,892 in 1860.

The numbers of live animals exported in 1897 were 392,190 cattle, 28,751 hogs, 39,532 horses, 7,473 mules, and 244,120 sheep. The export of horses has increased from 25,126 in 1896, 13,984 in 1895, 5,246 in 1894, and 2,000 or 3,000 in previous years; the export of cattle had expanded for two years, but was not as great as in 1892 or 1890. The exports of breadstuffs consisted mainly of 79,562,020 bushels of wheat, 14,569,545 barrels of wheat flour, 176,916,365 bushels of corn, 35,096,736 bushels of oats, 20,030,301 bushels of barley, and 8,560,271 bushels of rye. The exports of wheat to Europe were 67,512,440 bushels, of which the United Kingdom took 55,742,689 bushels. Of the exports of wheat flour 9,234,932 barrels went to Europe, of which 8,256,630 were shipped to England and 2,168,761 to the Netherlands; 2,191,741 went to North American countries, of which Canada took 709,873, the British West Indies 543,864, Cuba only 132,738; 1,297,839 barrels went to South America; and 1,235,133 barrels went to Asia. The exports of corn to Europe have undergone great fluctuations, amounting to 154,210,002 bushels in 1897, against 88,856,848 in 1896, 23,225,540 in 1895, 53,158,579 in 1894, 30,260,017 in 1893, 69,591,177 in 1892, 23,669,783 in 1891, 89,662,689 in 1890, 60,043,851 in 1889, and 19,237,241 in 1888. The coal exports in 1897 consisted of 1,274,417 tons of anthracite and 2,384,069 tons of bituminous. The exports of ginseng have fallen off from 251,205 pounds in 1893 to 179,573 pounds in 1897, but scarcity makes the smaller quantity more valuable than the greater. The copper exports in 1897 consisted of 15,001 tons of ore and 279,393,807 pounds of metal, compared with 175,580,762 pounds in 1896, 148,446,039 pounds in 1895, and 37,642,464 pounds in 1894. The exports of Sea Island cotton have recovered from 7,983,415 pounds in 1893 and 14,225,439 pounds in 1894 to 21,585,360 pounds in 1897. The exports of ordinary cotton were 6,176,365 bales, or 3,082,169,589 pounds, against 4,659,765 bales in 1896, 6,965,358 in 1895, and 5,397,509 in 1894. The total crop of 1897 was 4,397,177,704 pounds, or 8,757,964 bales, and out of this 3,103,754,949 pounds were exported, exceeding the exports of any previous crop year excepting 1895, being 70.59 per cent. of the total product, compared with 65 per cent. in 1896, 69.83 per cent. in 1895, and 71.20 per cent. in 1894. The consumption of American spinners was 1,293,422,725 pounds of domestic and 50,710,403 pounds of foreign, a total of 1,344,133,128 pounds. The exports of cotton cloth in the fiscal year 1897 were 313,533,044 yards, made up of 83,409,441 yards of colored and 230,123,603 yards of uncolored. The principal customers were China to the extent of 140,121,035 yards; the rest of Asia and Oceania, 36,113,401 yards; Canada, 29,254,586 yards; West Indies, 15,693,546 yards; Chili, 13,419,230 yards; Brazil, 8,331,326 yards; the rest of South America, 22,837,755 yards; Central America, 10,446,766 yards; Mexico, 5,577,808 yards; Madagascar, 10,831,409 yards; the rest of Africa, 5,452,910 yards; Great Britain, 11,094,345 yards. Among the fish exports the most notable increase has been in canned salmon, of which 35,303,290 pounds were exported in 1897. The exports of dried apples were 39,775,401 pounds; of green and ripe apples, 1,593,981 barrels, against 360,002 in 1896. The export of glucose has grown from 6,263,751 pounds in 1888 to 194,419,250 pounds. There were 168,890 tons of pig iron exported, against 29,862 tons in 1896; of steel ingots and bars 92,507,017 pounds, against 5,988,502 pounds. Iron manufactures, such as car wheels, builders' hardware, machinery, nails and spikes, printing presses, saws and tools, locomotives, wire, and sheets and plates show a steady expansion. The export of pig lead has risen from 1,885,198 pounds in 1895 to

17,632,455 in 1897. The export of crude petroleum in 1897 was 131,726,243 gallons, against 110,923,620 in 1896; of illuminating oil, 771,350,626 gallons, against 716,455,565; of lubricating oil, 50,199,845 gallons, against 50,525,530. The cotton-seed oil exports were 27,198,882 gallons, against 19,445,848 gallons in 1896. The exports of paraffin, amounting to 126,365,128 pounds, have doubled in the course of five years. The exports of canned beef in 1897 were 54,019,772 pounds, 9,578,000 pounds more than in the preceding year; of fresh beef, 290,395,930 pounds, 65,612,000 pounds more; of salted and pickled beef, 67,712,940 pounds, 2,997,000 pounds less; of tallow, 75,108,834 pounds, 22,349,000 pounds more; of bacon, 500,399,448 pounds, 75,047,000 pounds more; of hams, 165,247,302 pounds, 36,211,000 pounds more; of pickled pork, 66,768,920 pounds, 2,730,000 pounds less; of lard, 568,315,040 pounds, 58,781,000 pounds more; of margarine butter, 4,864,351 pounds, 1,199,000 pounds less; of margarine oil, 113,506,152 pounds, 10,230,000 pounds more; of butter, 31,345,224 pounds, 11,971,000 pounds more; of cheese, 50,944,617 pounds, 14,167,000 pounds more. The exports of leaf tobacco in 1897 reached the total of 305,978,292 pounds, though the value was little greater than in the preceding year, when the exports were 287,700,301 pounds. The exports of beans and peas were 900,219 bushels, almost double the amount for 1896. The exports of sawed timber were 391,291 thousand feet; of hewn timber, 6,406,824 cubic feet; of boards, deals, and planks, 876,680 thousand feet.

Of the total imports by sea in 1897 only 15 per cent. were carried in American vessels, compared with 15.7 per cent. in 1896, 15.5 per cent. in 1895, and 19.4 per cent. in 1894. Of the total value \$109,133,454 arrived in American vessels and \$619,784,338 in foreign vessels, making the total by sea \$728,917,792, while \$35,812,620 came in land vehicles. Of the total exports \$65,082,305 went by land and \$985,911,251 by sea, \$905,969,428 in foreign vessels and \$79,441,823 in American vessels, the proportion being 8.1 per cent. of the sea-borne commerce, compared with 8.5 per cent. in 1896, 8.2 per cent. in 1895, and 8.7 per cent. in 1894. Of the total carrying trade the percentage falling to American ships was 11 per cent., whereas it was 12 per cent. in 1896, 12½ per cent. in 1891, 15½ per cent. in 1886, 16½ per cent. in 1881, 27½ per cent. in 1876, 32 per cent. in 1871, 50 per cent. in 1862, and 66½ per cent. in 1860.

The commercial intercourse of the United States with the different countries of the world in the year 1897 is shown in the following table:

COUNTRIES.	Imports.	Exports.
Europe:		
Austria-Hungary	\$8,158,328	\$4,023,011
Azores and Madeira	12,535	208,400
Belgium	27,070,625	33,071,555
Denmark	355,355	10,194,887
France	67,590,231	57,594,541
Germany	111,310,614	125,246,088
Gibraltar	26,262	332,245
Greece	732,702	110,763
Greenland, Iceland, and Faroes	40,056	
Italy	19,067,352	21,502,493
Netherlands	12,824,126	51,045,011
Portugal	2,234,291	2,520,058
Roumania		42,065

The imports of gold coin and bullion for 1897 were \$83,014,780, and the exports were \$40,361,580, of which \$39,152,522 were domestic and \$1,209,058 foreign, leaving an excess of imports of \$44,653,200, reversing the current, which had taken gold from the United States for eight years, the net exports in 1896 having been \$78,884,882, the largest outflow of any year except 1893, now suddenly succeeded by the greatest influx except that of 1880 and 1881, the epoch of specie resumption. The silver imports in 1897 were \$30,533,227 in coin value, and the exports were \$61,946,638, comprising \$56,-

451,823 of domestic and \$5,494,815 of foreign, exceeding by over 2 per cent the exports for 1896, which were nearly 50 per cent greater than those of 1894, the greatest of any other year.

Navigation.—The tonnage entered at United States ports during the year ending June 30, 1897, was 20,092,639, of which 3,845,737 tons were sailing vessels, 1,129,745 American and 2,715,992 foreign, and 16,156,902 tons were steamers, 2,441,431 American and 13,675,471 foreign. The total tonnage cleared was 19,878,403, of which 3,097,270 tons were sailing vessels, 1,139,295 American and 2,557,985 foreign, and 16,181,133 tons were steamers, 2,499,164 American and 13,692,971 foreign. Of the total tonnage entered 6,325,070 tons arrived from British, 1,667,106 from German, 1,258,663 from British Columbian, 1,038,519 from Cuban, 926,175 from Nova Scotian and New Brunswick, 909,841 from Brazilian, 758,754 from British West Indian, 661,755 from Belgian, 527,711 from Dutch, 509,373 from Italian, 499,793 from French, 353,036 from Mexican, 292,053 from Colombian, 292,421 from Australian, 262,345 from Chinese, 243,572 from Spanish, and 3,197,550 from other ports. Of the total tonnage cleared 7,163,057 tons departed for British, 2,079,392 for German, 1,200,579 for British Columbian, 1,075,623 for Nova Scotian and New Brunswick, 1,061,546 for Dutch, 864,767 for French, 708,394 for Cuban, 666,127 for Belgian, 499,215 for British West Indian, 426,772 for Italian, 311,200 for Chinese, 258,698 for Australian, 256,715 for Mexican, 244,249 for Colombian, 198,029 for Brazilian, and 2,454,147 for other ports.

The United States mercantile marine on June 30, 1897, comprised 22,633 vessels, of 4,769,020 tons, of which 6,599, of 2,233,900 tons, were steamers, and 16,034, of 2,415,120 tons, were sailing vessels, canal boats, and barges. There were 237 steamers, of 253,816 tons, 928 sailing vessels, of 533,403 tons, and 11 barges, of 3,651 tons, employed in the foreign trade, a total of 1,176 vessels, of 792,970 tons. In the coastwise trade were engaged 6,332 steamers, of 2,100,084 tons, 11,331 sailing vessels, of 1,294,084 tons, 650 canal boats, of 73,786 tons, and 1,469 barges, of 428,872 tons, a total of 19,802 vessels, of 3,896,826 tons. There were built during 1897 a total number of 891 vessels, of 232,223 tons, of which 338, of 64,209 tons, were sailing vessels, 288, of 106,153 tons, were steamers, 70, of 10,216 tons, were canal boats, and 195, of 11,528 tons, were barges. The iron and steel tonnage built during the year was 124,383, of which 46,150 tons were sailing vessels and barges and 78,236 tons steam vessels.

Railroads.—The railroads of the United States had, on June 30, 1896, a total length of 192,776 miles, an increase during the year of 2,119 miles. The number of miles operated in 1896 was 180,891, having a capital stock of \$3,290,730,567 and a funded debt of \$5,416,074,969. The gross earnings were \$1,123,632,023, of which \$263,213,238 came from passengers, \$770,424,013 from freight, and \$89,894,754 from miscellaneous sources. The operating expenses were \$793,598,269, leaving a net earnings \$332,333,756, to which \$104,007,542 of rentals from lessor companies and other receipts must be added to give the total available revenue of \$436,341,298, out of which were paid \$59,081,068 of rentals, tolls, etc., \$342,413,494 of interest on bonds, \$7,996,456 of interest on floating debts, \$41,304,834 of dividends, and \$34,233,688 of miscellaneous outlay, making a total of \$425,031,550, and leaving a surplus of \$11,309,748. The number of passengers carried during the year was 335,129,756, and the total passenger mileage 13,064,440,242; tons of freight moved, 77,867,716, with a total freight mileage of 93,885,536,634. The total length

of track of 178,549 miles of railroads was 235,482 miles, including 56,933 miles of side tracks and sidings. Of this total 207,618 miles consisted of steel and 27,864 miles of iron rails. The total liabilities of the railroads, including capital stock, bonded debt, unfunded debt amounting to \$339,502,302, and \$386,382,440 of current accounts, amounted to \$11,432,090,278, and the total assets, comprising \$9,953,767,710 of cost of railroad and equipment, \$1,450,418,025 of real estate, stocks, bonds, and other investments, \$231,915,121 of other assets, and \$161,396,357 of current accounts, was \$11,797,497,213, leaving \$364,806,935 excess of assets over liabilities.

Telegraphs.—The Western Union Telegraph Company on June 30, 1897, had 190,614 miles of line, with 841,002 miles of wire, not including 8,000 miles of line and 60,000 miles of wire belonging to the New York Mutual Telegraph Company, 6,711 miles of line and 54,087 miles of wire of the Baltimore and Ohio Railroad Company, and 2,684 miles of line and 20,370 miles of wire of the American Rapid Telegraph Company, 8,000 miles of wire of the Northwestern Telegraph Company and other lines, making over 210,000 miles of line open to traffic, nearly all operated by the Western Union Company. The number of messages sent in 1897 was 58,151,684. The receipts were \$22,638,859; expenses, \$16,906,656; profits, \$5,732,203. The capital stock is \$100,000,000.

Arbitration Treaty with Great Britain.—On Jan. 11, 1897, a treaty providing for the settlement of future disputes arising between the United States and Great Britain by arbitration was signed at Washington by Secretary Olney and Sir Julian Pauncefote. The establishment of a system of international arbitration for the adjustment of disputes between the two governments was the subject of communications exchanged between Secretary Gresham and Sir Julian Pauncefote in the spring of 1895. When Mr. Olney, on Feb. 27, 1896, proposed a joint commission and ultimate binding arbitration for the settlement of the Venezuela boundary dispute Lord Salisbury took the view that he was not prepared in matters of high political import to admit unrestricted arbitration. On March 5, 1896, in a dispatch to the British ambassador at Washington, he proposed a general arbitration treaty, excluding issues upon which neither government was willing to accept arbitration, such as involve the national honor or integrity. In the wide region that lies within this boundary the United States desired to go further than Great Britain. A system of arbitration would be an entirely novel arrangement, and therefore the conditions under which it should be adopted were not likely to be ascertained antecedently, and the limits ultimately adopted must be determined by experiment. In the interests of the idea and of the pacific results that were expected from it, the British Minister of Foreign Affairs thought it wise to make a modest beginning. He enclosed in the dispatch a draft treaty, the adoption of which would give an opportunity for observing more closely the working of the machinery, leaving it entirely open to the contracting parties to extend its application and to bring under its action controversies to which for the present it can only be applied in a tentative manner and to a limited extent.

In the draft treaty Lord Salisbury proposed that the British and American governments should each appoint two or more judicial officers, and on the appearance of any difference between the two powers which in the judgment of either of them can not be settled by negotiation, each of them should designate one of the said officers as arbitrator, and the two should hear and determine any

matter referred to them in accordance with the treaty, having previously selected an umpire, by whom any question upon which they disagree, whether interlocutory or final, should be decided. No question which in the judgment of either power affects its honor or the integrity of its territory would be referred to arbitration except by special agreement. Any difference whatever might be referred by agreement between the two powers, with the stipulation that the decision should not be valid unless accepted by both powers.

Secretary Olney, in his answer of April 11, 1896, said that the President reciprocated in behalf of the Government and people of the United States the desire manifested in the proposals of Lord Salisbury that the two great English-speaking peoples of the world should remain in perpetual peace. In regard to the scope of arbitration, he proposed that all disputes should be considered arbitrable unless the Congress of the United States or the Parliament of Great Britain by act or resolution declare that the matter in controversy involves the national honor or integrity, and withdraw it from the operation of the treaty. In regard to the appellate arbitration machinery he proposed that a majority of the six American and English Supreme Court judges should decide, and if the court be equally divided upon the subject of the award, that three learned and impartial jurists upon whom the six judges have agreed beforehand, should be added, and the award of the court so constituted, whether rendered unanimously or by a majority vote, should be final. If the award of the original arbitrators be unanimous there should be no appeal. The British Secretary of State insisted on retaining the right to reject the award on territorial questions unless the vote of the court of appeal was five to one, and Mr. Olney finally gave way.

In the treaty which was negotiated and signed, but which the United States Senate refused to ratify in its original form, introducing amendments that were not pressed by the United States Government, the contracting governments agreed to submit to arbitration all questions in difference between them which they fail to adjust by diplomatic negotiation. Pecuniary claims or groups of claims arising out of the same transactions or involving the same issues of law and of fact, and which do not in the aggregate exceed £100,000 in amount nor involve the determination of territorial claims, were to be dealt with and decided by an arbitral tribunal composed of one arbitrator, who should be a jurist of repute, nominated by each of the high contracting parties, and a third member to act as umpire and president of the tribunal, who should be selected by the two arbitrators; or on their failing to agree on any person within two months, by an agreement between the United States Supreme Court and the Judicial Committee of the Privy Council in Great Britain; or, failing such an agreement, by the King of Sweden and Norway. The award of the majority of the members of this tribunal would be final. Pecuniary claims or groups of claims exceeding £500,000 in amount and all matters in difference in respect of which either of the high contracting parties should have rights against the other under treaty or otherwise, provided they do not involve the determination of territorial claims, were to be dealt with and decided by an arbitral tribunal consisting of five jurists of repute, two to be nominated by each of the contracting governments, and the umpire to be selected by them or by the United States Supreme Court and Judicial Committee of the Privy Council, or by the King of Sweden and Norway. The award of a majority of the members of this tri-

bunal would be final. If, however, before the close of the hearing upon a claim submitted to one of these arbitral tribunals either government should move and the tribunal should decide that a disputed question of principle of grave general importance was involved affecting national as distinguished from private rights, then the jurisdiction of this tribunal would cease, and the case would be transferred to a tribunal constituted as described below. Any controversy involving the determination of territorial claims was to be submitted to a tribunal composed of three judges of the Supreme Court or justices of the Circuit Court to be nominated by the President of the United States, and three judges of the British Supreme Court of Judicature, or members of the Judicial Committee of the Privy Council to be nominated by the British Crown. In cases where the question involved concerns a particular State or Territory of the United States, or a British colony or possession, a judicial officer of such State or Territory or of such colony or possession might be appointed to be one of the arbitrators. An award in which five of the six arbitrators concurred would be accepted by both governments as final; an award made by less than this majority would have no validity if either government should within three months protest that it was erroneous. In the event of an award made by less than the prescribed majority or of an equal division of the arbitral tribunal, it was agreed that there should be no recourse to hostile measures of any description until the mediation of one or more friendly powers had been invited by one or both of the high contracting parties. Territorial claims were defined as including all claims involving questions of servitude, rights of navigation and of access, fisheries, and all rights and interests necessary to the control and enjoyment of the territory claimed by either of the high contracting parties. It was left open to either government to ask that for all cases or for any particular case a substitute be agreed upon to name the umpire instead of the King of Sweden and Norway, on the ground that material changes of conditions had occurred, and the same would be done if the King of Sweden and Norway desired to be relieved of the functions. The treaty was concluded for five years.

Alaska Boundary Treaty.—A treaty was signed by the Secretary of State and the British Ambassador at Washington on Jan. 30, 1897, providing for the demarcation of as much of the boundary between Alaska and the Dominion of Canada as lies along the one hundred and forty-first meridian. The text of the treaty is as follows:

1. Each government shall appoint one commissioner, with whom may be associated such surveyors, astronomers, and other assistants as each government may elect.

The commissioners shall at as early a period as practicable proceed to trace and mark, under their joint directions and by joint operations in the field, so much of the one hundred and forty-first meridian of west longitude as is necessary to be defined for the purpose of determining the exact limits of the territory ceded to the United States by the treaty between the United States and Russia of March 30, 1867. Inasmuch as the summit of Mount St. Elias, although not ascertained to lie in fact upon the one hundred and forty-first meridian, is so nearly coincident therewith that it may conveniently be taken as a visible landmark whereby the initial part of said meridian shall be established, it is agreed that the commissioners, should they conclude that it is advisable so to do, may deflect the most southerly portion of said line so as to make the range with the summit of Mount St.

Elias, such deflection not to extend more than twenty geographical miles southwardly from the initial point.

2. The data relating to the information already made at this time as to that of the two governments concerned of points on or near the one hundred and forty-first meridian for the purpose of fixing its position shall be submitted to each government to the commissioners, who shall decide which of the results of the determination shall be adopted by them. In case of disagreement between the commissioners as to the correct geographical coordinates of one and the same point determined by either of the two governments separately, a position midway between the two locations in question of the one hundred and forty-first meridian shall be adopted, provided the discrepancy between them shall not exceed 1,000 feet. In case of a greater discrepancy a new point determination shall be made by the commissioners.

3. The location of the one hundred and forty-first meridian as determined hereunder shall be marked by intervisible objects, natural or artificial, at such distances apart as the commissioners shall agree upon, and by such additional marks as they shall deem necessary, and the time, when and where thus marked, in whole or in part, shall be deemed to permanently define for all international purposes the one hundred and forty-first meridian mentioned in the treaty of March 30, 1867, between the United States and Russia, and in the treaty of Feb. 28 (16), 1825, between Great Britain and Russia.

The location of the marks shall be described by such views, maps, and other means as the commissioner shall decide upon, and duplicate records of these descriptions shall be attested by the commissioners jointly, and be by them deposited with their respective governments together with their final report hereinafter mentioned.

4. Each government shall bear the expenses incident to the employment of its own appointees and of the operations conducted by them, but the cost of material used in permanently marking the meridian and of its transportation shall be borne jointly and equally by the two governments.

5. The commissioners shall diligently prosecute the work to its completion, and they shall submit to their respective governments from time to time, and at least once in every calendar year, a joint report of progress and a final comprehensive report upon the completion of the whole work.

The Sealing Question.—A convention for the determination of the damages to which British vessels seized in Bering Sea were entitled under the Paris award of August, 1893, was signed in January, 1897, with the assent of Canada. The Paris tribunal had decided that Bering Sea was a part of the high seas and pronounced the seizure of sealing vessels outside of territorial waters illegal, but declined to go into the question of damages, leaving that to the consideration of the two governments. The Senate in 1896 had rejected an agreement made with the British Government to pay over a lump sum of \$425,000 in settlement of all damages. The convention was duly ratified, and Judge William L. Putnam, of the United States Circuit Court, on the part of the United States and on the part of Great Britain, George F. King, a justice of the Supreme Court of Canada, were appointed commissioners to assess the damages.

President McKinley appointed John W. Foster and Charles S. Hamlin special commissioners to endeavor to secure from the British Government a *modus vivendi* for the suspension of seal killing in Bering Sea for the season of 1897. Two years before Mr. Gresham had urged a speedy modification of the Paris regulations in order to avert the ex-

termination of the herd, and proposed a commission to examine the question in which Japan and Russia should be invited to join, asking that sealing in Bering Sea should meanwhile be prohibited and the north Pacific restrictions extended along the thirty-fifth parallel to the Asiatic shore. After waiting four months the British Government answered that it was too late to stop the sealers and that an international commission would not lead to any useful result. When more seals were killed under the Paris regulations than before, the British authorities assumed that the seals were increasing instead of being rapidly exterminated, as the United States Government represented. In 1896 the depletion of the herd was evidenced in the pelagic catch, which was only half as great as in 1894. Dr. David Starr Jordan, the American expert who investigated the conditions of seal life, in his final report estimated that the herd on the Pribiloff Islands had decreased to about one fifth its size in 1874, and to less than half its size in 1890. His investigation in 1897 showed that the shrinkage on the rookeries in 1896 was 15 per cent., and that the number of killable males had fallen 33 per cent. owing to the starvation of pups from pelagic sealing. In his preliminary report he estimated the herd in 1896 as consisting of 143,071 breeding females, or a total number of 440,000 seals of all grades. Dr. Jordan described pelagic sealing as a suicidal industry which can be profitably continued only under conditions that must bring it to a speedy end. Since it began more than 600,000 fur seals have been taken in the north Pacific. This means the death of about 400,000 breeding females, the starvation of 300,000 pups, and the destruction of 400,000 pups still unborn, taking account only of the seals whose skins have been brought to the market, as no record is available of the animals lost after being speared or shot, though their number is known to be very great.

On May 10, 1897, Mr. Sherman, in a dispatch to Ambassador Hay, declared that the British Government had from the beginning and continuously failed to respect the real intent and spirit of the tribunal or the obligations imposed by it. The consequence was that the British sealers had practically accomplished the commercial extermination of the fur seal and brought to naught the patient labors and well-meant conclusions of the tribunal of arbitration. The British Government had opposed the demand for a conference before the term of five years fixed by the Paris tribunal, but the American Government urged that to defer the subject until after the termination of the season of 1898 would be fatal to the subject in view, as, should the destruction continue during two more seasons, there would be no occasion, owing to the disappearance of the seals, for a conference. The evasive policy that the British Government had followed was shown by the refusal to extend the regulations to the Asiatic waters; by the failure to put in operation the recommendations for a suspension of the killing of the seals for three, for two, or even for one year; by the neglect to put the regulations in force until long after the first sealing had been entered on; by the almost total evasion of the patrol duty; by the opposition to suitable measures for the enforcement of the prohibition against firearms; by the omission to enact legislation necessary to secure conviction of the guilty; and by the refusal to allow or provide for an inspection of skins in the interest of an honest observance of the regulations.

These accusations were treated by the British Government as too undiplomatic to deserve an answer except indirectly in a justificatory memorandum from the Colonial Office explaining that the British Government had withdrawn from the ar-

range ment for the sealing up of arms because it did not serve to save British vessels from unnecessary interference, but was actually made a pretext for unwarrantable seizures; that it had refused to ask for legislation for the inspection of skins because it was not believed that such inspection would serve any useful purpose, as the sex of young seals could not be determined accurately from an examination of their skins. The colonial authorities in this communication asserted that the British Government had performed with the utmost vigor all the requirements of the award, but had been compelled to make continual and unavailing protests against the attempts of the United States to hamper and embarrass the operations of British subjects pursuing their lawful vocation.

Prof. D'Arcy Thompson, the English scientific expert who investigated the conditions on the rookeries in 1896, declared in his reports that the accounts of the herd's immense decrease and the prophecies of its approaching extinction were overdrawn and untenable. Nevertheless there was abundant need for care and for prudent measures of conservation in the interests of all. A birth rate estimated at 143,000 per annum was not great in comparison with the drain upon the stock. A loss of over 20,000 is experienced among the pups ere they emigrate, and the dangers and loss they endure in their migration are considerable, and when to the measured loss in infancy and the unmeasured loss in youth and age is added the toll taken on the islands, and then the toll taken at sea, it is not difficult to believe that the margin of safety is narrow if it be not already somewhat overstepped. A perpetuation of the present numbers might be hoped; no increase could be counted upon. It was therefore to be hoped that a recognition of mutual interests and a regard for the common advantage would suggest measures of prudence that would keep the pursuit and slaughter of the animal within due and definite bounds.

Mr. Gresham, in March, 1894, suggested a convention between the four powers principally interested, namely, the United States, Great Britain, Russia, and Japan, to embrace a complete scheme of regulations applicable not only to the high seas, but also within the sovereignty, and he coupled it with a proposal that meantime the *modus vivendi* established during the arbitration should be renewed and extended over the whole area of the award. The British Government expressed a willingness to take part in a conference of the four powers and to renew the *modus vivendi*, but objected to its extension. The United States Government had approached the Russian and Japanese governments, which intimated that the condition of their adhesion to the regulations would be an extension of the limit laid down in the regulations, namely, 30° of north latitude, as far as the Japanese coast, so as to protect the Russian and Japanese rookeries. On July 28, 1897, Lord Salisbury answered Mr. Sherman's undiplomatic dispatch in a short note, in which he said that the British Government was willing to agree to a meeting of experts nominated by Great Britain and Canada and by the United States in October following, when the further investigations to be made on the islands during the current season would have been completed, the object of the meeting being to arrive, if possible, at correct conclusions respecting the numbers, conditions, and habits of the seals frequenting the Pribiloff Islands as compared with the several seasons previous and subsequent to the Paris award.

The Japanese and Russian governments accepted an invitation to send representatives to a sealing conference to be held in Washington in October, whereupon the British government, on Sept. 24,

acting, as in all matters connected with the seal fisheries, at the prompting of the Dominion Government, objected to the inclusion of Russia and Japanese representatives, and on Oct. 6 formally notified the Government of the United States that it would not enter an international conference in which Russia and Japan were represented, thinking that the conference should be confined to a comparison of the conclusions reached by the experts of Great Britain and the United States. Mr. Sherman expressed astonishment at Great Britain's determination not to take part in a conference including Russia and Japan, since Lord Salisbury had been informed by Mr. Hay in the beginning, both verbally and in writing, that the President hoped that those countries would be represented in the proposed conference. Mr. Sherman proposed that the American and British and Canadian experts should meet in accordance with the agreement as construed by Lord Salisbury. The international conference was held without the participation of Great Britain. Japan was represented by M. S. Fujita, Keishiro Matsui, and M. K. Mitsukuri; Russia, by Pierre Botkin, M. de Wollant, and M. Rutkovsky; the United States, by John W. Foster, Charles S. Hamlin, and Prof. David S. Jordan. These plenipotentiaries signed a convention for the suspension of pelagic sealing altogether for such time as, in the opinion of experts, the seals will require in order to insure their continued existence.

The meeting of experts took place in November. Prof. Thompson represented Great Britain, J. M. Macoun Canada, and Prof. Jordan the United States. The falling off in the seal catch of nearly half in the season of 1897, as compared with the previous year, confirmed the contention of the American experts. The total catch in the north Pacific declined from 73,000 to 38,700, of which 30,800 were taken by British, 4,100 by American, and 3,800 by Japanese vessels. In Bering Sea the catch was 29,500 in 1896, and in 1897 only 16,650, of which British vessels took 15,600 and American vessels 1,050. The United States Government offered to suspend the killing of seals on the islands for a year if the Canadian Government would agree to the suspension of pelagic fishing during 1898. This the Canadians declined to consider unless the owners of sealing vessels received compensation.

On Dec. 30 the Secretary of the Treasury issued regulations for the enforcement of an act of Congress, signed by the President on the day preceding, prohibiting the import of seal skins taken anywhere but on the Pribiloff Islands. It was ordered that no seal skins, raw, dressed, dyed, or otherwise manufactured, should be admitted, even as passengers' personal effects, unless accompanied by an invoice signed by the United States consul at the place of exportation certifying that the skins were not taken from seals killed at sea, and that all skins not certified should be seized and destroyed.

The Bimetallic Mission.—President McKinley appointed Senator Edward O. Wolcott, Adlai E. Stevenson, and Gen. Charles J. Paine special envoys to France, Great Britain, and Germany with the mission to discuss, in concert with the United States ambassadors in those countries, questions connected with the monetary problem and with plenipotentiary powers to come to some agreement for the establishment of bimetalism. They went first to Paris, where they secured the co-operation of the French Government, and in their later conferences and negotiations with the British Government they had the active support of the French embassy. They laid the following proposals before the British Government on July 15: The opening of the Indian mints to silver coinage and the repeal of the order making the sovereign legal tender in India;

the placing of one fifth of the balance in the issue department of the Bank of England in silver; the raising of the legal tender limit of silver coin from 40s. to £20, together with the issue of notes for 20s. and 10s. based on silver and the withdrawal of the half sovereign; and an agreement to purchase a certain amount of silver annually, or as an alternative to purchase silver at a certain value to the extent suggested by the French ambassador, £1,000,000 a year. They suggested further that French and British dollars should be coined in England with full legal tender in the silver standard; the coinage of Great Britain and legal tender in the United Kingdom within the limit of £10, also that the self-governing British colonies be invited to follow on the same lines, and that Egypt should adopt free silver coinage. The reopening of the Indian mints was the crucial point in the negotiations. Baron de Courcel, the French ambassador, would have preferred to discuss the subject on the assumption that the English mints, as well as the Indian, should be opened to unlimited silver coinage. This was met by an uncompromising declaration of the Chancellor of the Exchequer that no such policy could possibly be entertained. The French Government insisted on the ratio of 15½ to 1 as representing the normal and natural relation between silver and gold. The English Government was bound by a unanimous resolution of Parliament, passed on March 18, 1896, and accepted by it, to do all that was in its power to secure by international agreement a stable monetary par of exchange between silver and gold on the express understanding that Great Britain would not itself depart from the gold standard. The Chancellor of the Exchequer, in speaking to this resolution, said that, while the Government would not be justified in proposing or accepting a departure from the gold standard of the United Kingdom, if it were "possible for other nations to be joined in a bimetallic league or in an agreement on this matter, which seemed good for themselves, I have little doubt but that the Indian Government would be prepared to agree with us in reopening the Indian mints to the free coinage of silver and that we might endeavor by other minor means to promote the increase of silver in coinage to aid in an international agreement on this great question." The First Lord of the Treasury said: "With this resolution in our hand we go to foreign nations and tell them that, although we are by tradition and by custom attached to a gold currency, and though they can hardly ask us to make this great change in our habits, a change far greater than any demanded of them, we will yet do for the cause of bimetalism as much as any country in the world. For we will make this great contribution to a bimetallic system—we will go back upon the deliberately arranged method of providing a currency for India; we will reopen the Indian mints, we will engage that they shall be kept open, and we shall therefore provide for a free coinage of silver within the Indian Empire for a population greater in number than the population of Germany, France, and America put together."

The proposal to hold one fifth of the reserve of the Bank of England in silver, which the statutes allow and which at the Paris Monetary Conference of 1881 the officers of the bank promised, at the suggestion of Italy and the United States, should international bimetalism be re-established, at first met with the approval of the governor and directors, but a storm of protests from financial circles made it impracticable for them or the Government to give effect to this suggestion. The proposal for reopening the Indian mints was submitted to the Indian Government. The answer, prepared by Sir James Westland, was dispatched on Sept. 16. The impor-

tation of the ratio of 15½ to 1 while the actual market ratio was 35 to 1, he contended, would shatter for a time at least the export trade of India, would gravely affect the relations between the state as landlord and the cultivating classes, would diminish the receipts from the state railways, and would give a shock to commercial and social relations by a sudden increase in the value of the rupee from 16½ to 25½, to be followed in all probability, if the anticipations of the bimetallicists were not realized, by as rapid a fall, probably to 9½ or even lower. The whole cost and risk of the experiment would be substantially borne by India alone, as France and the United States have a certain stock of gold on which they can rely if the new system were to break down, whereas India, reduced to a monometallic silver basis, would be unable to help herself. Moreover, the change in prices, to which France and the United States look with hope, would be injurious to Indian interests. India had to face her own difficulties, and saw her way through them after twenty years of monetary disturbances, if her efforts are not hampered by extraneous interference. The measures adopted to introduce a gold standard in India were at length approaching final success; the defects urged against the transition system could therefore be waived and the policy of linking India financially with Great Britain, the country to which she was most closely bound, by commercial as well as political ties, ought not to be weakened. An international agreement for the adoption of bimetallicism such as was contemplated by the Indian Government in 1892 was not in question. The project of a conference put forward by the American envoys extended only to a compact which France and the United States were provisionally willing to enter into in consideration that the Indian mints were opened and that some assistance was given in other ways. This the Indian Government considered too narrow a basis, even from the point of view of the bimetallicists, affording no security for the permanence of the new arrangement in the two contracting countries, which might be upset by such incidents as an effort to retain gold when other nations pour in silver or by the temporary adoption of a paper currency. That help would be given by a limited addition to the use of silver by countries outside the agreement was not considered worth counting upon, as it would have scarcely an appreciable influence in raising the gold price of the cheaper metal. The Indian Council recorded as its unanimous and decided opinion that it would be most unwise to reopen the mints as part of the proposed arrangement, especially at a time when India was to all appearance approaching the attainment of stability of exchange by the operation of its own isolated and independent action. Lord Salisbury, on Oct. 19, in an identical note to the United States and French ambassadors, endorsed this conclusion, pointing out that the Government of India could hardly be expected to give up the policy which for four years it had been endeavoring to make effective in the absence of substantial security that the system to be substituted for it was practically certain to be stable. If, owing to the great divergence between the proposed ratio and the present gold price of silver or to any other cause, the legal ratio were not maintained the position of silver might be worse than before and the financial embarrassments of India greater than any with which it had as yet had to contend. Even were these arguments less strong than they appear, the Government of India could hardly be compelled to make a second important change in Indian currency within so short a time as four years at a time of exceptional difficulty and suffering. In these circumstances the British Government was unable to accept the first proposal of the United States rep-

resentatives, and as this was, in its opinion, and also in that of the representatives of the United States and France, by far the most important contribution which could be made by the British Empire toward any international agreement, it did not feel it to be necessary to discuss the other proposals at present. The British Government was desirous to ascertain how far the views of the American and French governments were modified by the decision arrived at and whether they desired to proceed further with the negotiations.

The Supreme Court.—The result of the work of the United States Supreme Court for the past year is given below. The number of cases on the docket for the term beginning in October, 1896, was 834. Of these 447 were disposed of during the term. The number actually considered by the court was 338. Among the cases of general interest decided were the following:

South Carolina Dispensary Cases.—The cases of *Scott vs. Donald* and *Gardner vs. Donald*, decided Jan. 18, 1897, involved the validity of the State dispensary law so far as it relates to the seizure of liquors imported into the State by private citizens for their own consumption. The court, in an elaborate opinion, declared that the provisions of the law forbidding the importation of such liquors by any one except certain State officials appointed under the act was in contravention of the Constitution of the United States. This decision does not affect the merits of the law as a whole, but applies to the features that bear on interstate commerce. Justice Brown delivered a dissenting opinion, holding that the act of Congress of Aug. 8, 1890, declaring that intoxicating liquors transported into any State and remaining there for sale or consumption should be subject to the operation of the laws of the State, applied, and permitted the traffic to be regulated in such manner as the several States shall deem best for the public interest.

The Neutrality Act.—The United States *vs.* the steamer "Three Friends" was decided March 1, 1897. The steamer "Three Friends" attempted to land arms and ammunition on the island of Cuba in aid of the insurgent forces, and was seized as forfeited to the United States under the neutrality act. The United States district court of Florida decided that the Cuban insurgents were not a people, state, district, or colony within the meaning of act, and that the steamer was not liable to seizure. The opinion delivered by Chief-Justice Fuller construed the neutrality act and held the seizure to have been legal, and the cause was remanded with instructions to resume custody of the vessel. The case illustrates the distinction between recognition of belligerency and recognition of a condition of political revolt; between recognition of the existence of war in a material sense and war in a legal sense. Although the political department of the Government had not recognized the existence of a *de facto* belligerent power engaged in hostility with Spain, it had recognized the existence of insurrectionary warfare. Justice Harlan dissented.

Lotteries.—In *Dougllass vs. Kentucky*, decided Nov. 29, 1897, it was held that a lottery grant by a State is not a contract within the meaning of the Constitution.

The Bell Telephone Case.—United States *vs.* the American Bell Telephone Company *et al.* was decided May 10, 1897. This suit was brought to cancel a patent issued to the company, as assignee of Émile Berliner, the alleged inventor, in 1891. The cancellation of the patent was sought on the ground that the delay of thirteen years in the Patent Office was fraudulent and through the fault of the telephone company, and that a patent for the same invention had been issued in 1880. The decision

affirmed the decree of the court below and was adverse to the contention of the Government. Its effect is to continue the control of the telephone by the Bell Company for seventeen years from the date of the patent granted in 1891. Justice Harlan dissented, but delivered no opinion.

The Antitrust Decision.—A decision was rendered in *United States vs. the Trans-Missouri Freight Association*, March 22, 1897. The case arose under the act of July 2, 1890, commonly called the "Sherman antitrust law." The Trans-Missouri Freight Association consisted of 18 railways west of the Missouri river. A suit was brought in the district of Kansas to enjoin a contract and combination among these companies to maintain rates of freight. The case was decided against the United States in the lower courts, but the Supreme Court sustained the Government's position and held that the law in question applied to common carriers by rail, and that the contract between the members of the association was a restraint of interstate trade and commerce within the meaning of the act. Justices White, Field, Gray, and Shiras dissented, holding that the subject was covered by the interstate commerce act, and that reasonable contracts, although they in some measure restrain trade, are not within the meaning of the antitrust act.

Functions of the Interstate Commerce Commission defined.—On May 24, 1897, an important decision was rendered in the case of the Interstate Commerce Commission *vs. The Cincinnati and New Orleans Railroad Company*, construing the act to regulate commerce, approved Feb. 4, 1887, which created the Interstate Commerce Commission. The opinion was rendered by Justice Brewer. The gist of it is found in the following extract: "Under the interstate commerce act the commission has no power to prescribe the tariff rates which shall control in the future, and therefore can not invoke a judgment in mandamus from the courts to enforce any such tariff by it prescribed." Justice Brewer asked, "Has the commission no functions to perform in respect to matter of rates?" Replying to his question, he said: "Unquestionably it has, and most important duties in respect to this matter. It is charged with the general duty of inquiring as to the management of the business of railroad companies, and has the right to compel full and complete information as to the manner in which such companies are transacting their business. And with this information it is charged with the duty of seeing that there is no violation of the long-and-short-haul clause, that there is no discrimination between individual shippers, and that nothing is done by rebate or otherwise to give preference to one against another; that no undue preference is given to one place against another, but that in all things that equality of right which is the great purpose of the interstate commerce act shall be secured to shippers." Justice Harlan dissented.

The Interstate Commerce Commission *vs. the Alabama Midland Railway Company et al.* was decided Nov. 8, 1897. This was another decision limiting the effectiveness of the interstate commerce law. The case arose from an order issued by the Interstate Commerce Commission against the railroads charged with violating the "long-and-short-haul clause" of the law which forbids railroads charging more for a short haul than for a long one where the circumstances are similar. The commission has held that, when lower rates were to be put in operation, the schedule must first be filed with the commission. This was negated by the decision. On the question whether railroads can meet water competition without the consent of the Inter-

state Commerce Commission, the Court said: "We are unable to suppose that Congress intended to forbid common carriers, in cases where the circumstances and conditions are substantially dissimilar, from making different rates until and unless the commission shall authorize them to do so." Justice Harlan dissented, remarking that the opinion went far toward defeating the object of the interstate commerce law.

In the *Interstate Commerce Commission vs. the Detroit, Grand Haven and Milwaukee Railway Company* the specific charge in this case was that the railroad company furnished cartage free to merchants of Grand Rapids, and did not furnish similar service to the merchants of Ionia, 23 miles distant. The court held that the act has in view only the transportation of passengers and property by rail, and that when the passengers and property reached and were discharged from the cars at the company's station at Grand Rapids for the same charges as those received for similar service at Ionia, the duties cast upon the company were fulfilled and satisfied. The subsequent history would not concern the Interstate Commerce Commission.

State Laws affecting Railroads.—In *St. Louis and San Francisco Railway Company vs. Mathews*, decided Jan. 4, 1897, the Court sustained the constitutionality of a Missouri statute which gives property owners the right to recover damages from railroad corporations for destruction of property caused by fire communicated from locomotives.

In *New York, New Haven and Hartford Railroad Company vs. New York*, decided March 1, 1897, the court sustained the constitutionality of the statute of New York passed June 18, 1897, regulating the heating of steam passenger cars, and declared that it was clearly competent for the State, in the absence of national legislation on the subject, to forbid under penalties the heating of passenger cars in that State by stoves kept inside the cars or suspended therefrom, although such cars may be employed in interstate commerce. The power of Congress to regulate commerce among the States does not impair the authority of the States to make regulations providing for the public safety.

In *Gulf, Colorado and Santa Fe Railway Company vs. Ellis*, decided Jan. 18, 1897, the court held unconstitutional a law of Texas, passed April 3, 1889, requiring railroads to pay to the successful plaintiff attorney's fees not exceeding \$10 in certain actions wherein judgments are recovered against them. This law was held to operate to deprive railroad corporations of the equal protection of the laws, and to be within the prohibition of the fourteenth amendment. This contest over the question of a small fee established an important precedent. It is also interesting as deciding that a corporation is a "person" within the meaning of the fourteenth amendment. Chief-Justice Fuller and Justices Gray and White dissented.

In *Gladson vs. Minnesota*, decided April 12, 1897, it was held that a State statute requiring railroad passenger trains to stop at county seats is a reasonable exercise of the police power of the State, and does not unconstitutionally interfere with interstate commerce.

The Ohio Tax Law.—In *Adams Express Company vs. Ohio State Auditor*, the court, by a vote of 5 to 4, upheld the constitutionality of the Ohio law (the Nichols law) providing for taxation of telegraph, telephone, and express companies, and declared the validity of certain assessments made. The law taxed the corporations on the basis of the value of Ohio's share of the stock. It was claimed that the law was unconstitutional as a restraint upon interstate commerce, and that it was taking property of the citizen without due process of law,

and extending taxation beyond the jurisdiction of the State. Justices White, Field, Harlan, and Brown dissented from the opinion of the majority, and held the law unconstitutional.

Witnesses before Congressional Committees.—The case of Elverson R. Chapman, decided April 19, 1897, involved the power of the United States Senate to compel witnesses to give testimony before its investigating committees. The court refused the writ of *certiorari* and *habeas corpus* asked by Mr. Chapman, a New York broker, who refused to testify before a Senate committee, and was sentenced by the lower court to thirty days' imprisonment and \$100 fine. His recusancy was committed in connection with the investigation by the Senate of the alleged Sugar Trust scandal at the time of the tariff bill in 1894. It was contended that the law under which the conviction was had (section 102, R.S.) was unconstitutional. The court held that the Senate, under its constitutional right to censure and expel members, had the right to investigate any alleged improper conduct of Senators, and could compel witnesses to give testimony. It held that refusal to testify was also an offense against the United States. Congress possessed the constitutional power to enact a statute to compel the attendance of witnesses, and to compel them to make disclosures of evidence to enable the respective bodies to discharge their legitimate functions; and it was to effect this that the act in question was passed; but this act did not constitute a delegation of the power to punish for contempt. As to the allegation that the law was in violation of the fifth amendment of the Constitution, which provides that no person shall be subject for the same offense to be twice put in jeopardy of life or limb, the court said "it was quite clear that the contumacious witness is not subjected to jeopardy twice for the same offense, since the same act may be an offense against one jurisdiction and also against another; and indictable statutory offenses may be punished as such while the offenders may likewise be subjected to punishment for the same acts as contempts, the two being capable of standing together."

The President's Power to remove Officers.—The case of Lewis E. Parsons, Jr., vs. the United States was an appeal from the decision of the Court of Claims. It involved the point whether the President, under the Constitution, has the power to remove before the expiration of his term, an officer appointed, with the consent of the Senate, for a term fixed by law. Parsons was appointed by President Harrison, and confirmed by the Senate, as United States district attorney for the Northern and Middle Districts of Alabama, and the law fixed the term of office at four years. He was removed by President Cleveland before the expiration of his term, but declined to yield possession of his office to the new appointee until an order was issued from the United States circuit court requiring him to surrender the books and papers of the office. He complied with the order, and then brought suit for his fees up to the end of his term of office. The court held that the right of removal was an incident of the right of appointment; and that, although the appointment was with the advice and consent of the Senate, the appointing power was in the President, and, in consequence, the right to remove was his; and that the designation of four years as the term of appointment was not designed to give a term that should in all events last for four years, but should restrict the term to that period, subject to the pleasure of the appointing power.

The Thirteenth Amendment.—The decision in *Robertson vs. Baldwin*, rendered Jan. 25, 1897, is

a clear exposition of the meaning and scope of the expression "involuntary servitude" contained in the thirteenth amendment to the Constitution, particularly with reference to contracts with seamen. It was held that Congress has the power to confer upon justices of the peace of the States the authority to apprehend deserting seamen and return them to their vessels, and that the constitutional provision against involuntary servitude does not apply to contracts of seaman'ship. Justice Harlan dissented.

The Fourteenth Amendment.—The decision in *Allgeyer vs. State of Louisiana* held unconstitutional a State statute which had the effect of depriving a citizen of the State of his right to contract outside of the State for insurance on his property in the State. While there is power in a State to regulate the business of a foreign corporation within its borders, the fundamental rights of the citizen can not be interfered with. One of these rights is the right to make contracts.

In *Chicago, Burlington and Quincy Railroad Company vs. Chicago*, decided March 1, 1897, the court declared the potency of the fourteenth amendment to restrain action by a State through either its legislative, executive, or judicial departments which deprives a party of his property without due compensation. A judgment of a State court, even if authorized by statute, whereby private property is taken for public use, without compensation made or secured to the owner, is wanting in the due process of law required by the fourteenth amendment.

Oleomargarine.—In *re Kollock*, decided March 1, 1897, it was decided that the oleomargarine act of Aug. 2, 1886, is on its face an act for levying taxes, and the matter of designating the marks, brands, and stamps is left to the Commissioner of Internal Revenue with the approval of the Secretary of the Treasury. This involves no unconstitutional delegation of power.

Forfeiture of Land Grants.—In *Atlantic and Pacific Railroad vs. Mingus*, decided Feb. 15, 1897, the court sustained the validity of the act of Congress of July 6, 1886, forfeiting a portion of a land grant. It was held that Congress did not intend, by the statutes under which the company received its grant, to vest the lands absolutely in the company without a right to reacquire them on failure of the company to comply with the conditions. When the United States Government grants public lands upon condition subsequent it has the same right to re-enter, on breach of the condition, which a private grantor would have under the same circumstances, which right is to be exercised by legislation.

The case of *United States vs. Winona and St. Peter Railroad Company*, decided on the same date, involved the construction of the act of Congress of March 3, 1887, providing for the adjustment of land grants made by Congress to aid in the construction of railroads, and the act of March 2, 1896, which confirmed titles of *bona fide* purchasers and extended time for bringing suit.

The celebrated land-grant case of the *Southern Pacific Railroad vs. United States*, decided Oct. 18, 1897, involved nearly 1,000,000 acres of land and indirectly determined the title to more than 3,000,000 acres. The lands in southern California were those granted by Congress in 1866 to aid in the construction of the Atlantic and Pacific Railroad. As the railroad was not constructed the grant was forfeited by act of Congress in 1886. The Government's claim was upheld after a litigation which has been pending about ten years.

Several important cases were decided in the court on appeal from the Court of Private Land Claims. One of these, *United States vs. Sandoval*, in which the opinion was rendered by Chief-Justice Fuller,

THE NEW BUILDING FOR THE LIBRARY OF CONGRESS.

involved the title to the San Miguel del Bado land grant, including 315,000 acres of land in New Mexico. The court held that at the date of the treaty of Guadalupe Hidalgo neither the settlers nor the town on the grant could have demanded the legal title to the land in question from the former Government, and the Court of Private Land Claims was not empowered to pass the title, and that it was for the political department to deal with the equitable rights involved.

The court affirmed the decision of the Court of Private Land Claims in the case of the Chama Spanish land grant, Rio Arriba Land and Cattle Company vs. United States, involving title to 473,763 acres in Rio Arriba County, New Mexico. The decision was favorable to the contention of the Government. These decisions are decisive of several cases still pending in the Court of Private Land Claims, and will save to the public domain hundreds of thousands of acres.

In Dunlop vs. United States several important questions of evidence in connection with the offense of depositing in the mails a newspaper containing obscene and indecent matter were passed upon unfavorably to the accused, the publisher of the paper, and the definition of such matter was considered.

The Congressional Library.—The new building for the library of Congress, authorized by the act of April 15, 1886, was completed and opened in 1897. It is 470 × 340 feet, built of white New Hampshire granite in the style of the Italian Renaissance, with four projecting corner pavilions and one in the center, these having ornate columns and capitals, and the main building window casings carved in high relief. In the keystones of 33 windows are carved human heads representing various race types. Colossal statues of Atlas are carved below the roof of the central pavilion, surmounted by a pediment with an emblematic group in granite and sculptured American eagles. Above the arches of the three entrance doors are spandrels representing "Art," "Science," and "Letters." There is a carved balustrade surmounting the whole building, and in the center a gilded dome, the apex of which is 195 feet above the ground, while the walls are 69 feet high. There are three stories, the lower one of rustic stone, the others of a smooth bush-hammered finish, with vermiculated ornamentation at the corners. The entrance has massive granite approaches and wide staircases with heavy balustrades. In the ornamental parterre in front is a large bronze fountain. The pumps, boilers, and machinery for heating the building are in an annex in the rear. The interior is decorated with sculptures by Frederick McMonnies, Augustus St. Gaudens, Philip Martiny, and others; and with paintings by E. H. Blashfield, George W. Maynard, Walter Shirlaw, Kenyon Cox, W. L. Dodge, Robert Reid, and other American artists. The public reading-room is octagonal, with a diameter of 100 feet, the dome being supported by arches with massive pillars of Tennessee and Numidian marble, the arches intersected by an upper and lower arched gallery. The original plans for the building were submitted by Smithmeyer and Pelz, and Mr. Smithmeyer was appointed architect. Before the building was begun Gen. Thomas L. Casey was placed in charge, with Bernard R. Green as superintendent of construction, while the limit of cost was increased from \$4,000,000 to \$6,300,000. The designs for the interior architecture and decoration were made by Edward Pearce Casey. The capacity of the library as now shelved is sufficient for 1,900,000 volumes, and there is room to store more than 4,000,000. Opening out of the central reading-room on each side are two iron book stacks made from Mr. Green's designs, each nine stories

high, with floors of white marble, each stack having a capacity for 800,000 volumes. The floor area of the library on the first story is 110,000 square feet.

UNITED STATES, FINANCES OF THE. The receipts of the Government for the fiscal year ending June 30, 1897, were \$20,911,759 in excess of those for the previous year, the increase in the revenue from customs alone being \$16,532,375, due mainly to the increased importations of dutiable goods near the close of the year to avoid increased tariff rates under the bill then pending in Congress, and which became a law July 24, 1897. Notwithstanding the increased revenue, there was a deficit made up from the cash in the Treasury of \$10,062,453. The several items of receipts and expenditures for 1897 compared with like items for 1896 are shown below:

SOURCES OF RECEIPT	YEAR ENDING JUNE 30.	
	1897.	1896.
Internal revenue	\$19,000,074	\$18,702,065
Postal service	27,000,000	26,400,000
Customs	178,504,737	160,000,730
Sales of public land	984,581	1,000,000
Tax on circulation of national banks	1,872,360	1,701,607
Repayment of interest on Pacific railways	942,149	950,000
Sinking fund for Pacific railways	2,277,173	1,999,670
Customs fees, fines, penalties, and forfeitures	106,807	621,000
Fees, consular, letters patent, and lands	2,401,250	2,401,250
Sales of property except lands	1,157,000	600,750
Profit on coals	1,230,814	2,005,000
Revenue, District of Columbia	2,504,180	2,846,400
Immigrant fees	370,500	443,670
Miscellaneous	2,990,500	3,651,777

Assessing and collecting internal revenue	3,577,000	3,700,000
Miscellaneous	22,000,000	21,100,000
Total ordinary	\$404,670,000	\$404,670,000
Public debt principal	20,000,000	20,000,000
Grand total	\$424,670,000	\$424,670,000

No new loans were issued during the year except for refunding 4-per-cent. certificates, but there was redeemed from the cash on hand 100 matured loans \$252,002, of which \$4,192 was for fractional paper currency, of which there still remains

outstanding \$6,886,937, besides \$8,375,934 estimated loss or destroyed, and struck from the debt statement in 1879. There was also a net increase in the ordinary payments during the year of \$13,594,713, of which \$5,080,908 was for an increase of the navy, \$4,759,940 for increased bounty on sugar, and \$1,849,206 for an increased deficiency in the postal service.

Of the debt for which no reserve is required by law to be held there has been little change during the year except that the liability of the Treasury to the national bank redemption account was increased \$13,336,376. Legal-tender notes to meet the entire amount of the liability in this account, whatever it may be, have been received by the Treasury, and if not still in its cash have been paid out in current disbursement, and any increase or decrease in the liability is of no special moment. The several items of debt without reserve for 1897 and 1896 are as below shown:

DEBT WITHOUT RESERVE.	OUTSTANDING DEC. 31,	
	1897.	1896.
Funded loan continued at 2 per cent.	\$25,264,500	\$25,264,500
Funded loan of 1867 4 per cent.	559,611,500	559,638,300
Refunding certificates, 4 per cent.	44,220	45,890
Loan of 1891, 5 per cent.	100,000,000	100,000,000
Loan of 1895, 4 per cent.	162,315,400	162,315,400
Old loans matured.	1,399,250	1,383,070
Old demand notes.	54,347	54,347
United States notes green backs.	246,681,016	246,681,016
National bank redemption account.	32,268,116	18,876,333
Fractional notes.	6,886,937	6,890,504
Total.	\$1,134,586,336	\$1,121,249,960

Any changes in the debt having a reserve dollar for dollar should have no special bearing upon the financial condition of the country. It will be seen, however, from the table herewith that during the fiscal year there was a decrease in the amount of Treasury notes outstanding of \$13,468,000, and an increase in the amount of silver certificates of \$17,042,000. The decrease mentioned is permanent, there being no authority for an increased issue of Treasury notes. The decrease in the amount of these notes has been brought about by issuing the silver bullion bought with the notes into silver dollars, retiring the notes, and issuing in their place silver certificates, and also issuing such certificates on the dollars arising from the "profit on exchange" in the transaction. The original issue of the Treasury notes was \$155,931,002, but through issuing the bullion to pay for which they were issued at par with gold, and redeeming the notes in manner as stated, the amount has been reduced to \$106,348,281, and the reduction is still going on, and in time, if not stopped, the entire issue of Treasury notes will have disappeared, silver certificates taking their place.

DEBT WITH RESERVE.	OUTSTANDING DEC. 31,	
	1897.	1896.
United States notes green backs.	\$100,000,000	\$100,000,000
Treasury notes (1890)	106,348,281	119,816,280
Currency certificates (1872)	44,555,000	50,830,000
Gold certificates.	38,128,149	39,979,780
Silver certificates.	387,925,504	370,883,504
Total.	\$636,921,734	\$680,949,564

The assets and liabilities of the Treasury are shown for the close of the calendar instead of the fiscal year, reports being available for that purpose. It will be seen from the comparative tables below

that no marked change in the items of liabilities has taken place, except in Treasury notes and silver certificates, the cause of which change has already been explained. On Dec. 31, 1897, there were demand obligations against the Treasury of \$861,391,370, to meet which the Treasury held an equivalent in actual cash.

The aggregate assets increased during the year \$17,927,818, gold coin and bullion having considerably increased, also the balances held by national bank depositaries. The latter increase is owing to the temporary deposit in the banks of the proceeds arising from the reimbursement to the Government of the indebtedness of the Union Pacific Railroad Company, amounting in all to \$58,448,223.75, but the transaction did not occur until after the close of the fiscal year, hence does not show on the statement of receipts and expenditures.

ITEMS.	YEAR ENDING DEC. 31,	
	1897.	1896.
<i>Liabilities:</i>		
Gold certificates	\$38,128,149	\$39,279,780

Total.	\$861,391,370	\$853,463,552

The increase of the monetary circulation of the country outside of the Treasury during the last fiscal year was \$70,887,240, of which \$29,825,131 was in gold coin. There was also a considerable increase in silver certificates and Treasury notes, and a small increase in national bank notes. The total circulation at the close of the year was \$1,721,100,640.

CIRCULATION OUTSIDE OF THE TREASURY.	IN CIRCULATION DEC. 31,	
	1897.	1896.
Gold coin.	\$547,568,260	\$517,743,229
Standard silver dollars.	61,491,073	58,581,819

Total.	\$1,721,100,640	\$1,650,223,400

There was executed at the several mints during the fiscal year ending June 30, 1897, a largely increased coinage, of which that of the silver dollar piece shows the greatest increase over that of the preceding year. The bullion from which the pieces were coined was that purchased under the act of 1890 in payment for which Treasury notes were issued, and which are now being retired as before stated. The coinage in detail is as follows:

WEST POINT, AND THE MILITARY ACADEMY.

UNITED STATES MILITARY ACADEMY.

The United States Military Academy is at West Point, Orange County, N. Y., on the Hudson river, 32 miles north of New York city. The eastern side of the Point is a nearly straight, precipitous shore, while the northern side, curving and forming a bay at its western extremity, has a comparatively gentle slope, and commands a view of the river.

The academy is on a level terrace 160 feet above the water, flanked on the west by rocky heights; of these, the one on which stand the ruins of Fort Putnam is the nearest and most prominent. The principal buildings of the Academy are at the southern end of the terrace; the quarters of the officers and professors are on the west side and along the roads leading southward and westward.

The Military Academy, established for the fundamental education of the officers of the army, is the foundation on which our whole military system rests. It is believed that George Washington first broached the subject as a desirable matter for national legislation prior to 1793. He proposed prompt action to Congress during that year. In his last message, issued in December, 1796, President Washington declared that "the desirableness of this institution has constantly increased with every new view I have taken of the subject."

The act of Congress establishing the Academy was not signed until March 16, 1802. During the first ten years of its existence the Academy record was far from creditable; but this was proved to be largely due to negligence, mismanagement, and apathy on the part of the Federal authorities. Abuses became so flagrant that reorganization was ordered by an act of April 29, 1812. With the appointment of Brevet-Major Sylvanus Thayer, who was known afterward as "the Great Superintendent" and "Father of the Military Academy," on July 28, 1817, came a change. He organized the cadets into a battalion of two companies, officered by members of their own body, with a colonel at its head and an adjutant and a sergeant-major for his staff; appointed an officer of the army as commandant of cadets, responsible for their tactical instruction and soldierly discipline; transacted business with members of his command only at stated office hours; classified all cadets according to their proficiency in studies; divided classes into small sections for more thorough instruction; required weekly reports, showing the daily progress of students according to a scale of marks; directed more thorough recitations and a freer use of the blackboard; greatly improved the curriculum of studies, according to a well-digested programme; reorganized a proper academic board, with the

superintendent at its head; introduced the check-book system, to curtail the growing extravagance of cadets; reduced the expense of cadets' papers to less than half the cost at the West Point Military Academy, in England; laid the stress of the day dine with him, enjoining the cadets to learn all that was taking place in the past hours as required cadets to obtain a period from him for almost everything, even to a letter from the post office, thus maintaining such constant action that he could stand their characters and habits.

The Academy of to-day is merely the development of that of 1863. Nothing has been added to the requirements for admission except geography and United States history. These, with reading, writing, spelling, arithmetic, and grammar, complete the list. These requirements are so simple that hundreds of boys who would never dream of being able to enter college obtain appointments to the academy.

The Academy aims at what no military institution has accomplished, to furnish our whole army with a body of well-educated officers, by instructing every pupil in all branches of scientific and military knowledge, regardless of the corps or arm to which he may be assigned. How far success has been met with in this endeavor to provide useful soldiers and creditable citizens for the republic is well told by Gen. George W. Golden, in his "Biographical Register of the Graduates of the Military Academy": "West Point has filled every arm of the military service with talent, efficiency, and integrity; has materially aided in successfully conducting three great wars, extending our national domain and preserving the Union; has perpetually pushed the wild savage from our borders, and been the pioneer of advancing civilization; has constructed and armed our fortifications, improved our harbors, lakes, and rivers, defined our boundaries, surveyed and lighted our coasts, and explored the length and breadth of our land; has given to our militia and volunteers large numbers of valuable officers, and to our colleges able presidents and professors; has furnished distinguished civil engineers, who have bound our territory together with a network of railways and canals; has supplied valuable city, State, and Government functionaries; has improved our workshops and the cultivation of the soil; has added its note to the countinghouse, the bar, and the pulpit; and, through the contributions and text-books of its graduates, has greatly elevated the scientific standard of most of the educational institutions throughout our country, and even extended its influence abroad."

Gen. Winfield Scott, from observation and experience during the war with Mexico, thus expresses his views as to capability of West Point graduates in times of war: "I gave it as my fixed opinion that, but for our graduated cadets, the war between the United States and Mexico might, and probably would, have lasted four or five years, with, in its first half, more defeats than victories falling to our share; whereas, in less than two campaigns we conquered a great country and a people, without the loss of a single battle or skirmish."

To this Gen. Michie, Professor of Philosophy in the Academy, adds his testimony: "The records of the civil war sufficiently attest that the graduates of West Point, in loyalty, integrity, and ability, were equal to the vast responsibilities so suddenly thrust upon them by that great uprising. I say loyalty with deliberate purpose; for, though the Southern-born graduates were credited and reared in the belief of paramount allegiance to the State, yet 162, or nearly half of their number, remained true to the teachings of their alma mater, fighting

against rebellion and resisting every temptation of family and friends to swerve them from their devotion to the Union. When the war was ended many of the graduates of West Point had won the highest military fame, all had gained honorable distinction, and none had lost his integrity."

The Staff.—The Military Academy is in charge of a superintendent, who directs the studies and exercises, has command over all persons belonging to the academy, and commands the military post. The present superintendent is Col. Oswald H. Ernst, a graduate of the class of 1864, lieutenant colonel, corps of engineers.

By act of Congress, there is a board of visitors of twelve members, charged with the duties of advisory supervision. Seven of the number are chosen by the President of the United States, with due regard to State representation; two are appointed by the president of the Senate, and three are chosen by the Speaker of the House of Representatives.

The military staff of the academy consists of (1) an adjutant, who is also adjutant of the post, recruiting officer, commander of the band and of field music; (2) treasurer of the academy, who is also quartermaster and commissary of cadets; (3) quartermaster of the academy, who is also disbursing officer; (4) assistant to the quartermaster, who is also officer of police; (5) commissary and treasurer, in charge of post exchange; (6) surgeon; (7, 8) two assistant surgeons.

The academic departments and staff are as follow:

Tactics.—Commandant of cadets, who is also instructor of tactics and is charged with the discipline and administration, and commands the battalions; 3 senior instructors for cavalry, artillery, and infantry tactics respectively, and 4 assistant instructors.

Civil and Military Engineering.—One professor, 1 assistant professor, and 2 instructors.

Natural and Experimental Philosophy.—One professor, 1 assistant professor, 2 instructors, and 2 officers in charge of the observatory and astronomical observations.

Mathematics.—One professor, 1 associate and 1 assistant professor, and 7 instructors.

Chemistry, Mineralogy, and Geology.—One professor, 1 assistant, and 3 instructors.

Drawing.—One professor, 1 assistant professor, and 2 instructors.

Modern Languages.—One professor, 1 assistant professor of Spanish, 1 assistant professor of French, and 5 instructors.

Law and History.—One professor, 1 assistant professor, and 3 instructors.

Practical Military Engineering, Military Signaling and Telegraphy.—One instructor and 1 assistant instructor.

Ordnance and Gunnery.—One instructor and 2 assistant instructors.

There is also a chaplain, a master of the sword, and a teacher of music.

The entire staff embraces 57 army officers and 9 civilians holding assimilated army rank. Professors whose service at the academy as professor exceeds ten years have the assimilated rank of colonel, and all other professors the assimilated rank of lieutenant colonel.

Organization.—For instruction in infantry tactics and in military police and discipline, the cadets are organized into a battalion of four companies under the commandant of cadets. Each company is commanded by an officer of the army. The officers and noncommissioned officers are selected from those cadets who have been most studious, soldierlike in the performance of their duties, and most exemplary in their general deportment. In

general, the officers are taken from the first class, the sergeants from the second class, and the corporals from the third class.

The cadets are arranged in four distinct classes, corresponding with the four years of study. The cadets employed on the first year's course constitute the fourth class; those on the second year's course, the third class; those on the third year's course, the second class; and those on the fourth year's course, the first class.

The academic year begins July 1. On or before that date the result of the examination held in the preceding month is announced, and cadets are advanced from one class to another. At no other time is a cadet advanced from one class to another, unless prevented by sickness or authorized absence from attending at the examination, in which case a special examination is granted him; but in no case can a cadet be advanced from one class to another without having passed a satisfactory examination by the academic board.

Studies.—The course may be summarized as follows:

First year: Mathematics; English and French; infantry and artillery drill; use of the sword and bayonet and other military exercises. **Second year:** Mathematics; French and Spanish; drawing, including topography; infantry, artillery, and cavalry drill; target practice; practical military engineering. **Third year:** Philosophy; chemistry, mineralogy, and geology; drawing; drills for all branches of all arms; practical military engineering, including signaling. **Fourth year:** Civil and military engineering and science of war; law, constitutional, military, and international; history and historical geography; practical military engineering; natural and experimental philosophy; drill regulations; ordnance and gunnery.

Regulations.—The official day at the Military Academy is of sixteen hours' duration. No cadet, as a rule, has more than two distinct studies per day in which recitations are to be prepared. These two studies call for six hours of severe mental application for preparation and two and a half hours in the recitation room. Three hours are allowed for meals and recreation, and four and a half hours for drills, parade, and guard duty. In winter, when drills are suspended, two hours are available for additional study, exercise in the gymnasium, or recreation.

Every class is divided into sections of not more than twelve men in each, in the order of their ability as determined at the previous examination. These men are changed according to merits. Marks for recitations are posted every Saturday afternoon for the information of cadets. This publicity creates and maintains healthy ambition and it prevents injustice, because there is a proper time and place set apart for hearing of grievances in this connection.

In all battalion formations precedence is according to military rank. In marching to recitations, class standing determines the relative rank. Every subdivision in barracks has its cadet inspector. Every room has an orderly, responsible for cleanliness, etc. Authority to order and power to execute are limited to specific duties, times, and places. Under all other conditions cadets are comrades.

Academic duties and exercises begin Sept. 1 and continue until about June 30. Examinations of the several classes are held in January and June, and at the former such of the new cadets as are found proficient in studies and have been correct in conduct are given the standing in their class to which their merit entitles them. After either examination cadets found deficient in conduct or studies are discharged, with rare exceptions.

THE NAVAL ACADEMY AT ANNAPOLIS

Discipline.—"The first three months' service at the academy," says Michie, "are the most trying of all. The new life and surroundings, the severe physical exercise, the unwonted muscular soreness, the multitudinous duties, orders, and regulations that are to be learned and obeyed, do not make the life of the new cadet particularly enjoyable. The first lessons in military subordination are learned when one constrains himself to repress the stinging retort in response to the peremptory command, and obeys the order promptly and without question.

"The steady goer, the patient plodder, the indefatigable student, is certain of success; but the fitful worker, the careless trifler, or the indifferent scholar soon finds that his military career is ended. Discipline is very strict—more so than in the army. The aim is to inculcate habits of prompt and cheerful obedience to lawful authority, of neatness, order, and regularity, and of thoughtfulness and attention in the discharge of duty. A scrupulous regard for one's word is also required. The system of punishment for offenses is remarkable for inflexible enforcement rather than for severity. Besides demerit marks, which count in making up the class standing, cadets are liable to three classes of punishment: (1) Privation of recreation, etc., extra duty, reprimands, arrests, or confinement to room or tent, or in the light prison, reduction to ranks of officers and noncommissioned officers; (2) Confinement in the dark prison; (3) Suspension, dismissal with the privilege of resigning, public dismissal."

The age for admission is between seventeen and twenty-two years. Sons of those who have lost their lives in the defense of the nation have preference. The oath taken on entering is as follows: "I do solemnly swear that I will support the Constitution of the United States, and bear true allegiance to the National Government; that I will maintain and defend the sovereignty of the United States paramount to any and all allegiance, sovereignty, or fealty I may owe to any state or country whatsoever; and that I will at all times obey the legal orders of my superior officers, and the rules and articles governing the armies of the United States."

Pay and Expenses.—The pay of a cadet is \$540 a year, to begin with his admission, and is sufficient, with proper economy, for his support. No cadet is permitted to receive money, or any other supplies, from his parents or from any person whatsoever, without the sanction of the superintendent.

The expenses of the candidate for board, washing, lights, etc., prior to admission, will be about \$5 a week, and immediately after being admitted as a cadet he must be provided with an outfit of uniforms, etc., the cost of which is about \$90. "If, on arrival," says Gen. Michie, "he has the necessary sum to his credit on the books of the treasurer, he will start with many advantages in a pecuniary point of view over those whose means are more limited, and who must, if they arrive, as many do, totally unprovided in this way, go in debt on the credit of their pay—a burden from which it will require many months to free themselves; while, if any accident compel them to leave the academy, they must of necessity be in a destitute condition."

Qualifications.—A sound body and constitution, suitable preparation, good natural capacity, an aptitude for study, industrious habits, perseverance, an obedient and orderly disposition, and a correct moral deportment are such essential qualifications that candidates who are knowingly deficient in any of these respects should not subject themselves and their friends to mortification by accepting appointments at the academy and entering upon a career which they can not successfully pursue.

Appointments.—Each congressional district and Territory—also the District of Columbia—is

entitled to have one cadet at the Academy. Ten are also appointed at large. The appointments except those at large are made by the Secretary of War at the request of the Representative or Delegate in Congress from the district or Territory. The person appointed must be a resident of the district or Territory from which the appointment is made. The appointments are made by special authority conferred by the President of the United States.

Applications can be made at any time to the Secretary of War, to have the name of the applicant placed upon the register that is kept and furnished to the proper Representative or Delegate when a vacancy occurs. The applicant must submit the full name, date of birth, and pertinent details of the applicant, with the number of the congressional district where he has his residence.

Appointments are required by law to be made one year in advance of the date of admission except in cases where, by reason of death or other cause, a vacancy occurs which can not be provided for by such appointment in advance. These vacancies are filled in time for the next examination.

The Representative, or Delegate, in Congress may nominate a legally qualified second candidate, to be designated the alternate. The alternate will receive from the War Department a letter of appointment, and will be examined with the regular appointee, and if duly qualified will be admitted to the academy in the event of the failure of the principal to pass the prescribed preliminary examinations. The alternate will not be allowed to defer his reporting at West Point until the result of the examination of the regular appointee is known, but must report at the time designated in his letter of appointment. The alternate, like the nominee, should be designated as nearly one year in advance of date of admission as possible.

UNITED STATES NAVAL ACADEMY. The United States Naval Academy is at Annapolis, Md., on the right bank of the Severn, two miles above its entrance into Chesapeake Bay. It is 25 miles south by east of Baltimore and 37 miles east by north of Washington. The site and immediate neighborhood of the Naval Academy is historic ground. The Puritan refugees from Massachusetts under Durand settled at that place in 1649 and called it Providence. Not long afterward the name was changed to Anne Arundel Town, but subsequently it was renamed Providence, and, later, Annapolis, in honor of Anne of England. In a religious conflict between Protestants and Roman Catholics in its early history, Annapolis, then Providence, became the headquarters of the former. In 1694 Providence became the capital of Maryland, and it so remained after the final change of name.

On April 14, 1755, Gen. Braddock and Commodore Keppel, with five colonial governors, held a congress at Annapolis. At this meeting the two English officers discovered the inability of colonial officials to raise a British revenue in America for the use of the mother country. The policy of force was advocated by the congress and recommendations to that end were resolved upon before its adjournment. On Oct. 15, 1774, a vessel loaded with taxed tea, on which the duty had been paid by the owner, entered the port of Annapolis. The people became excited, declared that the ship and her cargo should be burned, and insisted with much vigor that the owner was compelled to run the ship ashore and destroy it with his own hands. On July 26, 1775, a convention at Annapolis formed a temporary government "which recognized the Continental Congress as the only authority with a general supervision of public affairs, and charged the internal affairs through a provincial committee of

safety and subordinate executive committees, appointed in every county, parish, or hundred." At the close of the Revolution Maryland offered to cede Annapolis to the General Government as the Federal capital. During the negotiation for a permanent site it was resolved in 1783 that Congress should meet alternately at Annapolis and Trenton, the first session to be held at Annapolis. At this session Washington surrendered his commission as commander in chief, Dec. 23, 1783.

History.—The Naval Academy was founded at Annapolis in 1845 by the Hon. George Bancroft, Secretary of the Navy in President Polk's administration. It was opened on Oct. 10, 1845, under the name of the Naval School. Its site had been occupied by Fort Severn. The course was fixed at five years, of which only the first and last were spent at the school, the intervening three years being passed at sea. In January, 1846, there were 56 cadets. Under a reorganization plan that was put into operation four years later the course was extended to seven years, the first two and the last two years being spent at school and the intermediate years at sea. A vessel was attached to the academy as a practice ship, and annual practice cruises were begun. After eighteen months' trial of the second plan the intermediate three years at sea was stricken from the course, making it four consecutive years of study, with a practice cruise to take the place of sea service.

When the civil war broke out in the spring of 1861, the academy was removed to Newport, R. I., but in the summer of 1865 it was returned to Annapolis, where it has since remained. By an act of Congress, March 3, 1873, the course was changed from four years to six years. The present regulation provides for four years at the academy and two years at sea. From 1866 to 1882 classes were formed and instructed especially in engineering. Two acts of Congress, passed August, 1882, and March 2, 1889, authorized many changes and practically placed the academy on its present footing.

Appointments.—One naval cadet is allowed for each member or Delegate of the United States House of Representatives, 1 for the District of Columbia, and 10 at large. The appointment of cadets at large and for the District of Columbia is made by the President. The Secretary of the Navy, as soon after March 5 in each year as possible, must notify in writing each member and Delegate of the House of Representatives of any vacancy that may exist in his district. The nomination of a candidate to fill the vacancy is made, on the recommendation of the member or Delegate, by the Secretary. Candidates must be actual residents of the districts from which they are nominated, and at the time of their examination for admission must be not under fifteen nor over twenty years of age and physically sound, well formed, and of robust condition. They enter the academy immediately after passing the prescribed examinations, and are required to sign articles binding themselves to serve in the United States navy eight years (including the time of probation at the Naval Academy, unless sooner discharged). The pay of a naval cadet is \$500 a year, beginning at the date of admission. Surplus graduates who do not receive appointments are given a certificate of graduation, an honorable discharge, and one year's sea pay.

The Staff.—The general staff consists of (1) a superintendent and 2 assistants, 1 in charge of buildings and grounds, the other acting as secretary of the Academic Board; (2) commandant of cadets and head of department of discipline, with 4 assistants. The present superintendent is Capt. P. H. Cooper. The several departments of academic and other instruction are thus divided:

Seamanship.—Head of department and 3 assistants.

Ordnance.—Head of department and 3 assistants.

Fencing.—Sword master and 2 assistants.

Navigation.—Head of department and 3 assistants.

Steam Engineering.—Head of department and 5 assistants.

Mechanics.—Head of department and 5 assistants.

Physics.—Head of department and 5 assistants.

Mathematics.—Head of department and 6 assistants.

English.—Head of department and 8 assistants.

Languages.—Head of department and 5 assistants.

Drawing.—Head of department and 3 assistants.

Naval Construction.—One instructor.

Physical Training.—One director and instructor.

The officers not attached to the academic staff are: A commander in charge of ships, 3 medical officers, a pay officer and general storekeeper, a commissary and cadet's storekeeper, a chaplain, a librarian and assistant librarian, a secretary, 2 marine officers, and 5 marine petty officers. The Academic Board consists of the superintendent, commandant of cadets, and the heads of departments of seamanship, ordnance, navigation, steam engineering, mechanics, physics, mathematics, English, languages, and drawing. The Board of Visitors includes a president, vice-president, 2 United States' Senators, 2 members of the House of Representatives, and 6 citizens of States.

The cadet officers include a lieutenant commander, lieutenant and adjutant, chief petty officer, passed assistant engineer, assistant engineer, 4 lieutenants, 4 junior lieutenants, 4 ensigns, 12 petty officers of the first class and 12 of the second class.

Including marine officers, the total of naval officers engaged in the instruction of cadets at the Naval Academy, 1897-'98, is 64, including 1 captain (the superintendent), 6 commanders, 2 lieutenant commanders, 29 lieutenants, and 9 ensigns. The number of civilian professors having that distinctive title is 11.

Classification of Cadets.—According to the last annual report, the classes of the naval cadets at the beginning of the academic year, 1897-'98 corrected to Oct. 2, 1897, were distributed as follows: 1. Naval cadets of the class appointed in 1892 performing required service afloat—line division, 25; engineer division, 12. 2. Of the class appointed in 1893 performing required service afloat—line, 37; engineer, 10. 3. Naval cadets of the first class—line, 28; engineer, 11. 4. Of the second class, 55. 5. Of the third class, 71. 6. Of the fourth class, 94. A summary of cadets actually at the academy October, 1897, shows the following result: First class, 39; second class, 55; third class, 71; fourth class, 94; total, 259. At the academy, but not included in the usual totals, were 3 cadets pursuing the post-graduate course of naval construction.

Studies.—Full details under this heading can be found in the reports and annual Naval Academy registers, always to be had on application to the superintendent. Briefly, the courses of the several classes embrace the following topics: *Fourth Class.*—First term of first year of study: mathematics—algebra, geometry; English—language, history; language—French. Second term: mathematics—algebra, geometry; English—language, history; languages—French, Spanish. *Third Class.*—First term of second year of study: mathematics—geometry, trigonometry; English—language, law; languages—French, Spanish; mechanical drawing. Second term: physics—physics, chemistry; mathe-

atics—stereographic projections and solutions of the "astronomical triangle," analytical geometry; English—language; languages—French, Spanish; mechanical drawing. *Second Class.*—First term of third year of study: seamanship; steam engineering—principles of mechanism; mechanics—differential and integral calculus; physics—physics, chemistry; English—history (United States navy); languages—French, Spanish; mechanical—drawing. *Second term:* Seamanship; navigation—the celestial sphere; steam engineering—marine engines; mechanics; physics; English—history (United States navy); languages—French, Spanish. *First Class.*—First term of fourth year of study: line division; seamanship—includes naval tactics; ordnance—infantry and artillery instructions, gunnery drill, guns and gun mounts; navigation—theory and practice of navigation, hydrographic surveying; mechanics—method of least squares, applied mechanics; physics. *Second term:* Seamanship—naval construction; ordnance—ballistics, guns, ammunition, armor, torpedoes; navigation—theory of the deviation of the compass, practical navigation, practical surveying; English—international law; physiology—special instructions from Blaisdell's "Practical Physiology." *Engineer Division.*—First term: Steam engineering—marine engines, boilers, designing of machinery; mechanics (same as line); physics (same as line). *Second term:* Seamanship—naval construction; steam engineering—marine engines, boilers, designing machinery; experimental engineering; physiology special instructions (same as line).

Instruction.—Cadets receive exhaustive practical instruction in seamanship, ordnance, navigation, steam engineering, and physical training. This is one of the most important features of the work. The following are the details of work carried on under the several headings mentioned above.

Seamanship.—Knotting and splicing; compass and lead line; ship nomenclature; cutting and fitting hemp rigging; cutting and fitting wire rigging; rowing, and the management of boats under oars and under sail; sailmaking; making up, bending, unbending, and handling sails; rigging ship; stripping ship; shifting spars; getting under way and anchoring; evolutions with vessels under sail and under steam; signaling, army and navy code; management of steam launches; steam fleet tactics with steam launches.

Ordnance.—Infantry, schools of the squad, company, and battalion, in close and extended orders; artillery, schools of the battery and battalion; exercise and target practice with small arms and guns of main and secondary batteries; exercise with cane, smallsword, and broadsword; handling and firing torpedoes, use of Riehlé and Rodman testing machines; determinations of velocities; experimental determination of range tables, also of the jump and drift; the preparation, inspection, care, and preservation of ordnance material. Six medals are awarded annually for marksmanship.

Navigation.—Observations, with sextant and artificial horizon, for time, longitude, chronometer correction, latitude, and azimuth. Surveying: Surveying and constructing a chart of a portion of the Severn river. Compass deviations: Swinging an iron ship, and observing the deviations and the times of vibration of horizontal and vertical needles on different courses; from these observations finding the approximate and the exact coefficients, and the horizontal and the vertical forces acting on the standard and steering compasses; also finding the heeling coefficients for the same compasses without heeling the ship; also correcting the deviations of a compass, using a navy compensating binnacle.

Steam Engineering.—The pattern shop: Selection and treatment of the best woods for different purposes. Elementals of the lathe and planer shop, through mortising, planing, and turned pattern work.

The foundry: Instruction in the making of bronzes, alloys, etc.

The blacksmith shop: Hot and cold working, tempering, casehardening, etc.; bending and quenching tests of metals.

The boiler shop: Riveting, scaling, and fitting, calking, annealing, tube expansion, etc.

The machine shop: Vice bench work, and tool work; including the setting of work, turning, planing; boring; slotting, etc.; pipe fitting; building, erection, and aligning of engines and engine fitting; preparation of working drawings and working from the same.

Management of main and auxiliary engines; getting up steam at leisure and in emergencies; fire-room and engine-room routine, firing, water tending, and oiling; routine under way when desirable to obtain maximum speed; same for maximum steaming radius; management of engines while manœuvring at sea; determining the condition and locating defects in machinery while in motion; causes and prevention of explosion of boilers, steam pipes, gases in uptakes and in coal bunkers; lying under banked fires; coming to anchor; overhauling machinery; cleaning boilers and condensers; preservation of machinery of a vessel when out of commission; conducting progressive and full-power trials and the collecting of data.

Ordinary casualties: Hot crown sheets, burst feed pipes, leaky boiler tubes and seams, burned grate bars, hot pins and journals, fire in bunkers, flooded compartments.

Damages received in battle: Preparations for action; temporary repairs and alternative devices and expedients to be adopted in event of receiving injury from shot or torpedoes; quick methods of disabling machinery about to fall into the hands of the enemy.

Use of slide rule, averaging machine, apparatus for testing oils and smoke gases; standardizing steam gauges and indicators; preparing specifications for purchase of machinery and stores; testing, inspection, and preservation of stores; preparation of various cements, paints, and varnishes in ordinary use; selection of coals; making estimates of the amount of coal on hand, prevention of deterioration, etc.; making of watch, quarter, and station bills.

Physical Training.—Class drills in calisthenics, free movements and with apparatus. Special exercises to promote symmetrical development when necessary. Athletic exercises, including boxing and swimming. Dancing.

Summer Cruises.—The United States practice ships "Monongahela" and "Standish" are used for the cruises of the naval cadets. In the summer of 1897 the "Monongahela," with a commander, 7 lieutenants, an ensign, 2 surgeons, a paymaster, a chaplain, 28 cadets of the first class line division, 54 of the second class, and 68 of the third class left Annapolis for Funchal, Madeira, and Cape Verde; passed the capes of Virginia, June 9, and at Funchal, July 15; arrived at Lyndhaye, Dec. 14; arrived at Annapolis, Aug. 23; and closed the cruise on Aug. 28. The "Standish" carried 20 cadets of the first class, sailed on the same date and visited Newport News, Va., Chesapeake Bay, Long Island, Philadelphia, Pa., New York, Brooklyn, Navy Yard, Bristol, Providence, Newport, Boston, Bath, Portland, Portsmouth, New York, and Lynnhaven Bay, returning and closing the cruise Aug. 23.

Condition and Progress.—The present condition, and the recent advancement of studies, facilities, etc., at the Naval Academy are carefully noted in the last report (Sept. 27, 1897) of the superintendent, Capt. P. H. Cooper, to the Chief of the Bureau of Navigation. In this report he says:

"During the three years that are now ending the resources have increased from nearly nothing to a sloop yacht, four cutboats, and several eight-oared shells for the cadets to regard as their own, and a corresponding tendency to use their resources.

"The Naval Academy and the naval service will soon see the fruition of a hope which has long animated those who realize what is best in training young officers, in the building of the sailing practice vessel.

"During the year the improvements accomplished have been the building of two double houses for instructors, grading the land forming the last purchase, converting the same into an agreeable feature of the grounds by the planting of trees, girdling it with well-constructed roads, etc. The sea walls have been extended, a bulkhead of piling made on the east front on the line of the proposed extension, the new sewer system has been completed, proper sanitary water-closets built, and a new outfit of porcelain-lined bath tubs installed for the cadets, a new driveway of vitrified bricks and a granolithic pavement have been constructed in front of Blake Row, and porches added to the houses composing this row. The policy has been consistently followed of improving and repairing only such parts of the academy as will remain intact upon the adoption of the plan of rehabilitation, which was submitted by the board of 1895.

"The Naval Academy has marked an important advance in its career as an educational institution by the incorporation of a post-graduate course of study in naval construction. The course opens with three naval cadets of the class which completed the four years' course in June, 1897, a similar number to be added each year until nine cadets are undergoing this valuable training, the length of the course to be three years.

"The year which has just closed has been one of the most satisfactory in the history of the Naval Academy. Officers and cadets in their several spheres of duty have endeavored cheerfully and zealously to elevate the tone and character of the institution. The results have been evident to the most superficial observer: they have been indicated by the entire absence of friction, bad conduct, and serious infractions of regulations."

UNIVERSALISTS. The following is a summary of the statistics of the Universalist churches in the United States as they are published in the "Universalist Register" for 1898: Number of parishes, 691; of ministers, 781, of whom about 70 are women; of churches, 805, with 48,433 members; of Sunday schools, 652, with 53,730 members; of church edifices, 782, valued at \$10,259,963. The 13 educational institutions employ 162 professors and teachers, are attended by 1,443 students, and have property valued at \$3,786,500.

At the meeting of the General Convention for 1897 the consideration of proposed substitutes for the Winchester Profession of Faith was continued. Articles of a creed approved at the previous meeting of the Convention to be submitted to this one for ratification were rejected. Amended articles were adopted in place of them as follows:

"The conditions of fellowship at this Convention shall be as follows:

"The acceptance of the essential principles of the Universalist faith, to wit:

"The universal Fatherhood of God;

"The spiritual authority and leadership of his Son, Jesus Christ;

"The trustworthiness of the Bible as containing a revelation from God;

"The certainty of just retribution for sin;

"The final harmony of all souls with God;

"The Winchester Profession is commended as containing these principles, but neither this nor any other precise form of words is required as a condition of fellowship, provided always that the principles above stated are professed."

The annual meeting of the Young People's Christian Unions of the Universalist churches was held in Detroit, Mich., July 7 to 11. About 800 delegates were present, representing unions in 25 States, Territories, and provinces. Twenty-three unions had been formed during the year, and the number was now about 500, with 15,000 members. More than \$6,000 had been raised in these societies for missions and other general work. The Convention decided to propose to the Unitarian Young People's Society that the next annual meetings of the two bodies be held at the same place and at the same time.

URUGUAY, a republic in South America. The Senate has 19 members, one from each department, elected indirectly for a term of six years. The Chamber of Deputies is composed of 69 members, one to 3,000 inhabitants, elected by direct suffrage for three years. The President, whose term of office is four years, was in the beginning of 1897 Juan Idiarte Borda, elected on March 21, 1894. The Cabinet in the beginning of 1897 consisted of the following members: War and Marine, Gen. J. J. Diaz; Interior and Justice, Miguel Herrera y Obes; Agriculture, Industry, Instruction, and Public Works, J. J. Castro; Finance, Federico Vidiella; Foreign Affairs and Worship, Dr. J. Estrazulus; General Secretary, O. Hordeana.

The Army and Navy.—The permanent military force consists of 4 battalions of riflemen, armed with Remingtons, 4 cavalry regiments, and a regiment of artillery, the whole numbering 233 officers and 3,222 men. The police force numbers about 3,200 and the national guard 20,000 men.

The fleet of war in 1897 consisted of 3 small gunboats and an armed steamer, manned by 22 officers and 162 seamen.

Finances.—The budget of expenditures for the year ending June 30, 1897, was 13,647,924 pesos, of which 505,490 pesos were for the Legislature, 62,045 pesos for the presidency, 117,407 pesos for foreign affairs and worship, 2,213,694 pesos for the Interior Department, 832,026 pesos for finance, 953,346 pesos for public works, 1,730,507 pesos for war and marine, 5,721,735 pesos for the public debt, and 1,511,674 pesos for other expenses.

The consolidated external debt on June 30, 1897, amounted to 100,572,112 pesos: international debt, 4,483,125 pesos; internal unified debt, 6,623,700 pesos; guaranteed debts, 3,783,400 pesos; debt of liquidation, 1,519,993 pesos; railroad debt, 94,478 pesos; loan of 1897, 4,000,000 pesos; total public debt, 121,076,808 pesos. The expenses of the debt in 1897 were 5,942,391 pesos, 4,875,617 for interest and 1,066,774 for amortization. During the presidency of Borda 25,000,000 pesos had been added to the debt.

Navigation.—There were 283 sailing vessels, of 200,252 tons, and 980 steamers, of 1,791,302 tons, in the foreign trade entered at Montevideo during 1896, and 204 sailing vessels, of 150,800 tons, and 949 steamers, of 1,791,061 tons, were cleared. The coastwise trade comprised 1,635 sailing vessels, of 66,609 tons, entered and 1,632, of 65,655 tons, cleared, and 1,064 steamers, of 634,979 tons, entered and 1,045, of 625,830 tons, cleared.

The merchant marine in 1895 consisted of 19 steamers, of 4,608 tons, and 45 sailing vessels, of 17,779 tons.

Commerce.—The special imports in 1895 were valued at 25,400,000 pesos and the special exports at 32,500,000 pesos. The values in pesos of the imports and exports in 1896 and their distribution among the different countries are given in the following table:

COUNTRIES	Imports	Exports
Great Britain	2,277,000	1,583,000
France	2,000,000	5,000,000
Belgium	1,111,000	5,378,000
Germany	2,760,000	1,400,000
Spain	1,560,000	670,000
Italy	2,260,000	477,000
Portugal	19,000	143,000
Brazil	1,445,000	7,943,000
United States	1,776,000	1,714,000
Argentine Republic	3,524,000	4,895,000
Cuba	143,000	14,000
Chili	67,000	215,000
Paraguay	77,000	1,000
Other countries	9,000	162,000
Total	25,500,000	30,463,000

The exports of wool in 1896 were valued at 10,248,000 pesos; hides and skins, 5,707,000 pesos; meat, 4,573,000 pesos; extract of beef, 2,104,000 pesos; cereals, 1,803,000 pesos; tallow, 1,647,000 pesos; animals, 1,491,000 pesos.

Communications.—There were 906 miles of railroad in operation at the beginning of 1896 and 191 miles under construction. The telegraphs had a total length of 3,397 miles, besides 952 miles belonging to railroad companies. The number of dispatches in 1895 was 332,477. The post office in 1895 forwarded 8,602,475 letters, etc., in the internal and 6,612,025 in the international service; receipts, 1,771,340 francs; expenses, 1,667,766 francs.

Revolutionary Uprising.—The revolutionary invasion of Uruguay from the neighboring Brazilian and Argentine provinces became formidable after the revolutionists gained a victory over the Government forces near the Argentine frontier on March 17, 1897. The revolution was supported by the whole party of the Blancos, the opponents of President Borda and the Colorados who supported him. They were goaded into revolution by his tyrannical course in depriving them of all electoral and civil rights. A new expedition of Blancos under Col. Mongrell had crossed the frontier at this point about 900 strong, and, as usual, they were quickly joined by a great number of adherents. At the same time the southern division of the rebels under Col. Lamas worked its way northward from Colonia to the Rio Negro, growing in numbers as it advanced until it formed an army nearly 2,500 strong. Gen. Villas, commanding the northern division of the Government army, advanced by forced marches and attacked the united rebel forces encamped close to Paysandu. The rebel cavalry was well mounted and armed, and contained many soldiers who had served in the Brazilian army. Owing to this superiority and to the strength of their position the Blancos repelled the Government troops, although they fought with great gallantry, returning to the attack several times. The losses on both sides were about 500 killed and 400 wounded. One of the Government regiments of rifles was nearly annihilated.

After this victory Col. Lamas worked eastward along the Rio Negro, intending to join Aparicio Saravia, Col. Mena, and the large contingents that were pouring in from Brazil, and with the combined forces, mustering nearly 6,000 men, marching upon Montevideo. The authority of the Government was entirely suspended in the northern

department of Artigas. In four or five of the central departments, however, the revolution, railroad traffic and internal and foreign trade fell off rapidly. The entire country was in rebellion. President Borda attempted to suppress the rebels. This caused the Minister of War to resign. He was succeeded by Gen. Berro. The latter was kept under martial law. In April the rebels were in complete possession of the entire Department and collected the customs on the Brazilian frontier. Nevertheless lack of money and munitions and a gradual decline in the strength of the rebels, while the Government was enabled with a force of 4,000,000 pesos to put forth extraordinary efforts. On May 16 Gen. Villas gained a decisive success over the united forces of Lamas and Saravia near Fructuosa. The main body of the rebels was broken up and driven back into Brazil, and the danger to the capital was averted. Still they could carry on guerrilla tactics indefinitely, and these were as disastrous to industry and prosperity as a regular campaign. Both the rebels and the Government troops seized horses where they could find them and killed sheep and cattle for food so that production as well as commerce was paralyzed.

For this reason a commission was sent to try to arrange terms with the rebels. Dr. Larreta, the head commissioner, brought back in July from Rio Grande the terms on which the rebel leaders, Aparicio Saravia and Col. Lamas, agreed to lay down their arms, which were the dissolution of the Chamber, the resignation of President Borda, the constitution of a council of notables drawn from both political parties, and the nomination by this council of a triumvirate to administer the Government until the election of the next President in March, 1898. To such terms the Congress was as little disposed to agree as the President. Heavy skirmishing was resumed between Trinita y Tres and the Brazilian frontier. In this district about 2,000 rebels kept the army under Gen. Mufiz on the alert. One detachment of Government troops 300 strong was surprised and surrounded, and two thirds of them were killed or taken by the insurgents. The Chambers when peace was in sight had passed a bill restoring the liberty of the press. The Government generals proved themselves incapable of coping with the two rebel leaders, who conducted their operations in perfect accord with one another and displayed much military ability. The rebels managed to capture a large quantity of ammunition and stores from Gen. Mufiz. A difficulty was created with Brazil by the Government troops, who in pursuing the rebels crossed over the border. Peace negotiations were resumed, and in the middle of July an armistice was arranged to last till Aug. 5. It was not strictly observed on either side at first, but the negotiations took a hopeful turn, and the armistice was prolonged till Aug. 15. The insurgents sent peace delegates, who demanded that the Blancos should have the chief offices in eight departments. As the President would only give them the control of three the negotiations again came to a standstill.

Meanwhile the popular exasperation against President Borda became intense. When he first entered upon his office he had a reputation for personal integrity, and through the reforms that he instituted and the prosperity that flowed from them he built up an enormous party. He seemed to be kept long together by the motives of patriotism, favoritism, and tyranny, and by the fact that he carried to a higher degree than his predecessors. Hence a strong feeling was growing up in the Colorado party, which was shared like the Blancos when they first opposed the electoral machinery in connection with the

pendent men from the Congress. The Chamber elected in November, 1896, was composed entirely of his creatures. Having assumed despotic power, Borda was held responsible by the people for all the evils that had befallen the country. A youth attempted to assassinate him in April. After the failure both of the military campaign and of the peace negotiations, which he had abruptly broken off out of sheer obstinacy and ill temper, there were many who were ready to kill him. The civil war was resumed vigorously in the interior by the Blancos, and the Government forces met with severe losses in sharp skirmishes fought on Aug. 21 and 22. Borda refused to send medical aid to the wounded because he did not wish the extent of the calamity to be known, for he had arranged an elaborate official celebration of the anniversary of national independence on Aug. 25, accompanied by a great military parade and costly operatic performances, although the Government was nine months in arrears in its payments. Borda laughed at the warnings of his friends, who told him that it would be dangerous to expose himself in public. When he issued from the cathedral after the official *Te Deum* and, accompanied by his ministers and followed by a train of diplomats and officers, passed through the plaza between the files of 4,000 soldiers, a respectable grocer's clerk stepped out from the crowd of spectators and with a revolver shot the President through the heart.

No disturbance of public order ensued. The Vice-President of the Republic, Juan L. Cuestas, at once assumed the presidency. He had been known as a decided partisan, and therefore anxiety was felt regarding the policy he would pursue toward the rebel Blancos. Moreover, it was feared that he would advance the candidacy of Dr. Julio Herrera y Obes, who had been President from 1890 to 1894 and had implanted the system of corrupt and arbitrary party rule that was the source of the national misfortunes. Señor Cuestas adopted a course that won the approbation of the commercial and foreign communities and relieved the popular tension of mind. He resumed negotiations with the rebels, and called an immediate extraordinary session of the Chambers. Confirming Gen. Perez as Minister of War, he announced the other Cabinet appointments on Aug. 29 as follows: Minister of Finance, Dr. Juan Campeseguy; Minister of Public Works, Eduardo Macachen; Minister of Foreign Affairs, Dr. Mariano Ferreira; Minister of Public Works, Jacobo Varela. The rebels displayed extraordinary activity in extending the zone of their occupation. Although the Government was supposed to have 20,000 men in the field, Gen. Tajos, who had recently assumed command of operations, was unable to prevent the rebel groups from moving freely in all directions, even in the immediate vicinity of his headquarters at Nico Pérez. They again appeared in the neighborhood of the capital. Their bands were augmented by fresh adherents whenever they appeared. Soldiers and policemen were sent to them, taking Government arms and ammunition. Señor Ramirez, the official delegate of the Government, on Sept. 10, came to an agreement with rebel leaders, who promised to cease hostilities if the party were confirmed in the control of six departments, and if the Government paid them an indemnity of 200,000 pesos, reinstated the army officers who had been dismissed, officials who had joined the rebels, and reformed the electoral laws and procedure, including the representation of minorities. The rebels threatened to attack the capital with an army of 5,000 men, when the Government accepted their terms after its generals had demonstrated their inability to suppress or even check the movement. The Cham-

bers ratified these terms of peace, which did not even oblige the rebels to surrender their arms. From being little more than a name for a quarter of a century, the Blanco party became a strong factor in politics through the terms which it dictated to the Government without having won any signal battle. The craving of the country for tranquillity, the financial straits of the Government, which Borda had left with a deficit of 6,000,000 pesos, the stoppage of trade and of revenue receipts, and the imminent loss to the country of most of the wool crop and grain harvest if the rebellion continued, led the new President to accept the conditions demanded and the Chambers to ratify the peace convention unanimously. The local banks advanced 500,000 pesos to pay the indemnity and meet other pressing obligations.

An entirely new political situation arose out of the peace and the attitude assumed by acting President Cuestas toward Dr. Herrera, the Colorado candidate for the presidency, who had the unanimous support of Borda's Congress and a strong following in the army. Señor Cuestas himself was proclaimed a candidate for President by all political parties except the former adherents of Borda. Sustained by the moderate Colorados who had opposed Borda's methods and by the newly enfranchised Blancos, the President threatened to dissolve the Chambers and to mobilize the national guard in case the army should manifest a mutinous disposition. Meeting with opposition in the Cabinet, he appointed Dr. Salterain Minister of Foreign Affairs upon the resignation of Señor Ferreira on Dec. 2. The whole civil service was reformed with a view to economy, and a host of supernumerary officials were discharged. Several officials were arrested and prosecuted for malversation. On Nov. 18 an attempt was made to abduct and depose President Cuestas. In November Dr. Herrera and other leaders of the Opposition were arrested, and the ex-President, Gen. Tajos, Major Brian, and Dr. Aguirre were exiled by a decree of the President. On the next day a man attempted to kill President Cuestas with a knife. A Cabinet crisis was occasioned by the assumption of a dictatorship by the President, who on Dec. 22 appointed Gen. Gregorio Castro Minister of War and Dr. Mendoza Minister of Finance.

UTAH. A Western State, admitted to the Union Jan. 4, 1896; area, 84,970 square miles. The population in 1890 was 207,905; the estimated population in 1895 was 247,324. Capital, Salt Lake City.

Government.—The following were the State officers during the year: Governor, Heber M. Wells; Secretary of State, James T. Hammond; Treasurer, James Chipman; Auditor, Morgan Richards, Jr.; Attorney-General, A. C. Bishop; Superintendent of Public Instruction, John R. Park—all Republicans; Adjutant-General, John Q. Cannon; Coal-Mine Inspector, Thomas Lloyd, resigned, and succeeded in October by Gomer Thomas; Surveyor-General, G. W. Snow, succeeded in September by Jacob B. Blair; State Engineer, Willard Young; Fish and Game Warden, John Sharp; Fruit-Tree Inspector, H. J. Faust, Jr.; Regents of the University, Rebecca E. Little, James Sharp, T. R. Cutler; Board of Arbitration and Conciliation, John Nicholson, E. A. Wall, W. S. Willis; Chief Justice of the Supreme Court, Charles S. Zane; Associate Justices, George W. Barte and J. A. Miner—Republicans; Clerk, L. P. Palmer.

Finances.—The financial statement covering the first half of 1897 shows the following items: Amount of legislative appropriations, \$987,777.76; warrants drawn to June 30, 1897, \$257,992.58; unexpended balance of appropriations, \$729,758.18;

balance in treasury, Dec. 31, 1896, \$420,550.38; receipts from all sources, six months, \$282,266.99; total, \$702,817.37; less warrants paid, \$631,996.86; balance on hand, June 30, 1897, \$65,850.51; outstanding warrants, June 30, 1897, \$149,118.91.

HEBER M. WELLS, GOVERNOR OF UTAH.

The total of the State's liabilities, including bonded debt and outstanding warrants, is \$1,098,681.75. The current deficit appears to be \$105,541.90. Compared with the same period of 1896, the current deficit in the State's financial affairs shows an improvement, being then \$127,764.52.

The receipts of the office of the Secretary of State for the whole year were \$31,612.67, of which \$9,449.52 was from the tax on premiums of insurance companies.

The valuation of the State by the returns to the State board was \$102,570,000. The Board of Equalization raised the assessment of Salt Lake County 5 per cent.

In a case involving the limit to the debts of counties, the Supreme Court held that, according to the law, each year's debts must be paid by each year's taxes and revenue, and that no debt or liability can be created except such as can be liquidated by the taxes and revenue of that year.

Education.—The school population is 81,882, a gain of 2,489 over that of 1896. The amount for the first apportionment of 1898 on this basis will give \$2.97 *per capita*. The schools of Salt Lake City show an enrollment of 10,719, and an average attendance of 9,397.

Provision was made for a branch normal school to accommodate the southern part of the State, and Cedar City, in Iron County, was selected as the site. The city is to have a building ready for the opening of the school in September, 1898, and meantime temporary quarters are furnished.

The State University granted the degree of B. A. to 2 graduates this year, and B. S. to 3. Certificates for the four years' normal course were granted to 21, and for the three years' course to 25.

The attendance at the Agricultural College for the year ending June 30 was 488, a slight falling off from the previous year, when it was 497.

There were 14 graduates (with the degree of B. S. compared with 7 of the preceding year. These graduated with honor.

The receipts during the year were \$21,000 from the State, \$37,000 from the Federal Government, and \$5,811 from other sources, a total of \$63,811. The expenditures were \$62,000.

Ground was broken May 13, 1897, for the new Young College building at Ogden. The new building, consisting of 10 class rooms, 10 lecture halls, 10 classrooms and 6 class rooms were to be built. At the end of the year. At the 1897-98 commencement, in June, 25 were graduates, and in October 250 were in attendance.

The School for the Deaf and Blind at Ogden, sent out 2 graduates in June.

Insane Asylum.—The number of patients, Oct. 31, was about 254.

Militia.—The National Guard was in camp at South Cottonwood, Salt Lake County, five days in September.

At a meeting of the Western Federation of Miners in May, the president, in his address, urged that members see that "ways and means are provided so that every member can be furnished with the latest improved rifle, which can be obtained from the factory at a nominal price." He added: "I entreat you to take action on this important question, so that in two years we can hear the cheering music of the martial band of 25,000 armed men in the ranks of labor," and further said: "The constitution should be also amended, so as to declare all members of the National Guard ineligible to membership, and withhold our patronage and assistance from all companies and individuals or organizations where any member of the National Guard is employed or admitted to membership."

Railroads.—The sale of the Oregon Short Line and the Utah Northern under the consolidated mortgage of Aug. 1, 1890, was made Jan. 1, for \$5,447,500. The Utah Southern was sold to the same bidders, representing the reorganization committee, for \$763,000, and the Utah Southern Extension for \$975,000. The separation of the first named road from the Union Pacific and the establishment of the headquarters of the reorganized road at Salt Lake City means much for the prosperity of the State. In May an arrangement was entered into by this road and the Rio Grande Western, by which they were to combine on a division of through-freight rates on all business from the territory south of Ogden. An arrangement was made that on June 1 the Ogden gateway would be opened to all connecting lines. It has been closed since 1891. This is a move of great importance in the matter of freight facilities, and will give the capital and the surrounding country the benefit of a great amount of through-passenger traffic between Denver and the Northwest.

Three short roads—the Salt Lake and Fort Douglas, the Salt Lake and Eastern, and the Utah Central—were bid in May for \$272,000.

Banks.—The condition of the 11 national banks, as published Jan. 8, showed that since the previous report the average reserve held had decreased from 43.12 per cent. to 37.64 per cent. Loans and discounts had increased from \$2,461,894 to \$2,525,000. The reserve had decreased from \$1,098,800 to \$1,403,376, of which gold holdings decreased from \$699,262 to \$686,376, and local reserves decreased from \$7,298,783 to \$7,063,901. The total assets increased from \$3,925,321 to \$4,963,211.

In December the ex-president of the Utah National Bank of Salt Lake City was charged with making false entries upon the books of the bank, and was reported in a report to the Treasury, having reported a balance of \$5,575.53, when they were \$14,407.82.

Products.—Notwithstanding increased activity in mining in certain portions of the State, there was a material falling off in the total value of the metals produced in 1897. This decrease is confined to silver and gold; in lead and copper there was a decided increase. The total value of the output of the four metals was \$9,347,383 in 1896, and \$8,263,685 in 1897.

The gilsonite deposits have attracted much attention of late. They cover considerable territory in the Uncompahgre reservation, extending into Colorado. The report of the United States Geological Survey says there are 7 distinct veins, which vary from 1 to 18 feet in thickness, and it is estimated that their total contents will amount to 23,714,528 tons.

The same report quotes the price of this material in Chicago at \$40 to \$50 a ton. It is a sort of asphaltum, and is described as a black, tarry-looking substance of most brilliant luster, normally of absolutely homogeneous texture and exceedingly brittle.

One of the uses of gilsonite is the manufacture of mineral paint. It is expected to afford complete protection to the bottoms of ships against animals, as it will make impossible the boring into them by the creatures that now cause so much expense for repairs. It is also an absolute nonconductor of electricity.

The figures for the wheat crop of 1896 gave that of Utah as valued at \$1,906,552, representing 2,803,753 bushels, raised on 105,802 acres.

Indians and Public Lands.—A table of railroad lands patented during the year in the mountain States shows that the Central Pacific Company received patents for 285,858 acres in Utah, and the Union Pacific for 255,120 acres. Three coal land patents, embracing 355 acres in Utah, were issued. A schedule of vacant lands shows that Utah has 9,828,581 acres of surveyed land, and 34,366,489 acres unsurveyed.

By the bill passed by Congress in June, all lands on the Uncompahgre reservation will be thrown open for settlement except the mineral lands, the title to which will remain in the Government. This will go into effect April 1, 1898. Commissioners were appointed to allot lands in severalty to the Indians.

Several Ute Indians who were off their reservation with a large party, hunting game in northwestern Colorado, were killed Oct. 28, by game wardens. The number killed was 2, or 6, or 8, according to different reports, and some squaws were wounded. Much indignation was expressed at what was regarded as wanton killing, but an investigation which was ordered resulted in the vindication of the wardens.

Judicial Decision.—In a case of the settlement of an estate, the Supreme Court decided in June against the law of 1896 regarding the right of children of a deceased man to inherit. The act giving them the right to share in property left by their fathers was declared invalid, because in its passage the Legislature assumed to exercise judicial powers, which it had not assumed. They assumed the right to regulate the law, to regard judgments as reprehensible, and to make laws enforceable under the laws in force at the time the judgments were rendered and by which vested rights were established and evidenced.

The Semicentennial.—The centennial of the year in the history of the State was the jubilee in celebration of the fiftieth anniversary of the entrance of the pioneers into the Salt Lake valley, July 24, 1847. An incident of the festivity was the presentation to the survivors of the first party who entered at that time of gold badges, on which were por-

traits of Brigham Young. The week of jubilee began July 20. The national colors were raised on Ensign Peak, on the spot where the first American flag was raised by the pioneers in 1847. Among the incidents of the celebration were religious exercises, addresses, and the reading of a prize poem by N. A. Sherman, the unveiling of a statue of Brigham Young, a parade of children, a cowboy tournament, and processions representing the history and progress of the State. Striking features of the processions were the Leadville drum corps, the marching Indians, 200 or 300 in number, a beautiful float representing the gulls and crickets, the hand-cart brigade, the first locomotive ever sent over the Union Pacific Railroad, the fire department, the first street car in Salt Lake, a silkworm float, a telephone float, and that with 27 girls representing the counties. In the pioneer parade on the last day were shown some of the wagons in which the first settlers arrived, and a representation of the original pioneer train as it first entered the valley. The "old sow" cannon, which was brought across the plains, was in line. The pony express riders called forth great applause by their wild gallop through the streets accompanied by the firing of revolvers. A hall of relics was established, modeled after the Parthenon. The attendance of visitors was estimated at 60,000.

Political.—At the Trans-Mississippi Congress in Salt Lake City, July 15, a resolution declaring for free and unlimited coinage of gold and silver at the ratio of 16 to 1, and without the co-operation of any foreign government, was adopted by a vote of 244 to 46. Resolutions were adopted also favoring the Nicaraguan Canal and Hawaiian annexation, and the following: "Resolved, That it is the sense of this Congress that the Pacific lines should be foreclosed as they become due, and that the Government should adopt such measures as will secure to the patrons of the Pacific Railway the use of said roads upon the payment of rates which yield a reasonable return upon the present value of the roads measured by the cost of reproduction."

Much comment was caused in October by a discourse of President Woodruff at a semiannual Church conference at Salt Lake City, in which he advised his hearers to lay aside party ties and vote together as Mormons. Following is the report, in part, from the "Deseret News":

"I prophesy, in the name of Israel's God, the day has come when the mouths of Wilford Woodruff, George Q. Cannon, Joseph E. Smith and these twelve apostles, should not be closed because of the opinions of the children of men. There have been feelings that these men holding high positions—the twelve apostles and presidency—should say nothing about politics. I want to say to you here, the day has come when God Almighty requires at your hands to unite together in your temporal business, and in your politics, so far as it is wisdom. I do not care whether a man is a Republican or a Democrat, in that he is free; but it is your duty to unite in electing good men to govern and control your cities, your local affairs, and I will state that when you do not do this you are losers of the blessings of Almighty God. My mouth shall not be closed upon these principles. I know it is the duty of the Latter-day Saints to unite together in your local affairs, the election of your city councils, the election of men to act for you in the affairs of State. I take the liberty as President of the Church of Jesus Christ of Latter-day Saints, of making these remarks. No matter what the feelings of men may be toward me, I shall not stay in this country very long. But I realize very well that this people are groaning under poverty, under affliction, under taxation, and in positions that they

ought not to be if they would only unite together and do their duty."

At the municipal election in November the candidate for mayor on the citizens' ticket was elected, while the Democrats carried most of the other offices. Their defeat on the vote for mayor was ascribed to Church influence. Democratic mayors were elected at Ogden, Mercur, Logan, and Eureka, and Republican at Provo and Brigham.

It appears that the women who were candidates for office in Salt Lake City were badly scratched by the woman voters. Miss Joanna Sprague, the candidate for recorder, was defeated by women, although a local paper says that practically every lawyer in the city supported her, because she had been a successful deputy in the district court clerk's office. She had no criticism to encounter from any source, and an informal canvass of the business district before the election justified the general belief that she would run ahead of her ticket. So also Mrs. La Barthe and Mrs. Bradley, who were nominated for the auditorship, although competent and experienced, were defeated by Mr. Swan, an independent candidate, through the votes of the women.

The Trial of Moses Thatcher.—This was concluded in August. The trouble began soon after Mr. Thatcher accepted the Democratic nomination for United States Senator. This breach was widened during the campaign that followed, and culminated when the Church formulated the last manifesto and Mr. Thatcher refused to sign it. At the conference of the Church following this, Mr. Thatcher was suspended from the quorum of apostles, and a little later was deprived of that office.

In the last senatorial campaign, Mr. Thatcher was again a candidate for the United States Senate, and his public utterances, interviews, and letters gave offense to the Church authorities, so that finally he was placed on trial before the high council on a charge of apostasy. The decision of the State presidency was that the charges were sustained, but it was added that Mr. Thatcher might be restored to membership in the Church by making proper submission. He accepted the decision, signed the manifesto, and was retained in fellowship with the Church.

Legislative Session.—The second session of the Legislature began Jan. 11 and ended March 16. Aquila Nebeker was chosen president of the Senate, and John N. Perkins Speaker of the House. There were 3 Republicans and 4 Populists in the Legislature, all the others being Democrats. Three of the members were women.

The contest over the election of a successor to United States Senator Arthur Brown lasted from Jan. 19 to Feb. 3. The Legislature was so overwhelmingly Democratic that no caucus was held. The leading candidates were Joseph L. Rawlins, Moses Thatcher, and Henry P. Henderson, all Democrats. The Republicans gave complimentary votes during the contest to Arthur Brown, Lafayette Holbrook, G. M. Cannon, A. L. Thomas, C. C. Goodwin, Thomas Kearns, C. W. Bennett, E. B. Critchlow, and A. C. Bishop. The Populists named H. W. Lawrence, James Hogan, Mrs. La Barthe, Warren Foster, Mrs. Anderson, and Mrs. Cannon. Others voted for were C. W. Powers, Fisher Harris, R. C. Chambers, and Aquila Nebeker. On the fifty-third ballot Joseph L. Rawlins was elected, having 32 votes, the number necessary to a choice. Following is a description of the scene on Feb. 23, from the Salt Lake "Herald": "No such spectacle was ever witnessed in any legislature in the Union as that which was presented in the Utah joint Assembly yesterday. No man was ever elected Senator amid such a storm of passion. Upon the floor of

the Assembly members were charged that their colleagues were the slaves of a priesthood; that they were voted like pawns for one candidate and then for another, and the time controlled by an unseen hand. And these charges, delivered with dramatic effect, drew forth loud shouts of approval from the hundreds of their sympathizers who crowded the hall. The members thus accused uttered indignant and fiery protests against those charges, which were denounced as absolutely false. They were hissed and jeered by their sympathizers and cheered by anti-Thatcherians. The Mormon Church was bitterly assailed by Thatcher's followers, and defended by the opposition. For two hours the Assembly was tossed and swayed by the storm of excitement, and the final scene, ending in the announcement of Rawlins's election, was one of such wild frenzy, such dramatic, almost tragic, features, as to absolutely beggar description."

Resolutions were introduced in both houses calling for the appointment of a committee to investigate the alleged use of Church influence in the senatorial contest. They were amended so as to call for an investigation into all kinds of influence used during the contest, "ecclesiastical or otherwise," and an inquiry "into the alleged fact whether or not any of the newspapers of Utah have been subsidized, assisted, bought, or purchased in the interest of any candidate for the United States Senate." The committee was to consist of the Governor, the Attorney-General, and the three justices of the Supreme Court. The resolutions were adopted by the House, but failed in the Senate by a vote of 5 to 11.

The first bill that became a law was an act "to provide for the formation of railroad corporations." The immediate object of the bill was to provide for the reorganization of the Oregon Short Line and Utah Northern Railway which was sold early in January.

Another bill affecting railroads provided for land grants to be made to them. It was passed over the veto of the Governor, who objected to the section providing that railroads may have a right of way over all State lands, including certain depot privileges every 10 miles, as unconstitutional, because he believed it would be a violation of the trust imposed by the Constitution to donate any part of the granted lands to any person or corporation.

The work of the Code Commission was adopted after changes, one of which was the rejection of a provision extending the operation of the eight hour law to all employers of the State, and of all counties and municipal governments.

Some important laws in regard to the public lands were enacted. One provides for the construction of irrigation works by persons or corporations; it will enable the State to take advantage of the act of Congress granting 1,000,000 acres on condition of the establishment of irrigation works.

The office of State Engineer was created, with a salary of \$1,000 and traveling expenses.

The Land Board is authorized to lease any State lands containing stone, coal, oil, gas, or any mineral, conditioned upon the payment to the State of a royalty upon the product.

A new mining law was vetoed, but was passed over the veto.

Another act provides for creating a forested land-grant fund.

A change was made in the form of bonds required by law, so as to simplify matters for farmers.

A State Board of Horticulture was created, to consist of three members to be appointed by the Governor, for the purpose of preventing the spread of pests that attack trees, shrubs and vines. The office of State Dairy and Poultry Commissioner was created. Another measure makes it unlawful to

offer for sale any adulterated vinegar, and requires manufacturers to mark upon each barrel or package the standard strength of the contents.

A new fish and game law provides for county wardens. Some changes were made in the closed seasons, and after much controversy in each house the following important section was added to the bill: "It shall be unlawful for any person or persons, at any time, to ship or cause to be shipped, carried, or transported out of the State, any of the animals, birds, or fish, or any part thereof mentioned in this act."

An assignment law was made. One provision is, that in all assignments for the benefit of creditors, debts due for wages or personal services of servants or employees of the assignee for services or labor rendered within one year previous to the assignment are preferred claims.

A branch of the State Normal School is to be established in Beaver or in Iron County. The public-school laws were amended in unimportant particulars.

The newspaper libel law was amended and re-enacted.

The expenses of the session amounted to \$24,955.

The tax levy for general State purposes was fixed at 4½ mills, a reduction of half a mill; the State school tax at 3 mills, the county tax for general purposes at 5 mills, and the county school tax may not exceed 4 mills. The amount to be raised for the years 1897 and 1898 is about \$950,000.

The sum of \$15,000 was appropriated for the State semicentennial celebration, \$8,000 for an exhibit at the Omaha Exposition, and \$2,000 for one at Nashville.

The appropriation to the State University for a period ending in June, 1899, was fixed at \$73,000; that to the Agricultural College at \$22,500; to the School for the Deaf, Dumb, and Blind, \$45,000; and \$3,500 was granted to the State Industrial School for purchase of land.

Other acts were:

Setting aside certain lands about Fish lake as a State park.

Permitting the use of automatic machines in elections.

For the building of a miners' hospital at Park City.

Providing that real estate sold under deeds of trust may be redeemed within six months.

Providing for the weighing of coal at the mine before it leaves the mine car, where miners are paid by the ton.

Making it the duty of employers to provide seats for women and girls employed in stores and shops.

For the protection of evergreen trees.

Providing that no spectator at any indoor place of amusement shall wear any headware tending to obstruct the view of any other person. Violation of the act is punishable by a fine of not less than \$1 and not more than \$10.

Raising the marriageable age of males from fourteen to sixteen, and that of females from twelve to fourteen.

Providing for the compulsory education of deaf-mute and blind children.

Prohibiting the sale of intoxicating liquor within ten miles of an Indian reservation, except in incorporated cities and towns.

Providing for a complete revision of the record of marks and brands by the State Auditor.

Providing that a suit in law or equity may be brought, prosecuted, and appealed by a person too poor to pay the costs, upon his oath that such is the case.

Several memorials were adopted, among them the following:

Asking Congress for cession to the State of all public lands in it except mineral lands.

Asking for the opening of Indian reservations.

In relation to placing a statue of Brigham Young in Washington, and appropriating \$250 for the use of the Utah Senators in forwarding the project.

For the relief of citizens who suffered from Indian depredations before becoming citizens.

Asking for a Federal grant of the Industrial Home property for educational and other purposes.

For a reserve of the head waters of Beaver river.

Permitting the cutting of timber on public lands for local purposes.

Asking compensations for veterans of the Black Hawk war.

A bill providing for an income tax was defeated in the House. Another bill that failed proposed to make silver coins of the United States of whatever denomination full legal tender in payment of all dues and settlement of all transactions, whether public or private.

The Senate refused to confirm several nominations sent in by the Governor, because the men appointed were supporters of the national Republican ticket in 1896 and not in favor of free coinage of silver. The Legislature adopted a resolution to submit to the people an amendment to the Constitution depriving the Governor of the power to appoint to office any person whose name has been rejected by the Senate for that office; but, having that power under present laws, the Governor appointed his nominees after the adjournment of the Legislature.

Several amendments to the Constitution were proposed.

V

VAN WYCK, ROBERT A., first mayor of the greater city of New York, born in New York city in 1850. His father was William Van Wyck, a lawyer, politician, and member of Tammany Hall, who was at one time president of the Board of Aldermen. President Andrew Jackson and President Martin Van Buren were confidential friends of William Van Wyck. The progenitor of the family in America was Cornelius Barents Van Wyck, who emigrated to the New Netherlands in 1650 from the town of Wyck, in Holland, and married, in 1660, in Flatbush, Ann, daughter of the Rev. Johannes Theodorus Polhemus, the first Dutch Reform minister in Kings County. All the American Van

Wycks are descended from this couple. Robert A. Van Wyck is a descendant in the seventh generation from the founder. The family has produced many men who have been conspicuous in the professions and in the public service as judges, State legislators, congressmen, and Senators. In every one of the country's wars there have been Van Wycks among its defenders. The mother of Robert A. Van Wyck was a Southern woman, and several years of his early life were spent in Virginia. He attended the public schools, but left them to go into business. He became a messenger boy, and afterward a clerk. For five years he worked as a clerk, and then went back to school and prepared

John A. Van Noy

to begin the study of law. He was graduated in Columbia College Law School in 1872 at the head of a class numbering 124, and delivered the valedictory address. After living for a time in Germany, Mr. Van Wyck returned to New York, took up the practice of law, and was successful in the profession. He had a taste for politics, became a member of Tammany Hall soon after his return to New York, and took an active part in every canvass, always on the Democratic side. In 1880, when Tammany Hall was under the leadership of John Kelly, Van Wyck left it on account of the equivocal course which it had pursued in the presidential campaign of that year. He went over to the County Democracy, and twice was an unsuccessful candidate for office. He subsequently returned to Tammany Hall, and in 1889 was elected chief justice of the city court. Only a small percentage of the decisions that he made while holding this post have been reversed on appeal. On Sept. 30, 1897, Justice Van Wyck was nominated to be the Tammany candidate for first mayor of the greater city of New York, and on Nov. 2 he was elected by a plurality over Gen. Benjamin F. Tracy, the Republican candidate; President Seth Low, the nominee of the Citizens' Union; Henry George, who headed a party calling itself the Democracy of Thomas Jefferson; and several other candidates. Mayor Van Wyck took office on Jan. 1, 1898.

VENEZUELA, a federal republic in South America. The Congress consists of a Senate of 27 members, 3 from each State, elected for four years, and a House of Representatives of 63 members, elected also for four years by the votes of all adult male citizens. The President and the Council of Government are elected for four years. Gen. Joaquin Crespo, who was victorious in the civil war of 1892, was elected President for the term ending March 4, 1898. The Council of Government consisted in 1897 of Manuel Guzman Alvarez, President; Dr. F. Acevedo, Vice-President; and Dr. H. Rivero, Gen. Custodio Milano, Luis Zagarzazu, José G. Riera, Tomás José Guillén, and Manuel Modesto Gallegos, members. The President's Cabinet was composed as follows: Interior, Dr. J. F. Castillo; Foreign Affairs, Dr. Ezequiel Rojas; War and Marine, Gen. Ramon Guerra; Treasury, H. Perez; Public Instruction, Dr. Federico R. Chirinos; Fomento, Dr. Manuel A. Diez; Public Works, H. Perez.

Area and Population.—The area is estimated at 593,943 square miles. The population in 1894 was 2,444,816, consisting of 1,197,069 males and 1,247,747 females. The number of foreigners was 44,129, of whom 13,358 were Spaniards, 11,081 Colombians, 518 other South Americans, 232 citizens of the United States, 6,154 British, 3,179 Italians, 2,545 French, 3,729 Dutch, 962 Germans, 82 Danes, and 2,089 from other countries. The number of marriages in 1894 was 4,012; of births, 80,819; of deaths, 46,410; excess of births, 34,409. The number of immigrants was 141.

Finances.—The receipts of the treasury for the fiscal year 1898 were estimated at 40,150,000 bolivars, or francs, of which 27,000,000 bolivars are the yield of customs, 3,970,000 bolivars come from internal revenue taxes, and 5,180,000 bolivars from rents and profits of state property. The expenditures were estimated at the same total, divided into 8,387,593 bolivars for the interior, 2,516,170 for foreign affairs, 2,227,255 for fomento, 3,171,176 for public instruction, 2,633,264 for public works, 15,163,402 for finance and service of the debt, and 6,051,140 for the army and navy.

The public debt on June 30, 1897, amounted to 148,956,298 bolivars, of which the internal consolidated 6-per-cent. debt of April 14, 1896, represented

63,374,943 bolivars, the external 3-per-cent. debt 66,600,300 bolivars, and the special debt of the Caracas aqueduct 10,640,955 bolivars.

Commerce.—The value of the exports in the year ending June 30, 1896, was 85,786,000 bolivars; of the cacao, 10,000,000; of the gold, 11,792,000 bolivars; of hides and skins, 2,597,000 bolivars; of animals, 1,552,000 bolivars. The trade is chiefly with Great Britain, the United States, the West Indies, France, Germany, and Colombia. The total value of the exports in 1894 was 107,635,604 bolivars. During that year 1,480 steamers and 7,629 sailing vessels were entered at the ports.

Communications.—The railroads had in 1896 a total length of 394 miles. The length of telegraph lines belonging to the Government was 3,262 miles.

The Army and Navy.—Since the reorganization of July 30, 1895, the strength of the permanent army is fixed at 11 battalions, each consisting of 6 companies of 60 men. The naval force consists of 3 steamers, to each of which is attached a company of marines, and 2 sleep gunboats.

The Guiana Boundary Arbitration.—The arbitration treaty between Great Britain and Venezuela which brought to an end the long boundary dispute that became acute after the discovery of gold in the disputed territory in Guiana, inducing the vigorous diplomatic intervention of the United States Government, was signed at Washington on Feb. 2, 1897, by Sir Julian Pauncefote, British ambassador, and Gen. José Andrade, Venezuelan minister to the United States. The Venezuelan Congress, which met on Feb. 20, ratified the treaty without a dissenting voice on April 5. Diplomatic relations with Great Britain, which had been interrupted since 1887, were resumed by the appointment of Dr. Juan Pietrie as minister to England. The final ratifications of the treaty were exchanged at Washington on June 14. The boundary commissioners were named in the treaty—Lord Herschell and Justice Henn Collins, nominated on the part of Great Britain by the Judicial Committee of the Privy Council, and Chief Justice Fuller and Justice Brewer on the part of Venezuela, nominated the one by the President of Venezuela and the other by the justices of the Supreme Court of the United States. It was provided that these four were to select a fifth commissioner to act as president and umpire. They selected Prof. Martens, of the University of St. Petersburg. The commissioners arranged to hold the court of arbitration in Paris in the autumn of 1898.

The Presidential Election.—The Legalsists, who are the successors of the old Oligarchist or Conservative party that opposed the extension of political rights to the people and all the progressive measures since enacted by the Liberals, such as the abolition of slavery and of the death penalty for political crimes, the abolition of tithes, civil marriage, the suppression of convents, liberty of the press, financial reorganization and the gold standard, the building of railroads, and the establishment of unlimited suffrage, named as their candidate for the presidency, to succeed Gen. Crespo for the term beginning on March 5, 1898, Rojas Paúl, whom they desired President Crespo to accept as the official candidate. It has been the practice of the Presidents of Venezuela to favor a particular candidate, and by the power of the Government to secure his election, barring a revolution. President Crespo determined this time to stand neutral between the parties. He declared that he would not interfere in the elections save to see that the rights of all were respected. The Legalsists, on April 27, nominated Gen. Ignacio Andrade. By effect the Administration supported him, and he was elected President on Sept. 16 by an overwhelming majority.

A new Cabinet was constituted on June 28, as follows: Minister of the Interior, Dr. Heriberto Gordon; Minister of Foreign Affairs, Dr. Ezequiel Rojas; Minister of War and Marine, Gen. J. R. Rieart; Minister of Public Instruction, Dr. F. R. Chirinos; Minister of Public Works, Gen. Jorge Uzar; Treasurer, Luis Castillo; Minister of Agriculture and Improvements, Señor Agrinaldo; Minister of Posts and Telegraphs, Dr. A. Riera. Later Ernesto García became Minister of Public Works and Gen. Uzar Treasurer. Later in the year revolutionary disturbances were threatened in Caracas. Several journalists and politicians were arrested for attacking the Government. A plot to bring about a revolution in order to prevent the meeting of Congress was suspected, and on Nov. 1 some 500 arrests were made.

VERMONT, a New England State, admitted to the Union March 4, 1791; area, 9,565 square miles. The population, according to each decennial census, was 154,465 in 1800; 217,895 in 1810; 235,966 in 1820; 280,652 in 1830; 281,948 in 1840; 314,120 in 1850; 315,098 in 1860; 350,551 in 1870; 332,286 in 1880; and 332,422 in 1890. Capital, Montpelier.

Government.—The State officers in 1897 were: Governor, Josiah Grout; Lieutenant Governor, Nelson W. Fisk; Secretary of State, Chauncey W. Brownell; Treasurer, Henry F. Field; Auditor, Franklin

account State highway tax, \$83,028.17; from temporary loans, acts of 1894 and 1896, \$400,000; from superintendent of the State Prison, \$23,867.64; from United States Government, endowment of Agricultural College, \$22,000. A balance of \$67,113.80 remained at the end of the year. Temporary loans to the amount of \$280,000 were paid, and an asylum loan of \$50,000. The Auditor's orders amounted to \$664,679.46. School and highway money was distributed, each to the amount of \$86,899.88. The resources amounted to \$702,754.68, and the liabilities to \$367,149.45, leaving available for the ensuing year \$335,614.45. The funded liabilities were \$135,500; this is the agricultural college fund, represented by registered bonds due in 1910.

Education.—The latest available school statistics are for the biennial period 1895-'96. Among the items for 1896 we find: Number of "legal schools" maintained, 2,361; of graded schools, 114; number of less than twenty-six weeks, 92; average number of weeks of schools having twenty-six or more, 308; average daily attendance, 46,261; average number of days for all schools, 154; total amount received, \$887,117.24; indebtedness for necessary school expenses, \$70,436; for new buildings, \$206,656; cost per pupil, \$16.33; cost of free text-books for each child attending, \$2.11; estimated number attending parochial schools, 3,293; attending private schools, 360; number public libraries, 99; number of volumes, 171,754.

The three normal schools graduated 174 students during the two years, and drew from the State treasury \$26,028.

The summer schools of two weeks each year were attended by 1,416 for the two years.

At the University of Vermont there were 295 students in the departments of arts and sciences, and 480 in all departments, including the medical. The expenditures in 1896 were \$71,468.65.

Prisons.—The number of inmates of the State prison in July, 1896, was 159. The income was \$38,487.74, and exceeded the expenditures by \$678.58.

The number of commitments to the House of Correction, at Rutland, during the two years was 777, and the number remaining June 30, 1896, was 111. The changes made by the last Legislature in laws against intoxication and tramps have considerably decreased the commitments for those offenses since the last report. The average cost of subsistence for all connected with the institution has been 94 cents per day.

The whole number committed to the Industrial School was 1,105, of whom 107 were girls. There were 95 boys and 14 girls remaining at the close of the period. The expense to the State for each was \$148.19.

Militia.—The National Guard of the State, as shown by the annual returns for the year ending June 30, 1896, consists of 68 officers and 680 enlisted men, organized into one 3-battalion regiment of infantry, one 4-gun battery of light artillery, and the Norwich cadets, designated by statute the Section of Artillery.

Charities.—The Brattleboro Retreat for the Insane had 162 patients June 30, 1896, 116 of whom were supported by private means. The receipts were \$167,943 and the expenditures \$167,715.

At the State Asylum there were 498 patients. The average cost was \$2.89 a week for each patient.

The Soldiers' Home, at Bennington, has received since its organization in 1887 286 soldiers; of this number, 68 have died and 127 have been discharged. The new addition to the main building of 40 x 32 feet will make it 140 feet long and 3 stories high.

Banks.—The aggregate resources of all the savings banks, savings institutions, and trust companies in the State June 30, 1896, were: Loans on

JOSIAH GROUT, GOVERNOR OF VERMONT

D. Hale; Adjutant General, T. S. Peck—all Republicans; Superintendent of Education, Mason S. Stone, Independent; Inspector of Finance, Hosea Mann; Tax Commissioner, D. J. Foster; Railroad Commissioners, Gen. Merrill, Z. S. Stanton, and Frank Kenfield; Chief Justice of the Supreme Court, Jonathan Ross; Associate Justices, Loveland Munson, John W. Rowland, Russell S. Taft, Henry R. Starr, L. H. Thompson, and James M. Tyler; Clerk, M. E. Simile—all Republicans.

Finances.—The report of the Treasurer for the year ending June 30, 1897, shows that the receipts during the year were \$1,342,850.37, including the balance \$209,455.94 on hand at the beginning of the year. The larger items of receipts were: From corporations, \$383,728.63; from courts, clerks, judgments, and balances, \$56,737.96; from towns, account of State school tax, \$83,028.17; from towns,

mortgages of real estate in Vermont, \$6,613,133.53; loans on mortgages of real estate elsewhere, \$11,085,427.91; loans on personal security, \$2,866,002.64; loans with bank stock as collateral security, \$244,759.65; loans on other collateral security, \$1,074,827.24; loans to towns, villages, etc., \$508,214.03; United States bonds owned, \$787,031; State, city, county, town, village, and other bonds owned, \$8,946,373.77; real estate owned for banking purposes, \$236,987.11; real estate acquired by foreclosure, \$424,512.88; bank stock owned, \$419,485; miscellaneous assets, \$269,321.59; cash on deposit in banks, \$1,136,463.74; cash on hand, \$354,806.81; total resources, \$34,991,346.90; net increase in resources, 1896 over 1895, \$1,920,713.62. The liabilities were: Amount due depositors, \$32,170,742.88; capital stock of trust companies, \$200,730; amount of surplus and accumulations, \$1,766,389.01; miscellaneous liabilities, \$147,425.01; total liabilities, \$34,191,346.90; net increase in liabilities, 1896 over 1895, \$1,920,713.62.

Railroads.—Plans have been considered for the reorganization of the Vermont Central, but none appears to have been fully decided upon. At a meeting in Boston in October the first-mortgage bondholders voted to accept the offer of the Grand Trunk Railway of Canada and turn the Central over to its control; but opposition appears to have been developed. The "Vermont Watchman" says:

"In fairness to the present management it ought to be said that the occasion of the receivership of the road originated in extravagant leases made by the old management of the Central Vermont ten or twelve years ago, at a time when the country was prosperous and everything looked favorable for the taking of these leases."

There was great rejoicing in May when ground was broken for the Mount Mansfield electric railway, which was destined to connect the village of Stowe with Waterbury and the outside world. For more than forty years the people of Stowe have been struggling for connection with Waterbury.

Products and Industries.—Reports from the clerks of 223 towns show that there were sold between Jan. 1, 1896, and Jan. 1, 1897, 1,567 farms, 170 of which were not occupied at the time of the sale. The reports show that during the year \$257,100 has been invested in new manufacturing enterprises, and that they are furnishing employment for 353 persons. This is but \$56,000 more than half as much as was invested in 1893, showing the least of any of the six years in which these statistics have been collected.

The 110 summer hotels and homes that have reported their business for 1896 entertained 36,592 persons and received \$207,772 for board and \$15,983.50 for livery. Thirty-two report business as an average with other years, 33 that it was better, and 44 that it was poorer.

The season of 1897 was remarkable in the annals of sugar making. Great quantities were made, and most of it was of the best quality, as it was made comparatively early in the season. In some sections the flow of sap was so much greater than the makers were prepared for that a great quantity was wasted.

Vermont had, Jan. 1, 1897, 263,640 cows, an average of 4½ cows to 100 acres, and an average of 84 head, including horses and cattle of all ages.

The Tax on Inheritances.—The law passed in 1896 imposing a tax on collateral inheritances is apparently meeting with great unpopularity, and will probably come before the Legislature of 1898 for reconsideration. Up to June, 1897, only \$543.70 was credited as having come to the State treasury from this source.

Landslide.—The most remarkable event during the July flood was the landslide on Fayston moun-

tain. This was one of the heaviest avalanches ever known in the State. The top of the slide was in the town of Warrington, and extended to within nearly 200 tons fell but 100 feet from a deeply perpendicular height, and when the immense boulder struck was the beginning of the slide. It started nearly at the top of three strata of two points, and after a distance of about 200 rods the two came together and the combined spurs were well reaching to the foot of the mountain south of 1000 feet, and its momentum carried it nearly a mile down a comparatively level ground. About 150 acres of heavily wooded spruce timber land were torn in the slide, leaving the rocks almost bare. The average width of the avalanche was 20 rods, and at several points near the top of the slide it was at least 60 feet deep. The noise was heard five miles and more. The actual fall was 2,416 feet.

VIRGINIA.—A Southern State, one of the original thirteen, ratified the Constitution, June 25, 1788. Area, 42,450 square miles. The population, according to each decennial census, was 747,619 in 1790; 880,200 in 1800; 974,000 in 1810; 1,065,116 in 1820; 1,211,405 in 1830; 1,233,797 in 1840; 1,421,661 in 1850; 1,596,318 in 1860; 1,225,163 in 1870; 1,512,565 in 1880; and 1,655,980 in 1890. Capital, Richmond.

Government.—The following were the State officers during the year: Governor, J. Hugo Tyler, Democrat; Lieutenant Governor, Edward Echols; Secretary of the Commonwealth, James T. Lewis; Attorney-General, A. J. Montague; First Auditor, Morien Marye; Second Auditor, Joseph Ryland, Jr.; Treasurer, A. W. Harman; Adjutant-General, Charles J. Anderson; Superintendent of Public Instruction, J. W. Sutherland; Commissioner of Agriculture, Thomas Whitehead; President of the Court of Appeals, James Keith; Justices, John W. Riely, John A. Buchanan, George M. Harrison, and Richard H. Carlwell; Clerk of the Court, G. K. Taylor—all Democrats.

J. HUGO TYLER, GOVERNOR OF VIRGINIA.

Finances.—The following is a synopsis of the financial operations of the State Treasury for the fiscal year ending September 30, 1897. On account of

the Commonwealth: Balance on hand Oct. 1, 1896, \$231,710.81; received in fiscal year 1896-'97, \$3,131,255.35; total, \$3,362,966.16; disbursed in fiscal year 1896-'97, \$3,155,458.11; balance on hand Oct. 1, 1897, \$207,508.05. On account of literary fund: Balance on hand 1896, \$228,080.52; received 1896-'97, \$273,279.81; total, \$501,360.33; disbursed, \$281,259.80; balance on hand, \$220,100.53. On account of interest on public debt: Balance on hand, 1896, \$1,301.18; received 1896-'97, \$712,928.82; total, \$714,230; disbursed, \$703,898.48; balance on hand, \$8,331.52. On account of sinking fund: Balance on hand 1896, \$340,303.57; received 1896-'97, \$30,904.23; total, \$371,207.80; disbursed, \$371.25; balance on hand, \$370,363.55. On account of Miller fund: Balance on hand 1896, \$17,900.03; received 1896-'97, \$72,163.95; total, \$90,063.98; disbursed, \$81,999.92; balance on hand, \$8,963.16. The total balance in the treasury to the credit of the several funds was \$815,530.81, in addition to which the United States direct-tax fund had to its credit \$2,029.90. The entire amount of interest paid out on the Riddi-berger and century bonds and bonds held by the colleges of the State was, for 1896, \$713,000. At the preceding session of the General Assembly a law was enacted under which the Commissioners of the Sinking Fund were authorized to exchange coupon bonds of the State, issued under the act of 1892, into registered bonds, and to arrange for the transfer of registered bonds. For every bond so issued in exchange a fee of 50 cents was to be paid to the Second Auditor, and by him turned over to the Treasurer for the credit of the sinking fund. The extension of time under this act was limited to Dec. 21, 1896. Under this law State bonds amounting to \$370,668.58 were turned over to the Second Auditor, who exchanged them against century bonds in the same proportion as those founded under the law of 1892. Nearly all the exchanged bonds consisted of tax-receivable coupon bonds. This exchange made quite a clean sweep of that class of bonds, which have caused the State a great deal of trouble. There were left only about \$125,000 worth of tax-receivable bonds outstanding, and it was assumed that a number of them had been lost.

Criminal Expenses.—Several counties were charged upon the books of the Auditor with greater sums for criminal expenses than the amounts they paid in as taxes on real and personal property. Figures from the Auditor's report show that Buchanan County expended \$5,808.57 for punishment of crime, while the largest sum to have been collected from taxes was but \$6,886.32. The county of Carroll expended more than half of the total amount of taxes assessed. In Dickinson County the sum of assessed taxes was only \$2,957.34, and \$5,179.64 was consumed by criminal expenses. Patrick County called on the State for \$7,451.36, and was assessed for only \$6,967.91. The whole amount paid by the State for criminal expenses was \$378,291.37.

The Insane.—Inmates under care and treatment in the State hospitals, Sept. 30, 1897, numbered in all 2,568, divided as follows: Western, 857; South-western, 325; Eastern, 567; Central, 849. Of these 269 died. The cost of support *per capita* was reported: Western, \$125.90; Southwestern, \$143.27; Eastern, \$126.50; Central, \$95.86.

Education.—The school population for the year closing July 31, 1897, was 665,865—397,162 white and 268,703 colored; there were 8,529 schools in operation—6,250 white and 2,279 colored; the total of white and colored pupils enrolled was 267,817—244,583 white and 123,234 colored. Pupils in average daily attendance numbered 213,421—145,218 white and 68,203 colored; the total of pupils studying in the higher branches was 11,886; total supplied

with text-books at public expense, 7,245; average number of months school was kept open, 6.01; total number of teachers, 8,575—6,448 white and 2,127 colored; average monthly salaries—male teachers \$31.98, female teachers \$26.67; cost of tuition per month per pupil enrolled, 61 cents; estimated value of school property, \$3,090,777. The revenue of the school system was reported as follows: State funds, \$737,512.07; direct appropriation by the General Assembly, \$200,000; interest on investment of the literary fund, \$46,057.88; county funds, \$254,298.60; district funds, \$270,312.22; city funds, \$315,630.56; other funds (local), \$39,892.67; total, \$1,863,704. The total cost to all sources for all purposes, including balances due for the year were: Current expenses—pay of teachers, \$1,409,289; pay of superintendents, \$50,669.96; pay of district clerks, \$19,436.83; pay of treasurers, \$42,573.67; rent, \$14,584.44; fuel and lights, \$50,126.29; insurance, \$4,790.37; text-books for indigent pupils, \$4,990.28; expenses of county and electoral boards, \$5,442.56; other contingent expenses, \$45,349.97; "School Journal," \$512.40; expenses, central office, \$5,647.51; summer normal schools, \$2,500; total amount expenses, \$1,655,913.72. Permanent improvements—real estate, buildings, furniture, and repairs, \$147,012.82; school apparatus, \$24,070.68; total, \$171,089.50. Total cost for all purposes, \$1,827,003.22. The amount due teachers at close of the year was \$27,160.

Agriculture.—The general average of crops for 1897 was given as follows: Wheat, 99; corn, 83; oats, 85; hay, 74; cotton, 90; tobacco, 93; Irish potatoes, 87; sweet potatoes, 85; peanuts, 90; pastures, 85; apples, 73; peaches, 56; pears, 48; grapes, 84. Acreage: Wheat, 93; corn, 98; oats, 89; hay, 89; cotton, 95; tobacco, 97; Irish potatoes, 87; sweet potatoes, 68; peanuts, 99; pastures, 97.

The Oyster Industry.—The State has 201,216 acres of natural oyster beds, and 400,000 acres of planting ground. From this immense area she received as revenue for the four years 1894-'97 the small sum of \$131,630, and the expense of maintaining police vessels and executing the laws amounted to \$116,885, leaving a balance of only \$14,745. In 1896-'97 the receipts from the oyster tax were \$29,985; expenditures, \$31,693.

Railroads.—There are 37 lines of railroad in the State, the total mileage being 4,499.05; the gross earnings and income of these roads amounted to \$49,763,367.48; operating expenses, taxes, and other deductions, \$36,817,080.97; interest, \$11,677,190.53; total killed during year, 124; total injured, 1,165.

State Farm.—Under an act of 1894 a farm containing 952 acres, lying on James river, was purchased for the employment of short-term convicts. The investment is reported to have increased in value 200 per cent.—that the farm could now be sold for \$50,000. During the year it produced: Corn, 20,000 bushels; wheat, 1,165 bushels; rye, 1,124 bushels; oats, 2,500 bushels; peas, 800 bushels; tobacco, 32,000 pounds; sugar beets, 24½ tons; and truck in large quantities. Besides supporting, on an average, 150 sick and disabled and 150 working convicts, the farm furnished the Penitentiary with products worth \$10,000.

Militia.—The volunteer militia consists of 227 officers and 2,518 men, comprising 46 companies of infantry, 2 troops of cavalry, and 3 batteries of artillery. Of the infantry, 8 companies are colored. In 1896 and 1897 the militia was used in aid of the civil authorities in the cities of Portsmouth and Alexandria, called out by the mayors thereof, and in the counties of Albemarle, Shenandoah, Fairfax, and Culpeper, called into service by the sheriffs thereof. The entire cost, including transportation, was \$1,066.75.

Lawlessness.—In his message the Governor said: "There have only been three occasions of open and violent defiance of law during my administration. Three men have suffered death at the hands of lynchers—one in Essex County, one in Patrick County, and one in the city of Alexandria. So far as I have been able to learn, after careful investigation, no blame attaches to the law officers of either the county of Essex or Patrick for the acts of the mob. In the city of Alexandria I regret to say that, in my opinion, there was dereliction of duty somewhere. That city has the largest military company in the State. A man was arrested charged with a vile felony. He was committed to the station house, where several policemen were on duty. The excitement became intense, and a crowd assembled at the station house in a threatening manner. Later another crowd gathered, broke into the station house, seized the policemen in charge, battered down the door of the cell in which the prisoner was confined, took him out and hung him to a lamp-post. The mayor, though clothed with the power to summon the military company to aid the civil authorities, issued no order and took no step to protect the prisoner, notwithstanding the excited condition of the city, of which he had full notice. There may be no doubt the prisoner was guilty of a most heinous crime, committed under the most diabolical circumstances, and deserved death, but he was in the custody of the law officers, safely confined, and yet a mob was permitted in a city of 18,000 population, with a strong military force at the command of the mayor, to bid defiance to the law and trample down the authority of the Commonwealth. There can be no possible excuse for the success of the mob."

VOLUNTEERS OF AMERICA, THE. An offshoot, by secession, from the Salvation Army. (See "Annual Cyclopædia" for 1883, page 716). The separation occurred in February, 1896. Commander Ballington Booth, who took charge of the Salvation Army in the United States in 1886, from time to time modified the rigid system of that organization, to adapt it more effectively to the varying conditions of its development in this country, and his administration was marked by many improvements. Differences with Gen. William Booth, his father, concerning the administration of army affairs in the United States, especially in relation to turning over certain funds to the central control in London, led to a rupture, which resulted in the recall of Commander Booth. It appears that among certain grievances which Ballington Booth had submitted to his father, was one concerning the "War-Cry" superannuation fund. The sale of the "War-Cry" in the United States had been sanctioned by Gen. Booth on condition that 10 per cent. of such sales be set apart for disabled and superannuated soldiers of the Salvation Army. It is claimed that Gen. Booth sent for this money, which amounted to \$8,000 or \$10,000, with the intention of using it for purposes other than such as had been agreed upon, and that Ballington Booth declined to accede to his father's demand, the former holding that the fund was for the American Salvation Army superannuated soldiers, and could not be otherwise used; whereupon his father ordered his removal.

It was felt by many Americans that the recall of the commander was a grave mistake, and a popular meeting was held in New York city in February,

which sent to Gen. Booth in England the expression of a hope that the rumor of recall might be countermanded. At the same time, in view of its intended influence, it was decided, Booth withdrew from the Army altogether, and his place was filled by Commander Booth, Jr. It was claimed that it was not the intention of Commander Booth to form a new or rival organization, but that, as many prominent Salvation Army officials withdrew from the Army in sympathy with their action, a body, subsequently, while posts were withdrawing, he concluded that it was his duty to continue work in the United States, and a new body was formed. This body was named "The Volunteers of America," and was duly incorporated under the laws of the State of New York on Nov. 9, 1896, one of the chief features of its declaration of principles being that "All properties, real estate and personal, of the Volunteer movement shall be held by a body or board composed of 5 to 7 well-known and responsible American citizens," and that "In the Volunteer property will be held by trustees chosen for the purpose, instead of being decided over to one man."

The constitution of the Volunteers embraces 19 articles based upon the sentiment, "In righteous principles, unity; in divine doctrines, harmony; in essential methods, liberality." Following is a synopsis of the most important provisions of this constitution:

Article I declares that "The Volunteers of America is a military movement, military in its methods, organized for the reaching and uplifting of all sections of the people." Article III contains the statement: "It is, and ever must be, an American institution, recognizing the spirit and practice of the Constitution of the United States; and it is not, and never shall be, controlled or governed by any foreign power whatsoever." Article IV provides that in all foreign missionary work the principle of home rule upon which the Volunteers were organized shall be maintained, and foreign branches shall have absolutely no connection, so far as their control is concerned, with the national organization in this country. Article VI deals with the selection of a commander in chief, and reads in part: "The officer in supreme military command of The Volunteers of America shall be designated as the Commander in Chief, and he shall be elected by the soldiers. He shall have been an officer in the Volunteers for a period of not less than five years previous to his election, and he shall hold office for a period of ten years and until his successor shall be elected. The commander in chief may be removed by a three-fourths vote of the Grand Field Council." The members qualified to elect the directors of the association "must be citizens of the United States." Every Volunteer must subscribe to a belief "in one Supreme God and in the Trinity, in the inspiration of the Bible, in Jesus Christ as the Son of God, in the doctrine of the immortality of the soul, in the resurrection of the body, and in eternal punishment." It is provided that "the sacrament of the Lord's Supper and the rite of baptism shall be observed." Woman is recognized as man's equal and entitled to the same privileges in the organization.

When this body was but little over six months old it included 140 posts, 400 commanding officers, 50 staff officers, 3 regiments, and 10 battalions, with headquarters in New York city comprising over 40 persons. Since then it has grown rapidly.

W

WASHINGTON, a Pacific coast State, admitted to the Union Nov. 11, 1889; area, 69,180 square miles. Population, according to the census of 1890, 349,390. Capital, Olympia.

Government.—The State officers for the year were: Governor, John R. Rogers; Lieutenant Governor, Thurston Daniels; Secretary of State, Will D. Jenkins; Treasurer, C. W. Young; Auditor, Neal Chestnam; Commissioner of Public Lands, Robert Bridges; Superintendent of Public Instruction, T. J. Brown; Justice of the Supreme Court, John B. Reavis; Attorney-General, Patrick Henry Winston—all Populists except Winston, who is a Silver Republican.

JOHN R. ROGERS, GOVERNOR OF WASHINGTON.

Finances.—The levy made by the State Board of Equalization for 1897 for State purposes is 2-6 mills; for school purposes, 2-7 mills. This levy will produce for State purposes \$587,940; for school purposes, \$610,553; a total of \$1,198,493. Last year the total amount of the State tax was \$626,615; school tax, \$655,480; a total of \$1,282,095. The total for State and school purposes is \$88,002 less this year than last.

The total valuation of railroad property in the State is placed at \$20,024,505, against \$12,910,176 last year. The State board raised these valuations from \$17,863,567, as returned by the county boards.

The total amount of taxes levied in King County for 1897 is \$1,017,120.64. The average rate of taxation is 23 mills. In Snohomish County the total amount of taxes levied for all purposes is \$287,002.90, and the average rate of taxation is 36 mills.

Legislative Session.—The Legislature, which organized on Jan. 11, 1897, passed, among others, the following bills, which were approved by the Governor:

Creating a State board of control. It creates one board for all the penal, charitable and reformatory institutions, leaving the educational, wards of the State to be managed by separate boards of regents.

Fixing order of payment of debts of decedents. Debts shall be paid as follows: Funeral expenses; the expenses of last sickness; debts having preference by law; any debts or dues owing the State; judgments rendered against deceased during his lifetime, which are liens upon real estate, on which execution might have issued.

Defining the crime of rape, and fixing the age of consent at eighteen years.

Granting bounty for production of sugar. This bill provides that the State shall pay 1 cent a pound, as bounty, to manufacturers for all sugar manufactured within the State, and provides further that no bounty shall be paid on sugar not containing at least 90 per cent. of crystallized sugar, and only upon sugar produced from beets for which as much as \$5 a ton has been paid to the producer. The bounty to be paid by the State shall not exceed \$50,000.

Providing that property assessed for street improvement may be sold on ten days' notice after the assessment falls due, without foreclosure.

Exempting from execution and attachment to householders and freeholders personal property to the amount of \$1,000. When any person dies seized of exempt property, leaving heirs, such property shall be set aside for the use of such heirs, free from all claims against the deceased.

To regulate insurance companies, requiring that policies be written by local agents; that a license be secured from the State, and that 2 per cent. on all policies be paid to the State; that statements be published in two daily papers each year; that in case of a total loss the full amount of the policy be paid, and prohibiting insurance combinations.

George Turner, Populist, was elected to the United States Senate.

Dairies.—The annual report of the Dairy Commissioner for 1897 shows in Washington an increase of more than 150,000 pounds of cheese and 200,000 pounds of butter. A total of 709,364 pounds of cheese was produced during the year 1897, compared with 554,123 pounds in 1896. The butter production was: 1897, 2,094,427 pounds; 1896, 1,853,657 pounds. The largest creamery in the State is that of Martin & Hubbard, of Spokane, where 139,876 pounds of butter and 103,235 pounds of cheese were produced last year.

Kittitas is the leading dairy county in the State, as shown by the report of the commissioner. Twice the number of dairies in other counties are located in Kittitas, and the report shows that they have done a good business during the year. The number of dairies in each county is: Adams, 2; Clallam, 4; Clark, 6; Columbia, 1; Cowlitz, 3; Douglas, 1; Island, 1; Jefferson, 1; King, 7; Kittitas, 15; Klickitat, 1; Lewis, 6; Lincoln, 2; Pierce, 4; Snohomish, 3; Skagit, 2; Spokane, 2; Stevens, 2; Thurston, 3; Wahkiakum, 2; Whatcom, 3; Whitman, 4; Yakima, 6.

The total amount of cheese shipped to outside points was 112,402 pounds; of butter, 174,778 pounds.

Mines.—The Mine Inspector's report issued in 1897 shows that the coal mines of Washington produced nearly 2,000,000 tons of coal last year, and employed the largest number of miners ever en-

gaged in that calling within the confines of the State. There were fewer mine accidents than ever, and the precautions for the safety of the workers were more generally recognized. The production of last year was 280,000 tons larger than ever before known.

Fisheries.—The annual report of the Fish Commissioner shows that the output of the Puget Sound salmon canneries for 1897 was 494,026 cases, compared with 312,361 cases in 1896. The increase in one year's production was 175,665 cases, or over 55 per cent. The increased revenue amounts to more than \$500,000.

WEST AFRICA. Previous to the assumption of a German protectorate over Togoland and the Cameroons in 1884 the European possessions on the west coast of Africa north of the Portuguese colony of Angola consisted merely of the English trading posts at Bathurst, Lagos, and on the Gold Coast and the colony of Sierra Leone, originally peopled by liberated slaves from the West Indies, and the French colony of Senegal. Since then European powers have taken possession of the whole coast except the independent republic of Liberia, and asserted claims to the whole interior, except the Central Sudan states of Bornu, Wadai, and Kanem.

British Possessions.—The total imports of the United Kingdom from the West African colonies in 1895 were valued at £1,685,581, and the exports of British produce and manufactures to those colonies at £1,083,333. The colony of *Gambia* has an area of about 2,700 square miles and a population of 50,000. The settlement is 69 square miles in extent, with a population in 1894 of 14,978, of whom 62 were white. The Administrator is R. B. Llewellyn. The district exports ground nuts, hides, beeswax, rice, cotton, corn, and rubber. The revenue in 1895 was £20,561; expenditures, £28,867. The value of the imports was £97,399, and of the exports £93,337. The chief imports of all the colonies are cotton goods, spirits, and tobacco.

Sierra Leone has an area of 15,000 square miles, containing about 180,000 inhabitants; the colony proper, with an area of 4,000 square miles, had 74,835 in 1891, of whom 224 were whites. The Governor is Col. Frederic Cardew. The revenue in 1895 was £97,851 and the expenditure £96,690. The development of the neighboring French colonies has diverted some of the trade. The exports are palm kernels and oil, rubber, kola nuts, gum, copal, and hides. The value of the imports in 1895 was £427,337, and of the exports £452,604. Freetown, which has 30,000 inhabitants, is a British coaling station and the headquarters of the British garrison in West Africa, consisting of a regiment of blacks recruited in the West Indies and British engineers and artillery. There is also a native constabulary of 570 men employed chiefly as a frontier guard. In August, 1896, a protectorate was proclaimed over additional territory embracing 30,000 square miles, with a population estimated at from 250,000 to 500,000. A railroad is being constructed from Freetown to Songhai.

Lagos has an area of about 1,500 square miles and a population estimated at 100,000. The number of whites is about 200. The protectorate has been extended over Yorubaland, with an area of about 19,000 square miles and 3,000,000 inhabitants. The chief exports are palm oil and kernels, ivory, gum, copal, rubber, cotton, cacao, and coffee. The Governor is Major H. E. McCallum. The revenue in 1895 was £142,049; expenditure, £144,484. The value of imports was £815,813, and of exports £385,594.

The *Niger Coast Protectorate* includes the district formerly known as the Oil Rivers and a part of the territory formerly administered by the Niger

Company. The boundaries are indeterminate. The administrative and judicial functions are exercised by an Imperial Commissioner and Consul-General, Sir H. D. Ralph Moor. The exports are palm oil and kernels, rubber, ivory, hides, cane-wax, indigo, gums, barwood, hides, and so on. The value of the imports in 1895 was £1,700,000 and of the exports £825,000. The protectorate embraces the country drained by the rivers Benue, Brass, Old Calabar, Benue, Quenele, Opobo, and New Calabar, reaching back as far as the junction of the Niger and Benue, about 300 miles, and covered with a large area of the oil palm. The British have undertaken several punitive expeditions to break down the trading monopoly which the pagan tribes living on the rivers have possessed from time immemorial. Thus the chief Nana, on the Benue, the chief of Okrika, on the Benue, and the Brass natives have been punished successively. An expedition set out on Jan. 2, 1897, to visit Duhami, the King of Benue, one of the boldest and haughtiest of these river potentates, in whose capital the Juju worship, requiring human sacrifices, was practiced without restraint. The King refused to receive the mission, consisting of 9 English officers, with 250 Krumsen, and when the party entered his dominions it was surrounded by his warriors, and acting Consul-General Phillips, the head, and the other Englishmen, excepting Capt. Bourgon and Commissioner Locke, who made their escape by hiding, were killed. An avenging expedition of 600 men was immediately equipped, which advanced through the river and lagoons, captured Gwato and Sapoda, marched 24 miles through the bush, and took Benue on Feb. 18, after a bombardment. The natives offered a determined resistance, but could not stand before the Maxim guns. The British lost 17 Europeans and 23 natives killed or wounded. The chiefs surrendered after a few days, and on Aug. 7 the King, who had escaped into the back country, gave himself up and was taken as a political prisoner to Old Calabar. A British garrison remained in the capital.

The *Niger Territories* were taken under British protection in 1896 and intrusted to the administration of the Royal Niger Company that during the previous two years had negotiated with native chiefs and tribes treaties under which the country up to the bend of the Niger and eastward to Lake Chad was claimed as British, including the territories known as Sokoto and Borgu. On Aug. 3, 1890, the French Government agreed to a line demarcating the British from the French spheres, drawn from Say, on the Niger, to Barua, on Lake Chad, in such a manner as to comprise in the sphere of the Niger Company "all that fairly belongs to the kingdom of Sokoto," the line to be determined by commissioners to be appointed. The British and German spheres are divided by an agreed line drawn from the rapids in the Cross river to a point on the Benue 30 miles east of Yola, and thence to the southern shore of Lake Chad. The extent of the regions claimed by the company is 500,000 square miles, with a population estimated variously from 20,000,000 to 35,000,000. The exports, consisting of gums, hides, palm kernels and oil, rubber, ivory, and vegetable butter, were valued at £406,000 in 1893. The importation of spirits into the country north of 7° of latitude is prohibited. The company imposes heavy duties on the ports of spirits and gunpowder, tobacco, and salt, and on all exports, the effect of which is to secure for it a monopoly of the trade in those regions which the merchants of Liverpool, who antagonized the company, once shared with the Germans; and latterly also with German merchants. Since the independent Liverpool merchants, on the other hand, the Govern-

ment detached the Benin and lower Niger countries from the territory of the Niger Company, formed in 1889 the African Association, limited, with a nominal capital of £2,000,000. The capital of the chartered Royal Niger Company is over £1,000,000, all subscribed, which it has power to increase indefinitely. The chairman is Sir George Taubman Goldie. The territories within the sphere of the company's influence are in part pagan Hausa states that have held their own against the Mohammedan invasion from the north and in part states that have yielded to the religious and military domination of the Mohammedan conquerors, the Fulahs, who now rule over them as a military caste. The Niger Company has concluded more than 400 treaties, 235 with separate pagan tribes, and the rest with the greater and lesser Mohammedan chiefs.

Throughout the latter part of 1896 many English officers entered the Niger Company's service, and preparations were made for a forward movement, the first one against the Mohammedans of the Niger regions, whom the British had endeavored to win by alliances and concessions in contrast with the French policy of subjugation. On Jan. 6 a column under Major Arnold marched out of Lokoja toward Kabbau, while an armed flotilla of the company's steamers proceeded up the middle Niger toward Eggau. The movement was directed against the forces of the Emir of Nupe. This emir, whose territory stretches westward of Lokoja, along the northern bank of the middle Niger to the Bousa rapids, had for five years pursued a defiant attitude toward the Niger Company, while the rulers of Sokoto, Gando, and Borgu, to whom he and the other Mohammedan chiefs were regarded as tributary by the English, and who had entered into treaties placing their foreign relations in the company's hands and binding themselves to recognize no white power except Great Britain, had assisted the company by using their influence to restrain the emirs from slave-raiding and hostile action against the British. The company had endeavored to preserve the peace with Nupe, overlooking acts of aggression and granting a subsidy of £2,000 a year to the ruler, a larger one than was paid to the Emirs of Adamawa, Muri, Bakundi, Bautshi, and Zaria. Nupe itself was tributary to the Sultan of Gando, to whom the emir was obliged to furnish thousands of slaves every year. After the accession of a new emir, Abu Bokari, in 1895, it was found impossible to avoid for a long time a conflict with him and his organized army. He attempted to form a league with the Emirs of Bousa and Ilorin, with the object of driving the Christians out of the country. Nupe, whose territory borders on the pagan states south of the Niger, which the emir has claimed as his vassals, has been the most troublesome opponent of the Niger Company, which had taken these pagan states under its protection and disputed the right of the emir to demand slaves and produce as tribute. The inhabitants of Nupe are superior in wealth and civilization to most of the Mohammedan peoples of the western Soudan, excelling as weavers and as workers in iron, brass, leather, and glass. In May, 1896, his general, the makum, crossed the river Kabbau, in defiance of treaty engagements, with a force of 20,000 infantry and 2,000 cavalry, and formed a permanent camp, striking terror among the surrounding population. The emir joined him later with other forces, bringing the total number, including noncombatants, up to 50,000. The British column, consisting of about 800 Hausa troops, trained, drilled, and led by picked European officers, with six Maxim guns and two 7-pounders, accompanied by Sir George Taubman Goldie, made a rapid march of 200 miles to Eggom, where the vessels had deposited supplies

of military stores. The river was strongly held by the company's flotilla. The enemy dispersed and fled before the advancing column, which crossed the river at Eggom on Jan. 24, dragged the guns through swamps, and attained the high ground overlooking Bida, the stronghold and capital of Nupe. The British had induced the makum to betray his master by promising him the succession. Heavy fighting began on Jan. 26. The column, which had left detachments for garrison purposes along the line of march, and was now reduced to 250 men, had to cut its way by force of superior discipline and better arms, machine guns and repeating rifles, against bows and arrows, through masses of natives estimated at 20,000 to 30,000. The Fulahs rely chiefly on their cavalry, against whose onsets the company's troops were usually able to protect themselves by fencing in their position with barbed wire rapidly strung from reels mounted on wheels. There was a moment in the assault on Bida when the English force, surrounded on all sides by the enemy's cavalry, was in danger of annihilation. The Hausa troops, with great steadiness and courage, maintained their square unbroken at this critical juncture, and executed a retreat in good order. When the heavy artillery arrived the assault was renewed, and on Jan. 27 the British entered the town and received the submission of the enemy. The Emir of Nupe was deposed, and the Makum Mohammed was placed on the throne, who on Feb. 5 signed a treaty acknowledging British protection in both southern and northern Nupe, agreeing to abandon slave-raiding, and transferring to the direct rule of the company the dependent territories on the south side of the river. A part of the expedition marched immediately for Ilorin, in the rear of Lagos, where a battle was fought and won outside of the walls of the city, and the emir made his submission on Feb. 18. In Ilorin, as in Nupe, the Fulahs are the ruling caste, but the people are Yorubas, not Hausas. Their capital was destroyed by the British shells, and in the fighting, which lasted two days, they lost 200 of their horsemen. The Emirs of Lafagi and other neighboring states accepted the company's rule without a contest. An expedition of 200 men, with artillery, marched against the Patanis, who were accused of smuggling arms, and these made their submission without fighting. The Fulah strongholds along the river Niger were reduced by the flotilla, and new native rulers, amenable to the company's control, were placed over the populations. The authority of the company having been vindicated and its rule extended over a vast territory in which it previously exercised only trading rights, the Governor on March 6 issued a decree abolishing from June 19, 1897, the legal status of slavery throughout the territories under the direct administration of the company, embracing the country of the pagan tribes south of the Niger and a strip three miles wide along the northeast bank, over which the ganagas or river chiefs formerly held dominion. In the autumn the company's forces under Major Arnold subjugated Igarra, extending from the borders of Nupe to the mouth of the Benue, completing the conquest of all the countries south of the Niger in the undisputed English sphere.

The complaints of Liverpool merchants regarding the trade monopoly of the Niger Company and the territorial disputes with France, which had become so acute as to threaten a disturbance of international relations and to demand the assumption of all responsibility and control by the Imperial Government, forced upon the imperial authorities the necessity of placing the territories of the Royal Niger Company under their direct control. Negotiations were accordingly begun with the governor

and council of the company, looking to the surrender either of its trading activity or of its political powers, and in all events the restriction of the latter to administrative functions under the control of the home authorities.

The *Gold Coast* colony has an area of about 15,000 square miles, and the neighboring protectorate 31,600 square miles. The population of the colony is estimated at 1,473,882, of whom only 150 are whites. The Governor is Sir W. E. Maxwell. The revenue in 1895 was £230,076; expenditure, £265,280. The value of the imports was £331,537; exports, £877,804. Rubber, palm oil and kernels, and gold dust are the chief exports. Ashanti was conquered and placed under British protection early in 1896, with a Resident at Kumasi, Capt. Donald Stewart. A new labor ordinance permitting natives to be impressed as carriers was issued to facilitate the military operations undertaken on an extensive scale in 1897. It had the effect of totally stopping trade on the Gold Coast.

Samory, chief of the *Sofas* of the upper Niger region, who entered into an alliance with the English and took refuge within their sphere after the French by great military sacrifices had nearly succeeded in crushing his power, turned against his friends when they also proceeded to reduce to European rule the countries that were the field of his freebooting and slave-raiding exploits. In February, 1897, he captured the party of Lieut. Henderson, who had just made a treaty with the chief of Wa. Mr. Ferguson, the valued colored political agent of the English, died of his wounds. An expedition was sent against the *Sofas*, who were driven out of Bontuku. Samory retreated to Lobi, on the right bank of the Volta, where the French had posts. A detachment of French troops were sent under Major Caudrelier to expel the *Sofas*, who, however, surrounded the expedition near Bontu and killed 46. Bontuku, being within the French sphere, was evacuated by the British in November. Samory took up a strong position northwest of Seguskoro, in the bend of the Niger, where he was supplied with modern arms obtained from the Tuaregs and had 12,000 troops, who were drilled in European fashion.

French Possessions.—By the Anglo-French agreement of Aug. 3, 1890, Great Britain recognizes as within the French sphere all territories north of the Say-Barua line. The French occupy the coast from Cape Blanco south to Portuguese Guinea, except Gambia; beyond Portuguese Guinea to Sierra Leone; the Ivory Coast between Liberia and the British Gold Coast; and the Slave Coast between Togo and Lagos, with the conquered kingdom of Dahomey in the rear, beyond which the regions in the bend of the Niger are the subject of dispute between France and England. The French sphere extends northward across the Desert of Sahara until it joins Algeria and Tunis. The coast line from Cameroon to the Congo, except the Spanish settlement at Corisco Bay, belongs to France, and by an agreement with Germany in 1894 the region behind Cameroon northward east of the Shari to Lake Chad. Eastward the French sphere extends across the continent north of the Congo Free State, along the right bank of the Congo and of the Mobangi north of 4° of north latitude, to the region of the upper Nile formerly occupied by Egypt and claimed as within the British sphere. The two spheres are separated by the still independent countries to the east and north of Lake Chad, which both France and England hope to absorb. The northern sphere embraces an area of 550,000 square miles south of Sahara, the French part of which is 1,000,000 square miles in extent, and the southern sphere 330,000 square miles.

Senegal is a French colony, represented by a

Deputy in the Chamber. It includes the communes of St. Louis, which has a population of 20,000, Dakar, Rufisque, and the island of Gorée, together with territories or stations on the coast and the river Senegal. Including the annexed countries of Walo, Cayor, Toro, Dima, and Danga, the area is 58,000 square miles, having in 1891 a population of 1,029,540. The Governor General of French West Africa, M. Chaulié, is Governor of Senegal, and resides at St. Louis, where he is assisted by a Colonial Council. The troops in 1896 numbered 2,700, with 66 officers. There are 246 miles of railroad. The telegraphs have a length of 574 miles, with 1,022 miles of wire. The local revenue in 1895 was 3,951,400 francs. The expenditure of France in 1897 was 5,951,841 francs. The imports in 1895 amounted to 13,866,000 francs; the exports, consisting of ground nuts, gums, rubber, palm nuts, palm oil, hides, mats, and gold dust, amounted to 17,985,000 francs. The protectorates attached to Senegal have an area of 96,500 square miles, with an estimated population of 80,000.

The *French Soudan* embraces the regions of the upper Senegal and the upper and middle Niger, including the protected states of Samory and Tieba. The Lieutenant Governor, residing at Kayas, is Col. de Trentinian. The area of the annexed territories is about 54,000 square miles, with an estimated population of 300,000. The protectorates have an estimated area of 230,000 square miles, with 2,500,000 inhabitants. There is a railroad from Kayas, at the head of navigation on the Senegal, to Bamako, on the Niger, 320 miles. The troops in 1896 numbered 178 officers and 3,637 men. The local revenue in 1895 was 1,447,400 francs, and the expenditure 1,437,827 francs. The expenditure of the French Government in 1897 was 7,801,500 francs.

French Guinea, embracing the Rivières du Sud, the Gold Coast settlements of Grand Bassam, Assinie, Grand Lahou, and Jackeville and the Benin settlements of Porto Novo, Kotonu, Grand Popo, and Agoué, has an area, including protectorates, of 25,000 square miles. The population of the colony proper was 47,555 in 1891. The negro pagan kingdom of Dahomey, containing 4,000 square miles, was subjugated in 1894, and Guthili was made King instead of Behanzin. The inhabitants, numbering about 150,000, are industrious cultivators of the soil and produce the finest palm oil in Upper Guinea. The protected country attached to Grand Popo has 100,000 inhabitants; Mahis and Ajuda, 150,000; Porto Novo, 150,000; Abeokuta, 150,000. About 20,000 tons of palm kernels and 10,000 tons of oil are exported annually from Whydah and Kotonu. The imports of Dahomey in 1894 were valued at 10,750,000 francs, and exports at 9,950,000 francs. The budget of French Guinea in 1895 was 548,000 francs, besides 1,100,000 francs for the Ivory Coast settlements. The local revenue of Dahomey amounted to 1,600,000 francs. The protectorate of Fouta Djallon, not included in the above estimate, has an area of 42,460 square miles and about 600,000 inhabitants. Of the protected kingdom of Kong and neighboring territories no estimates have been made of area and population. The Governor of French Guinea, residing at Conakry, is N. E. Ballay. The Ivory Coast, or Grand Bassam, has L. Mouttet for its Governor, and Dahomey and its dependencies P. V. Ballot, residing at Kotonu. A telegraph line, 370 miles long, connecting all the posts, was constructed in 1897.

The preparations of the Niger Company for making military conquests in the Soudan aroused the suspicions of the French who disputed the claims of the Niger Company to the countries in the west, where there was no agreed line of delimitation separating the French and British spheres. The

French Government asked and received a pledge from the British Government, a pledge that the company's troops would not be employed farther north than 9° of latitude. A French expedition of 400 men under Lieut. Bretonnet set out from Dahomey and reached the Niger, and then descended the river from Illo, and occupied and garrisoned the town of Boussa and several other positions. Boussa is a pagan kingdom on the west bank of the Niger that lies back of Lagos, 150 miles to the east of an extension of the frontier of Dahomey. The Niger Company made treaties with the Boussa chiefs in 1890, and in 1895 the British Government notified the powers that the country was under its protectorate. A French expedition made an advance into this district, and was withdrawn in October, 1895, in response to a protest from the Niger Company communicated to the French Government. Subsequently the company established two fortified posts on the west bank of the Niger within this territory, one at Leaba and one at Fort Goldie, a post originally established by the French under the name of Fort Aremborg during their former expedition. Sir George Goldie went to Boussa after the British captured Ilorin, and found M. Carron established there as French resident and the French troops in possession of the district and not disposed to acknowledge the prior British claims. Lieut. Bretonnet assumed the title of French resident of the middle Niger. He had acted under instructions from the Minister of the Colonies directing him to proceed to the occupation of points in the valley of the middle Niger not already occupied by the English. The King of Boussa was at first unwilling to acknowledge the French protectorate, but he accepted the aid of a force of French soldiers in an expedition against his rebellious vassal, the King of Kworra, which resulted in the capture and destruction of the town of Wa after a fight in which 100 persons were killed. Nearer Dahomey Capt. Baud and Capt. Verneersch occupied the district of Gurma, to which the Germans had a claim under treaties with native chiefs, and Commandant Estenave and Lieut. Voulet, coming from the Sudan, took possession of Mossi. The Sultan of Gurma placed his 8,000 warriors at the disposition of the French. Another expedition rendered effective the French title to Futa Jallon. The chance of a territorial conflict with Germany was averted by an agreement arrived at by French and German commissioners, who as the result of mutual concessions settled on a frontier line which gives to France the whole of Gurma and permits Germany to annex Sansanne Mangu to Togoland. The convention was signed at Paris on July 23, 1897. The region obtained by France, while less productive than the country conceded to Germany, is of much greater extent, and it establishes the long-desired communication between Dahomey and the French Sudan. The line of demarcation proceeds from the end of the previously settled boundary, in 9° of north latitude, in a nearly northwesterly direction to 11° of latitude, then bends due west, and subsequently turns, following the river Volta in a southwesterly and afterward in a southerly direction until it reaches the neutral territory of Salaga. The German sphere embraces Ganda, Kirikri, Kunjari, Bafflo, Gambaga, and Wadwale, besides Sansanne Mangu, while the French obtain in addition to the whole of Gurma the districts of Dje, Pregno, Pama, Wangara, Semere Aloy, and Segou. In the course of the negotiations it was found that native chiefs had repeatedly concluded treaties simultaneously with French and German agents, and had also declared that their territories extended farther than they actually did and in other cases claimed an independence that they did not possess. It be-

came evident, furthermore, that it was impossible to base claims on the mere fact that territory had been duly occupied by one or the other of the negotiating powers, since French and German expeditions had often founded stations in the immediate neighborhood of each other, sometimes in the same place. The delegates of both powers agreed that where treaties had been regularly concluded priority of date should govern.

The boundary between the French possessions and the English sphere back of Lagos was fixed by the agreement of August, 1889, as far as 9° of north latitude. The French encroached on the English sphere by building a military road and establishing posts for the passage of expeditions from Dahomey at a point near the intersection of the frontier by the eighth parallel.

In the back country of the British Gold Coast colony the French have been as active as in the disputed *Hinterland* of Lagos. To secure this region for England a colored man named Fergusson has for years circulated among the tribes as far north as the line from Say to Segou, beyond which is the acknowledged French sphere in the Sudan, and he and other British agents have obtained treaties purporting to establish a British protectorate over Gurunsi, Mamprusi, Dagarti, Daboya, Chakosi, Bona, Lobi, Gonja, and the rest of the native states. Treaties made in 1892 were signed over again in 1894, and in 1897 other British missions traversed the region and secured fresh treaties. French agents also obtained like treaties from the same persons or others assumed to have the right to cede native territories. At Wagadugu, the capital of Mossi, in the extreme north, Mr. Fergusson obtained a treaty in 1894, also at Wa, the capital of Dagarti, and Mr. Henderson made a treaty on Feb. 2, 1897, at Leo, in the Gurunsi states. Successive treaties were made covering Bona and the other states. The validity of such treaties unaccompanied with effective possession has been denied by the French Government, and when the Niger Company undertook to establish its military power in the regions of the middle Niger the French dispatched armed expeditions both from the coast and from their military centers in the interior north of the line between Say and Segou to occupy as much as they could of the valley of the middle Niger before the British forces from the Gold Coast and the expedition of the Niger Company took actual possession. French expeditions coming down from the north attacked and took Wagadugu, took also Leo, secured the submission of Daboya, and at Wa induced the King of Dagarti to cancel his prior treaty with Great Britain, and substitute a French treaty in its place. In the *Hinterland* of Lagos the French still remained in possession of the Boussa district in the face of vigorous diplomatic representations, occupying Boussa, Illo, Niki, Kiami, and other towns. The British Government assumed the direction of affairs, and emphasized its serious diplomatic remonstrances by sending additional military forces into the territories of the Niger Company and considerable expeditions into the back country of the Gold Coast. In the autumn the French and British military forces stood watching each other, and there were moments when a collision was narrowly escaped. Capt. Stewart, the British officer, and Lieut. Voulet, at Wagadugu, and Capt. Seal, at Leo, effected temporary agreements equivalent to an armed truce in order that the questions at issue might be referred to their respective Governments for a diplomatic settlement. At Wa the French under Capt. Hugot promised to withdraw if the British officer would also retire, and afterward re-entered the town on the plea of securing themselves against attack. A

French force occupied Saki, 20 miles south of the ninth parallel, and still farther east of the Dahomey frontier, but retired when Major McCallum appeared with a detachment of troops from Lagos. Kishi, farther to the north in the same region, was occupied in spite of a British treaty made by Capt. Lugard, and was made a French station in order to afford a short cut to Boussa. In consequence of representations from the British Government the Paris authorities ordered the expedition that marched northward from Dahomey later to avoid passing through British territory. Two powerful British gunboats, the "Heron" and "Jackdaw," were placed on the middle Niger, to patrol the river from Boussa to Say, in order permanently to establish British influence on both banks. A large expedition under Lieut. Col. Northolt was sent into the back country of the Gold Coast. Here, in the beginning of November, Major Jenkinson seized Buna, which is in the middle of the French sphere of influence back of the Ivory Coast. In October the Barbakas attacked and defeated a British detachment under Capt. Humphrey at Hlesha, west of Saki, where the English established a post after the French had evacuated the place.

When a mixed boundary commission met in Paris in May, 1896, with the object of trying to effect an agreement for the delimitation of the French and English spheres beyond 9° of north latitude, it was found that the English commissioners were not empowered to conclude an arrangement, and the commission separated without accomplishing anything. The commissioners were summoned to meet again on Oct. 21, 1897, to discuss the questions that now threatened to precipitate an armed conflict in Africa, and to settle all the frontier questions. Before they could begin their labors the two Governments discussed the bases of an agreement, and found that irreconcilable differences as to the principles of the delimitation still kept them apart. At the same time active military preparations were prosecuted on both sides in West Africa. The French complained that the English were distributing arms among the natives to be used against the French, and that British officers were inciting rebellion in Borgu and the Niki region effectively occupied by France.

The boundary commissioners, empowered to discuss plans and arrangements to be referred to their respective Governments, held their first meeting on Oct. 29.

The *French Congo*, formerly known as Gabon-Congo, is under a Commissioner General, H. de Lamotte. The area is over 300,000 square miles, and the estimated population 5,000,000. The country is covered with great forests. The exports are rubber, cacao, coffee, ivory, ebony, sandalwood, palm oil and nuts, and gum copal. The imports were valued at 3,166,000 francs in 1893; exports, 2,345,000 francs. The local budget for 1895 was 3,000,546 francs. The expenditure of the French Government for 1897 was 2,197,861 francs.

French expeditions advanced in 1897 by way of the upper Ubangi and the Welle, with the probable object of establishing French posts in the Nile valley on the Bahr of Ghazal and the White Nile and thus anticipate the English advance from Uganda and the Anglo-Egyptian military movement in the direction of Khartoum. The ultimate aim was to extend French influence across the continent from the French possessions in Senegambia and on the Congo to those of Obock, on the Gulf of Aden, and thus French colonial adventurers hoped to accomplish with the aid of the Emperor Menelik of Abyssinia. Major Marchand's expedition set out from Brazzaville on March 1 for the Ubangi, where Capt. Liotard was engaged in taking pos-

session of regions in the upper Shari basin assigned to France in the Congo agreement (1884). Lieut. Dye had the parts of a steamer which he expected to put together on the Bahr of Ghazal. The expedition struck across from Senou, in the Niamey-Namti country, on the right bank of the Niger river, and in September was reported to have reached Nozibou, on one of the affluents of the White Nile. Major Marchand and his companions intended to organize a military force of the natives from whom they had a large supply of arms, and they expected to meet at Fashoda the party of Mr. Brookings, arriving from Jibuti by way of Abyssinia.

German Possessions.—The German protectorate of *Togoland*, administered by an Imperial Commissioner, Herr Köhler, has an estimated area of 23,160 square miles, with a population of 2,500,000. The white population in 1895 was 88, all Germans except 9. There is a police force of 150 natives. The chief exports are palm oil and kernels, gum, and ivory. The imports in 1894 were valued at 2,240,642 marks; exports, 2,864,333 marks. The revenue was 576,580 marks; expenditure, 410,140 marks.

Cameroun has an area of 191,130 square miles, and about 3,500,000 inhabitants. The Imperial Governor is J. von Putt Kamer. The Europeans in 1896 numbered 235. The budget for 1896 makes the revenue 1,270,300 marks, including a contribution of 600,300 marks from the Imperial Government. The imports in 1896 were valued at 5,377,943 marks; exports, 4,323,656 marks. The chief exports are palm nuts, ivory, palm oil, and rubber. Some cacao is exported, and plantations of coffee and tobacco have been begun.

Portuguese Possessions.—Portugal resumed possession of the Cape Verde islands and a strip of the coast of Upper Guinea in 1885. The area of *Cape Verde* is 1,650 square miles, with 119,920 inhabitants. The estimated revenue in 1895 was 259,170 milreis; expenditure, 265,757 milreis. The imports were 252,000 milreis, and exports 240,000 milreis in value.

Portuguese Guinea has an estimated area of 14,000 square miles, and about 800,000 inhabitants. The revenue was estimated for 1895 at 67,060 milreis, and expenditure at 174,708 milreis. The value of the exports is about 43,000 milreis a year.

The area of *Príncipe's* and *St. Thomas islands* is 454 square miles, with a population of 21,040. The revenue for 1895 was estimated at 263,490 milreis, and expenditure at 232,359 milreis. The imports in 1893 were valued at 1,035,963 milreis. The exports, consisting mainly of coffee and cacao, were 1,046,820 milreis in value.

Angola, including Ambriz, Benguela, Mossamedes, and the Portuguese Congo, has an area of 457,500 square miles, and about 2,000,000 inhabitants. The revenue for 1895 was estimated at 1,634,800 milreis, and the expenditure at 1,592,637 milreis. The imports are 2,570,000 milreis, and the exports 3,250,000 milreis a year. There are 180 miles of railroad in operation and 230 miles under construction or projected. The length of telegraphs is 260 miles.

Spanish Possessions.—The coast region of the Sahara south of Morocco is claimed as a Spanish protectorate. The right to the banks of the Niger and Campo rivers is disputed by France. The settlements of *Rio de Oro* and *Aden* are placed under the direction of the Governor of the Canary Islands. The area of the protectorate is 243,000 square miles, with a population of 100,000, not including the disputed region, which has an area of 60,000 square miles, and a population of 14,000,000.

Near Cape Nun is the Spanish station of *Ifor*.

with an area of 27 square miles, and 6,000 inhabitants.

The area of the Spanish island of *Fernando Po*, and of *Annaboni*, *Corisco*, *Elobey*, and *San Juan*, on the Guinea coast, is 850 square miles, with a population estimated at 30,000.

WEST INDIES. The West Indian islands are colonies of European powers with the exception of the island of Hayti, which is divided between two independent republics (see HAYTI and SANTO DOMINGO). Cuba and Puerto Rico are the only remaining Spanish colonies in America (see CUBA). The majority of the inhabitants of the West Indies are descendants of enfranchised negro slaves, who constitute on some islands almost the entire population. The Guianas are in South America.

British Colonies.—The British possessions in the West Indies are divided into 6 groups, each of which is administered by a Governor. The total imports of the British colonies in 1895 amounted to £6,545,426, including bullion and specie, and the total exports to £5,351,124. In 1893 the exports were £6,974,652 in value. The aggregate revenue of all the colonies in 1895 was £1,843,637, and their expenditure £1,932,358. The imports of Great Britain from these colonies in 1895 were £1,863,673, of which £492,369 represented sugar, £158,044 rum, £565,555 cacao, and £187,446 dyes. The British exports to the islands were valued at £2,104,374, of which £547,760 represented cotton goods, £247,384 apparel, £128,348 leather and leather goods, £151,062 iron manufactures, and £57,124 machinery.

The *Bahamas* have an area of 5,450 square miles, and a population estimated at 51,517. There were 2,004 births and 1,182 deaths in 1895. The revenue in 1895 was £63,232, and expenditures £62,110. The value of the imports was £172,581, and of exports £124,011. The products of the sponge fisheries was £67,565. The exports of fresh pineapples were £22,784. Preserved pineapples are also exported. The cultivation of the risal plant is increasing. The Bahamas have become an important winter resort. The Governor is Sir W. F. Haynes Smith. The public debt amounts to £114,126.

Jamaica has an area of 4,200 miles, and a population estimated in 1894 at 672,762. The white population in 1891 was 14,692. Kingston, the capital, had 46,542 inhabitants. The number of marriages in 1895 was 3,629; of births, 25,298; of deaths, 14,321; excess of births, 10,977. The immigration of coolies, suspended in 1886, was resumed in 1891. There were 13,828 East Indian immigrants in 1893. The Governor is Sir Henry Arthur Blake. The West India regiments maintained in Jamaica by the British Government had in 1897 a strength of 1,567 officers and men. There are 119 miles of railroad. The imports in 1895 were valued at £2,228,945; exports, £1,873,105. The largest exports were sugar for £195,459, rum for £164,600, and coffee for £284,821. The revenue was £814,341; expenditure, £836,513. The largest items of expenditure were £63,831 for public works, £81,111 for the debt, and £55,468 for police. The debt amounts to £2,174,049, including guarantees. It was mainly incurred for public works, such as railroads, canals, and roads. The decline in the cultivation of sugar cane is general but persistent; the increase in coffee, cacao, sugar, and tobacco has been great, and in bananas is greater. The destruction of the Florida orange groves in 1894 led to a large increase in the Jamaica fruit exports. The export of sugar is only 10 per cent. of the total exports, whereas it was 32 per cent. twenty years ago. About half the imports come from Great Britain, and nearly half from the United States, whose proportion is increasing.

Turks and Caicos Islands, attached to Jamaica, have an area of 169 square miles, and a population of 4,745, employed mainly in raking salt, which is exported to the United States, Canada, and Newfoundland. The Cayman Islands, with a population of 4,322, export coconuts and green turtles.

Barbadoes has an area of 166 square miles, and a population estimated at 188,000. The revenue in 1895 was £146,314; expenditure, £152,039. The public debt is £405,100. The Governor is Sir James Shaw Hay. The headquarters are here of the European garrison of the West Indies, numbering 30 officers, and 747 men in 1896. There are 24 miles of railroad. The local revenue in 1895 was £6,396. The sugar crop, the only important one, declined from 66,262 hogsheads in 1894 to 36,451 in 1895. The fisheries yield about £17,000 annually. The total value of exports in 1895 was £587,298, and of imports £956,921. The export of sugar was £282,257; of molasses, £97,856. The sugar crop in 1895 was greatly reduced by drought and the cane disease. In 1896 there was a good crop, and the total exports, consisting mainly of sugar and its products, amounted to £758,228. The Government had proposed to assist emigration. This project was abandoned for the time, owing to the opposition of the Legislature, for work happened to be plentiful, and food cheap and abundant.

The *Leeward Islands*, consisting of Antigua, with Barbuda and Redonda, the Virgin Islands, Dominica, St. Kitts, Nevis, Anguilla, and Montserrat, have a total area of 701 square miles, with an estimated population of 127,800. Their revenue in 1895 was £119,080, and the expenditure £165,996. They have a debt of £301,771. The imports in 1895 were valued at £414,238, and exports at £288,345. The export of sugar was £173,652; of molasses, £23,290. The Governor is Sir Francis Fleming.

The *Windward Islands* have an area of 784 square miles, with 146,800 inhabitants, as estimated in 1895. The revenue for 1895 was £132,491, and expenditures £150,164. There is a debt of £315,750. The value of the imports in 1895 was £395,449; exports, £381,056. The group consists of Grenada, St. Vincent, the Grenadines, and St. Lucia. The cultivation of cacao, cotton, spices, and coffee is replacing that of sugar cane. The Governor is Sir Cornelius Alfred Maloney.

Trinidad has an area of 1,754 square miles, and a population estimated in 1895 at 237,934. The capital is Port of Spain, with a population of 42,000. The number of marriages in 1895 was 2,032; of births, 8,059; of deaths, 5,876; excess of births, 2,183. There are 56 miles of railroad and 30 miles more in course of construction. The telegraphs have a length of 690 miles. The dependent island of Tobago, where cotton and tobacco are grown, has an area of 114 square miles, and 20,039 population. The agricultural products of Trinidad are sugar, coffee, cacao, yams, and coconuts. From the pitch lake in the center, belonging to the Government and leased to an American company, 86,148 tons of asphalt were exported in 1895. The total value of imports in 1895 was £2,276,864; of exports, £2,000,748. The imports of Tobago were £13,643; exports, £10,517. The revenue of Trinidad was £552,275; expenditure, £549,771. There is a public debt of £569,679. Tobago's revenue was £8,591; expenditure, £8,278. The Governor of Trinidad is Sir H. E. H. Jenningham.

British Guiana has an estimated area of 109,000 square miles, including the area between the Essiquibo and the Schomburgk line, which is claimed also by Venezuela. The population in 1896 was 283,278. The revenue in 1896 was £567,749; expenditure, £596,493. The revenue from customs

were £269,891; from licenses, £113,571; rum duty, £54,262; royalty on gold, £22,740. The expenditure on the civil establishment was £158,891; ecclesiastical, £22,884; judicial, £28,391; education, £31,442; public works, £28,482. There is a public debt of £362,704. The Governor is Sir A. W. L. Hemming. The imports for the fiscal year 1896 were £1,443,553 in value, exports, £1,769,500. The principal exports were sugar for £1,046,160, rum for £121,145, molasses for £15,967, and gold for £441,991. There are 20 miles of railroad. The population in 1891 comprised 2,533 born in Europe, 90,615 negroes, 105,465 East Indians, and 3,714 Chinese. There were 90,492 living on sugar estates and 125,557 in villages and settlements. The number of immigrants from India in 1896 was 2,412, while 2,071 coolies were returned. The gradual abandonment of the sugar estates imposes the obligation upon the Government of transporting to their homes the indentured Indian coolies who are thrown out of work. The free coolies have taken up the cultivation of rice on such a scale as to replace sugar cultivation in some measure and create a large demand for labor. The gold diggings have given employment under three months' engagements to about 7,000 negro laborers, though they have not yet increased the general wealth of the colony. A great amount of local capital has been sunk in the exploitation of unprofitable claims, and no large amount of British capital has been attracted to the mines. The mining operations have been chiefly confined to placer washings, and for every dollar taken out one has been sunk. Of two quartz mines opened with English capital, one has ceased operations, and the other has been condemned by mining experts. The colonists consider the costliness of transportation and the insecurity of tenure due to the boundary dispute with Venezuela to be chief drawbacks to the development of mining into a profitable industry. The decline in the yield of gold from 128,279 ounces in 1893 to 119,422 ounces in 1896 is attributed to the withdrawal of capital from the placer mines for speculation in quartz-mining ventures and to the exhaustion of old placers by wasteful methods of mining. The yield in the year ending June 30, 1897, showed an improvement, amounting to 128,333 ounces. The Government levies a royalty of 5 per cent. on all gold brought down from the gold fields, besides a license fee of \$10 on each claim.

Puerto Rico.—The Spanish colony of Puerto Rico, which is one of the most fertile and salubrious of the Antilles, is administered by a Captain General—Lieut.-Gen. Marin in the beginning of 1897—assisted by an Administrative Council appointed by the Government at Madrid.

The area is about 3,550 square miles, and the population at the beginning of 1898 was 813,937, of whom over 300,000 were negroes. San Juan, the capital, had 23,414 inhabitants; Ponce, 37,545; and San German, 30,146.

The revenue for 1894 was estimated at 3,903,655 pesos, of which 2,300,000 pesos came from customs and 1,358,800 from taxation, direct and indirect. The estimated expenditure was 3,879,813 pesos, of which 1,050,006 pesos were for military expenses and 250,045 pesos for financial administration.

The export of coffee in 1895 was 16,884 tons, valued at £1,755,931 sterling; of sugar, 54,861 tons, valued at £712,131; of tobacco, 1,807 tons, valued at £152,722. The total value of imports in 1893 was £3,464,090, and of exports £3,349,078. Spanish imports in 1894 were valued at 21,580,125 pesetas, and exports to Spain at 28,678,869 pesetas.

Danish Colony.—The Danish Antilles consist of the islands of Santa Cruz, St. Thomas, and St. John, having a total area of 118 square miles and a popu-

lation of 32,786. The chief products are sugar and rum. The Governor is Col. C. E. Hestermann.

French Colonies.—*Guadeloupe* has an area of 563 square miles. The dependencies of Marie-Galante, La Désirade, Les Saintes, the French part of St. Martin, and St. Bartholomew have an area of 165 square miles. The population of Guadeloupe is 167,069, and of the dependent islands 23,605. The exports of Guadeloupe in 1894 were valued at 21,060,000 francs, of which 20,914,000 francs went to France; imports, 22,636,000 francs, of which 12,880,000 francs were French products and manu-factures. The Governor is D. Moraschini.

Martinique has an area of 381 square miles, with a population of 189,599. The imports in 1894 were valued at 29,117,000 francs, of which 13,850,000 francs were from France; exports, 22,511,000 francs, of which 21,190,000 francs went to France. There are 120 miles of railroad. The Governor is N. Pardon.

French Guiana has an area of 46,850 square miles, with a population of 29,650. The imports in 1893 were 10,921,000 francs in value, of which 7,400,000 francs came from France; exports, 4,734,000 francs, of which 4,287,000 francs went to France. The Governor is H. E. Daniel. There were 50,273 ounces of gold exported in 1895.

Dutch Colonies.—The island of *Curacao* and the dependencies of Bonaire, Aruba, St. Eustache, Saba, and part of St. Martin have a total area of 463 square miles, with a population of 48,972. There were 209 marriages, 1,795 births, and 1,016 deaths in 1895. The revenue in 1897 was estimated at 610,617 guilders; expenditures, 702,217 guilders. The Governor is C. A. H. Barge. The imports for 1895 were 2,633,000 guilders in value.

Dutch Guiana has an area of 46,000 square miles, with 76,500 inhabitants, besides 12,000 Indians and Boschnegers. Paramaribo, the capital, has 29,261 inhabitants. The revenue in 1897 was estimated at 2,016,730 guilders; expenditure, 2,241,498 guilders. The imports were valued at 5,263,000 guilders; exports, 5,490,000 guilders. The Governor is W. Tonckens. The chief products are sugar, cacao, bananas, coffee, rum, molasses, and gold, of which the export was 1,618,733 guilders in 1894.

The Governors of British Guiana, the Leeward Islands, the Windward Islands, and Trinidad addressed repeated complaints during a series of years to the British Colonial Office as to the depressed state of the sugar industry, which the colonists attributed to the Continental system of sugar bounties. In April, 1895, the Chamber of Commerce of British Guiana proposed that the British Government should protest against the bounties on beet sugar, or should adopt measures that would enable West Indian sugar to compete with beet sugar on fair terms. The Marquis of Ripon, while he sanctioned special remissions of taxation on sugar estates in British Guiana, Trinidad, and the Leeward Islands, declined to take any action, but in November, 1895, Mr. Chamberlain, who had succeeded him, wrote that the British Government would lose no opportunity of bringing home to the minds of other governments the inadvisability of continuing the bounty system, of which there was hope that they were beginning to realize the mischievous effects. A year later, when the price of sugar was still further depressed, and when the German and Austrian governments had on Aug. 1 practically doubled their bounties, and France was on the point of doing the same thing, he proposed the appointment of a royal commission to inquire into the effect of these bounties on the colonial sugar industry and on the conditions and prospects of this industry and the financial and economic outlook in the West Indies. There had been heavy

deficits in Antigua and St. Kitts, notwithstanding an abundant sugar crop, and labor riots in the latter island. The governments of the Windward Islands were insolvent and that of Barbadoes in financial difficulties, notwithstanding severe retrenchments and an increase of taxation. The abandonment of sugar estates in St. Vincent had been announced, and cultivation was being reduced in Trinidad and with serious rapidity in British Guiana, involving the loss of capital invested in expensive machinery. There seemed to be no prospect of an alternative industry soon taking the place of sugar cultivation in British Guiana or Barbadoes, where a large amount of capital was invested, and if this industry were abandoned the coolies in the former colony and the negroes in the latter would be thrown on the hands of an insolvent Administration, which would be unable to provide for their repatriation in the one case, although bound by contract to do so, or for their support or immigration in the other case. The circumstances of Antigua, St. Kitts, and Nevis were analogous on a smaller scale. The banking establishments in the West Indies were involved in the sugar industry to such an extent that a collapse of that industry would bring about a disastrous financial crisis. The special danger in the outlook lay in the fact that the sugar industry employs far more labor per acre than any possible substitute, and that no possible substitute was immediately available; that the revenue depended directly on the industry, so that the administrations were liable to be financially crippled, when they would be subjected to the greatest strain; and that any general failure of employment could be confidently expected to produce, if not immediate rioting, at least a very dangerous and unstable situation, in which more efficient police arrangements than existed in the majority of the islands, and possibly the presence of troops or ships of war, might be necessary to maintain order. The position of affairs had become so serious that Mr. Chamberlain was unwilling to acquiesce longer in the policy of nonintervention in regard to the sugar bounties without studying the probable cost to the British exchequer, and without knowing as clearly as possible at what cost it might be to the welfare and stability of the West Indian colonies and to industries in which English capital was largely invested. The English Government had not pressed a bill introduced in 1889 to give effect to the sugar-bounties convention for the reason that these bounties gave a substantial advantage to certain British industries. It had now become a question whether the continued enjoyment of this advantage did not involve the ruin of the British sugar-producing colonies. The new German export bounties were from £1 5s. to £1 15s. a ton; the French bounty was already equivalent to a grant of £3 5s. a ton, and by the new law this bounty was raised to £4 10s. a ton. The effect of these liberal bounties and of the protective customs duties and the excise duty which is £10 a ton in Germany and £24 a ton in France was to make sugar 3d. or 3d., cheaper in England than it was on the Continent.

The Treasury concurred in Mr. Chamberlain's proposition for a royal commission, which was appointed in December, 1896, consisting of Gen. Sir Henry Norman, chief commissioner, and Sir David Barbour and Sir Edward Grey. The commissioners visited all the colonies and made an elaborate report, which was issued on Oct. 2, 1897. During the fifteen years in which the manufacture of beet sugar in Europe had been rapidly developed under the bounty system, which cost the taxpayers of Germany, France, and Austria £32,000,000 a year to maintain, the world's production of sugar

had risen from 3,799,384 tons in 1882 to 7,474,000 tons, and prices had fallen from 29.14s. to 14.75s. per hundredweight for refined and from 21.15s. to 10.34s. for unrefined sugar. In the same period the cost of production had been reduced in British Guiana, the principal sugar-raising colony, from £16 1s. 7d. a ton to £9 and in some exceptional cases to £8 0s. 6d. a ton. The world's production of sugar had doubled in fifteen years, but that of the West Indies had not increased in the same proportion. At the same time the average cost of production had been reduced to half what it formerly was, but only the most advanced of the West Indian producers had succeeded in halving the cost.

Not all the colonies are dependent on sugar exclusively for their prosperity. Jamaica and Trinidad have other economic resources. Grenada has already given up the production of sugar for export, and the export from Dominica has been largely reduced. The commissioners found the condition of things in the sugar colonies very serious and rapidly approaching a crisis. They did not believe that the abolition of the bounty system on the Continent of Europe would restore the West India industry to its former prosperity. They believed, however, that it would render possible the maintenance of a large proportion of the present area of cane cultivation, and advised the Government to aim at the abolition, even at some sacrifice. In British Guiana and Barbadoes, where the soil is exceptionally favorable for the production of rich cane, and where the latest processes and the best machinery are already employed, only a few estates can now manage to make both ends meet. In the bulk of the colonies the governments will soon be unable to meet the absolutely necessary expenses of administration, to provide for the interest in their debts, pensions, even the maintenance of the poor and the wages of the police. The commissioners expressed the decided opinion that the mother country must submit to sacrifices in one shape or another in behalf of the colonies. The British Government stands under a direct moral responsibility for the black population, brought originally to the islands as slaves. The establishment of the negroes as small landowners, the introduction of new crops by the aid of botanic stations, the improvement of communications between the islands, and the encouragement of the fruit trade with New York were the palliatives suggested, for which the British Government was advised to contribute £27,000 a year for ten years, with a further grant of £20,000 a year for five years to enable the colonial governments to meet their ordinary expenditure, an immediate grant of £60,000 to clear off the floating debts of some of the smaller islands, and one of £30,000 for the settlement of the laboring population on the land. Sir Henry Norman proposed to meet the bounties with a countervailing duty, making sugar perhaps a halfpenny a pound dearer to the British consumer. The other commissioners did not join in this recommendation. The policy of some of the States of the American Union to encourage the cultivation of the sugar beet threatened the sugar colonies with a new danger, for the United States are the principal market for West India sugar. At the suggestion of West India planters and proprietors, the British Government instructed its ambassador at Washington to ascertain the views of the United States Government in regard to reciprocity trade relations between the British West India colonies and the United States under the clause of the Dingley tariff bill by which a reduction of 20 per cent. on the import duties in the United States may be obtained in exchange for equivalent remissions of duties on American goods.

WEST VIRGINIA, a Southern State, admitted to the Union June 19, 1863, area 24,780 square miles. The population, according to each decennial census, was 442,014 in 1870, 618,547 in 1880, and 702,749 in 1890. Capital, Charleston.

Government. The following were the State officers during the year: *Governor*, George W. Atkinson; *Treasurer*, M. A. Kendall; *Auditor*,

GEORGE W. ATKINSON, GOVERNOR OF WEST VIRGINIA

J. M. Lafollette; *Attorney-General*, E. P. Rucker; *Superintendent of Schools*, J. R. Trotter—all Republicans; *Presiding Judge of the Supreme Court of Appeals*, John W. English; *Associate Judges*, Marmaduke H. Dent, Henry Brannon, and H. C. McWhorter; *Clerk*, O. S. Long—all Democrats except McWhorter, Republican.

Finances.—The biennial report of the Treasurer shows that at the beginning of the fiscal year 1895-96 there was in the treasury the sum of \$883,683.74; receipts from all sources during the fiscal year ending Sept. 30, 1896, \$1,524,879.45; total in treasury during the same fiscal year, \$2,408,563.19; amount disbursed during the year, \$1,581,333.70; balance in treasury Oct. 1, 1896, of all funds, \$827,329.43. This balance was made up of: The State fund, \$238,980.63; the general school fund, \$327,076.98; the school fund, \$261,271.82. The Auditor made the following estimate of the receipts at the treasury for the year ending Sept. 30, 1897: For the State fund, \$795,000; balance on hand, \$238,980.63; total, \$1,033,980.63; charges for the year, \$721,158; leaving a balance of \$312,822.63. Receipts for the general school fund, \$376,500; add balance on hand, \$327,076.98; total, \$703,576.98. Receipts for the school fund, \$30,000; add balance on hand, \$261,271.82; total, \$291,271.82. Estimated receipts for the fiscal year ending Sept. 30, 1898: For the State fund, \$785,000; add estimated balance on hand, \$312,822.63; total, \$1,097,822.63; estimated charges for the year, \$555,825; leaving a probable balance of \$541,997.63.

Valuations.—The following valuations were reported for the year: Real estate, \$141,925,633; personal property, \$51,307,197; railroad property, \$22,437,102; total value of all property, \$215,669,932.

Banks.—The State Bank Examiner reported the condition of the State banks, savings banks and trust and investment companies as follows for the year ending Sept. 30, 1896: Resources—loans and discounts, \$19,885,210.61; overdrafts, \$51,011.56; real estate, furniture and fixtures, \$909,884.39; stocks and bonds, \$209,190.45; due from banks, \$1,714,153.49; current expenses, \$123,286.09; cash and cash items, \$1,325,254.94; other corporations, \$5,914.09; total, \$15,763,610.53. Liabilities—capital stock paid in, \$3,255,550; surplus fund, \$380,730.81; undivided profits, \$201,332.89; dividends unpaid, \$1,151.80; due to banks, \$542,218.67; deposits, \$10,077,884.96; bills payable and redemptions, \$136,337.47; other liabilities, \$131; total, \$15,763,610.53. The Bank Examiner compares these results with those of 1891, when the first State report on banks was made, as showing "the marvelous progress in material wealth and in banking during the five years. In 1891 the total number of State banking institutions was only 42, against 60 in 1896, an increase in five years of nearly 43 per cent. Then the total capital stock paid in was \$2,470,884.16 against \$3,255,550 in 1896, an increase of over 31 per cent. Then the deposits subject to check were \$8,331,940.97 against \$10,077,884.96 in 1896, an increase of over 21 per cent. A similar gain appears in the loans and discounts. In 1891 the surplus fund was \$126,388.18, against \$380,730.81 in 1896, an increase of nearly 72 per cent. A comparison of the surplus fund of 1895 with that of 1896 shows an increase in one year of \$113,472.71, and the undivided profits for 1896 were \$50,527.56 more than in 1895.

The following is a summary of the condition of the 33 national banks of the State for the year ending Oct. 6, 1896: Resources—loans and discounts, \$8,405,921.11; overdrafts, \$54,005.01; stocks and bonds, \$1,917,987.83; real estate, furniture, and fixtures, \$613,931.01; due from banks and reserve agents, \$1,173,352.85; cash and cash items on hand, \$1,209,037.23; total, \$13,374,855.04. Liabilities—capital stock paid in, \$3,451,000; surplus fund, \$832,457.27; undivided profits, \$297,415.40; national bank circulation, \$1,151,129; due to banks, \$337,642.90; dividends unpaid, \$10,748.58; deposits, \$7,200,450.89; bills payable and redemptions, \$94,000; total, \$13,374,855.04. With an aggregate of capital stock slightly in excess of that of the State banking institutions, and with an increase in capital from 1895 to 1896 slightly in excess of that of the latter, the national banks of the State increased their deposits a little over 6 per cent. In the same time the State banks increased their deposits over 9 per cent. The national banks gained in deposits in one year \$421,945.56, and the State banks \$911,812.86. The loans and discounts for the same time grew in substantially the same proportions. The surplus fund of the State banks grew from \$790,443 in 1895 to \$832,415 in 1896, an increase of nearly 5 per cent., while for the same year the surplus of the national banks increased from \$792,417 to \$832,457, a gain of but little more than 5 per cent., or scarcely more than one third as much as that of the State banks. The examiner observes that, with a smaller capital and without any note-issuing department, the State institutions outstripped the national banks, not only in the business done, but also in the profits realized.

Insurance.—In 1896 73 fire insurance companies were doing business in the State with these results: Risks written during the previous year, \$29,102,414.84; premiums received, \$3,914,006.78; losses paid, \$214,028.96. The 27 life insurance companies wrote risks to the amount of \$7,335,554; premiums received, \$671,127; losses paid, \$170,844. The 29 assessment life companies wrote risks to the amount of \$880,950; premiums received, \$45,302;

losses paid, \$24,607. The accident, plate-glass, and other miscellaneous companies wrote risks amounting to \$8,313,724; premiums received, \$66,251; losses paid, \$7,448.

Education.—The Superintendent of Free Schools reported the total enumeration of school children in the State, white and colored, at 296,517, an increase over the previous year of 7,243; total enrollment, 215,665, a decrease of 2,043; total number not attending school, 80,825, an increase of 9,251; average daily attendance, 141,081; teachers employed, 6,454; total number of schoolhouses, 5,475; value of schoolhouses, \$2,462,196; value of school lands, \$351,589. The chief part of the school revenues is derived from "local levies"—that is, magisterial districts, independent school districts, and city levies, as laid by the various boards of education. These levies are made up of what is known as the "teachers' fund" and the "building fund," the former of which in 1896 amounted to \$1,255,396.96, and the latter to \$560,189.28, an aggregate of \$1,815,586.25, which, added to the gross amount of the general school fund, viz., \$405,650.98, gives a total of \$2,221,237.22 expended for school purposes in 1896. Adding to this amount the sum of \$21,200 expended by the State for the improvement and maintenance of the State University, and \$56,950 expended for the State Normal School and its branches, there results a grand total of \$2,299,387.22 expended by the State in 1896 for primary, secondary, and higher education. Enrollment in the normal schools amounted to 1,202, and 27 teachers were employed.

Coal and Oil.—The coal product of the State was reported as follows: Number of mines, 190; loaded at mines for shipment, 8,858,256 short tons; sold to local trade and used by employees, 445,023 short tons; used at mines for steam and heat, 50,595 short tons; made into coke, 2,634,087 short tons; total product, 11,387,961 short tons; total value, \$7,710,575; average number of employees, 19,159.

The product of the oil fields was 8,120,125 barrels, of which 8,109,782 barrels were classed as illuminating and 10,343 barrels as lubricating oil; total value of product, \$11,038,770, an average of \$1.36 a barrel. The average per barrel of the illuminating oil was \$1.35, and the lubricating oil as \$2.04.

Agriculture.—The Commissioner of Labor reported: Total number of farms in the State, 73,128. Acres in farms—total, 10,321,326; improved, 4,554,000; unimproved, 5,767,326. Valuation—land, fences, and buildings, \$155,635,801; improvements and machinery, \$3,245,420; live stock, \$17,254,575; estimated value of farm products, \$14,717,866; estimated cost of fertilizers purchased, \$414,529. Farm acreage and products were given as follow: Wheat, 248,229 acres, 3,695,975 bushels; corn, 593,608 acres, 16,126,181 bushels; oats, 203,144 acres, 3,033,628 bushels; buckwheat, 14,113 acres, 125,014 bushels; rye, 14,541 acres, 118,167 bushels; potatoes, 26,503 acres, 1,968,106 bushels. Farms cultivated by owners, 60,152; farms under 10 acres, 1,535; 10 acres and under 20, 2,229; 20 acres and under 50, 9,735; 50 acres and under 100, 17,429; 100 acres and under 500, 27,204; 500 acres and under 1,000, 1,465; 1,000 acres and over, 555. Farms rented for fixed money value, 4,296; rented for share of product, 8,680.

Legislative Session.—In the passage of a joint resolution the Legislature organized a commission to revise the Constitution of the State, the commission consisting of 9 members, 4 in the House and 6 of the Senate, appointed by the respective officers of the respective bodies. This commission will report to the next session of the General Assembly. It voted down a proposition to grant the right of suffrage to women.

Among the acts passed by the General Assembly were the following:

Appropriating \$2,000 to mark the positions occupied by West Virginia troops at the battle of Gettysburg.

Requiring the removal of hats and bonnets during theatrical performances where an admission fee is charged.

Establishing an industrial home for girls.

Providing for a game and fish warden.

To prevent the administering of anesthetics or narcotics to females by any physician or dentist except in the presence of some third person.

Creating a dairy and food commission.

WIRE GLASS. This name is given to a woven netting of wire imbedded in sheets of molded glass for use in skylights and other places where there is liability to breakage. It was first introduced as a successful article of merchandise in 1893, and is now in general use in large railway stations, factories, etc., all over the United States. The principal factories are at Philadelphia and St. Louis, operating under the patents of Frank Shuman, of Philadelphia, who perfected the process. Before the introduction of wire glass it was customary to protect large skylights with screens of wire netting on the inside so that when breaks occurred glass might not fall on persons below. Such protection was absolutely necessary in the case of glazing placed 50 or 100 feet above the level, where a large number of people were obliged to pass. The separate wire netting was unsatisfactory, however, in that it allowed small pieces of glass to drop through and in that it interfered with the cleaning of the glass, thus tending to darken the interior, a serious matter in large workshops and railway stations where the glass was being continually smoked. As long ago as 1871 efforts were made to cast wire netting within the glass by Thomas Hyatt, of England, but he failed to find means to keep the wire in the center of the glass, and could only make it in small panes. In 1882, 1887, and 1888 processes were patented in Germany and England, but they proved to be commercially impractical. The Shuman United States patent of 1892 solved all the difficulties and secured for the inventor the John Scott legacy and premium medal from the Franklin Institute. With this process it is necessary that the wire netting shall be kept at a heat within a few degrees of the temperature of melted glass. The iron casting table is set in the floor of the shop and the molten glass poured on with a large ladle. A frame carrying four large iron rollers is then run over the glass. The first roller smooths and levels the hot glass; the second roller carries in the red-hot netting and imbeds it in the glass by means of corrugations or ridges in the roller surface; the third roller resmooths the surface of the glass, completing the covering of the wire; and the fourth roller serves to keep the glass, which becomes plastic at this stage, from curling up behind the third roller, and also adds a smoother finish to the glass. The glass is next annealed so as to toughen it, and trimmed to the size of the wire netting, which determines the size of the sheet. Netting of almost any size may be introduced in the glass in this way, practice differing from the quarter-inch mesh to meshes in which the crossed wires are three inches apart. Sometimes for special purposes the wire is corrugated within the glass, this being accomplished by altering the form of one of the rollers. The thickness of this glass varies from three sixteenths to an inch, and the common sizes are 2 × 7 and 3 × 8 feet. The cutting of the glass to small sizes is slow work, as the lines are first scratched with a diamond and the glass cracked and then worked back and forth until the crack opens suffi-

ciently to admit the blade of a fine steel saw, with which the wire is severed. When wire glass is broken by accident, the fractured pieces tend to hang on the wire. Wire glass is cheaper than ordinary glass protected by a screen, because the inferior wire adds so much to its strength that it is practical to use it in much thinner sheets to secure a given strength. This also lessens the weight to be carried by the roof, an important item in some cases.

WISCONSIN, a Western State, admitted to the Union May 29, 1848; area, 56,040 square miles. The population, according to the United States census of 1880, was 1,686,880; by the State census of 1895, it was 1,931,975. Capital, Madison.

Government.—The following were the State officers during the year: Governor, Edward Scofield; Lieutenant Governor, Emil Barusch; Secretary of State, Henry Casson; Treasurer, Sewell A. Peterson; Attorney General, William H. Mylrea; Superintendent of Public Instruction, John Q. Emery; Railroad Commissioner, Duncan J. McKenzie; In-

spired, \$2,340,700.36. The initiative on April 8, 1897, was \$33,675.21. Some of the largest items disbursed were: Salaries and permanent appropriations, \$1,270,175.75; legislative expenses, \$133,822.03; publication, 1888, in newspapers, \$49,700; State Hospital for Insane, \$119,310.91; Northern Hospital for Insane, \$133,661.75; School for Deaf, \$59,837.47; School for Blind, \$47,722.07; Industrial School for Boys, \$29,634.41; State Prison, \$114,380.96; Home for Female Orphan, \$107,702.86; State Public School, \$65,971.00; agriculture, \$31,324.41; Normal School and normal institutes, \$49,066; common schools, \$119,372.51.

Education.—The opening of the School for the Feeble Minded at Chippewa Falls, June 15, 1897, completed the educational system of the State.

The faculty of the University of Wisconsin, at Madison, consists of 135 professors, instructors and lecturers. The number of students in attendance is about 1,700. The whole number graduated at the commencement in June, 1897, was 213.

The seven State normal schools are at Platteville, Whitewater, Oaklawn, River Falls, Milwaukee, Stevens Point, and Superior. All these, except the one at Milwaukee, provide two standard courses. The number of graduates of the seven schools during the year was: From the elementary course, 1881, from the advanced course, 264. There are about 200 free high schools in the State. They are supported in part by an annual State appropriation of \$50,000, and in part by local taxation. About 60 of these schools have three-year courses. In the others the course embraces four years' work.

The Legislature of 1895 authorized any board of education in the State having charge of a high school to establish and maintain a department of manual training in connection with the schools under its control and management. These local boards at Menomonee, Eau Claire, Appleton, Janesville, and Florence have complied with the law.

The common schools of the State, outside of the cities, in all of which graded school systems are maintained, are administered according to two different systems. In the southern and the central part of the State the district system is almost universal. There are 6,400 districts in charge of 19,200 officials. In many of the newer counties in the north the township system is common. There are 400 schools with an enrollment of fewer than 10 pupils each, and 1,650 with an enrollment of fewer than 20 pupils each. In Fond du Lac County, the second richest county in the State, there are 67 schools whose teachers are paid \$20 a month, out of which sum they pay their board and traveling expenses. In most of the older portions of the State conditions are similar. In spite of low wages, the cost per pupil of maintaining these schools is very great. The Legislature of 1893 appointed O. E. Wells a commissioner to prepare a proposed revision of the school code; Mr. Wells reported to the Legislature of 1895 by a bill which did not pass; but interest in the question did not die out, and the Legislature of 1895 appointed J. Q. Emery commissioner to investigate the township system of school government, and to report by bill or otherwise. Mr. Emery did not agree with Mr. Wells that the township system should be mandatory. Any district is authorized to levy a tax for the free transportation of children residing in the district who live more than a mile and a half from the schoolhouse.

The School for the Deaf is at Watrous. The average number of children in it is about 200.

Since 1885 the State has supported the maintenance of day schools for orphans and dumb in the larger cities. For every pupil taught for nine months in one of these schools the State appro-

EDWARD SCOFIELD, GOVERNOR OF WISCONSIN.

prize Commissioner, William A. Fricke—all Republicans. Chief Justice of the Supreme Court, John B. Cassaday; Associate Justices, Silas W. Paine (Democrat), Alfred W. Newman (Republican), John B. Winslow, and Rosset D. Marshall (Republican). At the spring election in April, Rosset D. Marshall was re-elected Associate Justice for the full term of ten years, beginning in January, 1898.

Finances.—On Sept. 30, 1896, the amount on hand belonging to the general fund was \$49,815.56. The amount received during the year, including \$340,000 borrowed from the trust funds, was \$2,324,572.01. The largest items of the receipts were from railway companies, \$1,264,270.98; from insurance companies, \$128,964.18; from taxes on the counties, \$391,438.09; from charitable and penal institutions, \$79,916.32; telegraph companies, \$10,684.28; telephone companies, \$10,777.14; Secretary of State, office fees, \$10,887.45; Insurance Commissioner, office fees, \$38,292.87; postpaid licenses, \$12,439.90. The disbursements during the year aggreg-

privates \$125. The cities of Milwaukee, La Crosse, Wausau, Manitowish, Sheboygan, Eau Claire, Fond du Lac, Marinette, and Oshkosh maintained these schools. The total number of children taught in the nine schools was 121 in 1896.

The School for the Blind is at Janesville. The number in attendance is about 100.

The Industrial School for Boys is located at Waukesha. The average number of inmates in recent years is about 350.

The Industrial School for Girls is at Milwaukee. This school was founded by private charity, and is still under the control of a self-perpetuating board of managers. The school is large enough for the accommodation of 160 inmates.

The State Public School is at Sparta. It was opened Nov. 13, 1886. Its primary object is to furnish a temporary home for dependent and neglected children. The average number of inmates is about 250.

There are in the State about 3,000 feeble-minded and idiotic persons. Until the opening of the Home for the Feeble-Minded at Chippewa Falls, the State had made no provision for their care and instruction. The buildings already erected are adequate for the care of 250 inmates. Early in 1898 additional buildings will be opened for the reception of as many more. Up to Jan. 1, 1898, 239 inmates had been received.

The Legislature of 1897 provided for the founding of the State Reformatory, and the Board of Control has located this institution at Green Bay. Buildings are now in course of erection with a capacity sufficient for 600 inmates. The institution is designed for the custody and training of male offenders, whose ages at commitment are from sixteen to twenty-five years.

The thirty-sixth annual meeting of the National Educational Association was held in Milwaukee, July 6-9, 1897. The meeting was notable in the largeness of the attendance, and in the great value of the papers, lectures, and discussions.

Legislative Session.—Some of the important acts of the Legislature of 1897 were:

The election of John C. Spooner to succeed William F. Vilas as United States Senator.

The revision of the statutes of the State, and providing for the printing and publication of the same by Sept. 1, 1898.

Providing for an increase in the income of normal schools.

Authorizing the Governor to designate a day to be known as "Arbor and Bird Day."

To promote physical education.

To encourage the production of beet sugar.

To prohibit pool-selling.

To provide for enlarging and equipping the State Historical Library building.

To regulate casualty insurance corporations.

To increase the efficiency of the Free Library Commission.

Relating to libel suits by newspapers.

To organize the Wisconsin State Board of Agriculture.

To revise the banking laws.

To prohibit the sale of cigarettes to minors.

To prevent corrupt practices in elections.

A joint resolution in favor of the Torrey bankruptcy bill.

A joint resolution requesting the Governor to issue a proclamation for the celebration of the fiftieth anniversary of the State.

A memorial to Congress for the passage of an act to strengthen the national credit.

Semicentennial.—The State Historical Society of Wisconsin is actively engaged in pushing the organization of local historical societies, and in

giving them suggestions and directions relative to work in preparation for county semicentennial observances to be held Saturday, May 28, 1898.

State Prison.—The State Prison is at Waupun. The whole number of prisoners received from the opening of the prison up to Sept. 30, 1896, the date of the latest printed report, was 6,892. The number in confinement Sept. 30, 1896, was 582, of whom 19 were women. The board in their latest report say: "The sanitary condition of the prison for years has been deplorable."

The sanitary conditions have been greatly improved. An electric-light plant has been put in. Open air ducts from each cell have been opened into a large galvanized iron chamber over the roof, exhausting into a receiving room in the attic and thence into the open air.

About 300 convicts are employed in shoemaking under the contract system, at 50 cents a day. During the two years covered by the report the State received \$103,718.37 from this source. The contract expired Dec. 31, 1897. The knitting shop is not so successful. The net income to the State for the last year covered by the report, for 17,067 days of convict labor, was only \$1,322.64, or 7½ cents a day for the labor of each convict. This shop is run on the piece-price contract system. The tailor shop plant netted \$3,951.45 for 8,016 days' labor, or 49½ cents a day for the labor of each convict employed. In 1895 the net daily cost *per capita* was 22-2 cents. In 1896 it had been reduced to 13-1 cents.

The Insane.—The State maintains two institutions for the care of the insane—the State Hospital at Mendota, near Madison, and the Northern Hospital at Winnebago, near Oshkosh. The whole number of patients in the State Hospital, Sept. 30, 1896, was 402; in the Northern Hospital the number was 520. The Wisconsin system of caring for the insane is unique, but very simple. The fundamental principle of the system is that the State hospitals shall have for their sole function the cure of the curable. So long as there is any hope that hospital treatment will benefit the patient, either physically or mentally, he is retained in the institution. When it is plain that there is no hope of his recovery, he is transferred to one of the 23 county asylums. On Sept. 30, 1896, there were 2,816 inmates in these institutions, and the State had paid for the care of these inmates for the two years ending on the date named \$419,966.02.

Railways.—From the report of the Railroad Commissioner it appears that on June 30, 1896, the total mileage of railways in the State was 6,279.46. The capital stock was \$106,157,479.40; the funded debt was \$153,445,697.89; the unfunded debt was \$3,300,006.22. Dividends were declared amounting to \$2,666,151.60 for the two years covered by the report. The annual license fees, which are in lieu of all State, county, and local taxes, are as follows: 1. Four per cent. of the gross earnings of all railroads, except those operated on pile and pontoon, or pontoon bridges, whose gross earnings equal or exceed \$3,000 a mile per annum of operated railroad. 2. Five dollars a mile of operated railroad of all railroads whose gross earnings exceed \$1,500 a mile per annum, and are less than \$3,000 a mile per annum of operated road; and in addition 2 per cent. of their gross earnings in excess of \$1,500 a mile per annum. 3. Five dollars a mile of operated road by all companies whose gross earnings are less than \$1,500 a mile per annum. 4. Two per cent. of the gross earnings of all railroads operated upon pile or pontoon, or pontoon bridges, which gross earnings shall be returned as to such parts thereof as are within the State. These license fees constitute by far the largest single item in the annual revenues of the State.

Decisions.—Jan. 26, 1894, the State Board of Health made a rule which, in June, 1894, was modified to read as follows:

"SECTION 1.—No child shall be allowed to be enrolled as a pupil in any public, private, or parochial school without first presenting to the principal or teacher of the school in which he applies for enrollment or attendance the certificate of a reputable physician that he has been successfully vaccinated, or, in lieu of such certificate of successful vaccination, a certificate from a reputable physician that such child has been vaccinated at least twice within a period of three months next preceding the date of such application; such latter certificate, however, shall be void after the expiration of one year from its date."

The Board of Education of Beloit made an order for the enforcement of this rule in the public schools of that city. E. J. Adams, a resident of Beloit, father of three school children, refused to allow his children to be vaccinated on account of his belief, as a Christian Scientist, that the laws of God do not permit the operation or treatment of vaccination. The children, thereupon, were expelled from the schools in which they had been enrolled. Mr. Adams, in the circuit court, secured a writ of peremptory mandamus for the reinstatement of his children. The Board of Education took an appeal to the Supreme Court, and on Feb. 23, 1897, the judgment of the lower court was affirmed. The Supreme Court held that "in the absence of a statute making vaccination compulsory or a condition precedent to the right of children of proper qualifications to attend the public schools, a rule by the State Board of Health, which was authorized to take general supervision over the public health, and to make regulations to preserve it and to guard against contagious diseases, that no child should be allowed to attend a public or private school within the State without presenting a certificate of vaccination, can not be sustained as an exercise of police power. Also, that the State Board of Health is merely an administrative body, and can not be clothed with legislative powers."

The Legislature of 1895 passed an act entitled "An Act to protect all citizens in their civil and legal rights." The act provided "that all persons within the State shall be entitled to the full and equal enjoyment of the accommodations, advantages, facilities, and privileges of inns, restaurants, saloons . . . eating houses . . . and all other places of public accommodation or amusement, subject only to the conditions and limitations established by law, and applicable alike to all persons of every race and color."

Isaac T. Bryan, a colored man, entered an eating house in the city of Milwaukee, seated himself at a table, and waited forty minutes for some one to take his order. He was informed that his order was not taken because he was colored. He complained to the proprietors, who requested one of their waiters to serve the colored man. The waiter refused, whereupon the colored man left the restaurant. He afterward sued in the Superior Court for damages. Losing his suit, he appealed to the Supreme Court, and the Supreme Court reversed the judgment of the lower court. The court held that the statute prohibits persons from doing what the State is forbidden to do by the Constitution of the United States, and makes the offender liable in damages to the person aggrieved.

Libraries.—The Wisconsin Library Association, organized in 1891, has held annual conferences since that date, except in 1892. The Legislature of 1895 passed a law providing for the establishment of the Wisconsin Free Library Commission,

and the Legislature of 1897 strengthened the commission by increasing its annual appropriation for its support from \$7500 to \$14000, and in other ways. The duty of the commission is to give advice to all free libraries in the State and to all communities which may propose to establish them, as to the best means of establishing and administering such libraries; the selection of books cataloging and other details of library management. The commission may also send its members to visit and organize new libraries or in improving those already established. The commission consists of seven members.

The law for the establishment of free libraries, as amended in 1897, provides that "The Common Council of every city not exceeding in population 50,000 inhabitants, and the village board, or board of trustees, of every village, and the town board of every town containing over 1,000 inhabitants shall have power to establish and equip a public library and reading room; and may annually levy a tax upon the property of such city, village, or town to provide a library fund. The number of free libraries is now 49, and the number is increasing rapidly. It is made the duty of the State superintendent to prepare lists of books suitable for school district libraries, and the town clerk in purchasing books must select from this list. Nearly 600 township libraries have been established. They are not for the exclusive use of school children; the law makes them free to all residents of the district."

WYOMING, a Northwestern State, admitted to the Union July 10, 1890; area, 97,800 square miles. Population in 1890, 60,705. Capital, Cheyenne.

Government.—The following were the State officers during the year: Governor, W. A. Richards; Secretary of State, Charles W. Burdick; Treasurer, Henry G. Hay; Auditor, William O. Owen; Adjutant General, Frank A. Sitzer; Attorney-General, B. F. Fowler; Superintendent of

WILLIAM A. RICHARDS, GOVERNOR OF WYOMING.

Education, Estelle Reed; Public Lands, Supreme Court—Chief Justice, A. B. Conway, Republican; Associate Justices, Samuel F. Corn, Democrat, and C. N. Potter, Republican; Clerk, R. H. Repath.

Finances.—The balance of cash on hand in the treasury Sept. 30, 1896, was \$102,304.86; cash received from all sources during the year ending Sept. 30, 1897, \$256,729.96; total, \$359,034.82. The disbursements during the year ending Sept. 30, 1897, amounted to \$245,227.59; cash charged to the Treasurer, \$113,807.82. The bonded indebtedness of the State was given as follows: Capitol building, \$150,000, 6 per cent., one-tenth in the year 1901 and one-tenth each year thereafter, interest payable Jan. 1; university, \$50,000, 6 per cent., payable in the same way; Insane Asylum, \$30,000, 6 per cent., one-tenth in 1912 and one-tenth each year thereafter, interest payable Jan. 1; public buildings, \$20,000, 6 per cent., one-tenth in 1918 and one-tenth each year thereafter, interest payable July 1; total, \$320,000. At the end of the fiscal year the counties were charged with delinquent taxes to the amount of \$27,958.58.

The valuation for State revenue as made to the several counties by the Board of Equalization was as follows: Albany, \$3,673,660.04; Big Horn, \$1,051,442.91; Carbon, \$3,411,775.63; Crook, \$1,568,184.46; Converse, \$1,523,800.50; Fremont, \$1,219,278; Johnson, \$1,163,745.05; Laramie, \$5,433,052.37; Natrona, \$1,062,078.58; Sheridan, \$1,924,433.41; Sweetwater, \$3,590,106.01; Uinta, \$3,504,701.60; Weston, \$1,174,263.75; total valuation, \$30,300,462.31. The total tax levy was \$181,802.77.

The sum of \$24,000 was appropriated for distribution among the counties for the payment of bounties on predatory wild animals.

Banks.—The deposits of national, State, and private banks at the close of the fiscal year amounted to \$3,643,328, or a *per capita* of about \$50. The average reserve of the banks was: National, 42.83 per cent.; State, 59.80 per cent.; private, 40.50 per cent. The aggregate deposits increased approximately \$900,000 during the year, while the loans and discounts remained practically the same as in the previous year.

Insurance, etc.—There were 42 fire insurance companies doing business in the State. Insurance written, \$6,799,072.45; premiums received, \$121,616.96; losses paid, \$23,579.11. Thirteen life insurance companies paid during 1896 claims to the amount of \$14,655, and collected premiums to the sum of \$125,507. Six assessment life insurance companies paid claims to the amount of \$11,072. Six building and loan associations had 8,096 shares in force.

Valuations.—The report of the State Board of Equalization contained this statement: "The increase in the assessed valuation of property in this State is an indication of an actual increase in the value of property in general, and especially is this true in regard to range cattle. The average price of

Wyoming range steers in the Chicago market has increased from \$31.01 in 1893 to \$38.35 in 1897; cows increased from \$16.80 in 1893 to \$27.04 in 1897; calves from \$5.31 in 1893 to \$11 in 1897. These figures are for common range cattle, and do not include sales of high-grade stock. The assessed value of live stock has been increased during this time in proportion to the increase of other property assessed by this board." The year 1897 was noted as "one of the brightest and most productive years for Wyoming cattle men since the balmy days of 1880."

Education.—The number of children of school age in the State was reported at 11,387; the average number of days' schooling, 106.8. Illiteracy, compared with the population, was reported decreased.

Land Grants.—The report of the State board calls attention to the fact that on Sept. 30, 1894, there were in effect 453 leases, which number has since been increased to 570. This does not simply imply the issuing of 117 additional leases, but also the reissuing of the greater part of those in force in 1894. Over 200 of this number expired in 1896, which, with few exceptions, were renewed at the same valuation. In calling attention to the high price fixed upon State land, the report says: "Under the acts of the General Government granting lands to the State, and also by a provision of the State Constitution, no lands owned by the State can be sold under \$10 an acre. This is an effectual barrier to the sale of lands, which probably can not be removed for many years, if at all. Even if the limit of price was reduced to \$5, or even to \$1.25, it is doubtful if sale could be found for State lands, for it must be remembered that the General Government at the present time owns over 50,000,000 acres of public lands in this State subject to entry under its various land acts, and with this amount of land at its disposal the General Government will be a competitor of the State in disposing of lands for many years."

Coal.—The output of coal in 1897 was 2,663,133 tons. The capacity of the coal mines under the supervision of the State Mine Inspector is 18,650 tons per day, indicating an output, if needed, of 5,595,000 per year.

Legislative Session.—Among the acts passed by the General Assembly are the following:

Providing for the rebuilding of the Wyoming General Hospital, and making available \$15,000.

For the organization of a State militia.

To encourage the beet-sugar industry.

To increase the State library.

For the protection of game and fish.

To rebuild the Rock Springs Hospital.

To encourage the destruction of predatory wild animals.

INDEX TO THE TWO VOLUMES OF THE THIRD SERIES. 1896—1897.

- Abbey, Henry E., obit., i, 542.
 Abyssinia, i, 1; ii, 1.
 Abyssinian priests dancing, illustration, i, 6.
